April 2, 2007, was at one time one of the country's largest mortgage origination companies, reporting over $56 billion of total mortgage originations and purchases in 2005 alone. New Century was identified by the OCC in 2010 as *the* worst subprime lender in the country based on the delinquency rates of the mortgages it originated in the ten metropolitan areas with the highest rates of delinquency. Like Countrywide and the other mortgage originators that issued loans that backed the PLMBS purchased by the Bank, New Century effectively abandoned underwriting guidelines in favor of loan volume.

a. Government actions and related lawsuits and investigations demonstrate New Century's failure to adhere to sound underwriting practices.

239. On February 29, 2008, Michael J. Missal, the Bankruptcy Court Examiner for New Century, issued a detailed report on the various deficiencies at New Century, including lax mortgage standards and a failure to follow its own underwriting guidelines. During the course of his investigation, the Examiner conducted 110 interviews of 85 witnesses and reviewed millions of pages of documents from New Century, its outside auditors, and others.

240. Among the findings in his 550 page Final Report, the Examiner noted:

> New Century had a brazen obsession with increasing loan originations without due regard for the risks associated with that business strategy. . . . The Loan Production Department was the dominant force within the Company and trained mortgage brokers to originate New Century loans in the aptly named "CloseMore University." Although the primary goal of any mortgage banking company is to make more loans, New Century did so in an aggressive manner that elevated the risks to dangerous and ultimately fatal levels.
>
> New Century also made frequent exceptions to its underwriting guidelines for borrowers who might not otherwise qualify for a particular loan. A Senior Officer of New Century warned in 2004 that the "number one issue is exceptions to the guidelines." Moreover, many of the appraisals used to value the homes that secured the mortgages had deficiencies.
>
> New Century . . . layered the risks of loan products upon the risks of loose underwriting standards in its loan originations to high risk borrowers.

> Senior Management turned a blind eye to the increasing risks of New Century's loan originations . . . [and] was aware of an alarming and steady increase in early payment defaults on loans originated by New Century beginning no later than mid-2004.

241. On May 7, 2007, a *Washington Post* front page story entitled "Pressure at Mortgage Firm Led to Mass Approval of Bad Loans," quoted former New Century appraiser Maggie Hardiman recounting how "[y]ou didn't want to turn away a loan because all hell would break loose" and that when she did reject a loan because of a low or otherwise inadequate appraisal, "her bosses often overruled her and found another appraiser to sign off on it."

242. On December 7, 2009, the SEC charged three of New Century's top officers with violations of federal securities laws. The complaint detailed the falsity of New Century's assurances to the market about its commitment to "adhere to high origination standards in order to sell [its] loan products in the secondary market" and its policy to "only approve subprime loan applications that evidence a borrower's ability to repay the loan."

243. Business Chief Underwriter for CitiFinancial Mortgage, Richard Bowen, testifying to the FCIC on April 7, 2010, specifically identified the inadequate underwriting standards employed by New Century. "A large New Century subprime pool was underwritten and purchased against their policy guidelines. The purchase approval rate under their guidelines was 93%. The approval rate under Citi guidelines would have been 83%."

244. In June 2010, Morgan Stanley agreed to pay $102 million to Massachusetts homeowners and the Commonwealth following the State Attorney General's investigation into Morgan Stanley's role in acting as a partner in financing mortgages issued by New Century, noting that "[t]hese loans often were unsustainable because of payment shock or poor underwriting," and that the lenders "should have known [the loans] were destined to fail."

245. The Massachusetts Attorney General identified how a Morgan Stanley review of New Century loans found that a large majority failed to meet New Century's underwriting guidelines. Further review disclosed that for 91% of those loans there was insufficient evidence of compensating factors to justify an exception to the underwriting guidelines and that for fully one third of a random sample of loans there was no compensating factor to justify the extension of credit. *See* Assurance of Discontinuance at 10, *In re Morgan Stanley, Inc*., No. 10-2538 (Mass. Super. Ct. June 24, 2010).

246. Patricia Lindsey, a former risk manager at New Century testified before the FCIC in April of 2010 that starting in 2004, underwriting guidelines were all but abandoned. She explained how New Century was approving loans with 100% financing to borrowers with low credit scores and no supporting proof of income.

b. Confidential witnesses provide further evidence of New Century's failure to adhere to sound underwriting practices.

247. Confidential witnesses provided further evidence that New Century failed to adhere to sound underwriting practices and created a culture in which exceptions to underwriting standards were the norm. Statements by confidential witnesses confirm that: (a) New Century underwriters faced intense pressure to close loans at any cost; (b) New Century increasingly approved risky, low- or no-documentation loans without adequate review; (c) New Century routinely approved loans that contained exceptions for which there were no reasonable compensating factors; (d) New Century employees approved loans with inflated appraisal values; and (e) New Century employees manipulated data in order to close loans.

248. Confidential witnesses include CW-D, a senior underwriter at New Century in Scottsdale, Arizona from March 2004 to 2006, who underwrote wholesale loans that independent brokers and brokerage firms brought to New Century account executives; CW-E, a risk manager

at New Century from 2004 to 2005; CW-F, an operations manager who worked in New Century's Irvine, California branch for 11 years until the company closed its doors in May 2007; CW-G, a former loan officer and senior branch manager at New Century from December 2000 through December 2005; and CW-H, a loan officer at New Century from 2001 through 2004.

249. CW-D reported that in order to close the loans, managers would "rerun loans all kinds of ways . . . to get any form of an approval." CW-D recalled one particular instance in which a manager pressured her to approve a stated income loan for a C-rated borrower, when they "were not supposed to do anything below a B." Although she refused to sign off on the loan because the borrower was a retired person on a fixed income, the manager signed off on it and "rearrange[d] a bunch of stuff to get the loan to work."

250. Due to the pressures that New Century employees faced to generate loan volume, they increasingly approved risky, low- to no-documentation loans; approved "exception" loans for which there were no reasonable compensating factors; encouraged appraisers to inflate property values; and manipulated loan data in order to close loans. According to CW-F, New Century account executives (who brought in loans from independent brokers and brokerage firms) received commissions based on the number of loans they closed. CW-G, a branch manager at New Century, also confirmed that he was compensated based only on loan volume. CW-D said she was "always pressured to close loans" at New Century. She mentioned that account executives would yell at her for declining loans and would often go to upper management to overturn her decisions to decline loans. CW-H, a loan officer for New Century from 2001 through 2004, said that if loan officers did not make at least five loan closings in a month, they were "put on a three-month program that put them on track for termination."

Additionally, loan officers who did not meet their numbers were subject to verbal abuse, including screaming.

251. CW-G ultimately resigned from the company because he "did not believe in the products being offered." Specifically, he disagreed with New Century's decision to offer a new mortgage product, called a "stated income W-2 loan." This loan allowed salaried employees to state their income and back it up with only a W-2 and no pay stubs or tax returns. While this flexibility may have been designed to address situations such as the Las Vegas employment market, where many employees make a lot of their income in tips—which are usually in cash and so often are not reported as income on a W-2—it became impossible to reconcile the amount of money that the individuals stated that they were making, and the amount of income the W-2s reflected and, as explained by CW-G, the loan files consequently lacked "integrity."

252. According to CW-G, "low doc" loans were more likely to be approved at New Century than full-documentation loans. Moreover, CW-G said that New Century approved loans with 100% LTV ratios all the time, and 100% LTV mortgages continued to increase as a percentage of the total loans approved in his branch during his time as branch manager. When CW-G complained to senior management that increasingly risky loans were being offered at New Century, senior management instructed him just to sell the products.

253. Confidential witnesses also described New Century's standard practice of deviating from prudent underwriting guidelines. As stated by CW-F, exceptions were made "all the time. It was the nature of subprime. They were granted frequently."

254. CW-D calculated that 50% of the loans that her branch underwrote each day contained exceptions. "Exceptions happened more often than not . . . . It was all about getting the loans approved." CW-D stated that New Century underwrote exception loans which had no

reasonable compensating factors, and that exceptions were made to clear loans that might otherwise have been rejected.

255. Similarly, CW-E said that New Century did "goofy loans that were hugely non-compliant." As an example of a "goofy loan" that New Century approved, he described providing a stated loan to a landscaper who allegedly made $25,000 per month, but had a $500 Visa credit card limit.

256. Confidential witnesses further described the pressure employees placed on appraisers to inflate property values so that loans could be approved. CW-H said that New Century loan officers advised appraisers what specific dollar amount they needed in order for a loan to be approved by New Century underwriters; the appraiser then came up with that exact figure in his or her appraisal.

257. Similarly, CW-D explained that New Century managers frequently reworked appraisals that came in short of New Century's guidelines. The managers would try to find something wrong with the comparable properties provided by the appraiser so that they could request new comparables. However, the new comparables generally were not true comparables because they inflated the value of the purchase property. Additionally, CW-D stated that New Century managers added "general inflation for the area" if the appraiser's comparables fell short on value and hindered the loans from closing.

258. According to confidential witnesses, New Century employees frequently manipulated loan data in order to close loans and generate volume. For example, CW-D stated that managers at New Century told underwriters to remove documents from the loan files or rerun credit reports in the hopes of improving credit scores. Similarly, CW-D described how underwriters were instructed to remove a wife's records from a loan file if she had bad credit and

only rely on the husband's credit score, even though the individuals were married and were borrowing based on dual incomes.

259. CW-E also mentioned that, while at New Century, he reviewed a lot of loans with fake documents, including fake verifications of employment, fake green cards, and fake social security cards.

c. The mortgages originated by New Century and securitized in the PLMBS purchased by the Bank provide further evidence of New Century's failure to adhere to sound underwriting practices.

260. New Century originated mortgages that secured at least Securities CMLTI 2006-NC1 A2C, CMLTI 2006-NC2 A2B, GSAMP 2006-NC2 A2C, MABS 2006-NC1 A3, MSAC 2006-HE5 A2C, MSAC 2006-HE6 A2C, and SABR 2006-NC3 A2B. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these Securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of New Century's failure to observe its stated underwriting standards. New Century's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

d. Confidential witnesses also provide evidence of predatory lending.

261. Confidential witnesses detailed predatory practices at New Century in which the originators failed to disclose the true terms of the loans to the buyers.

262. For example, CW-D estimated that half of her loans at New Century were stated income loans. She said, "It was really sad because a lot of the borrowers were uneducated" and did not understand the terms of the loan; she blamed the mortgage brokers for not explaining the terms of the loans to the borrowers.

263. Similarly, CW-H said that in the case of adjustable-rate mortgages, New Century employees only looked at the borrower's ability to make the initial monthly payment, and did not consider the fully indexed rate over the life of the loan. Additionally, he said that loan officers were coached not to call them "adjustable rate loans" when speaking with borrowers. Instead, New Century's sales model was to put the borrower first into a "two-year fixed loan," and when the two years expired, New Century would target the borrower for conversion to another mortgage product.

264. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at New Century, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any of the Offering Documents apprise the Bank of the extent to which New Century deviated from its guidelines, and engaged in predatory lending.

3. IndyMac Bank, FSB

265. IndyMac Bank originated underlying mortgage loans securing at least four of the PLMBS purchased by the Bank. IndyMac as well abandoned sound underwriting practices.

a. Government actions and related lawsuits and investigations demonstrate IndyMac's failure to adhere to sound underwriting practices, applicable appraisal standards, and predatory lending.

266. As reported in the Audit Report of the Office of Inspector General, Department of Treasury ("OIG"):

> IndyMac often made loans without verification of the borrower's income or assets, and to borrowers with poor credit histories. Appraisals obtained by IndyMac on underlying collateral were often questionable as well. As an Alt-A lender, IndyMac's business model was to offer loan products to fit the borrower's needs, using an extensive array of risky option-adjustable-rate-mortgages (option ARMs), subprime loans, 80/20 loans, and other nontraditional products. Ultimately, loans were made to many borrowers who simply could not afford to make their payments.

SAFETY AND SOUNDNESS: MATERIAL LOSS REVIEW OF INDYMAC BANK, FSB, OIG-09-032, (Feb. 26, 2009).

267. In describing what it referred to as IndyMac's "Unsound Underwriting Practices," the OIG Audit explained:

> IndyMac encouraged the use of nontraditional loans. IndyMac's underwriting guidelines provided flexibility in determining whether, or how, loan applicants' employment, income, and assets were documented or verified. The following procedures were used by the thrift:
>
> - No doc: income, employment, and assets are not verified
> - No income/no assets (NINA): income and assets are not verified; employment is verbally verified
> - No ratio: no information about income is obtained; employment is verbally verified; assets are verified
> - Stated income: income documentation is waived, employment is verbally verified, and assets are verified
> - Fast forward: income documentation is sometimes waived, employment is verbally verified, and assets may or may not be verified.

268. The OIG also explained that:

> among other things, we noted instances where IndyMac officials accepted appraisals that were not in compliance with the Uniform Standard of Professional Appraisal Practice (USPAP). We also found instances where IndyMac obtained

> multiple appraisals on a property that had vastly different values. There was no evidence to support, or explain why different values were determined. In other instances, IndyMac allowed the borrowers to select the appraiser. As illustrative of these problems, the file for one 80/20, $1.5 million loan we reviewed contained several appraisals with values ranging between $639,000 and $1.5 million. There was no support to show why the higher value appraisal was the appropriate one to use for approving the loan.

269. The OIG Audit contained 6 examples of examined loans with serious underwriting failings and questionable appraisals. These included the following examples of IndyMac's conduct and the losses resulting from IndyMac's violation of underwriting standards and reliance on faulty appraisals:

> Loan 1
>
> On May 2, 2007, IndyMac approved a $926,000 stated income loan for the borrower, . . . an adjustable rate mortgage with a 5-year term and a beginning interest rate of 5.875 percent, which was subject to change monthly. . . .
>
> As a stated income loan, IndyMac performed no verification of the borrower's self-employment income of $50,000 a month ($600,000 annually). IndyMac also did not verify the borrower's assets. . . .
>
> The loan file contained an appraisal which indicated that the property value was $1.43 million. This value was based on comparable properties that had been improved with single family residences. However, the comparable properties were located closer to the ocean and bay, and their values were based on listing price instead of the actual selling price. The appraised value also did not take in consideration a slowdown in the real estate market. We saw no evidence in the loan file that IndyMac resolved these and other anomalies with the appraisal.
>
> The borrower made payments totaling $5,389 before defaulting on the loan. The unpaid principal and interest at the time of foreclosure totaled approximately $1.01 million. At the time of our review, the property was listed for sale for an asking price of $599,000.
>
> Loan 2
>
> In November 2007, IndyMac approved a $3 million stated income loan, secured by the borrower's primary residence in Scottsdale, Arizona. The loan proceeds were used to refinance the primary residence which the borrower had owned for 11 years and reported its value as $4.9 million.

As a stated income loan, IndyMac performed no verification of the borrower's reported self-employment income of $57,000 a month ($684,000 annually). Contrary to IndyMac policy, the borrower selected the appraiser who appraised the property at $4.9 million.

Notes in the loan file indicated that the borrower had listed the property for sale in November 2006, first at a price of $4.9 million that was later reduced to $4.5 million before the borrower pulled the property off the market. Despite this, the appraiser concluded that the value of $4.9 million appeared to be reasonable. IndyMac accepted the appraiser's value based on a review of online sale and public records. It did not physically inspect the property.

The borrower made no payments on the loan before default. The total delinquent loan amount as of November 2008 was $3,015,625. According to the IndyMac official, the property sold in October 2008 for $2.0 million.

Loan 3

In February 2007, IndyMac provided the borrower a stated income, 80/20 loan, for a combined total of $1.475 million, to purchase a property in Marco Island, Florida. The combined loan equaled the appraised value of the property.

As a stated income loan, IndyMac performed no verification of the borrower's reported income of $28,500 a month ($342,000 annually). For 80/20 loans, IndyMac allowed an $800,000/$200,000 maximum loan amount and a maximum combined loan amount of $1 million. This loan was an exception to IndyMac policy as the combined loan amount of $1,475,000 exceeded the maximum combined loan amount. The loan exception was approved anyway.

Various appraisals in the loan file contained significant differences with no indication of how they were resolved by IndyMac. A January 2007 appraisal valued the property at $1.48 million. A valuation analysis prepared by an IndyMac employee on January 25, 2007, stated that the skill level of the appraiser was unacceptable—the appraiser had not provided accurate comparable properties to the subject property and did not accurately consider the location of the property. The IndyMac employee estimated the property value at $1 million and recommended that another appraisal be obtained. Another note in the loan indicated that the IndyMac official overruled the employee's recommendation and the appraisal was accepted. The IndyMac official, however, adjusted the appraised value approximately 10 percent lower, to $1.33 million, citing as a justification that a property on the same street had sold for $1.97 million.

The borrower made no payments before defaulting on the combined $1.48 million loans. According to the IndyMac official, the borrower deeded the property to the thrift in lieu of foreclosure. The IndyMac official estimated in November 2008 that the property was worth about $700,000.

Loan 4

In April 2002, IndyMac approved the borrower for a stated income home equity line of credit of $550,000. This line of credit was in addition to a 80/20 loan for $3 million that the borrower already had with IndyMac. The borrower reported that the property was worth $5.2 million.

As a stated income loan, IndyMac performed no verification of the borrower's reported gross income of $95,000 a month ($1.14 million annually) as the owner/manager of a limited liability corporation. The loan notes history did not indicate how IndyMac resolved negative information revealed in credit reports on the borrower. Two credit reports obtained in March 2002 listed serious and frequent delinquencies. An earlier credit report had noted a discrepancy with the borrower's social security number.

Various appraisals in the loan file also contained significant discrepancies with no indication of how they were resolved by IndyMac. Specifically, the appraisal for the original 80/20 loan, dated in October 2001, valued the property which the appraisal described as new construction at $5.2 million. This same value was reported by a second appraisal dated in March 2002. A third appraisal, dated in April 2002, placed the market value of the home at $508,500. The appraisal stated that the home was less than mile from a hazardous waste facility. A fourth appraisal, also prepared in April 2002, valued the property at $730,000, with the lowest reasonable value at $590,000 and the highest reasonable at $900,000. This appraiser also reported that the home was built in 1959.

The borrower made payments totaling about $11,000 before defaulting on the $550,000 home equity line of credit loan. According to the IndyMac official, the thrift was able to recover approximately $600,000 on both loans. . . .

270. A June 30, 2008 report issued by the Center for Responsible Lending entitled INDYMAC: WHAT WENT WRONG? HOW AN "ALT-A" LEADER FUELED ITS GROWTH WITH UNSOUND AND ABUSIVE MORTGAGE LENDING (the "CRL Report") concluded that IndyMac often ignored its stated underwriting and appraisal standards and encouraged its employees to approve loans regardless of the borrower's ability to repay.

271. The CRL Report quotes an IndyMac underwriting team leader, Audrey Streater, as stating of her time at IndyMac: "I would reject a loan and the insanity would begin. It would go to upper management and the next thing you know it's going to closing."

272. The CRL Report describes the recollection of another former underwriter for IndyMac, Wesley Miller, interviewed by CRL:

> [W]hen he rejected a loan, sales managers screamed at him and then went up the line to a senior vice president and got it okayed. "There's a lot of pressure when you're doing a deal and you know it's wrong from the get-go — that the guy can't afford it," Miller told CRL. "And then they pressure you to approve it." The refrain from managers, Miller recalls, was simple: "Find a way to make this work."

273. As to the recollection of another former underwriter interviewed by the CRL,

> Scott Montilla, who worked as an underwriter for IndyMac in Arizona. . . . says that when salespeople went over his head to complain about loan denials, higher-ups overruled his decisions roughly half the time. "I would tell them: 'If you want to approve this, let another underwriter do it, I won't touch it — I'm not putting my name on it,'" Montilla says. "There were some loans that were just blatantly overstated. . . . Some of these loans are very questionable. They're not going to perform."

b. Private actions against IndyMac demonstrate IndyMac's failure to adhere to sound underwriting practices.

274. Multiple insurers of IndyMac originated loans — MBIA Insurance Corporation, Financial Guarantee Insurance Company, and Syncora Guarantee Inc. — all of whom have experienced unprecedented losses in connection with the financial guarantee insurance they provided on IndyMac loans, have filed suit against IndyMac alleging the abandonment of underwriting standards based, in part, on their analysis of the loan files for IndyMac loans. Some of the allegations made by the insurers are virtually identical to the allegations made by the Bank here — namely that IndyMac completely abandoned its underwriting standards in its rush to originate (and securitize) as many loans as possible.

275. By way of example, according to MBIA:

> IndyMac had abandoned any reasonable and prudent underwriting standards. In an effort to expand its market share during the mortgage lending boom, IndyMac systematically abandoned its own underwriting guidelines in pursuit of increased loan originations: it knowingly loaned millions of dollars to borrowers who could not afford to repay the loans, or who IndyMac personnel knew or should have

> known were including misstatements in their loan applications, often with the assistance and encouragement of IndyMac's employees and brokers, or who otherwise did not satisfy did not satisfy the basic risk criteria for prudent and responsible lending that IndyMac claimed to use.

See MIBA Ins. Corp. v. IndyMac ABS, Inc., et al., No. BC422358 (Cal. Super. Ct.). This systematic abandonment of underwriting standards stands in sharp contrast to the representations made about IndyMac's underwriting standards in numerous documents, including investor prospectuses and prospectus supplements.

276. MBIA's allegations are supported by a review of a sample of the loan files to which they, as an insurer, eventually gained access. Of the 6,970 loans included in the mortgage pool for one of the PLMBS that MBIA provided insurance for, 418 loans – roughly 6% -- were in default less than a year after the security was issued. A review of the loan files for the defaulting loans indicated that only 401 loans — *more than 95%* — were not originated or acquired in material compliance with IndyMac's representations and warranties with respect to its underwriting guidelines and policies. Similarly, of the 3956 loans included in the mortgage pool for another PLMBS insured by MBIA, 297 loans — roughly 7.5% — were in default less than a year after the security was issued. A review of the of the 297 loans indicated that 294 loans — *more than 99%* — failed to comply with IndyMac's stated underwriting guidelines and policies.

277. The results of MBIA's analysis of two loan pools were duplicated by Syncora's analysis of various loans for pools for which it provided insurance. Out of the 107 loans analyzed by Syncora, 105 of the loans breached representations and warranties made by MBIA to Syncora. These include: (a) 83 loans in breach of the representation that "each Mortgage Loan was originated in all material respects in accordance with the applicable Originator's underwriting criteria in effect at the time of origination;" (b) 57 loans in breach of the

representation that "each Mortgage Note be a legal, valid and binding obligation, all parties had full legal capacity to execute the documents and convey real estate to the best of the Seller's knowledge, and there was no fraud involved in the origination of any Mortgage loan;" and (c) six loans in breach of the representation that "each Mortgage Loan contain an appraisal conforming to the standards of the applicable Originator."

278. It is also important to note that while the monoline insurers' loan reviews have been limited with respect to number of loans examined, this is because IndyMac is refusing to provide complete access to its loan files, notwithstanding its contractual obligation to do so. For this reason, all three insurers are seeking judicial relief to gain access to these various loan files. Investors, such as the Bank, also do not have access to these loan files, and the Bank does not expect to be able to gain access until Defendants are required to produce the files in discovery in this lawsuit.

279. In addition, in May of 2009, Deutsche Bank National Trust Company, pursuant to its contractual obligations and in its capacity as a trustee, filed suit against IndyMac Bank and the FDIC (in its corporate capacity as well as in its capacity as receiver and conservator for IndyMac Bank and IndyMac Federal Bank) over the more than 150,000 mortgage loans that IndyMac Bank had originated or acquired and sold to the trust. *See Deutsche Bank Nat'l Trust Co. v. FDIC, et al.*, No. cv09-3852-GAF (C.D. Cal.). Deutsche Bank's complaint asserts claims for breach of contract, breach of the duty of good faith and fair dealing, and breach of fiduciary duty, and alleges that IndyMac breached numerous representation and warranties that it made to the trusts, including: (a) mortgage loans IndyMac sold into the trusts failed to comply with IndyMac's credit underwriting standards and origination process; (b) mortgage loan origination files failed to contain required documentation; (c) the origination of mortgage loans did not

comply with applicable law; and (d) mortgage loans did not possess the characteristics set forth in the schedules to the relevant governing agreements. Simply put, the Deutsche Bank trustee, similar to the Bank here, is alleging that IndyMac sold "materially defective mortgage loans into the Trusts that did not comply with IndyMac's express Representations and Warranties," including representations and warranties regarding underwriting standards and loan quality.

c. Confidential witnesses provide further evidence of IndyMac's failure to adhere to sound underwriting practices.

280. Confidential witnesses provide additional evidence of IndyMac's failure to adhere to sound underwriting practices and guidelines as well as appraisal guidelines. For example, CW-GG, a former underwriter for IndyMac in Missouri from June 2005 to June 2007; CW-HH, a former underwriter for IndyMac in California from 2006 to 2008; CW-II, a former underwriter for IndyMac in New Jersey from 2004 to 2007; and CW-JJ, who began working for IndyMac in California as a licensed real estate appraiser trainee and who did appraisals for IndyMac, all confirm that IndyMac's failures.

281. According to CW-GG, on a daily basis she was required to approve loans that she believed should not be approved. IndyMac required underwriters who wanted to deny stated income loans to obtain management approval for the denial. As a result, CW-GG was frequently overruled, even when the income provided in the application was obviously overstated, such as when a cab driver from Chicago claimed to have $12,000 a month in income. Upset at being forced to approve clearly inaccurate loan applications, CW-GG many times noted in the file that "the loan was approved under duress."

282. CW-GG noted that IndyMac underwriters were under a lot of pressure to close loans. IndyMac underwriters received bonuses based on the number of loans that they permitted to be funded, not the number of loans that they reviewed. According to CW-GG, this structure

incentivized the approval of unscrupulous loans and opened the doors to committing fraud on the inside. CW-GG stated that a broker could not commit fraud unless an underwriter approved it, and there were certain underwriters that would approve anything, not matter how blatant, because they wanted a larger paycheck. In fact, in 2007, CW-GG recalls being required, along with the other underwriters in her department, to come in on a Saturday and review the loan files for stated income loans that had been previously funded. CW-GG believes that during this time period a lot of questions were coming up about the loans being reviewed, and CW-GG and her colleagues went through every loan her department had approved to see whether or not the stated salary was within the correct range—as indicated by salary.com—for the job description of the loan applicant. CW-GG found a lot of overstated incomes in the files that had been reviewed by other underwriters some of the underwriters would rather see a bigger paycheck than do the right thing.

283. The testimony of CW-HH and CW-II further confirms IndyMac s abandonment of underwriting standards. CW-HH stated that on several occasions she suspected that stated-income loan applications contained inflated income information. In particular, she recalls a gardener in California that purportedly made $20,000 a month. Notwithstanding her concerns, because the loan applicant had a sufficiently high FICO score, IndyMac s automated system eMITS approved him for the loan. When CW-HH questioned this approval, she was informed that because the system approved it, she needed to process the loans. CW-HH also recalled that the bonus system which was based on the number of loans funded incentivized underwriters to quickly approve loans. Those underwriters who failed to meet their quotas were written up. Similarly, CW-II reported that no-documentation and stated income loans were the norm during CW-II s tenure as an underwriter. CW-II stated that his managers approved loans that

CW-II would not have approved, and were known to overrule CW-II on loans that he denied. CW-II believed that IndyMac did too many no-doc and stated income loans, and approved deals that should not have been approved. CW-II was sufficiently concerned about the number of no-doc and stated income loans being approved that he brought it to the attention of upper management during an online chat in 2004. Upper management responded that because the loans were backed by Fannie Mae and Freddie Mac, the deals were secure.

284. CW-GG also testified as to the loosening of appraisal standards. When CW-GG first started at IndyMac, the bank had an automated system for scoring appraisals that took into account different factors such as the location of the property and the date of the comparable sales. Based on the scoring of this data, certain appraisals were sent to IndyMac's appraisal review department, which denied a lot of loans. According to CW-GG, at a certain point management concluded that too many loans were being reviewed and denied, so management relaxed the standards, thereby reducing the number of appraisals automatically sent to the review department. CW-GG worked on the same floor as the appraisal review department, and recalls talking with appraisal reviewers who complained "a lot" that they had strong belief that "they weren't seeing appraisals (they should be seeing)," *i.e.*, that suspect appraisals were not being reviewed. CW GG's testimony was confirmed by CW-JJ, an appraiser in California that performed work for IndyMac. CW-JJ recalls being blacklisted over her appraisal of a California home with a separate guest house. Consistent with standard appraisal practices, CW-JJ did not include the guest house's square footage in the main house, and refused to do so even under pressure from IndyMac. CW-JJ's refusal prompted IndyMac to stop sending her work, and an IndyMac representative verbally confirmed that she had been placed on a blacklist.

d. The mortgages originated by IndyMac and securitized in the PLMBS purchased by the Bank provide further evidence of IndyMac's failure to adhere to sound underwriting practices.

285. IndyMac originated mortgages that secured at least Securities HVMLT 2006-2 2A1A, HVMLT 2006-2 3A1A, INABS 2005-D AII3, and INDX 2006-AR15 A2. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these Securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of IndyMac's failure to observe its stated underwriting standards. IndyMac's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

286. In summary, far from following its underwriting guidelines and making occasional, targeted and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at IndyMac, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which IndyMac deviated from its guidelines and engaged in predatory lending.

4. Fremont Investment & Loan

287. Fremont Investment & Loan originated underlying mortgage loans securing at least two of the PLMBS purchased by the Bank. Fremont as well abandoned sound underwriting practices. Fremont was identified by the OCC in 2010 as the sixth worst subprime lender in the country based on the delinquency rates of the mortgages it originated in the ten metropolitan areas with the highest rates of delinquency.

a. Government actions and related lawsuits and investigations demonstrate Fremont's failure to adhere to sound underwriting practices and its predatory lending.

288. Fremont was one of the country's largest subprime lenders until it was forced out of the business by the FDIC in March of 2007.

289. In March 2007, the FDIC announced it had issued a cease and desist order against Fremont Investment & Loan, and its parent corporations, to resolve claims set forth in *In re Fremont Investment & Loan*, No. FDIC-07-035b (F.D.I.C. Mar. 7, 2007). According to the FDIC's press release:

> The FDIC determined, among other things, that [Fremont] had been operating without adequate subprime mortgage loan underwriting criteria, and that it was marketing and extending subprime mortgages in a way that substantially increased the likelihood of borrower default. . . .

290. The FDIC Cease and Desist Order noted Fremont's "inadequate underwriting criteria and excessive risk in relation to the kind and quality of assets held," and that Fremont "had been operating without adequate subprime mortgage loan underwriting criteria."

291. The FDIC, in its Cease and Desist order and accompanying press release, also sets forth how Fremont "operated inconsistently with the FDIC's Interagency Advisory on Mortgage Banking and Interagency Expanded Guidance for Subprime Lending Programs" and "that it was

marketing and extending subprime mortgage loans in a way that substantially increased the likelihood of borrower default, including by:

- qualifying borrowers for loans with low initial payments based on an introductory or "start" rate that will expire after an initial period, without an adequate analysis of the borrower's ability to repay the debt at the fully-indexed rate";
- making mortgage loans without adequately considering the borrower's ability to repay the mortgage according to its terms";
- approving borrowers without considering appropriate documentation and/or verification of income";
- approving borrowers for loans with inadequate debt-to-income analyses that do not properly consider the borrowers' ability to meet their overall level of indebtedness and common household expenses";
- issuing mortgages containing product features likely to require frequent refinancing to maintain an affordable monthly payment and/or to avoid foreclosure";
- providing borrowers with inadequate and/or confusing information relative to product choices, material loan terms and product risks, prepayment penalties, and the borrower's obligations for property taxes and insurance";
- approving borrowers for loans with inadequate debt-to-income analyses that d[id] not properly consider the borrowers' ability to meet their overall level of indebtedness and common housing expenses";
- issuing loans including substantial prepayment penalties and/or prepayment penalties that extend beyond the initial interest rate adjustment period"; and
- approving loans or "piggyback" loan arrangements with loan-to-value ratios approaching or exceeding 100 percent of the value of the collateral."

292. Similarly, in its complaint against Fremont, the Massachusetts Attorney General provided specific examples of Fremont's allegedly predatory practices, including the approval of loans worth over $800,000 to Frances Darden, a single mother of three with a monthly income of $1,800 from social security disability. Ms. Darden subsequently discovered that her application

falsely stated that she worked for Philip Medical earning $10,760 per month. Fremont paid her broker a yield spread premium of $7,024 for originating these loans, a premium that specifically rewards brokers for placing borrowers in higher interest rate loans. *See Commonwealth v. Fremont Inv. & Loan, et al.,* No. 07-4373 (Mass. Super. Ct.).

293. Fremont also approved a mortgage for 100% of the property purchase price for Macdala Louis, who had provided proof of income of $2,000 a month. When, at closing, Ms. Louis discovered her monthly payments (even at the low "teaser" rate that would reset after two years) was over $3,600 she tried to back out but was told by Fremont's lawyer and her broker that it was too late to change her mind. She later discovered her loan papers falsely represented her income as $7,300 a month. She lost all her life savings trying to make payments until eventually the property was foreclosed.

294. On December 9, 2008, the Supreme Judicial Court of Massachusetts affirmed a preliminary injunction preventing Fremont from foreclosing on thousands of loans, finding evidence that "Fremont made no effort to determine whether borrowers could "make the scheduled payments under the term of the loan" "[and] ma[de] loans based on information Fremont knew or should have known was inaccurate or false, including, but not limited to, borrowers' income, property appraisals, and credit scores." *See Fremont Inv. & Loan*, 897 N.E.2d 548 (Mass. 2008)

295. In reaching its decision, the Supreme Judicial Court relied on affidavits from two outside account executives who marketed Fremont loans. Each testified that Fremont purposefully relaxed its underwriting standards and made loans on documents known to contain false information.

296. In its ruling, the Supreme Judicial Court held that certain Fremont loans were presumptively unfair because their very terms low teaser rates followed by payment shock along with high loan-to-value and debt-to-income ratios resulted in a package that Fremont should have known was doomed to foreclosure. *See Fremont Inv. & Loan*,,897 N.E.2d at 558-59.

297. Subsequently, Fremont agreed to pay the Commonwealth of Massachusetts $10 million in consumer relief, civil penalties and costs arising from its conduct related to the issuance of mortgage loans in Massachusetts.

298. In October 2007, Morgan Stanley Mortgage Capital Holdings, LLC sued Fremont, alleging that it had found hundreds of improperly underwritten loans that fail[ed] to meet Fremont s underwriting guidelines because Fremont had fail[ed] to verify assets prior to closing, performed defective verification of rent, fail[ed] to obtain the minimum credit history information, and [made] loans to borrowers that did not have the requisite credit score.

299. Fremont also was among 14 lenders named by the NAACP in a complaint alleging systematic, institutionalized racism in sub-prime home mortgage lending. According to the lawsuit, African American homeowners who received sub-prime mortgage loans from these lenders were more than 30 percent more likely to be issued a higher rate loan than Caucasian borrowers with the same qualifications. In January 2009, the court denied a motion to dismiss, finding that the plaintiff had sufficiently pled a disparate impact claim, and also denied an individual motion to dismiss brought by Fremont, finding the claims were not moot as to Fremont.

b. The mortgages originated by Fremont and securitized in the PLMBS purchased by the Bank provide further evidence of Fremont's failure to adhere to sound underwriting practices.

300. Fremont originated mortgages that secured at least Securities FHLT 2005-E 2A3 and SABR 2006-FR3 A2. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these Securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of Fremont's failure to observe its stated underwriting standards. Fremont's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

301. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at Fremont, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which Fremont deviated from its guidelines and engaged in predatory lending.

5. GMAC and Residential Funding Corp.

302. GMAC Mortgage Corporation, which is now known as GMAC Mortgage, LLC (together, "GMAC") was the originator of loans for at least three of the PLMBS purchased by the Bank, and Residential Funding Corp. ("RFC"), a GMAC affiliate, was the sponsor and master servicer of at least one of the Bank's PLMBS investments. Both GMAC's representations regarding its loan origination practices and the representations of RFC, have been challenged by MBIA Insurance, one of the largest providers of bond insurance, which insured MBS securities sold by GMAC and RFC.

303. In *MBIA Insurance Corporation v. GMAC Mortgage LLC* (N.Y. Sup. Ct.), GMAC MBS insurer MBIA alleges that, with respect to GMAC securitizations it insured in 2004, 2006, and 2007, GMAC represented and warranted that (a) all of the information it provided to MBIA about the mortgage loans was accurate and not misleading; (b) all of the mortgage loans in the pools were underwritten in accordance with GMAC Mortgage's underwriting standards; and (c) in the case of each loan, after receiving all applicable employment, credit, and property information, a determination had been made that the borrower was able to meet his or her monthly payments.

304. According to MBIA, GMAC "blatantly violated its contractual representations and warranties." MBIA supports this allegation by explaining that in 2009, in the face of mounting payments caused by delinquent and "charged-off" loans, MBIA began to examine the loan files and documentation associated with thousands of loans. The result of this review clearly demonstrates that GMAC "had wholly abandoned its own underwriting policies and instead routinely approved loans to borrowers who failed to meet basic risk criteria." At least 89% of the 4,104 delinquent or charged off loans reviewed by MBIA were not originated in

material compliance with GMAC's underwriting guidelines or the contractual representations and warranties made by GMAC.

305. More specifically, MBIA alleges that many of the loans it has found to be non-compliant contained multiple breaches of representations and warranties, including:

- GMAC Mortgage routinely breached its representation and warranty that the mortgage loans were underwritten generally in compliance with GMAC Mortgage's underwriting standards.

- A significant number of mortgage loans were made on the basis of "stated incomes" that were grossly unreasonable or were approved despite DTI [debt-to-income] or CLTV [combined loan-to-value] ratios in excess of the cut-offs stated in GMAC Mortgage's Underwriting Guidelines or the Purchase Agreements or Prospectus Supplements.

- Contrary to its Underwriting Guidelines, GMAC Mortgage failed in many cases to verify the borrower's employment when required to do so or to verify prior rental or mortgage payment history, approved mortgage loans with ineligible collateral, approved mortgage loans to borrowers with ineligible credit scores, and approved loans without verifying that the borrower had sufficient funds or reserves.

- GMAC Mortgage used its proprietary automated electronic loan underwriting program, known as "Assetwise," to approve loans that did not comply with its Underwriting Guidelines. Assetwise assisted in the underwriting of mortgage loans by automating the process of determining whether a loan met prespecified underwriting criteria set up in the program. GMAC Mortgage used the program itself and also made the program available to its affiliates. Assetwise, however, failed to analyze proposed mortgage loans using the criteria set forth in GMAC Mortgage's Underwriting Guidelines. As a result, GMAC Mortgage routinely contributed loans to the Transactions that failed to comply with its own underwriting standards.

- GMAC Mortgage routinely breached its representation and warranty that the mortgage loan files were complete and contained all required documents and instruments. Many of the of mortgage loan files are missing necessary mortgage loan documents, such as disclosures relating to loan transfers and notes establishing the first lien. The absence of these and other necessary documents from the loan files impedes the ability of the trustees for the Transactions to enforce their rights and remedies with respect to delinquent mortgages. The failure to maintain the required loan documentation also impairs proper servicing.

- GMAC Mortgage breached its representation and warranty that all mortgage loans would comply with all local, state and federal laws, by furnishing, among other things, mortgage loans to the pools that violated state predatory lending laws. These laws are designed to protect borrowers from abusive lending practices by, for example, prohibiting the approval of a loan to a borrower who lacks the ability to repay.

306. Similarly, MBIA explains, in its complaint in *MBIA Insurance Company v. Residential Funding Corporation*, No 603552-2008, (N.Y. Sup. Ct.): "Of the 1,847 mortgage loans [examined by MBIA] . . . only 129 mortgage loans—less than 7% of the mortgage loans reviewed—were originated or acquired in material compliance with RFC's representations and warranties . . . with respect to the underwriting of the mortgage loans contributed to the RFC transactions." The complaint notes that "The Underwriting Guidelines . . . only allowed RFC to make exceptions to the Underwriting Guidelines in very specifically defined and limited circumstances. . . . RFC's Underwriting Guidelines required that a form—Form 1600—be completed and approve for any exceptions made to the Underwriting Guidelines in connection with the underwriting of purchase of a mortgage loan. [Yet, in fact f]or a significant number of non-compliant mortgage loans, RFC did not identify any specifically defined exception that was permitted under the Underwriting Guidelines. Further for a significant number of mortgage loans, RFC failed to document the alleged exceptions on a form 1600 as required by the Underwriting Guidelines."

307. GMAC and Residential Funding originated mortgages that secured at least Securities GMACM 2006-AR2 2A1, GMACM 2006-AR2 4A1, RFMSI 2006-SA2 2A1 and RASC 2005-KS12 A2. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to the weighted average LTV ratios, the

percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, these Securities have exhibited excessive delinquency and foreclosure rates. Securities GMACM 2006-AR2 2A1 and GMACM 2006-AR2 4A1 have experienced a delinquency rate as of January, 2010, that was over 50% higher than that of loans of comparable vintage with comparable FICO scores and LTV ratios. The cumulative loss rate on mortgages securing Security GMACM 2006-AR2 4A1 is more than double that of such comparable mortgages. Further information on the excessive delinquency and foreclosure rates of these securities is set forth below, *see infra* ¶¶591-592. These circumstances are strong evidence of GMAC's and Residential Funding's failure to observe its stated underwriting standards. GMAC's and Residential Funding's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused GMAC and Residential Funding to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

308. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at GMAC and RFC, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any of the Offering Documents apprise the Bank of the extent to which GMAC and RFC deviated from their guidelines and engaged in predatory lending.

6. Wells Fargo

a. Other investigations and lawsuits and confidential witness testimony demonstrate that Wells Fargo abandoned underwriting guidelines and applicable appraisal standards.

309. Wells Fargo originated underlying mortgage loans securing at least 7 of the PLMBS purchased by the Bank. In 2010, Wells Fargo was identified by the OCC as the thirteenth worst subprime lender in the country based on the delinquency rates of the mortgages it originated in the ten metropolitan areas with the highest rates of delinquency. Wells Fargo as well abandoned sound underwriting practices. In denying in part a motion to dismiss in *In re Wells Fargo Mortgage-Backed Securities Litigation,* No. 3:09-1376 (N.D. Cal.) (the "*Wells Fargo* Complaint"), the court found that plaintiffs had adequately pled that "variance from the stated [underwriting] standards was essentially [Wells Fargo's] norm" and that this conduct "infected the entire underwriting process."

310. The *Wells Fargo* Complaint is supported by numerous confidential witness statements substantiating the allegations that Wells Fargo abandoned underwriting guidelines, increasingly made exceptions without compensating factors, sacrificed underwriting standards to loan volume, and manipulated loan information in order to close loans without regard to borrowers' ability to repay the loans.

311. Confidential witnesses provide additional evidence of Wells Fargo's repeated failure to adhere to sound underwriting practices and guidelines. Statements by confidential witnesses confirm that: (a) Wells Fargo underwriters faced intense pressure to close loans at any cost; (b) Wells Fargo increasingly approved risky, low- or no-documentation loans without adequate review; (c) Wells Fargo routinely approved loans that contained exceptions for which there were no reasonable compensating factors; (d) Wells Fargo employees approved loans with

inflated appraisal values; and (e) Wells Fargo employees manipulated data in order to close loans.

312. Confidential witnesses include CW-J and CW-K. CW-J worked as an underwriter at Wells Fargo for five years and left the company in approximately 2006. She helped start one of Wells Fargo's wholesale lending offices. The wholesale lending office received mortgage applications from various brokers in the area and then underwrote, approved, and funded such mortgages. CW-K was an underwriting manager at a Wells Fargo branch in California from 2004 until late 2007, when Wells Fargo closed the branch. The branch was a "MAP" center, which was a location where Wells Fargo loans were registered, underwritten, processed, closed, and shipped out for sale in pools.

313. Wells Fargo employees increasingly disregarded the credit risk of loans and quality controls in favor of generating loan volume. According to CW-K, this was because loan officers and underwriters at Wells Fargo received commissions and/or bonuses based on the number of loans closed.

314. Among Wells Fargo's abuses of underwriting standards, confidential witnesses detailed a practice of approving risky loans based upon little or no documentation. CW-J explained that underwriters at Wells Fargo's branches used two automated underwriting systems ("AUS"), which were pre-programmed with the minimum credit scores, LTV and DTI ("debt-to-income") ratios, cash reserve levels, and documentation levels needed for the borrower to qualify for the various mortgage products that Wells Fargo offered. If these AUS returned an "approve" or "accept" result, then Wells Fargo typically approved the application and funded the mortgage. CW-J commented that she was skeptical of the "approvals" that came from the AUS, and often

thought to herself, "How did it approve *this*?" The systems approved borrowers who "never should have been approved."

315. For example, the AUS would approve a borrower with recent late payments, a 50-55% DTI ratio, a 650 credit score, and no cash reserves. CW-J would have questioned such an application. However, so long as the AUS approved the loan, the underwriters in Wells Fargo's branches were not required to look any deeper. In CW-J's view, the integrity of mortgage origination "all fell apart when the AUS became the standard." She explained that by the mid-2000s, when the AUS were being relied upon almost exclusively, she no longer agreed with the loans that were being approved because the underwriting guidelines had become so loose.

316. According to CW-J, upper level management at Wells Fargo did not want to hear her concerns about mortgages being approved for borrowers with questionable credit, high debt levels, high LTV ratios, or minimal cash reserves. They were not concerned with such issues because, throughout her time with Wells Fargo, the origination and underwriting emphasis was completely sales-oriented. According to CW-J, the motto at the company was "sales rules," and underwriters had no say in the kinds of borrowers that the AUS approved.

317. The only time human underwriters were involved in the underwriting process was when the AUS recommended a loan for "refer" instead of "accept." A result of "refer" meant that the application did not meet the underwriting guidelines programmed into the AUS. These loans required manual underwriting, and most of the time they were still approved.

318. CW-J stated that underwriters at Wells Fargo were pressured to approve applications on which the AUS returned a "refer" result because "sales rules." Underwriters were pressured to approve the loans because if they did not, they were at risk of suddenly being fired. As stated by CW-J, "[t]he loan officer or broker would go to the Operations Manager and

complain, and suddenly people [underwriters] were no longer there. Additionally, underwriters received emails directly from the outside mortgage brokers or loan officers indicating that they were unhappy with the underwriter s decision not to approve an application. Many mortgage brokers expected the underwriter to approve all of his or her loans. In general, CW-J stated that the mortgage brokers and loan officers learned how to get away with what they needed in order to get the loans approved.

319. CW-J explained that, in deciding whether to approve loans, underwriters disregarded whether the borrower had the ability to repay the loan: We were just supposed to ignore all the warning signs. Even for government loan programs, LTV ratios were in the range of 95-100%, FICO scores were as low as 550 to 560, and DTI (debt-to-income) ratios were as high as 55%. Cash reserves were only required sometimes. Many of the conventional loans that CW-J underwrote between 2004 and 2006 were stated income/stated asset or no-income/no-asset loans.

320. Confidential witnesses also described Wells Fargo s standard practice of approving exceptions which deviated from prudent underwriting guidelines. According to CW-K, 30-40% of the time, Wells Fargo loan officers issued exceptions to underwriting guidelines on loans that otherwise would have been rejected.

321. CW-K noticed that the exceptions that Wells Fargo granted increased in late 2006 or early 2007, in conjunction with Wells Fargo s purported decision to tighten its underwriting guidelines. Wells Fargo s sales staff could not understand why a loan that would have been approved the prior year could not be approved in the current year, and did not accept the tightened guidelines. According to CW-K, the sales staff wouldn t take no for an answer, and therefore placed tremendous pressure on the Wells Fargo underwriters to approve their

loans. Even where the Wells Fargo underwriters would deny requests for exceptions, Wells Fargo's sales staff would take their loans to lead underwriters and risk managers to have the decisions overridden. According to CW-K, the increase in exceptions countered Wells Fargo's efforts to tighten the underwriting guidelines.

322. According to confidential witnesses, Wells Fargo employees also manipulated loan data in order to close loans and generate volume. CW-K was aware of circumstances in which loan files were doctored in order for the loans to be approved.

323. Confidential witnesses also detailed how mortgages approved by Wells Fargo were based upon inflated appraisal values. According to CW-J, the outside mortgage brokers who brought the loans to her branch for approval chose the appraisers that they wanted to use. The outside brokers, loan officers, and appraisers all had a vested interest in the appraised value being accepted and the mortgage application being approved by Wells Fargo, since they all made money off of the transaction. Consequently, they all had a "let's make a deal mentality" about reaching an appraisal value that supported the amount of the mortgage and the home's value.

324. CW-LL has been a licensed appraiser in Washington state since 1992. In the spring of 2007, CW-LL was given an assignment by Rels Valuation—the appraisal management firm used by Wells Fargo—to appraise a home on the outskirts of Seattle. CW-LL's appraisal noted that the house was being remodeled, that the remodel was incomplete, and that the house was consequently not habitable. After submitting his appraisal, CW-LL was contacted by both Wells Fargo underwriters and Rels customer service representatives, ordering him to change his appraisal to state that the house remodel was complete. This pressure culminated with CW-LL receiving a phone call from a Rels Valuation Area Manager informing him that "you appraisers take USPAP [the uniform appraisal standards] too seriously," and that if CW-LL failed to alter

his appraisal, he would be blacklisted. When CW-LL refused on the grounds that changing the appraisal would violate appraisal standards, he was blacklisted and ceased receiving work from Wells Fargo.

325. CW-MM, who formerly worked as a review resolution coordinator for Rels Valuation from February 2007 to July 2010, confirms the problematic nature of the appraisal process. According to CW-MM, Wells Fargo had an unwritten "Five Percent Rule," whereby if a Rels review appraiser came up with a new value that was within 5% of the original value, the higher value was automatically accepted.

326. CW-MM also testified that from the beginning of his tenure at Rels in 2007, until the implementation of the new federal Home Valuations Code of Conduct in 2009, pressure from Wells Fargo officers occurred "quite frequently," with CW-MM receiving at least one call a day from a review appraiser complaining that a Wells Fargo loan officer contacted him or her directly. CW-MM also sat near 18 review resolution analysts that were tasked with resolving appraisals in which the original appraiser and the review appraiser could not agree on the value. On multiple occasions, CW-MM recalls a Rels national review manager arguing with the review analysts and telling them what he believed was the correct value. CW-MM believes that this constituted undue pressure on review analysts. According to CW-MM, "[o]n the one hand the review manager was trying to run a delicate balancing act with the client, Wells Fargo. But on the other hand, you have to draw the line. Most of the stuff that I saw I felt like it was a little over the line."

327. CW-MM also emphasized that not every appraisal ordered by Rels Valuation for Wells Fargo was reviewed by human eyes. Rels relied on a computer program, called ACE, to identify problematic appraisals. While the system caught clerical errors or omissions, appraisals

containing egregious violations of USPAP were sometimes not identified until after the loan had closed.

b. The mortgages originated by Wells Fargo and securitized in the PLMBS purchased by the Bank provide further evidence of Wells Fargo's failure to adhere to sound underwriting practices.

328. Wells Fargo originated mortgages that secured at least Securities BAFC 2006-F 2A1, BAFC 2006-F 3A1, CMLTI 2006-WFH2 A2B, CMLTI 2006-WFH4 A3, NHELI 2006-WF1 A3, WFHET 2006-3 A2, and WFMBS 2006-AR3 A4. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of Wells Fargo's failure to observe its stated underwriting standards. Wells Fargo's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

329. Thus, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, at Wells Fargo, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay.

Nowhere did any Offering Document apprise the Bank of the extent to which Wells Fargo deviated from its underwriting guidelines.

c. Other investigations and lawsuits and confidential witness testimony demonstrate that Wells Fargo engaged in predatory lending.

330. In July 2009, the Attorney General for the State of Illinois brought a lawsuit in Cook County Circuit Court, captioned *People v. Wells Fargo & Corporation,* No. 09-26434 (Ill. Cir. Ct.), alleging that Wells Fargo "steer[ed minority applicants] into high cost subprime or riskier mortgage loans while White borrowers with similar incomes received lower cost or less risky mortgages" and that Wells Fargo "engaged in deceptive practices by misleading Illinois borrowers about their mortgage terms, misrepresenting the benefits of refinancing, and repeatedly refinancing borrowers' mortgages, also known as loan flipping, without any real benefit to consumers."

331. The Illinois Attorney General Complaint detailed how borrowers were "plac[ed] into subprime mortgages, even though they qualified for prime mortgages with better terms," with the result that "[i]nstead of the affordable mortgages that these borrowers should have received, they were sold mortgages that were unaffordable and unsuitable." The complaint also detailed how Wells Fargo rewarded its employees for steering borrowers away from prime mortgages and into subprime loans, creating an incentive to sell borrowers higher cost subprime loans even if they qualified for prime loans, and "failed to maintain proper controls to ensure that borrowers were not placed into mortgages that were riskier or more expensive than the mortgage loans for which they were qualified."

332. On April 7, 2010 the City of Memphis filed its First Amended Complaint in *City of Memphis v. Wells Fargo Bank,* No. 09-2857 (W.D. Tenn.), alleging violations of the Fair Housing Act and of the Tennessee Consumer Protection Act arising from Wells Fargo's

discriminatory lending practices. The Complaint attaches sworn declarations from six former Wells Fargo employees providing evidence of discriminatory and predatory lending practices.

333. Doris Dancy, a former Wells Fargo credit manager explained how she was provided with lists of leads who were predominantly minorities despite her branch being "in an area where a lot of white people lived" and how she was required to present a misleading sales pitch that did not disclose that "we were actually just giving them a new more expensive loan that put their house at risk." She detailed how her "district manager pressured the credit managers . . . to convince our leads to apply for a loan, even if we knew they could not afford the loan or did not qualify for the loan." She stated that "I knew that Wells Fargo violated its own underwriting guidelines in order to make these loans to these customers." She was instructed by her district manager "to conceal the details of the loan." Eventually she resigned because she "decided that the practices were too unethical for me to participate any longer. I hated to go to work, and found myself crying at the end of the day."

334. Another Wells Fargo credit manager, Mario Taylor, testified how:

> branch managers told us how to mislead borrowers. For example we were told to make "teaser rate" loans without informing the borrower that the rate was adjustable. . . . We were told not to tell the customer what was in the fine print. In many cases income documents were falsified in order to qualify a borrower for a loan. I know that some managers, including one of my branch managers, changed pay stubs and used white-out on documents to alter the borrower's income so it would look like the customer qualified for the loan. Borrowers were not told about prepayment penalties. [O]ne of my branch managers told me not to disclose . . . fees to borrowers.

335. Camille Thomas, a Wells Fargo loan processor, explained that "[i]t was the practice at the Wells Fargo offices where I worked to target African Americans for subprime loans . . . . Elderly African Americans were thought to be highly vulnerable and were frequently targeted for subprime loans with high interest rates." She confirmed Mr. Taylor's testimony that

credit managers and branch managers made teaser rate loans without informing the borrower that the loan had an adjustable rate . . . . In many cases documents were actually falsified to inflate a borrower s income so that the borrower would appear to meet the debt-to-income requirements. I know that at least one branch manager engaged in this practice.

336. Tony Pashal, a Wells Fargo loan officer, described the case of one borrower who had a two-year-old subprime loan and was seeking to refinance in 2006 before his teaser rate expired. He explained that:

> I determined that the borrower qualified for a prime loan. The borrower had an excellent credit score and for this reason I suspected that he had previously qualified for a prime loan in 2004 but had been inappropriately placed by Wells Fargo into a subprime ARM at that time. In working with the borrower in 2006, I informed my branch manager, Dave Zolnak, that the borrower qualified to refinance into a prime fixed-rate loan. Mr. Zolnak told me I should instead refinance the borrower into another subprime ARM. I refused [and was written up with] a negative performance evaluation in my personnel folder.

337. Elizabeth Jacobson, who was the top subprime loans officer at Wells Fargo for many years testified about how:

> the commission and referral system at Wells Fargo was set up to make it more profitable for a loan officer to refer a prime customer for a subprime loan than to make the prime loan directly to the customer. . . . When I got referrals it was my job to figure out how to get the customer into a subprime loan. I knew that many of the referrals I received could qualify for a prime loan. . . . [Loan officers] used their discretion to steer loan customers to subprime loans by telling the customer, for example, that this was the only way for the loan to be processed quickly; that there would be less paperwork or documentation requirements; or that they would not have to put any money down. Customers were not told about the added costs, or advised about what was in their best interest. . . . According to company policy, we were not supposed to solicit 2/28 customers for re-finance loans for two years after we made a 2/28 subprime loan. . . . [M]y area manager told his subprime loan officers to ignore this rule and go ahead and solicit 2/28 customers within the two year period, even though this violated our agreement with secondary market investors. The result was that Wells Fargo was able to cash in on the pre-payment penalty by convincing the subprime customer to refinance his or her 2/28 loan within the initial two-year period. . . . Wells Fargo qualified borrowers for subprime loans by underwriting all adjustable rate mortgage loans, including 2/28 loans, with the assumption that the borrower would pay the teaser rate for the full

> life of the loan even though this lower rate only applied during the first two or three years of the loan. . . . I learned of [loan officers] cutting and pasting credit reports from one applicant to another [and] subprime loan officers who would cut and paste W2 forms [to] increase the credit worthiness of the applicant so that Wells Fargo's underwriters would approve the loan. I reported this conduct to management. . . . Underwriters, like loan officers, had a financial incentive to approve subprime loans than [sic], even if the customer could qualify for a prime loan, because they got paid more . . . if a subprime loan went through.

338. Confidential witnesses confirmed that Wells Fargo engaged in predatory lending practices. For example, CW-K mentioned that Wells Fargo's underwriters did not fully inform borrowers of the risks of the loans. In addition, as the above discussion shows, Wells Fargo routinely issued loans to borrowers who lacked the ability to repay the loans in violation of predatory lending restrictions.

7. Decision One Mortgage Company, LLC

339. Decision One Mortgage Company, LLC ("Decision One") originated underlying mortgage loans securing at least two of the PLMBS purchased by the Bank. Decision One also abandoned sound underwriting practices.

340. CW-L was a senior underwriter at Decision One Mortgage from 2004 through 2007. During this period, CW-L's duties included underwriting broker and correspondent subprime, home equity, and Alt-A loans. CW-L also trained new underwriters and account managers, conducted second signature reviews, and interacted with Decision One's corporate underwriting team on loans beyond his branch's authority.

341. In approximately 2006, CW-L recalls that Decision One released internal deficiency reports that showed quality issues in tens of millions of dollars worth of defaulted loans. During this internal audit, CW-L stated, "We tore these loans apart and found a lot of fraud." CW-L believes that the bulk of the loans that were the subject of this internal audit had been approved between 2001 and 2004. However, CW-L stated that many of the practices that

led to the quality issues discovered in the loan audit continued at Decision One until late 2005 or 2006.

342. According to CW-L, the main quality issues discovered by the internal audit at Decision One in 2006 included failure to properly confirm borrower income, fraudulent verification of rental payment history, and inadequate employment verification. Regarding borrower income, CW-L explained, underwriters in some of Decision One's branches would justify a borrower's stated income by assuming they were at the highest, management-level tier of any stated field, rather than verifying the actual applicable tier. Regarding rental payment verification, CW-L explained, inexperienced Decision One underwriters and support staff failed to cross-reference landlord contact information to ensure they were contacting the borrower's actual landlord to confirm rental payment history and payment amounts. CW-L explained that similar problems occurred when supposedly verifying a borrower's employment history, but failing to verify that the underwriter was actually speaking to the borrower's employer. Instead, CW-L revealed, Decision One underwriting staff would sometimes call the borrower him or herself to "verify" the borrower's current employment.

343. CW-L further stated that as a result of end-of-month pressure at Decision One to close loans, "loans just closed without verification."

344. In approximately 2006, the corporate office of Decision One issued a company-wide directive to increase loan data due diligence, "but there were probably still branches that were closing loans that should not have been closed," according to CW-L. As part of this directive, Decision One eliminated its "stated W2" or "stated income" program on which it relied through that time as a means of borrower income "verification."

345. CW-L reports that Decision One managers overturned underwriter's decisions to deny loans "more frequently than it should [have happened]." At Decision One, a manager's decision to overturn a loan denial was usually a "business decision," which meant that the loan was for a large broker client and the manager did not want to damage the company's relationship with the broker. For example, CW-L processed about six loans per day, and estimates that one out of six of those loans was a denial that management would subsequently overturn.

346. CW-L saw "a lot" of inflated appraisal values through 2005 or 2006. "They were values that just weren't there . . . . We had some management overrides on [inflated] appraisal values that were unwarranted." According to CW-L, Decision One managers also removed "derogatory" photos of properties from comparables supplied by appraisers. The company discovered this practice when investment banks occasionally requested copies of the original appraisals and noticed that Decision One had removed the photos. This practice of removing photos of comparables at Decision One occurred until some point in 2006.

347. By 2006 or 2007, CW-L saw fewer inflated appraisal values cross his desk because of third-party reviews.

348. Decision One originated mortgages that secured at least Securities MSAC 2006-HE5 A2C and MSAC 2006-HE6 A2C. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of Decision One's failure to observe its stated underwriting

standards. Decision One's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

349. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, at Decision One, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which Decision One deviated from its underwriting guidelines.

8. Ameriquest and Argent

350. Ameriquest Mortgage Company originated underlying mortgage loans securing at least two of the PLMBS purchased by the Bank. Ameriquest was the wholly owned retail lending subsidiary of ACC Capital Holdings ("ACC"), one of the nation's largest subprime lenders. ACC also owned mortgage subsidiary, Argent. Argent originated underlying mortgage loans for at least one of the PLMBS purchased by the Bank.

351. Both Ameriquest and Argent abandoned sound underwriting practices and engaged in predatory lending during the relevant period. In 2010, Argent was identified by the OCC as the eighth worst subprime lender in the country, and Ameriquest was identified as the fourteenth worst, based on the delinquency rates of the mortgages they originated in the ten metropolitan areas with the highest rates of delinquency.

352. Ameriquest's management pressured employees to generate loan volumes at all costs: "Up and down the line, from loan officers to regional managers and vice presidents, Ameriquest's employees scrambled at the end of each month to push through as many loans as possible to pad their monthly production numbers, boost their commissions, and meet [founder] Roland Arnall's expectations. Arnall was a man "obsessed with loan volume," former aides recalled, a mortgage entrepreneur who believed "volume solved all problems." Michael Hudson, *The Monster: How a Gang of Predatory Lenders and Wall Street Bankers Fleeced America – and Spawned a Global Crisis* (forthcoming from Times Books 2010), *excerpt available at* http://us.macmillan.com/BookCustomPage.aspx?isbn=9780805090468#Excerpt (last visited Oct. 12, 2010). As a result of such pressures at Ameriquest, employees falsified documents, forged borrowers' signatures on government-required disclosure forms, and misrepresented the terms of loans in order to induce borrowers to take out loans they could not afford. *Id.* In fact, "Ameriquest's deals were so overpriced and loaded with nasty surprises that getting customers to sign often required an elaborate web of psychological ploys, outright lies, and falsified papers. Every closing that we had really was a bait and switch," a loan officer who worked for Ameriquest in Tampa, Florida, recalled. "[c]ause you could never get them to the table if you were honest." *Id.*

353. According to a December 8, 2007 *Miami Herald* article, various Argent employees, including former vice president Orson Bean who is currently in prison for his activities at Argent, actively assisted brokers in falsifying borrower information, inflating income, inventing jobs, and inflating net worth. Mr. Bean explained that "the accuracy of loan applications was not a priority." Unsurprisingly, then, when the *Miami Herald* examined loan applications it "found at least 103 [out of 129 examined] that contained false and misleading

information and red flags [such as] non-existent employers, grossly inflated salaries and sudden drastic increases in a borrower's net worth. In one instance a borrower [who] claimed to work a job that didn't exist . . . got enough money to buy four houses.

354. The *Cleveland Plain Dealer*, in a May 2008 article entitled *The Subprime House of Cards*, quoted Jacquelyn Fishwick, who worked for Argent for two years in the Chicago area as an underwriter and account manager, as stating that some Argent employees played fast and loose with the rules. For instance she saw account managers remove documents from files and create documents by cutting and pasting them.

355. Citibank's Business Chief Underwriter, Richard Bowen, testified before the FCIC in April 2010 that he advised against Citibank's 2007 acquisition of Argent because of the number of fraudulent loan applications he saw in an Argent loan sampling prior to the acquisition.

356. Mr. Bowen testified before the FCIC that we sampled loans that were originated by Argent and we found large numbers that did not that were not underwritten according to the representations that were there.

357. An August 2007 *Business Week* article discusses the case of Mary Overton of Brooklyn, New York. Without her knowledge or understanding, Ameriquest created false tax returns, employment records, and a 401(k) to make her appear qualified for a loan as part of a scheme to coerce her to sign a loan which she could not afford.

358. A former Ameriquest loan officer interviewed on *National Public Radio* recalled that at her office in Tampa Florida, in order to close a loan at any cost, managers encouraged loan officers to conceal the actual cost and interest rate on loans and would white out income numbers on W2s and bank statements and fill in bigger amounts basically to qualify people for

loans that they couldn't afford." This practice was known as "taking the loan to the Art Department." The *National Public Radio* broadcast stated that other former Ameriquest employees confirmed this same conduct occurred around the country.

359. Senior management at Ameriquest was well aware of the fraud plaguing the origination process, but willfully ignored it. Ed Parker, the former head Ameriquest's Mortgage Fraud Investigations Department, told the FCIC that fraudulent loans were very common at the company. "No one was watching. The volume was up and now you see the fallout behind the loan origination process." FCIC Majority Report at 161. According to Parker, he detected fraud at the company within one month of starting his job there in January 2003, but senior management did nothing with the reports he sent. He later heard that other departments were complaining he "looked too much" into the loans. In November 2005, he was downgraded from "manager" to "supervisor," and was laid off in May 2006. *Id.* at 12.

360. Ameriquest was also among 14 lenders named by the NAACP in a complaint alleging "systematic, institutionalized racism in sub-prime home mortgage lending." According to the lawsuit, African American homeowners who received sub-prime mortgage loans from these lenders were more than 30 percent more likely to be issued a higher rate loan than Caucasian borrowers with the same qualifications. In January of 2009 the court denied a motion to dismiss, finding that the plaintiff had sufficiently pled a disparate impact claim. Moreover, Marc S. Savitt, a past president of the National Association of Mortgage Brokers, testified to the FCIC that while most mortgage brokers looked out for borrowers' best interests and steered them away from risky loans, about 50,000 of the newcomers to the field nationwide were willing to do whatever it took to maximize the number of loans they made. Savitt singled out Ameriquest as an example of a loan originator that was "absolutely" corrupt. FCIC Majority Report at 14.

361. Ameriquest and Argent originated mortgages that secured at least Securities AMSI 2005-R10 A2B, ARSI 2005-W5 A2C, and CBASS 2006-CB4 AV3. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of Ameriquest's and Argent's failures to observe their stated underwriting standards. Ameriquest's and Argent's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

362. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, variance from the stated standards was the norm at Ameriquest, and Ameriquest approved numerous loans with essentially little to no underwriting screens applied to the loans or effort to evaluate the borrowers' ability to repay. Similarly, Argent was widely engaged in actively falsifying borrower information, inflating income, inventing jobs, and inflating net worth on the mortgage loan applications it approved.

363. Nowhere did any Offering Document appraise the Bank of the extent to which Argent or Ameriquest deviated from their underwriting guidelines and the extent to which they engaged in predatory lending.

9. Downey Savings & Loan

364. Downey Savings & Loan originated underlying mortgage loans securing at least 2 of the PLMBS purchased by the Bank. Downey also abandoned sound underwriting practices.

365. In its SAFETY AND SOUNDNESS: MATERIAL LOSS REVIEW OF DOWNEY SAVINGS AND LOAN, FA, OIG-09-039 (June 15, 2009), the OIG noted that:

> Downey's loan underwriting standards, in terms of income and asset documentation, became more lenient. Downey required no documentation for some borrowers. . . . [T]he trend toward reduced documentation loans rose from an already high level of 60 percent of Downey's option ARM portfolio in 2000 to 91 percent of that portfolio in March 2008.

366. The OIG further explained how:

> [i]n October 2003, Downey expanded use of . . . Downey Express . . . stated income and stated assets loan[s]. Underwriting was limited to Downey's review of the property appraisal . . . and the borrower's FICO score. At that same October 2003 meeting, the board agreed to . . . expand[] the program to include subprime borrowers. . . . Through Downey it was [therefore] possible for a subprime borrower to get an option ARM loan (with negative amortization potential) with reduced documentation.

367. Downey originated mortgages that secured at least Securities HVMLT 2006-2 2A1A and HVMLT 2006-2 3A1A. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these securities have exhibited excessive delinquency and

foreclosure rates. These circumstances are strong evidence of Downey's failure to observe its stated underwriting standards. Downey's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

368. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact at Downey variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which Downey deviated from its underwriting guidelines.

10. Option One Mortgage

369. Option One Mortgage Corporation ("Option One") originated underlying mortgage loans securing at least two of the PLMBS purchased by the Bank. Option One as well abandoned sound underwriting practices. Option One was identified by the OCC as the seventh worst subprime lender in the country based on the delinquency rates of the mortgages it originated in the ten metropolitan areas with the highest rates of delinquency.

370. In denying a Motion to Dismiss and approving a preliminary injunction against Option One and its parent H&R Block, the Superior Court for the Commonwealth of Massachusetts found that the defendants had issued loans for which there was "a substantial likelihood that the Commonwealth will prevail in proving that Option One and H&R Mortgage

acted unfairly in violation of G.L. c. 93A, § 2 by issuing a significant number of home mortgage loans with reckless disregard of the risk of foreclosure and further explained that there was substantial authority suggesting that the issuance of [such a] loan is predatory lending. *Massachusetts v. H&R Block, Inc*., No. 08-2474, slip op. at 8, 48 (Suffolk County Super. Ct. Nov. 10, 2008) (order granting preliminary injunction).

371. According to the complaint filed by the Attorney General for the Commonwealth of Massachusetts, filed after a significant investigation, Option One increasingly disregarded underwriting standards, created incentives for loan officers and brokers to disregard the interests of borrowers and steer them into high cost loans, and originated thousands of loans that [Option One] knew or should have known the borrowers would be unable to pay, all in an effort to increase loan origination volume so as to profit from the practice of packaging and selling the vast majority of its residential subprime loans to the secondary market.

372. The Massachusetts Attorney General's complaint alleges that Option One agents and brokers frequently overstated an applicant's income and/or ability to pay, and inflated the appraised value of the applicant's home, and that these practices were allowed to continue because Option One avoided implementing reasonable measures that would have prevented or limited these fraudulent practices.

373. In addition, Option One was among 14 lenders named by the NAACP in a complaint alleging systematic, institutionalized racism in sub-prime home mortgage lending. In 2008, Option One settled all claims, agreeing to allow the NAACP to participate in the design of a training and testing program for its employees, to assist with various public education projects, and to contribute money to help pay for various NAACP programs.

374. Statements by confidential witnesses CW-M, a senior review appraiser at Option One in a California branch from April 2001 to December 2006, and CW-N, senior account manager at Option One in a Georgia branch from August 2005 until April 2006, confirm that: (a) Option One underwriters faced intense pressure to close loans; (b) Option One approved risky loans without adequate review; and (c) Option One employees approved loans with inflated appraisal values.

375. CW-M explained that, due to high demand for securitized loans, Option One wanted its employees "to be more aggressive." When Option One employees told top level managers at the company that "investors will never buy this," the managers would reply, "Somebody will buy it." Consequently, Option One's focus was simply on generating loans for sale – "[a]s long as they could sell it, that's what mattered."

376. CW-N recalled one particular broker who insisted that Option One approve his loans, even though his loan files frequently did not contain the requisite documentation. Nevertheless, "[h]e was given preferential treatment and his loans were always pushed through" because he supplied the company with "lots and lots of loans."

377. CW-M also recalled situations in which Option One allowed loans with inflated appraisal values to be approved. She mentioned that underwriters often failed to spot "red flags" in the appraisal values on the loans, and therefore did not escalate the appraisals to CW-M's appraisal department for further review and due diligence. Moreover, during her tenure at Option One, CW-M recalled that Option One "watered down" its appraisal system so that fewer loans were "kicked over to the appraisal department."

378. According to CW-M, when Option One's staff appraisers did receive loans for review, they would "cut the value" of appraisals on loans that were "really bad." Nevertheless, Option One sometimes disregarded the appraisers' reports and made the loans anyway.

379. Option One originated mortgages that secured at least Securities OOMLT 2005-5 A3 and OOMLT 2006-2 2A3. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of Option One's failure to observe its stated underwriting standards. Option One's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

380. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at Option One, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Documents apprise the Bank of the extent to which Option One deviated from its underwriting guidelines.

11. First Franklin

381. First Franklin originated underlying mortgage loans for at least six of the PLMBS purchased by the Bank. Merrill Lynch acquired First Franklin Financial Corp. and affiliated lending units NationPoint and National City Home Loan Services Inc. on December 30, 2006. Like the other originators identified above, First Franklin also abandoned sound underwriting practices and engaged in predatory lending. First Franklin was identified by the OCC as the fifth worst subprime lender in the country based on the delinquency rates of the mortgages it originated in the ten metropolitan areas with the highest rates of delinquency.

382. Statements by confidential witnesses confirm that: (a) First Franklin underwriters faced intense pressure to close loans at any cost; (b) First Franklin increasingly approved risky, low- or no-documentation loans without adequate review; (c) First Franklin routinely approved loans that contained exceptions for which there were no reasonable compensating factors; (d) First Franklin employees approved loans with inflated appraisal values; and (e) First Franklin employees manipulated data in order to close loans.

383. Confidential witnesses include CW-O, an underwriter at a First Franklin branch in Georgia from March 2004 to November 2007. He underwrote wholesale, subprime loans. The Georgia branch where he worked employed approximately 70 individuals, seven of which were underwriters. CW-P was an underwriter at a First Franklin from August 2004 to June 2005, and worked out of a First Franklin branch in Texas. Similarly, CW-Q was an underwriter at a First Franklin branch in Florida from 1999 until 2007.

384. CW-R worked at a First Franklin branch in Utah from 1996 until March 2008. She began working in the shipping department, became a loan account manager (account

executive), and then transitioned to underwriting. CW-R served as an underwriter between July 2006 and March 2008.

385. CW-S was an underwriter at a First Franklin branch in Washington from 2005 until November 2007. Her Washington branch received loan applications from across the country.

386. CW-T worked at First Franklin from 1998 until April 2007. Between 1998 and 1999, she worked in a Nevada branch of First Franklin as an underwriter. From 2000 until 2007, she worked in First Franklin s branch in Ohio, first as an underwriter and then as an account executive. During her last four years as an account executive at the company, she also assisted with the underwriting of loans when the volume of loans was too much for the underwriters to handle.

387. According to CW-O, account executives received a monthly commission based on the dollar value of approved loans; the more loans that were approved, the higher the account executive s commission. Consequently, said CW-O, Account executives were making $100,000 a month in commissions. They lived in Sugarloaf Country Club with baseball players and other celebrities. I couldn t get into Sugarloaf if I tried. I d have to sneak in the back door.

388. Due to the commissions they stood to make, CW-O explained that account executives at First Franklin frequently pressured underwriters who declined loans. If the underwriter refused to change his or her mind, the account executives went to upper management to get the loan approved. As CW-O stated, Nine out of ten times the loan went through. Upper management frequently overrode the underwriters recommendations to decline loans because people were making so much money on the loans.

389. CW-T echoed the same comments, and said that the more loans First Franklin closed, the more money account executives received in commissions. She explained, "Account executives paid processors cash under the table to help them get loans closed." CW-T recalled that one loan processor at her branch office, who worked for one of the top-producing account executives, was caught altering loan documents to get loans closed.

390. Similarly, as detailed by CW-S, after First Franklin hired a number of former employees from a company called "OwnIt Mortgage" (in the 2005/2006 time frame), non-compliant loans at her branch in Washington were frequently approved. The OwnIt underwriting manager became the manager at First Franklin's branch, and the OwnIt employees "were used to approving anything. They'd say, 'If we don't approve it, somebody else will. So why lose the money?'" The new underwriting manager from OwnIt "overrode [loans] that we [the underwriters] declined." The manager told CW-S that she was overriding the underwriters' recommendations in order to grow business for the branch and make their numbers.

391. Among First Franklin's abuses of underwriting standards, confidential witnesses detailed a pervasive practice of approving risky loans based upon little to no documentation. According to CW-O, First Franklin underwrote tons of "stated loans," which he and colleagues referred to as "liar loans" because they understood that "the borrower could basically state whatever they wanted" on the loan application. He said that the problem became particularly bad between 2005 and 2007.

392. Additionally, CW-O said he underwrote many no-documentation loans for borrowers, even when such borrowers had W-2s. He knew that the borrowers had W-2s because the borrowers would mention them on their applications, which made him question their eligibility for the loans: "Why would you need a no-doc loan if you had the documents?"

393. CW-T said that, as stated loans grew in popularity at First Franklin in the early 2000s and particularly in 2005, all underwriting became credit score-oriented. As she said, "If the [credit] score was above 700, you used a no-doc loan and you could just give a loan away. It was basically a blank 1003 [the uniform residential loan application]."

394. According to CW-P, fraudulent loans were underwritten at First Franklin "all the time." CW-P did not approve fraudulent loans, but "somebody would come behind me and sign off on the loan," or a more senior manager would tell CW-P to approve the loan and the manager would "counter-sign," so that CW-P would not be entirely responsible for the loan. If CW-P still refused to approve the loan, he would risk losing his job.

395. Confidential witnesses also described First Franklin's standard practice of approving exception loans which deviated from prudent underwriting guidelines. According to CW-T, the pressure to grant exceptions increased significantly at the end of the month because borrowers wanted to reduce closing costs by closing at the end of the month. In the 2005 to 2007 timeframe, "people were working until 8 p.m. on Saturdays and Sundays" in order to close the loans. Consequently, "a lot of loans slipped through. People were tired of being beat up. With the rush of loans, stuff could have been overlooked. Maybe the conditions didn't exactly meet the guidelines." Significantly, during the last crucial days of each month, employees were "begging for exceptions to close their loans." At times, employees formed a line outside the door of the branch manager's office in order to ask for exceptions to the guidelines. CW-T recalled one month when the branch manager, exhausted from having reviewed so many loans, came out of his office and yelled: "Oh f*** it! Just close the f***ing loans." The employees returned to their desks and closed their loans. According to CW-T, "It got out of hand."

396. CW-R detailed similar problems, and said that, at First Franklin, "some loans were approved that were not compliant with guidelines." CW-R also testified that account executives would approach branch managers to ask for exceptions and to have the underwriters' decisions to decline overturned. The managers would approve the loans in order to maintain relationships with the mortgage brokers. Because the mortgage brokers were providing the supply of loans, they did not want to risk angering them and losing the business.

397. On March 5, 2008, Merrill Lynch announced that it was discontinuing mortgage origination at its first Franklin subsidiary and was planning to explore the sale of Home Loan Services, a mortgage loan servicing unit for First Franklin. According to a March 5, 2008, press release issued by Merrill Lynch:

> The company said it made the decision to discontinue lending by First Franklin because of the deterioration of the subprime lending market.
>
> "Since July, we have reduced staffing at First Franklin by nearly 70 percent, but after evaluating a number of strategies, we believe it is appropriate to discontinue mortgage origination," said David Sobotka, head of Fixed Income, Currencies & Commodities at Merrill Lynch.

398. According to CW-R, as part of the discontinuation of its mortgage origination operations, in November 2007, First Franklin shut down all but six of the company's branches and decided that all underwriters in the remaining branches would assist with loss mitigation. The purpose of the loss mitigation group was to review loans that the investment banks requested First Franklin to repurchase because the loans allegedly were not compliant with First Franklin's guidelines. The loss mitigation staff compared the loans to the guidelines that existed on the day the loan was approved in order to conduct their compliance review. CW-R found that fifty percent of the loans that she reviewed were not complaint with First Franklin's guidelines. Moreover, during her review, CW-R found examples of fraud and areas of non-compliance that

the investment banks had missed: "We were finding more [non-compliance issues] than the banks were finding." Examples of non-compliance included inflated appraisal values, insufficient employment verification or no employment verification, and credit scores that fell short of First Franklin's guidelines. All of the non-compliant loans were stated loans. CW-R was not shocked that 50% of the loans she reviewed were not compliant: "We were doing so much volume. There were lots of chances for things to slip through."

399. CW-Q explained that First Franklin compromised loan quality for business growth: "If a loan was borderline compliant [with guidelines], we would approve the loan."

400. Confidential witnesses further explained that First Franklin approved loans based upon inflated appraisal values. CW-O said that First Franklin often hired contract appraisers to provide values on properties, and the appraisers inflated the values. CW-O recalls that "[t]hese were homes with busted out windows and the meter boxes were missing," but they were still appraised at $300,000. According to CW-O, the combination of stated income loans and inflated property values which "led to the mortgage crisis."

401. According to confidential witnesses, First Franklin employees frequently manipulated loan data in order to close loans and generate volume. CW-Q explained that, at First Franklin, "a lot of fraudulent loans were going through. There was tons of fraud going on." Even when the underwriters said loans weren't reasonable, the branch manager would override their opinions. According to CW-Q, "In 2005 . . . growth was the top priority for the company."

402. Similarly, while underwriting loans for First Franklin, CW-O "saw a lot of fake W-2s come through." He knew that the documents were fabricated because the tax withholdings did not match the stated income amounts. He knew that brokers were "whiting out or faxing

over the actual numbers, and writing in new numbers so that the loans would work. According to CW-O, "a lot of loans were getting through that had false incomes."

403. CW-O said that when loans defaulted before the first payment, the underwriters were tasked with finding out why the loan had defaulted. In some instances, CW-O went out to the property to try and speak with the borrowers. When he went, it was not uncommon for him to find an empty house that had been sold as an owner-occupied home. As he said, "There'd be a couch and a TV and no blinds on the windows." The problems were not isolated in his area: "There was so much negligence and fraud in the Atlanta area, but it wasn't just Atlanta. It was all over."

404. CW-R confirmed that, at First Franklin, she came across fraudulent loan applications on a regular basis, typically with regard to the borrower's employment or income information. "I saw blatant fraud," she said, and recalled a borrower who was buying a $500,000 property as owner-occupied when the same borrower had just purchased a $1 million home in the same neighborhood a month earlier as owner-occupied. As CW-R stated, "You can't have two owner-occupied properties." Although that particular loan "ended up dying," First Franklin managers "were mad at [her] for catching it." And other similar loans "did get approved" because other underwriters were looser with their practices and guidelines than she was.

405. CW-T said that the mortgage brokers sent her a lot of fraudulent loans: "A lot of brokers sent me sh**. I could smell fraud a mile away." Although she said she declined fraudulent loan applications when she found them, she admitted that she didn't always examine the entire loan file because "there might be something in the file that would kill the loan."

406. CW-S also explained that managers could manipulate loans so that they would be approved by First Franklin's systems. Thus, loans that had previously been declined were being approved, even though, according to CW-S, they "were not good loans to begin with."

407. Confidential witnesses also described predatory lending practices at First Franklin, where originators enticed borrowers into loans they could not afford and misrepresented the terms of adjustable-rate mortgages. CW-O said First Franklin employees frequently approved stated loans even when they were uncomfortable with the loans. After work on several occasions, CW-O met with his colleagues and they all discussed their level of discomfort with the loans that were being approved. "We had to go out collectively," he said. "We thought, 'This was ridiculous.'" They knew that First Franklin was approving loans for borrowers that the borrowers couldn't really afford. For example, "[Borrowers] had foreclosures and bankruptcies," yet underwriters approved their stated loan applications. CW-O also saw applications where a borrower had a 780 credit score, but only a $5,000 credit line, and was trying to buy a million dollar house.

408. Similarly, CW-R said that she saw loans which fit First Franklin's guidelines, but which nevertheless seemed beyond the borrower's ability to pay. Despite this problem, First Franklin's underwriters were expected to approve *any* loan which fit the guidelines. As CW-R said, "If it fit the guidelines, you can't not approve it."

409. CW-T said that mortgage brokers who sent loans to First Franklin to close did not explain to borrowers how adjustable-rate mortgages worked: "Brokers didn't give a sh**. They just wanted to do a loan. They didn't explain ARMs to borrowers."

410. In addition, First Franklin was among 14 lenders named by the NAACP in a complaint alleging "systematic, institutionalized racism in sub-prime home mortgage lending."

411. CW-P also described rampant appraisal fraud. "Appraisals were inflated all the time." First Franklin, as a wholesale lender, did not order appraisals directly from appraisers, but the brokers that were responsible for obtaining the appraisals for First Franklin routinely called up appraisers and told them that they needed a certain value to make the deal work. If the appraiser refused to come in at value, the broker would simply move on to another appraiser that would come in at value. While an underwriter could reject a loan if he believed an appraisal was inflated, high productivity loan officers would sometimes complain to a branch manager about the rejection, and often the loan officers would win. CW-P rejected loans that contained "pushed" loan-to-value ratios, inflated incomes, or inflated appraisal values, only to be overruled by his managers. CW-P estimates that for 10-15% of the loans he underwrote, management would override his denials and issue the loan.

412. First Franklin originated mortgages that secured at least Securities FFML 2006-FF13 A2C, FFML 2006-FF8 IIA3, FFML 2006-FF12 A3, FFML 2006-FF12 A4, FFML 2006-FF14 A5, and FFML 2006-FF10 A7. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of First Franklin's failure to observe its stated underwriting standards. First Franklin's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and

primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

413. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at First Franklin, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which First Franklin deviated from its guidelines and engaged in predatory lending.

12. WMC Mortgage Corp.

414. WMC Mortgage Corp, owned by General Electric as of 2004, originated underlying mortgage loans for at least three of the PLMBS purchased by the Bank. WMC was identified by the OCC as the second worst subprime lender in the country based on the delinquency rates of the mortgages it originated in the ten metropolitan areas with the highest rates of delinquency. Like the other originators identified above, WMC Mortgage Corp. abandoned sound underwriting practices and engaged in predatory lending.

415. In June 2008, the Washington State Department of Financial Institutions filed a Statement of Charges and Notice of Intent to Enter Order to Revoke License, Prohibit from Industry, Order Restitution and Collect Investigation Fees against WMC Mortgage, alleging multiple violations of Washington State deceptive and unfair practices laws, including multiple failures to make required disclosures to borrowers of the essential terms of their loans.

416. The State of Washington Department of Financial Institutions also closed down a broker who worked to market WMC Loans for multiple instances of fraud, including "caus[ing]

the preparation of false and fraudulent payment instruments such as cashier's checks, personal checks and business checks, which were submitted to mortgage lenders in support of loan applications for buyers of residential properties to obtain financing and caus[ing] the preparation of false and fraudulent loan documentation such as HUD-1 settlement statements, loan application forms, and gift letters in order to misrepresent that buyers/borrowers of residential properties had paid down payments as required by mortgage lenders, when in truth and in fact, buyers/borrowers had not provided the down payments required by the mortgage lenders.

417. A *New York Times* story reported on a WMC mortgage issued based on fraudulent income and asset disclosures unknown to the borrower, Ms. Philemond. The borrower, a receptionist whose husband owned a sign business, was issued two mortgages with monthly payments of $3,800 prior to resetting to a higher level when the interest rate became adjustable early in 2008. The couple's income had been overstated on the mortgage application by brokers who had helped them buy the house and get a loan from WMC Mortgage, which said that it had granted Ms. Philemond the loan because the information on her application indicated that she and her husband had income of more than $100,000 a year, savings exceeding $60,000 and had a tenant. None of this was true. Vikas Bajaj, *For Some Subprime Borrowers, Few Good Choices*, N.Y. TIMES, Mar. 22, 2007.

418. A *Reuters* Report states that:

> General Electric Co.'s subprime mortgage unit is responsible for some of the worst-performing loans in the benchmark index for the $575 billion market for home equity asset-backed securities, showing few lenders are immune to recent U.S. housing sector problems.
>
> Losses on more than $2.6 billion in loans issued by WMC Mortgage, a Burbank, California-based unit of GE Money Bank, are expected to top 15 percent, the

> highest projected rate of any bond in the widely watched ABX derivative index of bonds issued in early 2006, a UBS Securities model showed.
>
> Thirty-day delinquencies rose to 9.62 percent in February, from less than 2.0 percent six months ago, on WMC's loans backing one of the 20 bonds in the ABX 06-2 index, according to Morgan Stanley, whose Morgan Stanley ABS Capital I Trust packaged the loans into home equity ABS.
>
> WMC loans in Morgan Stanley's MSAC 2006-WMC2 bond carry characteristics of subprime issues that analysts have blamed for surging delinquencies.
>
> More than half the loans have "stated" income documentation that don't require borrowers to prove their ability to repay the loan, data on Morgan Stanley's Web site showed.
>
> First and second lien loans together cover more than 90 percent of the homes' values, making them riskier to investors since the homeowners have little equity at stake. Most lenders have been paring back on such loans, especially those with "piggyback" second mortgages that help finance 100 percent of the home.

419. In *PMI Mortgage Insurance Company v. WMC Mortgage Corporation,* No. BC 381972 (L.A. Sup. Ct.), WMC MBS insurer PMI alleges that, with respect to WMC securitizations it insured, WMC "breached various representations and warranties" including that (a) the loan to value ratios for mortgages at the time of origination was greater than 100%; (b) fraud, errors and misrepresentations, or gross negligence took place on the part of WMC, the associated borrower, and/or another party involved in the origination of the Mortgage loans; and (c) the loans did not comply with WMC's own underwriting standards at the time of origination.

420. PMI's allegations are supported by a review of a sampling of loan documents performed by Clayton Fixed Income Services Inc. Clayton's sampling review identified 120 loans that breached WMC's representations and warranties. For 46 out of the 120 defective loans, Clayton discovered an unreasonable stated income and/or misrepresentations of income and/or employment, the large majority of which could have been discovered by WMC through simple due diligence procedures. For 27 out of the 120 defective loans, Clayton discovered

misrepresentations of occupancy status by the borrower that could also have been discovered through simple due diligence procedures.

421. PMI's complaint emphasizes that while Clayton only analyzed a sample of loans, the deficiencies it uncovered demonstrate a "systematic failure" by WMC to apply sound underwriting standards and practices, and that these deficiencies cut across all of the loans in the securitization. In fact, 30% of the loans in the securitization were delinquent as of October 2007, a mere eight months after the close of the securitization. According to PMI, the sheer volume of delinquencies compels the conclusion that widespread underwriting deficiencies are present throughout the entire loan pool.

422. WMC was also among 14 lenders named by the NAACP in a complaint alleging "systematic, institutionalized racism in sub-prime home mortgage lending." According to the lawsuit, African American homeowners who received subprime mortgage loans from these lenders were more than 30 percent more likely to be issued a higher rate loan than Caucasian borrowers with the same qualifications. In January of 2009 the court denied a motion to dismiss, finding that the plaintiff had sufficiently pled a disparate impact claim.

423. WMC originated mortgages that secured at least Securities MSAC 2006-WMC2 A2C, MSAC 2006-HE5 A2C, and MSAC 2006-HE6 A2C. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these certificates have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of WMC's failure to observe its

stated underwriting standards. WMC's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

424. Accordingly, far from following their underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at WMC Mortgage Corp., variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which these mortgage originators deviated from its guidelines and engaged in predatory lending.

13. OwnIt Mortgage Solutions, Inc.

425. OwnIt Mortgage Solutions, Inc. ("OwnIt") originated underlying mortgage loans for bond CBASS 2006-CB4 AV3 purchased by the Bank.

426. OwnIt Mortgage Solutions, Inc. was located in Agoura Hills, California. It was the nation's sixteenth biggest issuer of subprime home loans, and in 2010, OwnIt was identified by the OCC as the fifteenth worst subprime lender in the country based on the delinquency rates of the mortgages it originated in the ten metropolitan areas with the highest rates of delinquency.

427. In 2005, OwnIt's 700 employees originated $8.3 billion in home mortgage loans. As described by CW-S, *see supra* ¶390, a former First Franklin underwriter who worked with former OwnIt employees —including managers —at First Franklin in 2005, OwnIt employees

were "used to approving anything. They'd say, 'If we don't approve it, somebody else will. So why lose the money?'" CW-S's underwriting manager and underwriting supervisor, both former OwnIt employees, overrode loans that CW-S declined and knew how to "re-work" loans so that system accepted them.

428. OwnIt originated mortgages that secured at least Certificate CBASS 2006-CB4 AV3. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing this Security, including misstatements with respect to the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described in Paragraphs 470-71 below, this certificate has exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of OwnIt's failure to observe its stated underwriting standards. OwnIt's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

429. Further allegations relating to OwnIt are *supra* at ¶390 and *infra* at ¶¶473-474.

14. First Horizon Home Loan Corporation

430. First Horizon Home Loan Corporation ("First Horizon") originated underlying mortgage loans securing at least one of the PLMBS purchased by the Bank.

431. Confidential witnesses provided evidence of First Horizon's failure to adhere to sound underwriting practices and guidelines. Statements by CW-U, an underwriter at First

Horizon from August 2004 until May 2006, confirm that First Horizon pressured employees to meet high production volumes, to the detriment of quality control.

432. As an underwriter, CW-U said he found problems in the loans that he reviewed "almost daily." Most frequently, he saw loan files that were "missing pay stubs" or other documents. CW-U was required to bring serious errors to the attention of his supervisor, which he did approximately once per week.

433. In 2006, CW-U stated that his work-production quota doubled from reviewing 5 loans per day to reviewing 10 per day. Although First Horizon demanded that he review more loans, they did not provide any software or "anything that would make the job go faster." CW-U felt that he could perform a decent quality-control review of the loans when his quota was 5 per day, but when he was told to review 10 per day his "real fear was degradation of quality." Nevertheless, First Horizon's emphasis was solely on quantity: according to CW-U, "It was put to me that I had to meet the quota or I'd be let go." After CW-U regularly fell short of the 10-per-day quota in an attempt to perform a sufficient review, he was counseled for low production volume "two to three times" and ultimately terminated for failing to meet the quota.

434. First Horizon originated mortgages that secured at least Certificate FHASI 2006-AR1 2A1. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing this security, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, this security has exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of First Horizon's failure to observe its stated underwriting

standards. First Horizon's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

435. As detailed above, rather than follow its underwriting guidelines and perform a prudent review of the loans it was approving, First Horizon sacrificed quality for quantity. Consequently, many loans were made with essentially little to no underwriting. Nowhere did any of the Offering Documents apprise the Bank of the extent to which First Horizon deviated from its underwriting guidelines.

15. Bank of America, N.A.

436. Bank of America, N.A. ("Bank of America") originated underlying mortgage loans securing at least three of the PLMBS purchased by the Bank.

437. Confidential witnesses provided evidence of Bank of America's failure to adhere to sound underwriting practices and guidelines. Statements by CW-V, who worked for Bank of America from August 2004 through April 2008 as a bank teller, sales and service specialist, and personal banker, confirm that Bank of America: (a) adopted practices encouraging employees to disregard a borrower's ability to qualify for a loan; (b) pressured employees to generate large quantities of loans at any cost; (c) created an environment where employees manipulated loan data in order to get loans approved; and (d) failed to adhere to its own underwriting guidelines.

438. During his time at Bank of America, CW-V was involved in the bank's retail and consumer banking operations, including generating residential mortgages by taking mortgage

applications from prospective borrowers who applied through his branch office. CW-V ultimately left Bank of America because of "unethical stuff" he observed in the mortgage lending side of Bank of America's business.

439. Specifically, CW-V said there was "horrible" pressure to generate quantities of loan applications and approved loans. According to CW-V, Bank of America imposed a *quarterly* requirement to book one million dollars in mortgage loans per banker. CW-V received a notice when mortgage applications that he prepared were approved for funding and were thus "booked" for purposes of meeting his one-million-dollar requirement. To meet these requirements, CW-V said he and his colleagues were told to enter mortgage applications regardless of whether it appeared the borrower would qualify for the loan. These practices led CW-V to view Bank of America's way of doing business as "fast food banking."

440. CW-V explained that there were times at quarter-end when Bank of America employees would believe that they weren't going to meet the million-dollar-per-quarter quota. Suddenly, the employee's loan would be booked because the Branch Manager had gone to the Regional Manager, who "pulled some strings" to get the loan approved.

441. Additionally, CW-V believed that Bank of America was lax on enforcing its own credit guidelines. He recalled that borrowers with a lower FICO score than was required still obtained mortgages from his branch.

442. CW-V described other practices with which he was uncomfortable, including manipulating loan data to get loans approved. For example, CW-V said that he and other bankers in his branch regularly rounded up applicants' salaries on the loan applications. Specifically, if someone's income was $34,000 annually, Bank of America employees would round it up to $40,000 to make the figure look better for loan approval purposes. CW-V said that

Bank of America employees also inflated how long an applicant had worked for his or her current employer. If the applicant had only worked for an employer for one year and the qualifications required two years with that employer, the Bank of America employee would input on the application that the person had worked for his or her company for three years.

443. CW-V said that he understood these practices were necessary in order to have greater success meeting the quarterly quota of one million dollars in booked mortgage volumes.

444. Bank of America originated mortgages that secured at least Certificates BAFC 2006-C 2A1, BAFC 2006-E 2A2, and BAFC 2006-E 3A1. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶591-592, these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of Bank of America's failure to observe its stated underwriting standards. Bank of America's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

445. As detailed, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at Bank of America, N.A., variance from the stated

standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which Bank of America, N.A. deviated from its underwriting guidelines.

16. HomeComings Financial Network, Inc.

446. HomeComings Financial Network, Inc. ("HomeComings") originated underlying mortgage loans securing at least one of the PLMBS purchased by the Bank.

447. Confidential witnesses provided evidence of HomeComings' failure to adhere to sound underwriting practices and guidelines. Statements by CW-W, an underwriter at HomeComings from January 2006 until December 2006, and CW-X, an underwriter for HomeComings from May 2005 until his office closed in October 2007, confirm that HomeComings: (a) engaged in predatory lending by making loans to borrowers when it was clear that they could not afford to make the monthly payments; (b) approved risky, low- or no-documentation loans; (c) approved exception loans for which there were no reasonable compensating factors; and (d) abandoned sound underwriting practices.

448. CW-X said a lot of the problem with HomeComings' mortgages during his employment was due to "what became the norm" in the lending industry: underwriting guidelines became really loose, and "the gray areas became even grayer." According to CW-X, he and other underwriters thought the extent to which the guidelines relaxed was "ridiculous."

449. During his tenure at HomeComings, CW-X underwrote full-documentation, stated income, stated income/stated asset ("SISA"), and no income/no asset ("NINA") documentation loans. Of these, the majority "75% "were stated income loans. According to CW-X, it was the stated income and the option-ARM (negative amortization) loans that "killed the industry."

450. Both CW-W and CW-X explained that HomeComings employed automated underwriting systems ("AUS") to underwrite loans. According to CW-X, HomeComings employees had the choice of two different options: (1) Desktop Underwriter ("DU"), and (2) Assetwise. As CW-X explained, HomeComings employees used DU for subprime applications from low-income applicants because it approved loans with higher debt-to-income ratios than Assetwise.

451. CW-W said that, with respect to Assetwise, HomeComings employees entered borrowers' information into the system and the computer provided its findings. As CW-W explained, "One of my problems was that [a loan application] would fit inside the guidelines, but if you read between the lines, you could see that the borrower was not going to be able to make the payments." Nevertheless, when CW-W raised such concerns to her supervisor, she was told: "It fits, you do the loan. We're going to do this deal."

452. Irrespective of which AUS HomeComings employees chose, CW-X said that virtually all of the loan applications ended up being approved. Moreover, said CW-X, once the AUS approved the application, the underwriters could not change the decision.

453. Besides approving loans that CW-W believed borrowers could not afford, CW-W also noted that mortgage brokers often appealed loans to CW-W's supervisor that had been denied by HomeComings' underwriters. CW-W's supervisor then instructed CW-W and other underwriters that they had to sign off on the loans.

454. CW-X also explained that underwriters searched for compensating factors which would enable them to approve loans, even in the presence of "red flags." For example, if a stated income application reflected a monthly income of $10,000 or more, that would be a "red flag,"

and the underwriter would review the loan application to find "contributing factors" which would nevertheless allow the loan to be approved.

455. HomeComings originated mortgages that secured at least Security RFMSI 2006-SA2 2A1. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing this security, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, the percentage of loans secured by property not the primary residence of the borrower, and the percentage of the loans originated using full documentation. Moreover, as described below, *see infra* ¶¶591-592, this security has exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of HomeComings's failure to observe its stated underwriting standards. HomeComings' actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

456. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at HomeComings variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which HomeComings deviated from its underwriting guidelines.

17. Other Mortgage Originators Also Abandoned Sound Underwriting Practices and Engaged in Predatory Lending in Order to Issue Loans for Securitization.

457. On information and belief, based on government reports and assessment of mortgage origination practices during the time period that the loans at issue were issued, as discussed above, *see supra* Section IV.C.1-16, and the Bank's investigation, each of the other mortgage originators who issued loans that backed the PLMBS purchased by the Bank similarly abandoned their underwriting guidelines and engaged in predatory lending in order to increase loan volume. These abuses were pervasive in the mortgage origination industry and were the standard operating practice of mortgage originators who issued loans so that they could be sold and securitized either by their affiliates or other financial institutions who acted as Depositors/Issuers, and Underwriters of PLMBS.

458. Accordingly, instead of following their underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, at these mortgage originators, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which these mortgage originators deviated from their underwriting guidelines.

D. The Securitization Process Was Plagued by Conflicts of Interest and Misplaced Incentives.

459. A few large financial institutions dominated every aspect of the mortgage securitization process. They owned many of the mortgage originators themselves, and funded the lending activities of many of the originators they did not own outright. As a result, these financial institutions—and the sponsors, depositors, and underwriters that were divisions of these financial institutions—were in a position to scrutinize the practices of the originators and

examine closely the mortgages placed in the pools. Indeed, they had the legal responsibility to do so and to provide investors with complete and accurate information.

1. The Vertical Integration of Many of the Firms Involved in the Issuance of the PLMBS Purchased by the Bank Provided the Defendants with Access to Information Regarding the Abandonment of Underwriting Guidelines, the Manipulation of the Appraisal Process, and Predatory Lending Practices.

460. Many of the PLMBS purchased by the Bank were issued by vertically integrated firms which were involved in several if not all of the stages of the securitization of the PLMBS loan origination, sponsoring, obtaining credit ratings, issuing, underwriting, and/or selling the securities. The following table summarizes the vertical integration of the entities involved in various of the PLMBS purchased by the Bank:

Sponsor	Security	Roles of Affiliated Entities
Bank of America, National Association	BAFC 2006-C 2A1 BAFC 2006-E 2A2 BAFC 2006-E 3A1 BAFC 2006-F 2A1 BAFC 2006-F 3A1	Originator: Bank of America, National Association Underwriter: Banc of America Securities LLC Depositor: Banc of America Funding Corporation Servicer: Bank of America, National Association

Nomura Credit & Capital, Inc.	NHELI 2006-WF1 A3	Underwriter: Nomura Securities International, Inc. Depositor: Nomura Home Equity Loan, Inc.

461. Between 2005 and 2007, the number of vertically integrated firms grew significantly because investment banks and other issuers of mortgage backed securities sought to ensure a steady supply of mortgage loans for securitization and sale to investors. Yet, as a result of the direct involvement in the origination of the loans they securitized, the vertically integrated

firms, and specifically, the Depositor/Issuer and Underwriter affiliates of the firms, had access to and often first-hand knowledge of the underwriting abuses of the mortgage originators.

462. For example, in GMACM 2006-AR2, GMAC RFC Securities as underwriter for the securities issuance, knew precisely what its affiliate, GMAC Mortgage Corporation as mortgage originator, was doing when it issued loans to people without regard to their ability to pay, and without any meaningful mortgage underwriting. The same is true for the other vertically integrated entities listed above, many of whom, like the GMAC entities, had corporate affiliates that originated the substandard loans underlying the Bank s certificates, or had corporate affiliates that served as sponsors that purchased and assembled the substandard loans into securities that were sold to the Bank. Unfortunately, the vertical integration of these firms created enormous incentives to push their affiliated originators and sponsors to loosen standards so that more loans could be issued and more securitizations sold. In this regard, the Depositor/Issuer Defendants and Underwriter Defendants themselves dictated and were well aware of the quality of the loans.

463. Rather than use their superior access to information about the underlying mortgage pools and unique ability to exert influence over the underwriting standards responsibly, the Depositor/Issuer and/or Underwriter Defendants at the vertically integrated firms accepted defective loans that their affiliates purchased or originated for securitization. The reason was straightforward. They made more money that way on the front end, when issuing the loans, and on the back end, when securitizing them. Adequate, actual, due diligence and exclusion of defective loans would have cut into their profits and slowed down the securitization machine.

464. Moreover, even those Defendants that did not have corporate affiliates involved in concocting the risky securities sold to the Bank still had corporate affiliates intimately involved

in the creation and marketing of MBS. Given these corporate affiliations, all of the Defendants should have known, and failed to disclose, the substantial risks associated with mortgage-backed securities.

2. Financial Ties Between the Investment Banks and Non-Bank Lenders Provided the Defendants with Access to Information Regarding the Mortgage Originators' Failure to Adhere to Underwriting Guidelines and Engagement in Predatory Lending Practices.

465. Even where the parties involved in the securitization were not all affiliated under a single parent (for example, where a sponsor purchased the loans from an unaffiliated mortgage originator) the Depositor/Issuer and Underwriter Defendants had access to abundant information about the mortgage originators' abandonment of underwriting guidelines and predatory lending practices. This was the result of the close financial ties between the unaffiliated mortgage lenders and the financial institutions that funded them.

466. An example of this relationship is the credit facilities that mortgage originators maintained with the financial institutions involved in the securitization and underwriting of the PLMBS that were backed by those originators' loans. For example, Countrywide Financial Corp., collectively with its origination subsidiary, Countrywide Home Loans, Inc., had credit agreements with Bank of America, J.P. Morgan Chase, Citicorp USA (part of Citigroup), and Barclays, each of which funded Countrywide's origination business. Likewise, originator New Century Mortgage Corp., collectively with other subsidiaries of New Century Financial Corp., had credit agreements with Bank of America, Morgan Stanley, Citigroup, and Barclays, each of which funded New Century's origination business. *See* John Dunbar and David Donald, *The Roots of the Financial Crisis: Who is to Blame?* (May 6, 2009), *available at* http://www.publicintegrity.org/investigations/economic_meltdown/articles/entry1286 (noting that 21 of the 25 largest subprime lenders were financed by Wall Street banks).

467. Mortgage originators, including those that issued loans backing the PLMBS purchased by the Bank, depended on credit facilities of this sort to fund their operations. The originators would borrow from these credit facilities pursuant to "warehouse agreements" so that they could continue to make loans to home buyers. When loans were sold, the originators would repay the warehouse agreements. When loans serving as collateral lost value, the financial institutions would make margin calls requiring the originators to pay cash to the institutions. In connection with this process, the mortgage originators provided the financial institutions with documents about the underlying loans, including performance characteristics and early warning signs of poor credit quality. The files were then passed to other divisions of the financial institutions for review and securitization. *See* Mortgage Bankers Association Warehouse Flowchart: Securitization, *available at* http://www.mbaa.org/files/ResourceCenter/WarehouseLending/FlowchartSecuritization.pdf (last visited Sept. 15, 2010).

468. The financial institutions also entered into purchase agreements with unaffiliated originators. These agreements ensured that the financial institutions were assured access to a batch of mortgages to securitize, and the originators were guaranteed a buyer for the mortgages they made. As part of the agreement, the financial institutions typically set the prices and quantities of the types of loans it wanted to buy and also gained access to loan information prior to purchase.

469. The investment banks that operated credit facilities for non-bank lenders and entered into purchase agreements did not limit their activities to just funding the lenders. To the contrary, they funded the lenders so that the lenders could issue more loans for the investment banks to purchase and securitize. These inter-relationships are illustrated by the warehouse lines

of credit which were extended to New Century Financial Corp. and its subsidiary, New Century Mortgage Corp., the originator of loans that backed the PLMBS in this case:

Certificate	**Warehouse Line of Credit with:	Sponsor of the PLMBS Certificate	Depositor/Issuer of the PLMBS Certificate	Underwriter Defendant for the PLMBS Certificate
GSAMP 2006-NC2 A2C	Goldman Sachs Mortgage Co.	Goldman Sachs Mortgage Co.	GS Mortgage Securities Corp.	Goldman, Sachs & Co.
MSAC 2006-HE5 A2C MSAC 2006-HE6 A2C	Morgan Stanley Mortgage Capital Inc.	Morgan Stanley Mortgage Capital Inc.	Morgan Stanley ABS Capital I Inc.	Morgan Stanley & Co. Incorporated
CMLTI 2006-NC1 A2C CMLTI 2006-NC2 A2B	Citigroup Global Markets Realty Corp.	Citigroup Global Markets Realty Corp.	Citigroup Mortgage Loans Trust, Inc.	Citigroup Global Markets Inc.

***Source: Factbox: New Century Creditors Named in Bankruptcy Filing*, Reuters (April 2, 2007), *available at* http://www.reuters.com/assets/print?aid=USN0243292520070402 (last visited Sept. 14, 2010).

470. As the chart shows, the same investment banks that offered warehouse lines of credit to New Century purchased the loans as sponsor, deposited them into trusts as depositor, securitized and issued them as issuer, and underwrote the securities backed by the loans as underwriter. Because the investment banks were involved in several if not all of the steps of securitization, they had direct information and knowledge about the problems in the loan pools.

471. In addition, the sponsors, the Depositor/Issuer Defendants, and the Underwriter Defendants, were all intimately aware of the mortgage originators practices as a result of their direct role negotiating with the originators regarding the quality and characteristics of the loans

in the mortgage pools they purchased. This is confirmed by confidential witness testimony. For example, CW-G, a branch manager at New Century from December 2000 through December 2005, indicated that not only did the investment banks know about the origination guidelines, they were the ones who designed them. As CW-G explained, the investment banks took advantage of their leverage over the mortgage originators and "abused subprime" for their own purposes – to make profits by selling mortgage-backed securities to unsuspecting investors.

3. Conflicts of Interest Undermined Adequate Due Diligence and Disclosure to Investors.

472. The multiple roles of large financial institutions in the securitization process created conflicts of interest that prevented these institutions from engaging in adequate due diligence on the loan pools. For example, these financial institutions did not use their influence and control over the mortgage origination process to ensure that underwriting guidelines were followed, because to do so would have jeopardized repayment of their warehouse lines of credit. By keeping the mortgage origination wheel turning, these financial institutions (by and through the Certificate's sponsors, the Depositor/Issuer Defendants, and the Underwriter Defendants) not only secured repayment on existing warehouse lines, but also paved the way for ever increasing lines in the future, with additional short-term profits. While these financial institutions eventually shut down their lines of credit, they did so only after the originators' financial condition deteriorated to the point that the financial institutions faced the risk of non-payment. Ironically, this risk was created by ever increasing numbers of repurchase demands by the financial institutions themselves for defective loans sold to the banks by the originators.

473. For example, Merrill Lynch Mortgage Capital, an affiliate of Underwriter Defendant Merrill Lynch, Pierce, Fenner & Smith, Inc., provided warehouse lines of credit to subprime originator OwnIt Mortgage Solutions. Pleadings filed in OwnIt's bankruptcy reveal

that Merrill Lynch Mortgage Capital was a secured creditor on its warehouse line of credit to OwnIt for $633 million. Bond CBASS 2006-CB4 AV3, which the Bank purchased from Defendant Underwriter Merrill Lynch, Pierce, Fenner & Smith, Inc. includes a substantial number of loans originated by OwnIt Mortgage Solutions an entity with which investment bank and Defendant Underwriter Merrill Lynch was in a conflicted relationship in general, and with respect to Bond CBASS 2006-CB4 AV3 in particular.

474. Furthermore, papers filed in OwnIt s bankruptcy proceedings also show that Merrill Lynch LP Holdings, Inc., another affiliate of Defendant Underwriter Merrill Lynch, Pierce, Fenner & Smith, Inc., holds an unsecured mortgage repurchase claim against OwnIt, arising from its right to compel repurchases of mortgage loans it purchased from OwnIt. The amount of such claim is estimated at $92.96 million, which is 20% of the principal balance of the mortgage loans subject to repurchase.

475. Similar conflicts prevented the investment banks from insisting on compliance with underwriting guidelines when they purchased loans at loan auctions. At the loan auctions, the mortgage originators would set a date and time for the sponsors to purchase a block of mortgage loans. In advance of the auction, the mortgage originator would provide certain potential bidders with a bid stipulation sheet that described the general characteristics of the loan pool being auctioned and the variance rate of the pool. The investment banks depended on the auctions to feed loans into their securitization machines. But investment banks feared that they would lose access to the bid stipulation sheets and other information from mortgage originators if they conducted rigorous quality reviews of the subject mortgages and rejected loans as being non-compliant with the mortgage originators stated guidelines. Thus, to curry favor with the mortgage originators and assure a continued pipeline of mortgages (however flawed) for

securitization, the parties who should have protected the quality of the mortgages being deposited into the pools instead ignored the flaws with the mortgages.

476. Simply put, as a result of corporate affiliations and conflicted relationships in the industry, the investment banks, by and through the sponsors and affiliated Depositor/Issuer and Underwriter Defendants, failed to appropriately fulfill their due diligence function with respect to the mortgages placed in the pools. Rather than conducting the appropriate due diligence on the loan pools, and either rejecting loans that failed to meet underwriting standards or adequately disclosing the true risks of the certificates, the Defendants utilized the securitization process to pass the risk of default down the line to investors, such as the Bank, through the use of materially false and misleading Offering Documents.

477. Confidential witnesses confirmed the failings of the Defendants due diligence process and their representations about the process. For example, statements by CW-Y, an associate in RBS Greenwich Capital s[4] asset-backed finance modeling group from October 2004 to February 2006, demonstrated that RBS Greenwich employees modeled the flow of funds for the PLMBS based upon superficial summary information even though more detailed information was available to RBS Greenwich. CW-Y also described how employees at RBS Greenwich turned a blind eye to red flags regarding the quality of the loans that were being packaged into mortgage-backed securities. For example, when CW-Y tried to discuss an article with his boss regarding an investigation into Ameriquest s lending practices, his boss told him: You need to

[4] Until April 1, 2009, RBS Greenwich Capital was the marketing name which encompassed The Royal Bank of Scotland s North American broker-dealer entities, including: (1) Underwriter Defendant Greenwich Capital Markets, Inc., n/k/a RBS Securities Inc.; (2) Controlling Person Defendant Greenwich Capital Holdings, Inc., n/k/a RBS Holdings USA Inc.; and (3) sponsor Greenwich Capital Financial Products, Inc., n/k/a RBS Financial Products Inc. *See* The Royal Bank of Scotland, RBS Greenwich Capital Re-Name and Re-Brand FAQ s, March 6, 2009, *available at* http://www.rbsgc.com/images/panels/rbsm/document/faq.pdf (last visited Oct. 3, 2010). As used herein, RBS Greenwich is meant to encompass all of these entities.

sit down and shut the f*** up. CW-Y explained that employees at RBS Greenwich ignored red flags because they stood to gain significant profits from securitization: I knew we were destroying the economy. . . . But if you re making $40 million a year, do you care? No.

478. Similarly, CW-Z, a capital markets analyst at Citigroup from July 2006 until November 2008, said that they did not review the underlying loan files when they were structuring and securitizing the mortgage pools, even though they had access to them. Instead, they simply trust[ed] the mortgage originator s data. CW-Z also explained that Citigroup s models for stress-testing the PLMBS were inadequate because the company could model a bond to see how it performed under the stress of 50% losses, but it never took into account the possibility of house prices falling. As explained above and echoed by CW-Z, the monetary incentives that the originators stood to gain by securitizing mortgage pools stimulated fraud.

4. Defendants Undermined and Misused Loan Pool Due Diligence Results Prepared by Third-Party Firms.

a. The Defendants directed the due diligence process and were provided with detailed reports describing the results of the process.

479. Information obtained from press reports, government investigations and confidential witnesses demonstrates that the financial institutions that retained third-party due diligence firms to conduct loan pool due diligence both manipulated the due diligence process and also disregarded the results of the process. They did so in order to maximize the profits they made from issuing and selling mortgage-backed certificates.

480. The two firms that dominated the third-party due diligence market were Clayton Holdings, Inc. (Clayton) and The Bohan Group (Bohan). Upon information and belief, both Clayton and Bohan were retained by Defendants or their affiliates to conduct third-party reviews of loans pools purchased by the sponsors of the PLMBS at issue. According to Clayton s Form

10-K for the fiscal year ended December 31, 2006, Clayton monitored over $418.0 billion in loans underlying mortgage-backed certificates, which represented 22.8% of the total outstanding U.S. non-GSE mortgage-backed certificates at such date. During 2006, 2005, and 2004, Clayton worked with each of the ten largest non-agency mortgage-backed certificates underwriters, as ranked by *Inside MBS & ABS* magazine, which accounted for 73%, 73%, and 78% of total underwriting volume during those respective periods.

481. Confidential witnesses, who worked at Clayton during the relevant time period and were familiar with the identity of Clayton's clients and the due diligence performed by Clayton during the relevant time period, named several different entities they knew had hired Clayton to perform due diligence on loan pools. These confidential witnesses include: CW-AA, an underwriting consultant at Clayton from 1999 until 2006, who underwrote mortgage-backed securities for a "lot of investment banks" that hired Clayton; CW-BB, an underwriter at Clayton from 2002 until 2008, who reviewed loans for financial institutions that hired Clayton; and CW-CC, who worked as a valuation specialist at Clayton from January 2006 until March 2008 and reviewed appraisals and properties in loan files on behalf of investment banks that hired Clayton. Together, CW-AA, CW-BB, and CW-CC confirmed that Clayton was hired to perform due diligence on underlying loan pools by such sponsors/investment banks as Morgan Stanley, RBS Greenwich, Countrywide, Nomura, Washington Mutual, Webster Financial, and National City. Media reports also indicate that Clayton Holdings did work for Goldman Sachs and Merrill Lynch. Gretchen Morgenson, *Raters Ignored Proof of Unsafe Loans*, N.Y. Times, Sept. 26, 2010.

482. Less information is publicly available about Bohan's due diligence business because it is a privately held company. However, press reports and confidential witnesses

confirm that Bohan provided third-party loan pool due diligence to a large number of financial institutions. For example, CW-DD, who worked as an underwriter at Bohan from 2003 to 2006 and reviewed loans that Bohan's clients were considering for securitization, said that Bohan's clients included Morgan Stanley, Chase, J.P. Morgan, and others.

483. The financial institutions that retained Clayton, Bohan, and other third-party due diligence firms for loan pool review maintained close contact and control over the process. As explained by Vicki Beal, Senior Vice President of Clayton Holdings in her September 23, 2010 written testimony before the FCIC:

> The loan review process is conducted as follows:
>
> - A client reviews a pool of loans and selects a sample of loans for diligence review. . . .
> - Client hires Clayton to perform diligence on the sample. Client gives Clayton's Client Services Manager instructions on the type and scope of review and the time frame for the deal.
> - Client sends or has sent to Clayton a tape containing loan information from the originator, which Clayton programmers "crack" and loads [sic] into our CLAS system.
> - At the end of each day, the lead underwriter generates reports for the client that summarizes Clayton's findings, including exception reports.

484. In addition, during the review process, the client financial institutions often put their own employees on-site to oversee the review process. For example, according to CW-BB, Morgan Stanley and RBS Greenwich always sent their own employees to the mortgage originator's site.

485. Numerous confidential witnesses confirm that due diligence reports are provided to the financial institutions that retained the third-party due diligence firms. According to CW-CC, Clayton's clients "had access to our [Clayton's] databases," and "could see everything."

CW-BB also explained that Clayton's lead underwriters could consult with the sponsor's representatives to determine if the sponsor wanted particular loans "kicked out" of the mortgage pools.

486. As Ms. Beal reported to the FCIC: "The work product produced by Clayton is comprised of reports that include loan-level data reports and loan exception reports. Such reports are "works for hire," the property of our clients and provided exclusively to our clients." Thus, on information and belief, the financial institutions that hired Clayton (including the Defendants) should have known about the red flags that the third-party underwriters identified.

487. Similarly, Bohan employed "lead" underwriters, who communicated directly with the financial institutions that retained them to review loan pools. As was the case with Clayton, CW-DD said that many of the sponsors sent their own employees to the originator's sites to review the loans that were being considered for inclusion in a mortgage pool and subsequent securitization. CW-DD also explained that the sponsors had access to Bohan's computer system and could view which loans were being approved or rejected. Thus, on information and belief, the investment banks (including the Defendants) should have known about the red flags that the third-party underwriters identified.

b. The Defendants manipulated and misused due diligence results.

488. As Ms. Beal testified with regard to Clayton, the client financial institutions determined the type and scope of review performed on the loan pools. Yet, rather than directing the firms to conduct thorough reviews that were most likely to identify defective loans, the financial institutions pressured the loan reviewers to disregard problem loans through exceptions and offsets that did not satisfy the applicable underwriting guidelines.

489. According to confidential witnesses, third-party due diligence underwriters were pressured by the banks that hired them to depart from the standards so that loans were not tagged as defective. For example, CW-BB, a Clayton employee, stated that one out of every four or five loans that he reviewed on behalf of client financial institutions did not meet the originator s guidelines. Although he felt many of the loans were dead assets (the lowest rating Clayton gave), he was required to provide compensating factors, which were reasons why the loan should be considered for inclusion in the mortgage pool.

490. Similarly, CW-DD said that she reviewed many loans requiring no documentation at Bohan. Yet, she was not allowed to challenge the borrower s claims. As CW-DD said, Whatever [the borrower] filled out on an application got through. When she informed a lead underwriter that she suspected the borrower s income was inflated, the lead underwriter pointed to the borrower s signature and fine print at the bottom of the loan application that indicated the borrower swore the information to be true. The lead underwriter told CW-DD, You can t call the borrower a liar. Due to such actions by the lead underwriters, CW-DD received the impression that the financial institutions who were buying the loans for securitization did not care about inflated income.

491. CW-DD also recalled other loans in the mortgage pools which included a credit score of 600, no income documentation, and no asset verification, but where the borrowers were receiving 100% financing. At the time, she recalled thinking: Why would anybody in the world want these loans? Nevertheless, the financial institutions bought and packaged the loans for securitization.

492. Bohan employees were pressured by the financial institutions who hired them to leave information out of their reports that detailed non-compliant or predatory loans that should

have been excluded from the pool. For example, CW-DD explained that many underwriters at Bohan did not include in their reviews the borrower's fee associated with rebates on wholesale loans. A rebate is negative points on a loan, whereby a borrower pays the lender for a higher interest rate in order to have lower up-front costs. The Bohan employees left such information out of their reports because if they mentioned it, the loans would often be considered predatory. CW-DD recalled one rebate situation in which the borrower refinanced a property three times over a one-year period. When she reviewed the loan on the third refinancing, she discovered that the borrower was seeking the loan to pay off $5,000 in bills and to obtain $8,000 cash, but the rebate fees totaled $12,000. CW-DD thought the loan was ultimately included in the mortgage pool because nothing was wrong with the loan, except that the borrower was getting nothing out of it and was "an older person that was being taken advantage of."

493. Further compounding the problems, Clayton employees were instructed to review fewer loans in the loan pools as the securitization market grew. Frank P. Filipps, Clayton's chairman and CEO, stated that "[e]arly in the decade, a securities firm might have asked Clayton to review 25 to 40 percent of the sub-prime loans in a pool, compared with typically 10% in 2006." E. Scott Reckard, *Sub-Prime Mortgage Watchdogs Kept on Leash; Loan Checkers Say Their Warnings of Risk Were Met with Indifference*, L.A. TIMES, Mar. 17, 2008, at C1.

494. According to Ms. Beal's 2010 testimony before the FCIC, as the securitization markets grew even more frenzied "when lenders and securitizers were trying to sell off as much as they could before the market collapsed, that figure reached as low as 5 percent."

495. Notably, according to Bohan President Mark Hughes: "By contrast, loan buyers who kept the mortgages as an investment instead of packaging them into securities would have 50% to 100% of the loans examined." *See* Reckard, *supra,* at C1.

496. As explained in Paul Muolo and Matthew Padilla, *Chain of Blame* 228 (2010):

> There were two reasons the [Wall] Street firms reviewed only a small sample of the loans they were buying . . . . The most important reason was the relationship with the lender. "The lower the sample you requested [of the lender], the more likely it was that you'd win the bid." . . . Lenders like Aegis and First Franklin had so many Street firms interested in buying their subprime and alt-A mortgages they could tell potential suitors that if they wanted to win the bid for the loan pool they should agree to review just a fraction of the mortgages.

497. Even though the third-party due diligence providers were instructed to review smaller samples of the mortgage pools over time, the demand for mortgage-backed certificates was so great that, in the aggregate, the third-party due diligence firms were reviewing staggering quantities of loans. According to *Chain of Blame*, "[i]n 2006, rank-and-file clerks hired by Clayton vetted a million individual mortgages for Wall Street firms. . . ." *Id.* at 228.

c. The Defendants should have known that the sponsors included defective loans in the pools.

498. Notwithstanding pressures on loan reviewers to look the other way, the third-party due diligence process provided the sponsors with extensive information about loan pool defects. As reported by the *Los Angeles Times*, Clayton and Bohan employees (including eight former loan reviewers who were cited in the article) "raised plenty of red flags about flaws so serious that mortgages should have been rejected outright "such as borrowers' incomes that seemed inflated or documents that looked fake "but the problems were glossed over, ignored, or stricken from reports." Reckard, *supra*, at C1.

499. Ironically, while the financial institutions pressured third-party reviewers to make exceptions for defective loans, these financial institutions often utilized information about bad loans to negotiate a lower price for the pool of loans from the seller (*i.e.,* the originator). According to the September 2010 testimony of Clayton's former president, D. Keith Johnson,

before the FCIC, negotiating a lower price was one of the primary purposes of the due diligence review.

500. CW-DD, who worked at Bohan from 2003 to 2006, confirmed that Bohan's review was used in price negotiations between the sponsors and the mortgage originators. The sponsors could request a discount if Bohan's reviewers rejected a large number of the loans. This is not to say that the financial institutions actually eliminated all of the defective loans from the pools. To the contrary, they obtained a lower price for the pools because the defective loans *stayed in the pools*.

501. Recent testimony before the FCIC reveals the extent of this activity with regard to loans reviewed by Clayton. During 2006 and the first half of 2007, Clayton reviewed 911,039 loans issued by originators including New Century Financial, Countrywide Financial, and Fremont Investment & Loan for securitization by its clients (including Bank of America, JPMorgan Chase, Citigroup, Goldman Sachs, Morgan Stanley, Bear Stearns, and Lehman Brothers). Clayton determined that 28% or 255,802 mortgages that they reviewed did not satisfy applicable underwriting guidelines. Of this number, Clayton's Wall Street clients "waived" 100,653 of them, or 39 percent of those loans that did not meet basic standards. *See* Testimony of Beal, Johnson, and supporting waiver reports documents, attached hereto at Appendix II.

502. Clayton provided the FCIC with documents showing the defect and waiver rate of the main financial institutions which had retained Clayton to conduct loan pool due diligence. Clayton's documents reveal the following rejection and waiver rates for entities that were involved in the securitization of the PLMBS purchased by the Bank:

Client:	**Percentage of Mortgages Rejected by Clayton:**	**Percentage of Rejected Mortgages Subsequently Waived by Client:**

Client:	Percentage of Mortgages Rejected by Clayton:	Percentage of Rejected Mortgages Subsequently Waived by Client:
Bank of America	30%	27%
Credit-Based Asset Servicing and Securitization LLC	29%	43%
Countrywide	26%	12%
Credit Suisse	37%	32%
Citigroup	42%	31%
Goldman Sachs	23%	29%
HSBC	27%	62%
JP Morgan Chase	27%	51%
Nomura	38%	58%
UBS	20%	33%

503. The Offering Documents fail to state that (1) that Clayton had informed their clients that a substantial percentage of loans in the loans pools backing PLMBS were defective; (2) that the Defendants, nonetheless, had waived the defects as to a substantial percentage of these loans; and (3) that the Defendants had used the due diligence reports to negotiate a lower price for the loans pools. As Keith Johnson, the former President of Clayton testified to the FCIC, Clayton "looked at a lot of prospectuses" and the firm wasn't aware of any disclosure to investors of Clayton's "alarming findings."

5. Defendants' Own Due Diligence Identified a High Number of Defective Loans in the Mortgage Pools Backing PLMBS.

504. The financial institutions that dominated the securitization markets did not just obtain information about defective loan pools from third-party due diligence firms, but also through their own in-house due diligence efforts. Wall Street banks in particular currently face a slew of investigations into their knowledge of mortgage pool defects that were withheld from investors. As stated in a January 12, 2008 *New York Times* article titled *Inquiry Focuses on Withholding of Data on Loans*:

> An investigation into the mortgage crisis by New York state prosecutors is now focusing on whether Wall Street banks withheld crucial information about the risks posed by investments linked to subprime loans. Reports commissioned by the banks raised red flags about high-risk loans known as exceptions, which failed to meet even the lax credit standards of subprime mortgage companies and the Wall Street firms. *But the [investment] banks did not disclose the details of these reports to credit-rating agencies or investors.* The inquiry, which was opened last summer by New York's attorney general, Andrew M. Cuomo, centers on how the banks bundled billions of dollars of exception loans and other subprime debt into complex mortgage investments.

(emphasis added).

505. Likewise, in its investigation into the "causes . . . of the current financial and economic crisis in the United States," the FCIC examined in particular Citigroup's securitization practices. The FCIC heard testimony from Richard M. Bowen, III, the former Senior Vice President and Chief Underwriter for Correspondent and Acquisitions for CitiFinancial Mortgage (Citigroup's subprime mortgage lending subsidiary from 2002-2005) and starting in 2006, Business Chief Underwriter for Correspondent Lending in Citigroup's Consumer Lending Group. In the latter position, Mr. Bowen supervised 220 professional underwriters and exercised direct oversight over the underwriting or more than $90 billion of mortgages annually.

506. Mr. Bowen testified that each year since 2005, Citigroup's mortgage operation systematically acquired tens of billions of dollars of risky loans that violated Citigroup's own underwriting criteria and were likely to default. He also testified that Citigroup's Wall Street Chief Risk Officer routinely overruled underwriters' rejections of pools of both prime and subprime mortgages that did not satisfy Citigroup's underwriting criteria for purchase, causing Citigroup to purchase billions of dollars of loan pools that fell far short of underwriting standards. Mr. Bowen testified that "[d]uring 2006 and 2007, I witnessed business risk practices which made a mockery of Citi credit policy. . . ."

507. Mr. Bowen reported that he discovered that of the $50 billion of prime mortgages purchased in 2006, "over 60% of these mortgages purchased and sold were defective." He testified further that he "started issuing warnings in June of 2006 and attempted to get management to address these critical risk issues. These warnings continued through 2007 and went to all levels of the Consumer Lending Group." Likewise, he reported systematic abuses in the subprime pools as well.

508. Mr. Bowen also testified that he recommended that Citigroup not purchase Ameriquest, because his due diligence found that Argent's loans did not meet the standards they had represented to Citigroup. Specifically, Mr. Bowen testified that "we sampled the loans that were originated by Argent and we found large numbers that did not "that were not underwritten according to the representations that were there."

509. Mr. Bowen submitted with his testimony email that he sent to Citigroup's then CEO, Robert Rubin, in late 2007 documenting his concerns. One email indicated, among abundant other information of abuses that:

> During 2006-7 there were pools of mortgage loans aggregating $10 billion which were purchased from large mortgage companies with significant numbers of files identified as "exceptions" (higher risk and substantially outside of our credit policy criteria). These exceptions were approved by the Wall Street Channel Chief Risk Officer, many times over underwriting objections and with the files having been turned down by underwriting. These pools involved files aggregated and originated by Merrill Lynch, Residential Funding Corp, New Century, First NLC and others.

Available at http://www.fcic.gov/hearings/pdfs/2010-0407-Bowen.pdf. Citigroup disregarded the warnings and red flags and completed the acquisition.

510. On May 12, 2010, the Wall Street Journal reported that "[f]ederal prosecutors, working with securities regulators, are conducting a preliminary criminal probe into whether

several major Wall Street banks misled investors about their roles in mortgage-bond deals, according to a person familiar with the matter. The article noted that:

> the banks under early-stage criminal scrutiny—J.P. Morgan Chase & Co., Citigroup Inc., Deutsche Bank AG and UBS AG—have also received civil subpoenas from the Securities and Exchange Commission as part of a sweeping investigation of banks selling and trading of mortgage-related deals, the person says. Under similar preliminary criminal scrutiny are Goldman Sachs Group Inc. and Morgan Stanley, as previously reported by The Wall Street Journal.

511. As the pending criminal probe indicates, Citigroup's practices were not unique. For example, on June 24, 2010, the Massachusetts Attorney General announced that Morgan Stanley had agreed to pay $102 million to the Commonwealth and borrowers in the Commonwealth to settle charges related to Morgan Stanley's role in facilitating predatory lending by New Century. The Attorney General reported that "our investigation revealed that Morgan Stanley backed loans for homeowners that they knew, or should have known, were destined to fail and they failed to disclose the riskiness of those loans to investors." She noted as well that:

> Morgan Stanley funded, purchased and securitized New Century loans. Morgan developed an intimate knowledge of New Century's business over time. And they uncovered signals pretty early on that the lending practices of New Century were not sound. Morgan Stanley continued to fund and securitize subprime loans even as New Century's bad loans were causing the lender to collapse . . . .

Available at http://www.mass.gov/Cago/docs/press/2010_06_24_ms_settlement_attachment4.pdf

512. Upon information and belief, the Defendants should have known as a result of the red flags generated by their own due diligence as well by third-party due diligence firms hired by the Defendants indicating that the pools of loans they purchased and sold in securitizations were far riskier than was represented to investors, including the Bank.

E. The Vertical Integration of Many of the Firms Involved in the Issuance of the PLMBS Purchased by the Bank Enabled the Controlling Person Defendants to Control the Management and Policies of the Controlled Entities

513. The Controlling Person Defendants, which had a 100% or substantial majority direct or indirect ownership in the respective Depositor/Issuer Defendants, Underwriter Defendants, Sponsors, and/or Originators, as well as the other entities identified herein, had the power to, and did, conduct and participate, directly and indirectly, in the management and control of all aspects of the management and policies of the Controlled Entities, as evidenced by the fact that, *inter alia*:

A. The Controlling Person Defendants created the respective Depositor/Issuer Defendants as their special purpose entities for the purpose of issuing the Certificates that are the subject of this action;

B. The Controlling Person Defendants played other vital roles regarding the structuring and administration of the issuing trusts and certificates, which allowed them to exercise substantial control over many parties to the securitization, including the respective Depositor/Issuer and/or Underwriter Defendants;

C. Revenue from the securitizations inured to the benefit of the Controlling Person Defendants;

D. Statements in the Controlling Person Defendants' SEC filings show control through comprehensive involvement with the Controlled Entities' operations;

E. The financial result of the Controlled Entities were often combined and reported as part of the Controlling Person's reported financial results;

F. The Controlling Person Defendants directly participated in the issuance of the Certificates, including touting their extensive activity and experience in the securitization

market, particularly in initiating securitization of the residential mortgage loans they originated or acquired in the secondary mortgage market and transferring those loans to Depositor Defendants for sale through the trust to purchasers such as the Bank;

G. The Controlling Person Defendants frequently and prominently identified themselves in the Offering Documents; and

H. Officers and/or directors of the Controlling Person Defendant frequently signed the respective registration statements.

514. In addition, the Controlling Person Defendants were frequently parties to the agreements necessary to the securitizations, such as the Pooling and Servicing Agreement, Mortgage Loan Purchase Agreement, Servicing Agreement, Assignment, Assumption and Recognition Agreement, including amendments, restatements and exhibits thereto, which agreements frequently:

A. Were between vertically integrated entities;

B. Were signed by the same officer or director of the Controlling Person Defendant on behalf of the Controlled Entity;

C. For purposes of providing formal notice under the agreement, identified a single individual and/or address as the notice recipient for two or more parties to the agreement and;

D. Provided for indemnification by the Controlling Person Defendant.

515. Control over the vertically integrated firms in all aspects of the securitization is apparent in prospectus language that shows the relationship among the Controlling Person Defendants and the controlled entities. For example, a prospectus for a Citigroup PLMBS states:

> [Depositor Defendant] Citigroup Mortgage Loan Trust Inc., as depositor, was incorporated in the State of Delaware on July 16, 2003 as an indirect wholly-owned subsidiary of [Controlling Person Defendant] Citigroup Financial Products

> Inc. and is an affiliate of [Underwriter Defendant] Citigroup Global Markets Inc.
>
> * * *
>
> The depositor, the sponsor and the underwriter are direct wholly-owned subsidiaries of [Controlling Person Defendant] Citigroup Financial Products, Inc. The trust administrator is a direct wholly-owned subsidiary of Citicorp Holdings Inc., a Delaware corporation. Citigroup Financial Products Inc. and Citicorp Holdings Inc. are both wholly owned subsidiaries of [Controlling Person Defendant] Citigroup Inc.

Prospectus Supplement for Certificate CMLTI 2006-NC1 A2C, dated June 28, 2006.

516. In sum, the Controlling Person Defendants controlled, influenced, or participated in essentially all material aspects relating to the acquisition, structure, and sale of the Certificates purchased by the Bank identified herein.

517. The Controlling Person Defendants' control, position, and influence over the Controlled Defendants made them privy to, and provided them with actual knowledge of, the material facts and omissions concealed from the Bank with regard to the underlying mortgage pools.

F. The Securitization Process Was Supported by Credit Ratings that Materially Misstated the Credit Risk of the PLMBS.

518. The triple-A credit ratings of the PLMBS played a crucial role in the Bank's purchase of PLMBS. Pursuant to Bank policy, the Bank could only purchase triple-A rated tranches of the certificates. Without that rating, no purchase would have occurred. Thus, the Bank relied to its detriment on the ratings and the Defendants' representations regarding the ratings in the Offering Documents.

519. The Defendants well understood (and banked on) the important role the credit ratings played in the PLMBS markets. They featured the ratings prominently in the Offering Documents and discussed at length the ratings received by the different tranches of the PLMBS,

and the bases for the ratings. Yet, the Rating Agencies knew, and the Defendants should have known, that the ratings were not reliable. Those ratings were bought and paid for and were based on flawed information.

1. The Credit Ratings Were Unreliable, Based As They Were on Underwriting Standards That the Rating Agencies Knew Had Been Abandoned.

520. By virtue of their intimate involvement in the securitization process, the Credit Rating Agencies knew that many mortgage originators, including the ones whose abandonment of underwriting guidelines is discussed above, had abandoned their stated mortgage underwriting guidelines, and thus knew that the ratings were false when made.

521. The Senate Subcommittee on Investigations, for example, uncovered internal Rating Agency emails from the summer and fall of 2006 noting that "there has been rampant appraisal and underwriting fraud in the industry for quite some time"; that "underwriting fraud[,] appraisal fraud and the general appetite for new product among originators [are] resulting in loans being made that shouldn't be made"; and that "this is like another banking crisis potentially looming."

522. Standard & Poor's became so concerned with underwriting standards that, when it was asked to rate certificates backed by subprime loans which Fremont Investment and Loan had originated, one analyst asked his supervisors whether he should treat Fremont collateral differently. "No," one of his supervisors responded, "we don't treat their collateral any differently." The other supervisor said that as long as there were current FICO scores for the borrowers, then the analyst was "good to go," no matter how little documentation the origination process required, and regardless of any other characteristic of the mortgage loans.

523. Based on its investigation, the Senate Subcommittee on Investigations found that from 2004 to 2007, the Credit Rating Agencies knew of the increased risks caused by mortgage fraud and lax underwriting standards, but failed to factor those risks into their rating models.

524. Here, just as in other cases, the Credit Rating Agencies did not factor the abandonment of underwriting standards into their analysis of the PLMBS that are the subject of this lawsuit. Instead, they based their ratings on underwriting standards they knew to have been abandoned in practice.

2. The Credit Ratings Were Compromised by Conflicts of Interest, Manipulation and Misinformation.

525. The Credit Rating Agencies received enormous revenues from the issuers who paid them for rating the products they sold.

526. Because the desired rating of a securitized product was the starting point for any securities offering, the Rating Agencies were actively involved in helping issuers structure the products to achieve the requested rating. As a result, the Rating Agencies essentially worked backwards, starting with the issuer's target rating and thereafter working toward a structure that could conceivably yield the desired rating.

527. A 2008 SEC Report entitled, "Summary Report of Issues Identified in the Commission Staff's Examinations of Select Credit Rating Agencies" ("Summary Report") revealed that the issuers and the Credit Rating Agencies worked together so that securities would receive the highest ratings:

> [t]ypically, if the analyst concludes that the capital structure of the RMBS does not support the desired ratings, this preliminary conclusion would be conveyed to the arranger. The arranger could accept that determination and have the trust issue the securities with the proposed capital structure and the lower rating or adjust the structure to provide the requisite credit enhancement for the senior tranche to get the desired highest rating. Generally, arrangers aim for the largest possible senior tranche, i.e., to provide the least amount of credit enhancement possible, since the

> senior tranche—as the highest rated tranche—pays the lowest coupon rate of the RMBS tranches and, therefore, costs the arranger the least to fund.

528. As a result of this collaboration with the Credit Rating Agencies, issuers were able to manipulate the system to achieve inflated ratings. For example, through repeated interactions with the Credit Rating Agencies, issuers (and the underwriters working with them) could effectively reverse engineer aspects of the ratings models and then modify the structure of a financing to improve its ratings without actually improving its credit quality. In this process, the issuers and underwriters could change aspects of a PLMBS very slightly—but without any real effect on the economic reality of the instrument—or simply present the same data in a different way, and thus get better ratings. Gretchen Morgenson & Louise Story, *Rating Agency Data Aided Wall Street in Deals*, N.Y. TIMES , Apr. 23, 2010.

529. This rating process was further compromised by the practice of issuers rating shopping. The issuers did not pay for the Credit Rating Agencies services until after the Credit Rating Agencies gave a preliminary rating to the issuer. This practice created, essentially, bidding wars where the issuers would hire the agency that provided the highest rating for the lowest price. The Credit Rating Agencies were paid only if they provided the desired Investment Grade ratings, and only in the event that the transaction closed with those ratings. Ratings shopping jeopardized the integrity and independence of the rating process.

530. Raymond McDaniel, Moody s CEO, realized that the market-share war had undermined the Ratings Agencies work product. In a presentation to Moody s Board of Directors in 2007, he stated,

> The real problem is not that the market does underweights [sic] ratings quality but rather that . . . it actually penalizes quality by awarding rating mandates based on

> the lowest credit enhancement needed for the highest rating. Unchecked, competition on this basis can place the entire financial system at risk.[5]

531. McDaniel described to the board how *Moody's* has "erected safeguards to keep teams from too easily solving the market share problem by lowering standards" but then stated, **"This does NOT solve the problem."** Turning then to a topic he referred to as "Rating Erosion by Persuasion," McDaniel observed, "Analysts and [managing directors] are continually "pitched" by bankers, issuers, investors" and sometimes "we "drink the kool-aid."

3. The Credit Ratings Were Unreliable Due to the Use of Inaccurate, Outdated Models and Inadequate Resources.

532. The outdated models used by the Credit Rating Agencies turned out PLMBS ratings that were inaccurate.

533. The models relied on pre-2000 data, and this data, for a number of reasons, produced wildly inaccurate results. First, this pre-2000 data ignored the dramatic changes in the mortgage industry following 2000: increased lending to riskier borrowers, increased origination of riskier kinds of mortgage loans, and a dramatic rise in housing prices. Second, the pre-2000 data, as the Congressional Research Service reported in 2009, was based on a "benign period of economic moderation in financial markets and rising house prices." Congressional Research Serv., Credit Rating Agencies and Their Regulation 7 (2009). They were useless in predicting the likelihood of default in a time of macroeconomic crisis and falling housing prices.

534. The models had other flaws, too. They attached the wrong weights to the effect of falling housing prices on loan default rates, and they miscalculated the interdependence among loan defaults—the likelihood, in other words, that an economic storm would sink more than one financial ship.

---

[5] Exhibit to October 22, 2008, hearing before the House Oversight Committee.

535. The Credit Rating Agencies knew of these flaws, but did nothing to fix them.

536. In 2007, for example, Vickie Tillman, an S&P Executive Vice President, stated before the Senate Banking Committee: "We are fully aware that, for all our reliance on our historically rooted data that sometimes went as far back as the Great Depression, some of that data has proved no longer to be as useful or reliable as it has historically been."

537. In an April 27, 2008 article in the *New York Times* Magazine, Mark Adelson, a former Managing Director in Moody's structured finance division, criticized Moody's use of historical data about 30-year fixed mortgages to predict defaults and delinquencies in the new mortgage market—describing it as "observing 100 years of weather in Antarctica to forecast the weather in Hawaii."

538. In fact, the Credit Rating Agencies themselves did not believe the results their models turned out.

539. In a December 2006 email, an S&P analyst expressed concern by describing the "CDO market" as a "monster" and concluding: "Let's hope we are all wealthy and retired by the time this house of cards falters." In an April 2007 electronic communication uncovered by the Senate Subcommittee on Investigations, two S&P analysts agreed that a particular mortgage-backed deal was "ridiculous," and that the model "definitely does not capture half the ris[k]." A month later, one of those analysts complained that "no body [sic] gives a straight answer about anything around here," and that there were no "clear cut parameters on what the hell we are supposed to do."

540. Eric Kolchinsky, a former managing director at Moody's who oversaw the rating of subprime-mortgage-backed CDOs during 2007, testified before the House Oversight and Government Reform Committee on September 30, 2009 that "[m]ethodologies produced by

Moody's for rating structured finance securities are inadequate and do not realistically reflect the underlying credits. Rating models are put together in a haphazard fashion and are not validated if doing so would jeopardize revenues."

541. Compounding the inherent problems with the rating models was the fact that the Rating Agencies simply did not commit the resources necessary to adequately rate residential-mortgage-backed financial products.

542. Frank L. Raiter, who from 1995 until 2005 was a Managing Director at S&P's and head of its Residential Mortgage Rating Group, stated in prepared testimony before the Senate Subcommittee on Investigations that "in the residential ratings group[,] . . . between 1995 and 2005[,] rating volumes grew five or six fold without similar increases in staffing. Rating production was achieved at the expense of maintaining criteria quality."

543. This inadequate staffing had practical consequences: it meant that the Rating Agencies were not able to improve the models they knew were producing inaccurate and misleading ratings. As Raiter testified, by early 2004 S&P had developed a model that took into account much more historical data than had been analyzed previously—a new model suggesting that the model then in use "was underestimating the risk of some Alt-A and subprime products." Due to inadequate staffing, Raiter testified, this model "was never implemented." If S&P had implemented the new model, stated Raiter, it would have required much greater credit enhancement from PLMBS issuers in 2005, 2006, 2007—at the price of being assigned much less favorable ratings.

544. Similarly, Jerome Fons, a former Managing Director of Credit Policy at Moody's, testified before the House Oversight Committee on October 22, 2008 that when evidence arose

that previously assigned ratings of PLMBS were inaccurate, the Rating Agencies did not update their models or their thinking.

4. The Rating Agencies Knew, and the Defendants Should Have Known, That the PLMBS Ratings in This Case Fundamentally Differed from the Ratings of Corporate Bonds.

545. Neither the Credit Rating Agencies nor Defendants disclosed to investors that the ratings of PLMBS were materially different from, and less reliable than, standard corporate bond ratings.

546. Instead, the Credit Rating Agencies represented that the credit ratings were comparable to corporate bonds. Moody s stated in a 2004 presentation that, [t]he comparability of these opinions holds regardless of the country of the issuer, its industry, asset class, or type of fixed-income debt. A May 2007 S&P document on rating methodology stated: Our ratings represent a uniform measure of credit quality globally and across all types of debt instruments. In other words, an AAA rated corporate bond should exhibit the same degree of credit quality as an AAA rated securitized debt issue.

547. In fact, however, the Credit Rating Agencies did not simply estimate expected loss and/or probability of default in determining the ratings of the PMLBS purchased by the Bank, as they do with corporate bonds. Rather, the agencies employ mathematical credit risk models based on random event simulations to determine the estimated loss distributions associated with the great many separate assets that backed those PLMBS. These models require the Credit Rating Agencies to make many estimates and assumptions regarding each of the various assets, including the degree to which losses or defaults on these assets would be correlated with each other.

548. The Credit Rating Agencies in this case knowingly made unreasonable

assumptions about how frequently defaults on the assets would be correlated with each other. *See supra* ¶¶533-537. And, unlike the assumptions the Credit Rating Agencies use for rating other instruments, such as corporate bonds, the correlation assumptions used to rate the PLMBS in this case were based on dramatically incomplete historical data or on pure speculation.

549. Defendants, by virtue of their close working relationship with the Rating Agencies, and their abundant and well-documented efforts to game the ratings to ensure the AAA or AA rating that was necessary for the sale of their PMLBS, should have known that the rating of the PLMBS differed fundamentally from the rating of corporate bonds in the way just described.

5. Subsequent Downgrades Confirm that the Investment Grade Ratings Reported in the Offering Documents Were Unjustifiably High and Misstated the True Credit Risk of the PLMBS Purchased by the Bank.

550. "Investment grade" products are understood in the marketplace to be stable, secure, and safe. Using S&P's scale, "investment grade" ratings are AAA, AA, A and BBB, and represent, respectively, highest credit quality, high credit quality, upper-medium credit quality and medium credit quality. Any instrument rated below BBB is considered below investment grade or, colloquially, a "junk bond."

551. Each prospectus supplement states that the issuance of the PLMBS was conditioned on the assignment of particular, investment grade ratings, and listed the ratings in a chart.

552. As noted, the Bank purchased only triple-A rated tranches of PLMBS. However, the triple-A ratings of the PLMBS misstated the credit quality of the underlying loans. The triple-A rating denotes "high credit-quality," and is the same rating as those typically assigned to

bonds backed by the full faith and credit of the United States Government, such as Treasury Bills.

553. On or about July 10, 2007, S&P publicly announced it was revising the methodologies used to rate numerous MBS because the performance of the underlying collateral "called into question" the accuracy of the loan data. S&P announced it was revising its methodology assumption to require increased "credit protection" for rated transactions. S&P reiterated that it would seek in the future to review and minimize the incidence of potential underwriting abuse given "the level of loosened underwriting at the time of loan origination, misrepresentation and speculative borrow behavior reported for the 2006 ratings."

554. One day later, on July 11, 2007, Moody's announced it was also revising its methodology used to rate the MBS and anticipated MBS downgrades in the future. Moody's did in fact significantly downgrade most of the MBS, noting "aggressive underwriting" used in the origination of the collateral.

555. Yet, at the time these statements were made in July 2007, all of the PLMBS at issue in this case retained their investment-grade ratings.

556. Historically, investments with triple-A ratings had an expected loss rate of less than .05%. The default rate on investment grade corporate bonds from 1981 to 2008, for example, averaged about 0.106% with no year higher than 0.41%.

557. Beginning in the spring of 2008, the PLMBS purchased by the Bank also became subject to these rating agency downgrades. Forty of the forty-three triple-A rated certificates at issue in this case (originally valued at over $3.3 billion) now have been downgraded to non-investment grade ratings, *i.e.*, junk status.

558. The en masse downgrade of triple-A rated PLMBS indicates that the ratings set forth in the Offering Documents were false, unreliable, and inflated. As the SEC has noted, "[a]s the performance of these securities continued to deteriorate, the three rating agencies most active in rating these instruments downgraded a significant number of their ratings. The rating agencies['] performance in rating these structured finance products raised questions about the accuracy of their credit ratings generally as well as the integrity of the ratings process as a whole." SUMMARY REPORT OF ISSUES IDENTIFIED IN THE COMMISSION STAFF'S EXAMINATIONS OF SELECT CREDIT RATING AGENCIES BY THE STAFF OF THE SECURITIES AND EXCHANGE COMMISSION at 2 (July 2008). The Defendants should have known the Offering Documents' statements with respect to these ratings were misleading because of their direct involvement in and manipulation of the rating process and awareness of the poor credit quality of the underlying loan collateral.

6. The Bank Reasonably Relied on the Credit Ratings Reported in the Prospectuses.

559. The Bank did not know, and reasonably could not have known, that the credit ratings set forth in the Offering Documents were flawed, and that the rating agencies knew they were flawed. The Bank did not know that when they secured the credit ratings reported in the Offering Documents, the Depositor/Issuer Defendants and the Underwriter Defendants had done so by gaming the system. Moreover, the Bank did not know that the specific statements regarding the ratings contained in the Offering Documents were false – specifically, that the ratings did not in fact address the risk of the certificates and the likelihood of payment by borrowers on the underlying mortgage loans. No disclosure in any Offering Document informed the Bank that the rating was the unreliable result of inaccurate information and deficient modeling, as opposed to a legitimate evaluation of credit risk.

560. The Credit Rating Agencies continued to assure the market of the integrity of their MBS ratings long after the PLMBS at issue here were purchased by the Bank. In a letter to the editor of *The Wall Street Journal* dated September 17, 2007, Vickie Tillman, then Executive Vice President of Credit Market Services at S&P, stated: "We have numerous safeguards in place that have helped us effectively manage potential conflicts of interest. "Our credit ratings provide objective, impartial opinions on the credit quality of bonds." Tillman likewise testified before the Senate Committee on Banking, Housing and Urban Affairs on September 26, 2007:

> S&P maintains rigorous policies and procedures designed to ensure the integrity of our analytical processes. For example, analysts are not compensated based upon the amount of revenue they generate. Nor are analysts involved in negotiating fees. Similarly, individuals responsible for our commercial relationships with issuers are not allowed to vote at rating committees. These policies, and others, have helped ensure our long-standing track record of excellence.

561. The Rating Agencies also assured the market that the ratings assigned to PLMBS were just as reliable as ratings assigned to corporate bonds. *See supra* ¶546.

562. At the time these statements were made in September 2007, all of the PLMBS at issue in this case retained their investment-grade ratings.

G. The Proper Steps Were Not Taken To Ensure That The Mortgages Underlying The Trusts Were Enforceable.

1. The PLMBS Have Value Only If the Mortgage Loans and Mortgages Have Been Validly Assigned and Transferred to the Issuing Trust Such That They Are Enforceable

563. For PLMBS certificates to have any value, the issuing trust must be able to enforce the mortgage notes that back the certificates. If the trust cannot enforce the loans, they are effectively worthless—and so are the certificates.

564. The mortgage originator is the entity responsible for generating the loans that are ultimately transferred to the trusts. But if the trustee is to enforce the loans—and if PLMBS

certificates are to have any value—both the promissory note executed by the borrower and the mortgage itself must be validly transferred to the trust in the securitization process.

565. The promissory notes and mortgages are not transferred directly from the loan originator to the trust. Instead, they are typically transferred to a depositor, or to a sponsor and thence to a depositor. *See supra* ¶¶87-88.

566. The Offering Documents for all of the PLMBS in this action represented that the mortgage notes would be validly transferred to the issuing trust in accordance with specified procedures.

567. A trust that issues PLMBS certificates must be able to enforce not only the mortgage notes that back the certificates, but also the mortgages that secure the mortgage notes. If the mortgages cannot be enforced, then the properties that secure the mortgage notes cannot be foreclosed on if the borrower defaults. If the mortgages that secure the mortgage notes are not enforceable, PLMBS are to that extent worthless.

568. Before mortgages can be enforced by the trustee, however, they must be validly assigned to the issuing trust.

569. Before a purported mortgage holder can foreclose on a mortgaged property, state law generally requires that the purported holder—if it is not the original mortgagee—prove that it is a valid assignee of the mortgage. The assignment, or chain of assignment, must trace back without gaps to the original mortgagee, it must be in writing, and it must identify the mortgage that is assigned.

570. The Offering Documents for all of the PLMBS in this action represented that the mortgages would be validly assigned to the issuing trust in accordance with specified procedures.

2. Failure to Validly Assign and Transfer the Mortgages or Mortgage Loans to the Issuing Trust Has Been Systemic, Thus Materially Affecting the Value of the PLMBS Certificates

571. A material number of the mortgage notes underlying the issuing trusts have not been validly transferred in accordance with the procedures outlined in the Offering Documents.

572. The best known example of this failure is *Kemp v. Countrywide Home Loans, Inc. (In re Kemp)*, No. 08-18700 (Bankr. D.N.J.), in which Linda DeMartini, whom Countrywide had employed for a decade and who testified that in her employment, she had been "involved in every aspect of the servicing," and "had to know about everything,"[6] testified—on direct examination—that failure to deliver the promissory note to the trust was normal operating procedure for Countrywide when acting as originator and servicer.[7] Among the PLMBS at issue in this action, Countrywide was an originator and servicer for SARM 2005-21 3A1.

573. In *Kemp*, the U.S. Bankruptcy Court for the District of New Jersey, applying New Jersey law, held that because the debtor's mortgage note had not been physically transferred to the issuing trust's trustee, or properly indorsed, it was not enforceable by either the issuing

---

[6] *Kemp*, Hr'g Tr. 45:7, :9-10 (Aug. 11, 2009).

[7] As DeMartini testified:

> Q. [I]s it generally the custom . . . for [the trust] to hold the documents?
> A. No. They would stay with us as the servicer.
> . . .
> Q. So I believe you testified Countrywide was the originator of this loan?
> A. Yes.
> . . .
> Q. So the physical documents were retained within the corporate entity Countrywide or Bank of America?
> A. Correct.
> Q. . . . [W]ould you say that this is standard operating procedure in the mortgage banking business?
> A. Yes. It would be . . . the normal course of business . . . , as we're the ones that are doing all the servicing, and that would include retaining the documents.

Id. at 14:5-15:6.

trust s trustee or the trustee s agent. *Kemp v. Countrywide Home Loans, Inc. (In re Kemp)*, 440 B.R. 624, 630-34 (Bankr. D.N.J. 2010).

574. Similarly, recent months have revealed that a material number of the mortgages backing the PLMBS were not validly assigned to the issuing trusts in accordance with the procedures outlined in the Offering Documents. *U.S. Bank N.A. v. Ibanez*, 941 N.E.2d 40 (Mass. 2011), for example, consisted of two consolidated cases arising out of two different mortgages purportedly assigned to two different mortgage-backed trusts. In both, there was no evidence that, prior to the foreclosure sales, the mortgage had ever been assigned to the relevant depositors. *See Ibanez*, 941 N.E.2d at 649-50.

575. In both of the cases consolidated in *Ibanez*, the servicer was Option One. In both cases, Option One failed to validly assign the mortgage to the issuing trust such that the issuing trust could enforce it. Among the PLMBS at issue here, Option One is the servicer for OOLMT 2005-5 A3 and OOLMT 2006-2 2A3.

576. These failures appear to be systemic in the industry. Even if they do not affect every mortgage underlying every issuing trust, the failures affect a sufficient number of the mortgages and materially impair the value of the PLMBS.

577. Multiple cases have been filed in courts across the country by homeowners challenging the right of financial institutions to foreclose. *See, e.g.*, *In re Mims*, 438 B.R. 52 (Bankr. S.D.N.Y. 2010); *Deutsche Bank Nat'l Trust Co. v. Tarantola (In re Tarantola)*, No. 09-09703, 2010 WL 3022038 (Bankr. D. Ariz. July 29, 2010); *In re Weisband*, 427 B.R. 13 (Bankr. D. Ariz. 2010); *Wells Fargo Bank, N.A. v. Marchione*, 887 N.Y.S.2d 615 (App. Div. 2009); *IndyMac Bank F.S.B. v. Garcia*, 28 Misc. 3d 1202(A) (N.Y. Sup. Ct. 2010); *Deutsche Bank Nat'l Trust Co. v. McRae*, 894 N.Y.S.2d 720 (Sup. Ct. 2010); *Citigroup Global Markets Realty Corp.*

v. Bowling, 25 Misc. 3d 1244(A) (N.Y. Sup. Ct. 2009); *HSBC Bank USA, N.A. v. Miller*, 889 N.Y.S.2d 430 (Sup. Ct. 2009); *Deutsche Bank Nat'l Trust Co. v. Abbate*, 25 Misc. 3d 1216(A) (N.Y. Sup. Ct. 2009); *In re Adams*, 693 S.E.2d 705 (N.C. Ct. App. 2010); *HSBC Bank USA v. Thompson*, No. 23761, 2010 WL 3451130 (Ohio Ct. App. Sept. 3, 2010); *Bank of N.Y. v. Gindele*, No. C-090251, 2010 WL 571981 (Ohio Ct. App. Feb. 19, 2010).

578. According to the *New York Times*, the United States Trustee Program has taken the unusual step of intervening in bankruptcy proceedings to force the mortgage companies to prove that they own, or otherwise have the standing required to enforce, the mortgages on which they are seeking to foreclose. See Gretchen Morgenson, *Don't Just Tell Us. Show Us That You Can Foreclose*, N.Y. TIMES , Nov. 27, 2010. The *Time's* article noted the Trustee s intervention in two Atlanta bankruptcy cases, one involving Wells Fargo and the other involving J.P. Morgan Chase.

579. The failure is also shown by the recent drop in foreclosures system-wide, which is attributable to lack of necessary documentation. *See, e.g.*, Dan Levy & John Gittelsohn, *Foreclosure Filings Hit Three-Year Low As U.S. Servicers in "Dysfunction"*, Bloomberg News, Mar. 9, 2011, *available at* http://www.bloomberg.com/news/2011-03-10/foreclosure-filings-drop-to-3-year-low-as-u-s-servicers-in-dysfunction-.html. In addition, in the Fall of 2010, major financial institutions such as Bank of America (which acquired Countrywide) and J.P. Morgan Chase, both originators of mortgages underlying the certificates purchased by the Bank, announced they were suspending mortgage foreclosures because they had discovered significant problems in their ability to locate and document the ownership of mortgage notes.

580. The evidence of misconduct in this regard has been so severe and pervasive that the Attorneys General of all 50 states have announced an investigation into the Defendants

practices. In addition, major financial institutions have reserved hundreds of millions, if not billions, of dollars to address litigation and losses stemming from the financial crisis and foreclosure problems.

581. Perhaps most telling is a recent proposal by a group friendly to the mortgage industry to enact federal legislation to loosen the standards for foreclosure. Jason Gold & Anne Kim, Third Way, *Fixing "Foreclosure-gate"* (2011), *available at* http://content.thirdway.org/publications/362/Third_Way_Memo_-_Fixing_Foreclosure-gate.pdf. The proposal would hardly be necessary if the industry's house were in order.

V. DEFENDANTS' MATERIAL UNTRUE STATEMENTS AND OMISSIONS IN CONNECTION WITH THE SALE OF PLMBS TO FHLBC

582. As detailed above, the Sponsor purchased mortgage loans and deposited them into issuing trusts, from which the Depositor/Issuer issued certificates, and the Underwriter Defendants—Wall Street banks and other large financial institutions—offered and sold those certificates to the Bank through the Offering Documents for each securitization. The Depositor/Issuer and Underwriter Defendants drafted the Offering Documents. In addition, each Depositor/Issuer Defendant and Underwriter Defendant was identified in these documents as the depositor/issuer or underwriter, respectively, of the certificates, and approved the versions of these documents that were delivered by the Underwriter Defendants to Plaintiff.

583. The Offering Documents contained extensive material misstatements and omissions of material facts with regard to the underwriting guidelines and practices purportedly applied by the mortgage originators whose loans backed the PLMBS purchased by the Bank, the appraisal process underlying the LTV ratios, predatory lending abuses by the mortgage originators, the transfer and enforceability of the mortgage loans underlying the certificates, and a number of key characteristics of the mortgage pools that pertain to the risk of the certificates.

These misstatements are not predictions of future events or subjective opinions; rather these misstatements constitute misrepresentations of current or historical material facts that were false when made. Moreover, all of the misstatements concern information that the Bank did not have access to and could not independently verify this information was only available to the Defendants, and thus the Bank relied upon the Defendants to accurately present the information. The Bank notes, in particular, that unlike Defendants, it did not have access to the mortgage loan files that contain (or at one time contained) complete information regarding the mortgage loans backing the PMLBS purchased by the Bank. Specifically, the misstatements and omissions of material fact are as follows:

A. Defendants Misrepresented Underwriting Guidelines Utilized by Mortgage Lenders

1. The Materiality of Underwriting Guidelines

584. As alleged above, the originator s underwriting standards, and the extent to which the originator departs from its standards, are key indicators of the risk of the mortgage loans made by the originator. And because the mortgage loans back the certificates that are issued to investors such as the Bank, the loan underwriting standards are also material to assessing the risk of the PLMBS certificates. For these reasons, the originator s underwriting standards as described in the Offering Documents were material to the Bank s decision to purchase the PLMBS certificates at issue here.

2. Misstatements Regarding Underwriting Guidelines

585. The Offering Documents contained material untrue or misleading statements and omissions regarding the underwriting guidelines allegedly employed in the origination of the mortgage loans that secure the PLMBS. Appendix III attached hereto and incorporated herein sets forth those statements and omissions and the reasons each is misleading. The following are

examples of these materially misleading statements and omissions regarding mortgages originated or acquired by Wells Fargo Bank, taken from the Banc of America Funding 2006-F Trust Prospectus Supplement (incorporated herein by this reference):

- That Wells Fargo's underwriting standards were used "*to evaluate the applicant's credit standing and ability to repay the loan, as well as the value and adequacy of the mortgaged property as collateral.*" BAFC 2006-F Pros. Sup. S-30 (emphasis added).
- That Wells Fargo balanced the following factors in determining a mortgagor's eligibility for a mortgage: "the amount of the loan, the ratio of the loan amount to the property value (i.e., the lower of the appraised value of the mortgaged property and the purchase price), the borrower's means of support and the borrower's credit history." BAFC 2006-F Pros. Sup. S-30.
- That Wells Fargo "supplements the mortgage loan underwriting process with either its own proprietary scoring system or scoring systems developed by third parties," which scoring systems provided "*consistent, objective measures of borrower credit and certain loan attributes*" that were then "used to evaluate loan applications and assign each application a 'mortgage score.'" BAFC 2006-F Pros. Sup. S-31 (emphasis added).
- That Wells Fargo required that "borrowers applying for loans must demonstrate that the ratio of their total monthly debt to their monthly gross income does not exceed a certain maximum level," which varied depending on the following factors:

[L]oan-to-value ratio, a borrower's credit history, a borrower's liquid net worth, the potential of a borrower for continued employment advancement or income growth, the ability of the borrower to accumulate assets or to devote a greater portion of income to basic needs such as housing expense, a borrower's Mortgage Score and the type of loan for which the borrower is applying.

BAFC 2006-F Pros. Sup. S-32.

- That "[t]he Mortgage Score is used to determine the type of underwriting process and which level of underwriter will review the loan file." These levels were described as follows:

  For transactions which are determined to be low-risk transactions, based upon the Mortgage Score and other parameters (including the mortgage loan production source), the lowest underwriting authority is generally required. For moderate and higher risk transactions, higher level underwriters and a full review of the mortgage file are generally required. Borrowers who have a satisfactory Mortgage Score (based upon the mortgage loan production source) are generally subject to streamlined credit review (which relies on the scoring process for various elements of the underwriting assessments). Such borrowers may also be eligible for a reduced documentation program and are generally permitted a greater latitude in the application of borrower debt-to-income ratios.

  BAFC 2006-F Pros. Sup. S-31.

- That "Wells Fargo Bank permits debt-to-income ratios to exceed guidelines when the applicant has documented compensating factors for exceeding ratio guidelines such as documented excess funds in reserves after closing, a history of making a similar sized monthly debt payment on a timely basis, substantial residual income after monthly obligations are met, evidence that ratios will be reduced shortly after closing when a financed property under contract for sale is sold, or additional income has been verified for one or more applicants that is ineligible for consideration as qualifying income." BAFC 2006-F Pros. Sup. S-32 (emphasis added).

- The Supplement further asserts the following with regard to mortgages purchased from originators other than Wells Fargo:

  > In order to qualify for participation in Wells Fargo Bank's mortgage loan purchase programs, lending institutions must (i) meet and maintain certain net worth and other financial standards, (ii) demonstrate experience in originating residential mortgage loans, (iii) meet and maintain certain operational standards, (iv) evaluate each loan offered to Wells Fargo Bank for consistency with Wells Fargo Bank's underwriting guidelines or the standards of a pool insurer and represent that each loan was underwritten in accordance with Wells Fargo Bank standards or the standards of a pool insurer and (v) utilize the services of qualified appraisers.
  >
  > BAFC 2006-F Pros. Sup. S-30.

586. These statements were materially misleading for multiple reasons that Appendix III describes in detail. Fundamentally, they grossly distort the underwriting process that was actually employed by indicating that it was a principled process that followed stated standards and employed enumerated safeguards. However, as described above in Sections IV.B and IV.C, both Wells Fargo and the other originators of mortgage loans that backed the PLMBS purchased by the Bank effectively abandoned their stated underwriting standards in an effort to maximize their mortgage origination volume. Thus Wells Fargo and other originators did not follow the underwriting standards set forth or otherwise referred to in the Offering Documents. "Exceptions" to standards became the rule. Reduced documentation was employed not to streamline the process where warranted, but instead to mask the borrower's disqualification.

587. In addition, the statements were materially misleading because they failed to disclose that Wells Fargo had no reliable basis on which to conclude that the scoring systems allegedly employed provided the asserted "consistent, objective measures of borrower credit," or that the resulting "mortgage score" was a reliable indicator of the probability of default. Wells Fargo, like others in the industry, constructed "models" to justify their underwriting programs,

but the models were based on scant historical data and were therefore utterly unreliable. Indeed, the explosion in Alt-A, subprime and other untraditional lending, described *supra* § IV.B.1, rendered irrelevant the industry s historical models, which were based on traditional underwriting practices. But Wells Fargo and others continued to use this data to construct models to justify their ever-less rigorous underwriting programs, and continued to present these models and programs to investors as prudent, thoroughly tested, and well-grounded in reliable and objective data.

588. The statements were further materially misleading because they failed to disclose that Wells Fargo, like the other originators of mortgages that backed the PLMBS purchased by the Bank, lacked adequate procedures and practices to monitor or evaluate their mortgage loan underwriters exercise of judgment, or to provide appropriate training and education to their mortgage loan underwriters.

3. Evidence Demonstrating Misstatements in the Offering Documents Regarding the Originators' Underwriting Practices.

a. Government investigations, actions and settlements, confidential witnesses and evidence developed in other private lawsuits demonstrate systematic and pervasive abandonment of stated underwriting practices by the originators.

589. As alleged in detail above, government investigations and lawsuits, press reports, and statements of confidential witnesses who are former employees of mortgage originators all document how the mortgage originators who issued the loans backing the PLMBS purchased by the Bank failed to apply their stated underwriting guidelines, ensure that compensating factors justified exceptions, and obtain accurate appraisals. Additional evidence has been generated by the many other private lawsuits against many of the same Defendants in connection with the sale of MBS and related certificates. This evidence and the allegations herein based on this

evidence demonstrates that the statements in the Offering Documents regarding the mortgage originators underwriting and appraisal practices are false and misleading. Contrary to the representations in the Offering Documents, the mortgage originators did not genuinely attempt to determine the borrowers ability to pay, or the adequacy of the collateral provided for the loans they issued, but abandoned these standards in order to issue and sell for securitization as many loans as possible.

b. Analysis of loans that backed the PLMBS purchased by the Bank demonstrates the abandonment of stated underwriting practices by the originators.

590. Analysis of the specific loans that backed the PLMBS purchased by the Bank show high rates of delinquency and foreclosure, evidencing a pervasive disregard of sound underwriting practices.

591. For example, for the following PLMBS, the rate of delinquent loans as of December 2010 was 10% or greater:

- Certificate AMSI 2005-R10 A2B, 29.44%
- Certificate ARSI 2005-W5 A2C, 44.04%
- Certificate BAFC 2006-C 2A1, 33.54%
- Certificate BAFC 2006-E 2A2, 30.51%
- Certificate BAFC 2006-E 3A1, 23.09%
- Certificate BAFC 2006-F 2A1, 23.75%
- Certificate BAFC 2006-F 3A1, 18.84%
- Certificate CBASS 2006-CB4 AV3, 44.90%
- Certificate CMLTI 2006-NC1 A2C, 52.57%
- Certificate CMLTI 2006-WFH2 A2B, 37.48%

- Certificate CMLTI 2006-WFH4 A3, 37.85%
- Certificate CMLTI 2006-NC2 A2B, 50.74%
- Certificate FFML 2006-FF13 A2C, 47.70%
- Certificate FFML 2006-FF8 IIA3, 51.55%
- Certificate FFML 2006-FF12 A3, 34.13%
- Certificate FFML 2006-FF12 A4, 34.13%
- Certificate FFML 2006-FF14 A5, 34.81%
- Certificate FFML 2006-FF10 A7, 34.17%
- Certificate FHASI 2006-AR1 2A1, 19.49%
- Certificate FHLT 2005-E 2A3, 58.65%
- Certificate GMACM 2006-AR2 2A1, 16.41%
- Certificate GMACM 2006-AR2 4A1, 20.82%
- Certificate GSAMP 2006-NC2 A2C, 42.33%
- Certificate HVMLT 2006-2 2A1A, 17.61%
- Certificate INABS 2005-D AII3, 37.25%
- Certificate INDX 2006-AR15 A2, 35.70%
- Certificate MABS 2006-NC1 A3, 41.69%
- Certificate MSAC 2006-WMC2 A2C, 49.20%
- Certificate MSAC 2006-HE5 A2C, 58.44%
- Certificate MSAC 2006-HE6 A2C, 70.67%
- Certificate NHELI 2006-WF1 A3, 36.36%
- Certificate OOMLT 2005-5 A3, 35.66%

- Certificate OOMLT 2006-2 2A3, 44.92%
- Certificate RFMSI 2006-SA2 2A1, 18.10%
- Certificate RASC 2005-KS12 A2, 35.34%
- Certificate SABR 2006-FR3 A2, 50.25%
- Certificate SABR 2006-NC3 A2B, 40.86%
- Certificate SEMT 2006-1 2A1, 26.11%
- Certificate SEMT 2006-1 3A1, 29.84%
- Certificate SARM 2005-21 3A1, 24.58%
- Certificate WFHET 2006-3 A2, 46.04%
- Certificate WFMBS 2006-AR3 A4, 13.42%

592. Similarly, for the following PLMBS purchased by the Bank, the rate of foreclosure as of December 2010 was 5 percent or greater:

- Certificate AMSI 2005-R10 A2B, 14.23%
- Certificate ARSI 2005-W5 A2C, 27.34%
- Certificate BAFC 2006-C 2A1, 15.30%
- Certificate BAFC 2006-E 2A2, 14.30%
- Certificate BAFC 2006-E 3A1, 8.61%
- Certificate BAFC 2006-F 2A1, 7.09%
- Certificate BAFC 2006-F 3A1, 10.23%
- Certificate CBASS 2006-CB4 AV3, 18.42%
- Certificate CMLTI 2006-NC1 A2C, 25.39%
- Certificate CMLTI 2006-WFH2 A2B, 16.19%

- Certificate CMLTI 2006-WFH4 A3, 14.23%
- Certificate CMLTI 2006-NC2 A2B, 24.15%
- Certificate FFML 2006-FF13 A2C, 18.74%
- Certificate FFML 2006-FF8 IIA3, 19.62%
- Certificate FFML 2006-FF12 A3, 12.41%
- Certificate FFML 2006-FF12 A4, 12.41%
- Certificate FFML 2006-FF14 A5, 12.95%
- Certificate FFML 2006-FF10 A7, 12.02%
- Certificate FHASI 2006-AR1 2A1, 10.48%
- Certificate FHLT 2005-E 2A3, 25.61%
- Certificate GMACM 2006-AR2 2A1, 6.72%
- Certificate GMACM 2006-AR2 4A1, 12.16%
- Certificate GSAMP 2006-NC2 A2C, 19.84%
- Certificate INABS 2005-D AII3, 24.08%
- Certificate INDX 2006-AR15 A2, 19.63%
- Certificate MABS 2006-NC1 A3, 19.03%
- Certificate MSAC 2006-WMC2 A2C, 23.42%
- Certificate MSAC 2006-HE5 A2C, 21.90%
- Certificate MSAC 2006-HE6 A2C, 27.12%
- Certificate NHELI 2006-WF1 A3, 13.22%
- Certificate OOMLT 2005-5 A3, 17.16%
- Certificate OOMLT 2006-2 2A3, 22.62%

- Certificate RFMSI 2006-SA2 2A1, 9.45%
- Certificate RASC 2005-KS12 A2, 16.25%
- Certificate SABR 2006-FR3 A2, 25.41%
- Certificate SABR 2006-NC3 A2B, 19.37%
- Certificate SEMT 2006-1 2A1, 13.74%
- Certificate SEMT 2006-1 3A1, 12.13%
- Certificate SARM 2005-21 3A1, 10.73%
- Certificate WFHET 2006-3 A2, 16.86%
- Certificate WFMBS 2006-AR3 A4, 6.37%

B. Defendants Misrepresented the Appraisal Process and Loan-to-Value Ratios ("LTV") That Were Based Upon Those "Appraisals"

1. The Materiality of Representations Regarding Appraisals and LTVs

593. The loan-to-value ratio of a mortgage loan is the ratio of the amount of the mortgage loan to the value of the mortgaged property when the loan is made. For example, a loan of $200,000 secured by property valued at $500,000 has an LTV of 40%; a loan of $450,000 on the same property has an LTV of 90%. The LTV is one of the most important measures of the risk of a mortgage loan because it is a primary determinant of the likelihood of default. The lower the LTV, the greater the borrower's equity relative to the value of the house. Thus, when an LTV is low, it is less likely that a decline in the property's value will wipe out the owner's equity and give the owner an incentive to stop making mortgage payments and abandon the property (a "strategic default"). Additionally, lower LTV ratios indicate that the losses on loans that do default will be less severe – *i.e.*, loans with lower LTVs provide a greater equity

□cushion□ because the proceeds of foreclosure are more likely to cover the unpaid balance on the mortgage loan.

594. Because the numerator (the amount of the loan) is predetermined, the key to an accurate LTV is an accurate denominator (the value of the property). The key to an accurate denominator, in turn, is an accurate appraisal of the property. In a purchase of a property, the denominator in the LTV is usually determined by choosing the lower of the purchase price or the appraised value. In a refinancing or home equity loan, the denominator is always an appraised value because there is no purchase price. Accordingly, an inflated appraisal will inflate the denominator of the LTV.

595. A denominator that is too high will understate, sometimes greatly, the risk of a loan. In the example above, if the property□s actual value is $500,000, but is valued incorrectly at $550,000, then the LTV of the $200,000 loan falls from 40% to 36.4%, and the LTV of the $450,000 loan falls from 90% to 81.8%. In either case, an LTV that is based upon an improperly inflated appraisal value understates the risk of the loan.

596. Additionally, at higher LTV ratios or higher loan amounts, even minor inflations in a property□s value can translate to significantly riskier loans. In the example above, although the risk of a loan with an LTV of 40% is greater than the risk of one with an LTV of 36.4%, both imply a relatively safe loan because of the large equity cushions. By contrast, a loan with an LTV of 90% is much riskier than one with an LTV of 81.8%. In the case of a loan with an LTV of 81.8%, there is an equity cushion of 18.2% of the value of the property, while in the case of the 90% LTV loan, the equity cushion is only 10%—just over half as much. Thus, in the example in the preceding paragraph, the $50,000 overstatement in the appraisal has a far more dramatic effect on the risk profile of the $450,000 loan than on the $200,000 loan.

597. Because the riskiness of the underlying loans in the asset pool (including the risk of default and the severity of the losses on default) impacts the risk of the associated PLMBS certificates, aggregate LTV metrics are material to an investor's decision to purchase PLMBS, and, specifically, were material to the Bank. The sole source of payment on the certificates is the cash flow from the mortgage loans that back them. If borrowers fail to make their payments, there is less cash to pay the investors in the certificates. The safety of their certificates consequently depends upon the quality of the loans, and a key indicator of loan quality is an LTV ratio resulting from an appraisal conducted in accordance with governing standards. In fact, credit rating agencies use LTVs to determine the proper structuring and credit enhancement necessary to assign a particular rating to a security. If the LTVs of the mortgage loans in the asset pool of the securitization are not based on appraisals conducted in accordance with governing standards, as the Bank alleges here, *see infra* ¶¶603-612, the ratings of the certificates sold in that securitization will also be incorrect. Investors will therefore be misled about the risk of investing in a particular PLMBS certificate.

598. LTVs also serve as indicators of prepayment patterns – that is, the number of borrowers who pay off their mortgage loans before maturity. LTVs thus predict the expected lives of the loans and the associated PLMBS certificates that are backed by the loans. Prepayment patterns affect many aspects of the PLMBS certificates that are material to the investors purchasing them, such as the life of the certificate and the timing and amount of cash that the investor will receive during that life.

599. Even seemingly minor differences in the aggregate LTV metrics have a significant effect on both the risk and rating of each certificate sold in the securitization. For example, assume the Offering Documents assert that the loan pool had a weighted average LTV

(*i.e.*, the average of the LTVs for the mortgages in the pool, weighted by the principal amount thereof) of 80%. If the true weighted average LTV (after correcting flawed procedures in appraisals that overstated the value of the properties securing the mortgages) was 82%, the Offering Documents assertion would constitute a material misstatement of the risk profile of the mortgage pool—and the PLMBS the pool secured—because the equity cushion (and the borrowers equity interest in the properties) would be eroded by 10%.

600. Finally, because an LTV is only as reliable as the appraisal used to determine the value of the collateral, LTVs and aggregate LTV metrics are meaningless to PLMBS investors unless the appraisals underlying the LTVs are done in accordance with governing standards. Thus statements regarding the valuation of collateral—including statements that appraisals were conducted in calculating the LTVs and that such appraisals conformed to uniform standards—are material to an investor s decision to purchase PLMBS, and, specifically, were material to the Bank:

> Mortgage bankers and investors consider the property appraisal one of the most important documents contained in the loan file since it establishes the value of the property securing the mortgage loan. In fact, investors put review of the appraisal on the same level as the review of credit. The appraisal assists the mortgage banker in assessing the collateral risk . . . . Obviously, the ultimate investor wants to mitigate such risk and relies on the appraisal to ensure that the property falls within the investor's valuation parameters.

Handbook of Mortgage Lending 165 (Mortgage Bankers Ass'n of Am. 2003).

601. Furthermore, assertions that appraisals conformed to the applicable standards are material to PLMBS investors like the Bank because such investors like the Bank have no reasonable means of verifying the LTVs represented metrics asserted in the offering documents at the time of sale. When conducted in accordance with governing standards, appraisals and their resulting LTVs are based on knowledge of particular facts that are not available to investors

in mortgage backed securities - an investor simply does not have access to the relevant data, let alone the time and resources needed to conduct an independent valuation of each piece of collateral underlying each certificate.

602. Statements regarding the independence and impartiality of appraisers are important as they provide assurance that manipulation by mortgage originators did not artificially inflate the LTVs. Likewise, statements in the Offering Documents that the appraisals conformed to USPAP or Fannie Mae and Freddie Mac standards, including requirements that appraisals be independently and impartially conducted, indicate that the appraisals and the aggregate data included in the Offering Documents based on the appraisals properly assess the value of the collateral and provide a reliable measure of the risk of the loan pools.

2. Misstatements Regarding Appraisals and LTVs

a. The Offering Documents falsely state that the LTVs were based upon appraisals

603. The Offering Documents contained numerous material untrue or misleading statements regarding the valuation of collateral and the "appraisal" process conducted upon the origination of the mortgages underlying the PLMBS. The Prospectus or Prospectus Supplement for each certificate states that the loan-to-value ratio represent a "ratio" or "fraction," the numerator of which is the "principal balance" or "principal amount" of the mortgage loan, and the denominator of which is the "lesser" or "least" of (1) the "sales price" or "purchase price" or "selling price" of the mortgaged property and (2) the "appraised value" or "appraisal" or "the appraised value determined in an appraisal" or "the appraised value . . . as established by an appraisal." *See* Appendix VII.

604. These are false statements of material fact because, contrary to Defendant's representations that the LTV ratios were based on "appraisals" or "appraised values," in reality

the biased and coerced valuations of collateral that Defendants labeled as "appraisals" failed to meet the federally required definition of "appraisal" applicable to entities that are regulated by the Office of Thrift Supervision ("OTS"), the Office of the Comptroller of the Currency ("OCC"), the Federal Deposit Insurance Corporation ("FDIC"), or the Board of Governors of the Federal Reserve System ("FRB") (collectively the "Bank Regulators"). Thus, the LTVs were not based on "appraisals" at all as that term was defined in the offering documents and is used and understood in the industry.

605. The Originators of the mortgages underlying the PLMBS were regulated by the Bank Regulators:

- Bank of America, N.A., and Wells Fargo Bank, N.A., are "national banking associations" chartered with the OCC pursuant to 12 U.S.C. § 21. Therefore, under 12 U.S.C. § 1813(q)(1), the OCC is the "appropriate Federal banking agency" with jurisdiction to regulate both banks.
- Downey Savings and Loan Association, F.A., IndyMac Bank, F.S.B., and Washington Mutual Bank are "federal savings association" within the meaning of 12 U.S.C. §§ 1813(b) and 1462(5). Pursuant to 12 U.S.C. § 1813(q)(4), the Director of the OTS is the "appropriate Federal banking agency" with jurisdiction to regulate these originators.
- Fremont Investment & Loan was a "state nonmember bank" within the meaning of 12 U.S.C. § 1813(e). Pursuant to 12 U.S.C. § 1813(q), the FDIC is the "appropriate Federal banking agency" with jurisdiction to regulate this originator.
- GreenPoint Mortgage Funding, Inc., was a subsidiary of North Fork Bank, which was a "state nonmember bank" within the meaning of 12 U.S.C. § 1813(e). Any

subsidiary of such a "state nonmember bank" is regulated by the FDIC. *See* 12 U.S.C. § 1831a(d)(1); 12 CFR § 362.4(a).

- Countrywide Home Loans, Inc. and Decision One Mortgage Company LLC were nonbank subsidiaries of the following "bank holding companies" within the meaning of 12 U.S.C. §§ 1841 and 1843:

Originator:	**Controlling "Bank Holding Company"**
Countrywide Home Loans, Inc.	Countrywide Financial Corporation[8]
Decision One Mortgage Company, LLC	HSBC North America

Subsidiaries of "bank holding companies" are regulated by the Board of Governors for the Federal Reserve System pursuant to 12 U.S.C. §§ 1813(q), 1841(n). *See also* 12 C.F.R. §§ 225.21-225.28.

- Chase Home Finance LLC, First Franklin Financial Corporation, and First Horizon Home Loan Corporation were subsidiaries of the following "national banking associations":

Originator:	**Controlling "National Banking Association":**
Chase Home Finance LLC	JPMorgan Chase Bank, National Association
First Franklin Financial Corporation	National City Bank
First Horizon Home Loan Corporation	First Tennessee Bank National Association

Subsidiaries of "national banking associations" are regulated by the OCC pursuant to 12 U.S.C. § 24a and 12 C.F.R. §§ 5.34 and 5.39.

[8]Countrywide Financial Corporation was a "bank holding company" until March 12, 2007.

606. Each of the Bank Regulators has issued regulations pursuant to Title XI of the Financial Institutions Reform Recovery and Enforcement Act of 1989 (FIRREA), 12 U.S.C. § 1339, that govern the appraisal practices of the institutions they regulate. These regulations define an "appraisal" as a "written statement *independently and impartially prepared* by a qualified appraiser setting forth an opinion as to the market value of an adequately described property as of a specific date(s) . . . ." 12 C.F.R. § 564.2 (OTS); 12 C.F.R. § 34.42 (OCC); 12 C.F.R. § 323.2 (FDIC); 12 C.F.R. § 225.62 (FRB) (emphasis added). Therefore, by representing that the LTV ratios were based on "appraisals" of the collateral, Defendants represented that the LTV ratios were based on independent and impartial valuations of the collateral.

607. The Bank Regulators define appraiser independence as follows:

> (a) Staff appraisers. If an appraisal is prepared by a staff appraiser, that *appraiser must be independent of the lending, investment, and collection functions* and not involved, except as an appraiser, in the federally related transaction, and *have no direct or indirect interest, financial or otherwise, in the property* . . . .
>
> (b) Fee appraisers. (1) If an appraisal is prepared by a fee appraiser, the appraiser shall be engaged directly by the regulated institution or its agent, and *have no direct or indirect interest, financial or otherwise, in the property or the transaction* . . . .

12 C.F.R. § 564.5 (OTS); 12 C.F.R. § 34.45 (OCC); 12 C.F.R. § 323.5 (FDIC); 12 C.F.R. § 225.65 (FRB) (emphasis added). In 2005 the Bank Regulators further elaborated on the standards for appraiser independence, stating that "[l]oan production staff should not select appraisers." Office of the Controller of the Currency et al., *Frequently Asked Questions on the Appraisal Regulations and the Interagency Statement on Independent Appraisal and Evaluation Functions* 2 (2005), *available at* http://www.federalreserve.gov/boarddocs/srletters/2005/SR0505a1.pdf. Additionally, the Bank Regulators specified that although loan production staff may use a "revolving, board approved list to select a residential appraiser," the "[s]taff

responsible for the development and maintenance of the list should be independent of the loan production process . . . . *Id.*

608. Defendants' statements in the Offering Documents are materially misleading because the LTV ratios were not based on impartial and independent "appraisals," but rather were the result of manipulation and coercion by loan production staff. As described above in sections IV.B and IV.C, the originators' loan production staff pressured and coerced appraisers to inflate values, demanded and obtained the ability to have "business managers" overrule staff and third-party appraisers, and routinely fed improper information to appraisers in an effort to manipulate their valuations, all of which served to undermine the independence of the appraisal process. Contrary to the interagency guidance, the originators' lending departments constantly pressured appraisers to increase their valuations, made clear that their continued access to work from these originators depended upon the appraisers coming in "at value," and in some cases simply overruled appraisers that refused to cooperate and refused to provide them with additional work. All of this resulted in appraisers having an indirect financial interest in each property they appraised, since their ability to obtain future work depended on their willingness to come in "at value" for each property they appraised. Simply put, as a result of this coercion, appraisers provided appraisals that they did not believe accurately reflected the value of the appraised property, but nevertheless were sufficiently high—*i.e.,* "at value"—to enable the deal to close. Because these valuations were not "independently and impartially prepared" as required by the federal definition of "appraisal," Defendants made false statements of material fact in the Offering Documents by stating that the LTV ratios were based on "appraisals" or "appraised values."

b. Misstatements regarding the standards to which the purported "appraisals" conformed

609. In addition, the Offering Documents contained materially untrue or misleading statements and omissions regarding the standards to which the purported "appraisals" conformed. The Offering Documents represented that, under the underwriting guidelines for each of the following originators, the appraisals are required to conform to the Uniform Standards of Professional Appraisal Practice ("USPAP") adopted by the Appraisal Standards Board of the Appraisal Foundation: Argent Mortgage Company, LLC; Decision One Mortgage Company, LLC; Downey Savings and Loan Association, F.A.; First Horizon Home Loan Corp.; IndyMac Bank, F.S.B.;[9] New Century Mortgage; Option One Mortgage Corporation; and WMC Mortgage Corp. *See* Appendix III.

610. Additionally, the Offering Documents represent that, under the underwriting guidelines of each of the following originators, the appraisals conformed to Fannie Mae and Freddie Mac appraisal standards: Countrywide Home Loans, Inc.; First Franklin Financial Corporation; First Horizon Home Loan Corp.; and Wells Fargo Bank, National Association.[10] *See* Appendix III. The Fannie Mae and Freddie Mac appraisal standards require that appraisals be conducted in accordance with the USPAP. *See* 2006 Single Family Selling Guide, Part XI, 102.02.

611. These statements in the Offering Documents were materially misleading because the mortgage originators routinely accepted and in fact overtly sought valuations of collateral that were conducted in violation of USPAP and Fannie Mae and Freddie Mac Standards. As

---

[9] This statement is not included in the offering documents for INABS 2005-D AII3.

[10] This statement is not included in the offering documents for BAFC 2006-F 2A1, BAFC 2006-F 3A1, or WFMBS 2006-AR3 A4.

detailed above, the USPAP requires that an appraiser perform assignments with impartiality, objectivity, and independence, and without accommodation of personal interests. Similarly, the Fannie Mae standards provide that it is essential that a lender obtain an independent, disinterested examination. As alleged in paragraph 608 and further described in sections IV.B and IV.C, which contain, among other details, abundant testimony from Confidential Witnesses, the appraisals used by the mortgage originators were the product of manipulation and coercion and thus were not impartial, objective, and independent as required by USPAP.

612. Additionally, USPAP precludes acceptance of an appraisal assignment where compensation is contingent upon reporting a predetermined result or a direction in assignment results that favors the cause of a client. Similarly, it is an unacceptable appraisal practice under Fannie Mae standards to develop and report an appraisal that favors either the cause of the client . . . [or] the attainment of a specific result . . . in order to receive compensation . . . and/or in anticipation of receiving future assignments. However, these are precisely the conditions that loan production staff for the mortgage originators forced upon appraisers when they repeatedly pressured appraisers to increase their valuations, implicitly or explicitly linked the receipt of continued work to at value appraisals, and even threatened to place appraisers on a blacklist if their appraisals did not come back at value.

c. Misstatements regarding aggregate LTVs

613. Because the LTV ratios were not based on appraisals conducted in conformance with applicable appraisal standards, the statements in the Offering Documents regarding the LTV ratios of the mortgage pools were materially untrue and misleading. These statements include: representations about the extent to which loans in the pools underlying each certificate had LTVs in excess of 100%, 90%, or 80%, and representations about the weighted average LTV of each

pool. Section V.B.3, *infra*, sets forth those statements for each certificate as well as the reasons each is misleading.

3. Evidence Demonstrating Misstatements about Appraisals and LTV Ratios in the Offering Documents

a. Government investigations, press reports, and confidential witnesses demonstrate systemic and pervasive appraisal manipulation by the mortgage originators

614. As alleged in detail above, *see supra* §§ IV.B and C, failure on the part of the mortgage originators to obtain accurate appraisals for the loans backing the PLMBS purchased by the Bank has been well-documented in government investigations and lawsuits, press reports, and statements of confidential witnesses. Furthermore, as alleged above, this evidence demonstrates that the mortgage originators manipulated the appraisal process and undermined the independence and impartiality of appraisers that is crucial to the determination of credible collateral valuations. This evidence – and the allegations herein based on this evidence – demonstrates that the statements in the Offering Documents regarding the appraisals and appraisal process are false and misleading.

615. The Bank's claim with respect to appraisals and LTVs is that the Defendants are liable for false statements of fact in the Offering Documents by representing that the LTVs were based upon appraisals conducted pursuant to governing standards. In fact, the "appraisals" underlying the LTVs were not appraisals at all since they were not independent assessments of a property's value, but rather were simply coerced or otherwise misleading statements from appraisers to enable loans to close.

616. The following Depositor and Underwriter Defendants, by virtue of being vertically integrated with the mortgage originators, that originated the loans underlying the certificates purchased by the Bank, *see supra* § IV.D.1, should have known that the appraisals

were inflated and were the product of manipulation and coercion in violation of the requirements of the USPAP:

Defendants:	**Vertically Integrated Originators:**
Banc of America Securities LLC Banc of America Funding Corporation	Bank of America, National Association
Wells Fargo Asset Securities Corp.	Wells Fargo Bank, National Association
Option One Mortgage Acceptance Corp. H&R Block Financial Advisors, Inc.	Option One Mortgage
Residential Funding Mortgage Securities I, Inc. Residential Asset Securities Corporation	Homecomings Financial Network, Inc. GMAC Mortgage Corp.
FTN Financial Capital Markets First Horizon Asset Securities Inc.	First Horizon Home Loan Corporation
Residential Asset Mortgage Products, Inc. Residential Funding Securities Corporation	GMAC Mortgage Corporation
IndyMac MBS, Inc. IndyMac ABS, Inc.	IndyMac Bank

617. Similarly, the remaining Depositor and Underwriter Defendants should have known that the appraisals were the product of manipulation and coercion because their corporate affiliates served as depositors/issuers for multiple other deals, including deals backed by loans originated by the originators that originated the loans underlying the certificates purchased by the Bank. *See supra* § IV.D.2. The Defendants should have known of the manipulation of the appraisal process because their corporate affiliates sought to use the knowledge of the inaccurate appraisals and other violations of underwriting standards to their advantage in purchasing loan pools at reduced prices. *See supra* § IV.D.2.

618. Moreover, as Underwriters for the certificates purchased by the Bank, the Underwriter Defendants performed reviews on the mortgage pools underlying the certificates. By virtue of these reviews, the Underwriter Defendants should have known that the originators had manipulated the appraisal process to inflate the appraisals and the LTV ratios based on the appraisals, but failed to take the necessary action of replacing substandard loans or adequately disclosing the risks to investors.

b. Analysis of loans that backed the PMLBS purchased by the Bank demonstrate that appraisals were materially inflated and the LTV ratios were materially understated.

619. As part of its investigation of the claims asserted herein, the Bank has analyzed the LTV ratios of mortgage loans that secure each of the PLMBS that it purchased. The Bank has tested the LTV ratios as represented in the Offering Documents against the LTV ratios that would have been calculated had the properties been valued at the time of loan origination in accordance with accepted and reliable appraisal practices (as was represented in the Offering Documents). To perform this analysis, the Bank has employed an industry-standard automated valuation model ("AVM") that reliably calculates the values of the subject properties as of the date of mortgage loan origination. The AVM draws upon a database of 500 million sales covering ZIP codes that represent 98.7% of the homes, occupied by 99.8% of the population, in the United States. Based on that database, the AVM calculates a valuation based on criteria including the type, condition, and location of the property, as well as the actual sale prices of comparable properties in the same locale shortly before the specified date. The extensive independent testing of the AVM confirms that the AVM is highly reliable and accurate means of determining the value that would have been determined for a property as of a historical date had that property been valued in accordance with accepted and reliable appraisal practices.

620. This analysis demonstrates stark misstatements in the LTV ratios information as represented in the Offering Documents. Because the LTV calculation is simply a ratio of loan amount to value, and because the loan amounts are unquestioned, the reason for the discrepancies is inescapable: the LTV ratios represented in the Offering Documents were the result of inflated and unreliable collateral valuations that were misleadingly labeled as "appraisals." Had the collateral valuation practices comported with the OTS definition of

appraisal and with the USPAP and Fannie Mae/ Freddie Mac standards as represented in the Offering Documents, the resulting aggregate LTV ratios would have been materially different from those represented in the Offering Documents.

621. The aggregate LTV ratio representations in the Offering Documents were key metrics in the Bank s decision to purchase the PLMBS, and the Bank was materially misled by the inaccurate information reported in the Offering Documents. Moreover, as a result of their knowledge of the manipulation of the appraisal process in the origination of mortgage loans, *see supra* §§ IV.B and IV.C, the Defendants should have known that the collateral valuations were unreliable and that statements made in the Offering Documents based in whole or in part on the collateral values, including statements regarding LTV ratios and credit ratings, were false and misleading.

622. The following tables summarize four types of material LTV ratio understatements contained in the Offering Documents: the percentage of loans with over 100% LTV; the percentage of loans with over 90% LTV; the percentage of loans with over 80% LTV; and the weighted average LTV ratio for the mortgage pool. Each is a distinct and significant misrepresentation in the Offering Documents.

623. The 100% LTV representation is obviously significant because loans with over 100% LTV afford the lender no equity cushion and leave the lender with inadequate collateral from the outset of the lender. The Offering Documents consistently assured the Bank that there were no such loans in the mortgage pools. Unfortunately, as the following table indicates, the recalculated LTV ratios (which, based on the AVM, indicate what the reported LTV would have been had proper appraisal methods been employed) indicate that there were a material number of mortgage loans with LTV ratios in excess of 100%:

Security (Certificate)	% of Loans with Greater than 100% LTV Per the Prospectus	Recalculated % of Loans with Greater than 100% LTV	Prospectus Understatement

624. The following table lists the certificates purchased by the Bank in which the LTV calculated using the AVM exceeds 90%, and lists the representation in the associated Offering Documents with respect to the percentage of the mortgages in the subject pool with LTVs greater than 90%. An LTV in excess of 90% represents an extremely risky mortgage for the investor, as the borrower has little equity in the property and there is a significant risk that upon foreclosure the collateral will be inadequate to pay the debt. Accordingly, for each of the certificates listed in the following table, the statement regarding the mortgages in the subject pool with LTVs in excess of 90% was materially misleading.

Security (Certificate)	% of Loans with Greater than 90% LTV Per the Prospectus	Recalculated % of Loans with Greater than 90% LTV	Prospectus Understatement

625. The following table lists the certificates purchased by the Bank in which the LTV calculated using the AVM exceeds 80%, and lists the representation in the associated Offering Documents with respect to the percentage of the mortgages in the subject pool with LTVs greater than 80%. The 80% LTV metric is very significant to an PLMBS investor such as the Bank, because in traditional mortgage underwriting an LTV in excess of 80% was generally considered as affording the lender little value cushion to protect against borrower default and loss upon foreclosure. Accordingly, for each of the certificates listed in the following table, the statement regarding the percentage of mortgages in the subject pool with LTVs in excess of 80% was materially misleading.

626. The following table lists mortgage pools securing the PLMBS purchased by the Bank in which the representation contained in the related Offering Documents with respect to the weighted average LTV of the mortgage pool securing those PLMBS was materially understated. The weighted average LTV representation is significant because it provides the investor with an important gauge as to the overall riskiness of the mortgage pool.

C. Defendants Misrepresented the Occupancy Status Rates.

1. The Materiality of Occupancy Status Rates

627. Residential real estate can be divided into the following occupancy status categories: primary residences, second homes, and investment properties. Mortgages on primary residences are less risky because they are less likely to default than mortgages on non-owner-occupied residences. Thus, the percentage of loans in the asset pool of a securitization that are secured by mortgages on other than primary residences is a key indicator of the risk of

certificates sold in the securitization. Occupancy status rates also influence prepayment patterns (which in turn affects the timing and payments on the PLMBS certificates).

628. For these reasons, the occupancy status of the collateral backing the mortgages in loan pools was material to the Bank's decision to invest in the PLMBS certificates. The Offering Documents for each of the PLMBS contained specific assertions as to the occupancy status rates of the mortgages backing the PMLBS.

2. Evidence Demonstrating Misstatements about the Occupancy Status Rates

629. The following table lists mortgage pools securing the PLMBS purchased by the Bank, sets forth the assertion contained in the related Offering Documents with respect to the percentage of the mortgages that were on properties that were not the borrower's primary residence, and sets forth the non-primary residence occupancy status rates generated by a review of information contained in various public and private databases. The databases reviewed contain information regarding, *inter alia*, the address to which borrower's tax bills were sent, the addresses used by borrower's other creditors to send billings, whether borrowers claimed the property as a homestead under applicable law, and whether borrowers owned other properties of record and how the amount of the subject loan compared to the amounts of mortgage loans on other properties owned. Defendants should have known, as set forth in the following table, that the occupancy status rates set forth in the Offering Documents for the PLMBS listed below were materially misstated, and materially misled the Bank regarding the true risk of the certificates it purchased:

Security (Certificate)	% of Mortgage on Non-Primary Residence Per Prospectus	% of Mortgages on Non-Primary Residence Per Database Review	Prospectus Understatement

WFMBS 2006-AR3 (WFMBS 2006-AR3 A4)	5.78%	11.94%	6.16%

630. Furthermore, unbeknownst to the Bank, as described *supra* §§ IV.B. and IV.C., borrower deception with respect to occupancy status, often encouraged by unscrupulous loan originators, was commonplace during the relevant period among the originators of the mortgages that secured the PLMBS.

D. Defendants' Statements Regarding the AAA Rating of the PLMBS Were False and Misleading.

1. The Materiality of the Credit Rating Process and Ratings

631. The Bank only was authorized to purchase investment grade, AAA-rated tranches of the certificates. Hence, the ratings issued by the Credit Rating Agencies were manifestly material to the Bank s decision to purchase the PLMBS at issue in this case. The ratings were not mere subjective opinions, rather they were factual representations that purported to assess the risk of the certificates based on factual information pertaining to the loans in the mortgage pools

and modeling based on this factual information and the likelihood that the bank would receive the payments contemplated by the certificates. Thus, the ratings provided material information for investors, including the Bank.

2. False Representations That the Certificates the Bank Purchased Would Not Be Issued Unless They Earned AAA Ratings

632. As alleged above, the Rating Agencies knew, and the Defendants should have known, that the ratings were unreliable and substantially understated the riskiness of the mortgage loans which underlie the PLMBS. Consequently, the Rating Agencies knew, and the Defendants should have known, that the PLMBS certificates did not in fact possess the characteristics necessary to qualify for accurate, bona fide AAA ratings.

633. All the Offering Documents for the PLMBS in this action stated that it was "a condition to the issuance of the offered certificates" purchased by the Bank that those certificates received AAA ratings.[11] The representation that the certificates the Bank purchased would not have been issued unless they had received AAA ratings was misleading because the certificates had not received accurate, bona fide AAA ratings. The AAA ratings the certificates received were fundamentally flawed because they were based on information about the underlying assets that was factually inaccurate.

3. Misstatements about the Credit Rating Process and Ratings

634. The Offering Documents misstated and omitted information about the ratings issued by the Credit Rating Agencies and the rating process. Each Prospectus contained disclosures regarding the ratings process and the purpose and bases of the ratings. Appendix IV

---

[11] *See e.g.,* AMSI 2005-R10 Pros. Sup. S-92; BAFC 2006-C Pros. Sup. S-68; FFML 2006-FF13 Pros. 127; HVMLT 2006-2 Pros. Sup. S-142; OOMLT 2005-5 Pros. Sup. S-105; SEMT 2006-1 Pros. Sup. S-105; WFMBS 2006-AR3 Pros. Sup. S-51.

attached hereto and incorporated herein sets forth those statements and omissions. For example, Ticker # JPMMT 2006-A5, Supplement to Prospectus, dated April 24, 2006, states:

> The ratings assigned to mortgage pass through certificates address the likelihood of the receipt of all payments on the mortgage loans by the related Certificate holders under the agreements pursuant to which such certificates are issued. Such ratings take into consideration the credit quality of the related mortgage pool, including any credit support providers, structural and legal aspects associated with such certificates, and the extent to which the payment stream on the mortgage pool is adequate to make the payments required by such certificates. Ratings on such certificates do not, however, constitute a statement regarding frequency of prepayments of the Mortgage Loans.

635. These disclosures, however, were incomplete, inaccurate, and misleading. Specifically, the Offering Documents misrepresented and omitted the following material information:

- The ratings did not "take into consideration the credit quality of the mortgage pool," because the credit ratings were based on false factual information about the underwriting standards, the "appraisals" and their resulting loan-to-value ratios, and similar characteristics of the loan.

- The ratings did not "address the likelihood of the receipt of all payments on the mortgage loans by the related Certificate holders," because—for the reasons just given—the ratings did not take into consideration the true characteristics of the mortgage loans, and thus could not address the true likelihood of the receipt of distribution on those loans.

- The Offering Documents did not disclose the Credit Rating Agencies' conflicts of interest, which compromised the rating process;

- The Offering Documents did not disclose the manipulation of the credit rating process and "ratings shopping" by issuers and underwriters;

- The Offering Documents did not disclose that the credit ratings were based on false and misleading information with respect to underwriting standards, loan-to-value ratios and other matters pertaining to the mortgages that secured the PLMBS purchased by the Bank;

- The Offering Documents did not disclose the scope and limitations of the Credit Rating Agencies' rating models, including that they relied on outdated data and failed to adequately protect against misinformation provided by issuers and borrowers;

- The Offering Documents did not disclose that the investment grade ratings given to the PMLBS were not, in fact, comparable to investment-grade ratings given to corporate bonds or other instruments;

- The Offering Documents did not disclose that the investment grade ratings stated and discussed in Offering Documents failed to reflect the true credit risk of the PLMBS purchased by the Bank.

636. In sum, the ratings provided by the Credit Rating Agencies did not in fact assess the likelihood of the receipt of all payments on the mortgage loans by the related certificate holders under the agreements pursuant to which such certificates are issued, the credit quality of the related mortgage pool, or the extent to which the payment stream on the mortgage pool was adequate to make the payments required by such certificates. As a result, the statements in the Offering Documents regarding the ratings assigned by the Credit Rating Agencies and the rating process materially misled the Bank regarding the true risk of the certificates it purchased.

4. Evidence Demonstrating Misstatements about the Ratings and Ratings Process

637. As alleged in detail above, *see supra* § IV.F, the credit rating process was subject to false information about underwriting standards, conflicts of interest, issuer and underwriter manipulation, inflated appraisals, and faulty and outdated models. Furthermore, as alleged above, the Depositors/Issuers manipulated the rating process through ratings shopping, their direct involvement in the rating process, and their knowledge that the loan pools were of far worse quality than they represented to the Rating Agencies. As set forth above, these allegations are all well-documented in government investigations, other litigation, and press reports. This evidence—and the allegations herein based on this evidence—demonstrates that the statements in the Offering Documents regarding the ratings and the rating process are false and misleading.

638. In addition, the en masse downgrade of the PLMBS purchased by the Bank from AAA to junk status indicates that the initial ratings were incorrect and without any legitimate

basis. Likewise, delinquency and foreclosure rates indicate that the PLMBS were far riskier and more prone to loss than the initial ratings indicated. As explained above, Defendants, by virtue of their access to information held by their corporate affiliates, their intimate involvement in the securitization process, and their own due diligence, *see supra* § IV.D.4, had access to ample information about the quality of the loan pools and should have known that the bundled certificates, even though tranched and credit-enhanced, did not possess the characteristics of a AAA-rated investment; that the AAA rating that was obtained as a result of the Depositor/Issuers' and the Underwriters' influence over the ratings process; and that the rating was the direct product of inaccurate information about the underwriting standards actually used in originating the mortgages backing the PLMBS. Defendants failed to state that the ratings were unreliable as a result of the Rating Agencies' failure to take into account the actual underwriting standards being used by mortgage originators, that the Defendants had access to important information about the characteristics and quality of the loans in the loan pools that was not shared with the Rating Agencies, that the models used to produce the credit ratings were inaccurate and outdated, that the ratings were the product of manipulation and conflicts of interest, and that the ratings were not anywhere near as reliable as the ratings given to other financial instruments such as corporate bonds. As a result, the rating misrepresented the risk of the PLMBS purchased by the Bank.

639. The following table sets forth the original face amounts and ratings of the PLMBS the subject of this action, and the first date on which such securities' ratings were downgraded to below investment grade:

Ticker	Original Face Value	Moody's Original Rating	S&P Original Rating	Fitch Original Rating	Date First Downgrade to Junk Status
AMSI 2005-R10 A2B	$10,000,000	Aaa	AAA	AAA

E. Defendants Misrepresented the Mortgage Originators' Compliance with Predatory Lending Restrictions.

1. The Materiality of Predatory Lending Practices and the Issuance of Loans that Violate Other State and Federal Lending Statutes.

640. As a matter of policy, the Bank was not permitted to purchase PLMBS backed by mortgage pools that contained predatory loans.

641. Accordingly, the Bank insisted as an absolute requirement that as to any security it purchased the issuer warrant that none of the underlying mortgages violated any state or federal law concerning predatory lending. Representations and warranties regarding compliance with predatory lending laws are generally contained in either a Mortgage Loan Purchase Agreement (MLPA) or a Pooling and Service Agreement (PSA) executed prior to the securitization of the mortgages.

642. Prior to purchasing any of the subprime PLMBS, the Bank reviewed the "reps and warranties" contained in either the actual agreements for each bond or the agreements from prior closed transactions that were presented to the Bank as containing "reps and warranties" that would be substantially similar to those included in the final agreements executed for each PLMBS it purchased. Additionally, each subprime PLMBS Prospectus contained either the required "rep and warranty" regarding predatory lending or a representation that such a "rep and warrant" would be contained in the relevant MLPA or PSA for each bond.

643. Thus, statements in the Offering Documents representing and warranting that the subprime mortgage pools did not contain loans that violated state or federal predatory lending laws were material to the Bank s decision to purchase the PLMBS from Defendants.

2. Misstatements about Predatory Lending Compliance

644. The Offering Documents contained material untrue or misleading statements and omissions regarding compliance with applicable predatory lending laws. As an example of the type of representations and warranties reviewed by the Bank prior to the purchased of each PLMBS, Amendment No. 2 to the Flow Mortgage Loan Purchase and Warranties Agreement backing bond FFML 2006-FF13 A2C, dated January 20, 2006, between Goldman Sachs Mortgage Co., the Purchaser (the Sponsor), and First Franklin Financial Corp., the Seller (the Originator), includes a provision stating:

> Any and all requirements of any applicable federal, state or local law, including, without limitation, usury, truth-in-lending, real estate settlement procedures, consumer credit protection, equal credit opportunity and disclosure laws, all applicable predatory and abusive lending laws, or unfair and deceptive practice laws applicable to the Mortgage Loans, including with limitation, any applicable provision relating to prepayment penalties, have been complied with . . . .

645. Substantively identical provisions were included in the MLPAs and PSAs reviewed by the Bank and relied upon prior to the purchase of each PLMBS. Additionally, representations that substantively similar reps and warranties would be included in the MLPAs and PSAs executed for each PLMBS purchased by the Bank were included in each Prospectus. Appendix V attached hereto and incorporated herein sets forth those statements.

3. Evidence Demonstrating Misstatements about Predatory Lending Practices of the Mortgage Originators

a. Government investigations, actions and settlements, confidential witnesses and evidence developed in other private lawsuits demonstrate predatory lending by the mortgage originators.

646. As alleged in detail above, predatory lending practices by mortgage originators, including those who issued the loans backing the PLMBS purchased by the Bank, is well-documented in government investigations and lawsuits, press reports, and statements of confidential witnesses who are former employees of the mortgage originators. Additional evidence has been generated by the many other private lawsuits against many of the same Defendants in connection with the sale of MBS and related certificates. This evidence and the allegations herein based on this evidence demonstrates that the statements in the Offering Documents regarding compliance with state and federal predatory lending rules are false and misleading. Contrary to the representations in the Offering Documents, the mortgage originators underlying these PLMBS engaged in predatory lending, and often issued loans to borrowers who lacked the ability to make the required payments, and without regard to such ability. Eleven of the sixteen lenders classified by the OCC as the worst of the worst based on foreclosure rates in the ten hardest hit metropolitan areas issued loans that backed PLMBS purchased by the Bank.

b. Analysis of loans that backed the PLMBS purchased by the Bank demonstrate that loans in the mortgage pools were the result of predatory lending.

647. An examination of the underlying mortgage loans that back the PLMBS purchased by the Bank provides strong evidence of the violation of predatory lending restrictions by the mortgage originators. This evidence takes several forms. First, given that the issuance of a loan to a borrower who is not qualified for the loan is itself a form of predatory lending, high rates of delinquency in the mortgage pools suggest predatory lending. Hence the data presented

in paragraphs 591 and 592 provides strong evidence of predatory lending practices of the mortgage originators who issued loans that back the PLMBS purchased by the Bank.

648. For many of the securities purchased by the Bank, the data is telling. For example, with respect to the two securities that included loans originated by Fremont Savings & Loan, total delinquency for the Fremont loans averaged over 54%, and foreclosures averaged over 25%. Likewise, for New Century, total delinquency averaged over 55% and foreclosures over 23%. Overall, for the loans (both prime and subprime) backing the PLMBS purchased by the Bank, delinquency averages were over 42%, and foreclosures were over 18%.

649. This analysis demonstrates that the representation and warranty of no predatory lending or high-cost loans made with respect to that pool are materially inaccurate and misleading.

F. Defendants Misrepresented the Due Diligence Performed on the Mortgage Pools that Backed the PLMBS Purchased by the Bank.

1. The Materiality of Due Diligence on the Mortgage Pools

650. As alleged in detail above, the Bank did not have access to the loan file information generated at the time the loans were issued; only the Defendants had access to this information. Consequently, the Bank was dependent on representations made by the Defendants regarding the quality of the mortgage loans backing the PLMBS it purchased.

651. Defendants made two types of representations regarding the acquisition of mortgages that were originated by third-party originators. First, the Defendants represented that certain of the originators that are identified in the Offering Documents conducted post-purchase due diligence reviews of a sampling of mortgages they acquired from third-party originators. Second, with respect to certain PLMBS backed by mortgages acquired by sponsors from unaffiliated originators, the Defendants represented that the sponsors conducted due diligence

reviews of the mortgages prior to their acquisition and securitization. In both cases, these due diligence reviews allegedly were undertaken to ensure that the mortgages were of adequate credit quality and that they were underwritten in compliance with applicable underwriting standards.

652. The representations regarding the underwriting standards employed by the originators and those regarding the sponsor s due diligence reviews of the mortgage loans provided the Bank with critical reassurances that the overall credit quality of the mortgage pools securing the PLMBS it purchased were as represented in the Offering Documents. The Bank relied on these representations in making its decisions to purchase these certificates.

2. Misstatements about Due Diligence

653. The Prospectuses provided to the Bank contained material untrue or misleading statements and omitted material information regarding the due diligence purportedly conducted by the Sponsors and Originators when they acquired mortgages from third-party originators. For example, Banc of America Funding 2006-F Trust Prospectus Supplement, provides the following with respect to mortgages acquired by Wells Fargo from third-parties:

> The contractual arrangements with Correspondents may . . . involve the delegation of all underwriting functions to . . . Correspondents, which will result in Wells Fargo Bank not performing any underwriting functions prior to acquisition of the loan but instead relying on . . . , in the case of bulk purchase acquisitions from such Correspondents, Wells Fargo Bank's post-purchase reviews of samplings of mortgage loans acquired from such Correspondents regarding the Correspondents' compliance with Wells Fargo Bank's underwriting standards. In all instances, however, acceptance by Wells Fargo Bank is contingent upon the loans being found to satisfy Wells Fargo Bank's program standards or the standards of a pool insurer.

BAFC 2006-F Pros. Sup. S-30. Substantively similar provisions regarding a mortgage Originator s due diligence reviews of acquired mortgages were included in the Prospectuses for many of the PLMBS purchased by the Bank. Appendix VI attached hereto and incorporated herein sets forth those statements.

654. Additionally, as an example of the representations made regarding a Sponsor's due diligence reviews of acquired mortgages, Ticker # CBASS 2006-CB4 AV3, Supplement to Prospectus, dated April 24, 2006, provides:

> The Sponsor or a loan reviewer reviewed a substantial majority of the files related to the Mortgage Loans in connection with the acquisition of the Mortgage Loans by the Sponsor for credit, compliance and property value considerations. These files may include the documentation pursuant to which the mortgage loan was originally underwritten, as well as the mortgagor's payment history on the mortgage loan. In its review, the Sponsor evaluates the mortgagor's credit standing, repayment ability and willingness to repay debt, as well as the value and adequacy of the mortgaged property as collateral.

655. Substantively similar provisions were included in the Prospectuses for many of the PLMBS purchased by the Bank. Appendix VI attached hereto and incorporated herein sets forth those statements. These statements were materially misleading because they omit to state the following information:

- The sponsors and originators routinely manipulated the due diligence process by determining the type and scope of review performed and pressuring the third-party due diligence firms to ignore deviations from the applicable underwriting criteria without regard to whether "compensating factors" were present;
- The level of due diligence performed by sponsors and originators of mortgages backing PLMBS deviated substantially from the level of due diligence performed by purchasers of mortgages who retained those mortgages as investments;
- The sponsors did not undertake any legitimate effort to determine whether the originators had satisfied their stated underwriting guidelines or the sponsor's purported standards; and instead allowed defective loans to be included in the loan pools for securitization;
- Due diligence review conducted by third-party underwriters often overlooked questionable claims by borrowers in stated income and other reduced documentation loans;
- The third-party underwriters informed the sponsors and originators that a substantial percentage of loans in the loans pools backing PLMBS were defective;
- The sponsors and originators nonetheless waived the defects as to a substantial percentage of these loans;

- In many cases, these reportedly defective loans were not removed from PLMBS deals, but rather were used by the sponsors to negotiate lower prices for the pools of mortgages they acquired and subsequently securitized; and

- Where defective loans in the sample were removed from the pool, no further review was conducted to ensure that none of the remaining 90% of the mortgages was plagued by similar defects as those in the sample.

3. Evidence of Misstatements about Due Diligence

656. As alleged in detail above, *see supra* §§ IV.D.4 and IV.D.5, the manipulation and disregard of the third-party due diligence process by sponsors and originators of mortgages backing PLMBS, including those PLMBS purchased by the Bank, is documented in public testimony and press reports, as well as confidential witness testimony discussed above. This evidence —and the allegations herein based on this evidence —demonstrate that the statements in and omissions from the Offering Documents regarding the due diligence review process were materially false and misleading.

G. Defendants Misrepresented That Mortgages and Mortgage Loans Were Validly Assigned and Transferred to the Issuing Trusts

1. The Materiality of Valid Assignment and Transfer

657. PLMBS have value because they are backed by income streams from loans and by the collateral that secure the loans. If mortgage notes and mortgages are not enforceable by the trust that issues the PLMBS, then the PLMBS have no value. For that reason, the valid assignment and transfer of mortgage notes and mortgages in accordance with the procedures laid out in the Offering Documents was material to the Bank s decision to purchase the PLMBS certificates at issue here.

2. Misstatements Regarding Procedures for Valid Assignment and Transfer

658. The Offering Documents misrepresented that all promissory notes had been or would be validly transferred to the trusts that issued the PLMBS certificates.

659. By way of example, the Offering Documents for SARM 2005-21 state:

> The Mortgage Loans will be assigned to the Trustee, together with all principal and interest received with respect to the Mortgage Loans on and after the Cut-off Date . . . . As to each Mortgage Loan, the following documents are generally required to be delivered to the Trustee (or its custodian) in accordance with the Trust Agreement: (1) the related original Mortgage Note endorsed without recourse to the Trustee or in blank . . . .
>
> [T]he depositor will, as to each Mortgage Loan, deliver or cause to be delivered to the trustee, or a custodian on behalf of the trustee . . . the mortgage note endorsed without recourse to the order of the trustee or in blank . . . . The trustee, or the custodian, will hold the documents in trust for the benefit of the securityholders . . . . The trustee, its agent or a custodian will review the documents related to each Mortgage Loan within the time period specified in the related Agreement after receipt thereof, and the trustee will hold the documents in trust for the benefit of the securityholders. Unless otherwise specified in the prospectus supplement, if any document is found to be missing or defective in any material respect, the trustee (or the custodian) will [demand repurchase or substitution of the defective loan, if the defect cannot be timely cured].

SARM 2005-21 Pros. Sup. S-72; SARM 2005-21 Pros. 81-82.

660. As *Kemp* and other cases show, the procedure specified in the Offering Documents was not followed. Mortgage notes were not properly endorsed by the originators, such that the depositor could in turn properly endorse the note. Possession of the notes was not transferred to the trustee, custodian, or agent of the trustee.

661. Further, where the procedure was not followed, the defective loans have not been repurchased or substituted, as represented in the Offering Documents.

662. The Offering Documents also misrepresented that all mortgages had been or would be validly assigned to the trusts that issued the PLMBS certificates.

663. By way of example, the Offering Documents for both OOLMT 2005-5 and OOLMT 2006-2 state:

> The Pooling Agreement will require that, within the time period specified therein, the Depositor will deliver or cause to be delivered to the Trustee (or a custodian, as the Trustee's agent for such purpose) . . . the Related Documents.[12] In lieu of delivery of original Mortgages . . . , if such original is not available or lost, the Depositor may deliver or cause to be delivered true and correct copies thereof . . . . Within 45 days of the Closing Date, the Trustee will review . . . the Related Documents . . . and if any . . . Related Document is found to be defective in any material respect[, repurchase or substitution of the defective loan will be demanded, if the defect cannot be timely cured].
>
> [T]he Depositor will . . . deliver, or cause to be delivered, to the related Trustee (or to the custodian described below) . . . an assignment of the Mortgage in blank or to the Trustee (or its nominee) in recordable form, together with any intervening assignments of the Mortgage with evidence of record thereon . . . .

OOLMT 2005-5 Pros. Sup. S-48; OOLMT 2005-5 Pros. 28; OOLMT 2006-2 Pros. Sup., Assignment of the Mortgage Loans; OOLMT 2006-2 Pros., Assignment of Trust Fund Assets.

664. As *Ibanez* shows, the procedure specified here was not followed. The mortgages were not properly assigned and physical transfer of the mortgages was not effected.

665. Further, where the procedure was not followed, the defective loan was not repurchased or substituted, as represented in the Offering Documents.

3. A Material Number of Mortgages and Mortgage Notes Were Not Validly Transferred or Assigned to the Issuing Trusts in Accordance with the Offering Documents

666. As alleged above, *see supra* § IV.G, a material number of the promissory notes backing the PLMBS were not validly transferred to the trust in accordance with the procedures outlined in the Offering Documents, as is necessary before those notes can be enforced under applicable state law. Where those procedures were not followed, the defective loan was not repurchased or substituted, as represented in the Offering Documents.

---

[12] "Related Documents" are defined by the Offering Documents as including the "Mortgage, [and] assignment of Mortgage in recordable form in blank or to the Trustee." OOLMT 2005-5 Pros. Sup. S-47; OOLMT 2006-2 Pros. Sup., Assignment of the Mortgage Loans.

667. As alleged above, *see supra* § IV.G, a material number of the mortgages backing the PLMBS were not validly assigned to the trust in accordance with the procedures outlined in the Offering Documents, as is necessary before those mortgages may be enforced under applicable state law. Where those procedures were not followed, the defective loan was not repurchased or substituted, as represented in the Offering Documents.

668. Thus, statements in relevant Offering Documents that mortgages and mortgage notes were validly assigned and transferred to the issuing trust in accordance with specified procedures—and that loans that were defective in this respect would be repurchased or substituted—were false and misleading.

VI. COUNTS

FIRST CAUSE OF ACTION

UNTRUE OR MISLEADING STATEMENTS IN THE SALE OF SECURITIES

(Illinois Securities Law, 815 ILCS § 5/12(F) & (G))

669. This cause of action is alleged jointly and severally against the following Defendants in connection with the sale of the following securities:

Security	Against Defendant	As
AMSI 2005-R10 A2B	Barclays Capital Inc.	Underwriter

670. The Bank hereby incorporates by reference all of the allegations herein.

671. The Bank expressly excludes from this cause of action any allegation that could be construed as alleging fraud or intentional reckless conduct.

672. In doing the acts alleged in connection with the offer and sale to the Bank of the Certificates in the securitizations referred to above, the Underwriter and Depositor/Issuer

Defendants violated 815 ILCS § 5/12(F) & (G) by: (i) engaging in transactions, practices, or courses of business which worked or tended to work a fraud or deceit upon the Bank as the purchaser of these securities; and (ii) obtaining money or property through the sale of securities by means of untrue statements of material fact or by omitting to state material facts necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading.

673. Defendants solicited the sale of these securities in Illinois, the Bank accepted the offers of sale for these securities in Illinois, and the purchase and sale of these securities was made in Illinois.

674. In connection with their offer and sale of these securities to the Bank, Defendants made numerous Offering Documents available to the Bank at its office in Cook County. These documents included the prospectus and prospectus supplement filed with the SEC for each securitization, registration statements, summary term sheets, and other documents. In these Offering Documents, Defendants made untrue or false statements of material fact about the Certificates they offered and sold to the Bank.

675. In purchasing the Certificates that are the subject of this cause of action, the Bank reasonably relied on Defendants business courses of action and the material misstatements and material omissions incorporated in the documents provided by Defendants to the Bank.

676. Defendants deceptive business practices, misstatements, and omissions alleged herein were material and were the cause of the Bank s decision to purchase these Certificates. If Defendants had not engaged in these materially deceptive practices, material misstatements, or omission of material information, and had instead provided full and accurate disclosures, the

Bank would not have purchased and in fact its own internal policies would have prevented it from purchasing the Certificates at issue.

677. The Controlling Person Defendants named in this Count are controlling persons as defined by ILCS § 2.4, because these Defendants offered or sold the securities that are the subject of this action, or are members of a group of persons acting in concert in the offer or sale of these securities, and these Defendants own (and did own at the time of sale) beneficially either (a) 25% or more of the outstanding voting securities of the respective Depositor/Issuer Defendants as identified above where no other person owns or controls a greater percentage of such securities; and/or (b) such number of outstanding securities of the respective Depositor/Issuer Defendants as would enable such person, or group of persons, to elect a majority of the board of directors or other managing body of such issuer. In the case of unincorporated Depositor/Issuer Defendants, the Controlling Person Defendants offered or sold the securities that are the subject of this action, or are members of a group of persons acting in concert in the offer or sale of these securities, directly or indirectly control the activities of the respective Depositor/Issuer Defendants as identified above.

678. As controlling persons under ILCS § 2.4, pursuant to ILCS § 13(A), the Controlling Person Defendants are jointly and severally liable to the Bank for the violations of 815 ILCS § 5/12(F) & (G) by the Depositor/Issuer Defendants alleged herein.

679. With respect to the Successor Liability Defendants, this Count is alleged against: (1) Successor Liability Defendant American Enterprise Investment Services, Inc. and/or Ameriprise Financial Services, Inc. as the successor or successors in liability to underwriter H&R Block Financial Advisors, Inc. with respect to Securities OOMLT 2005-5 A3 and OOMLT 2006-2 2A3; (2) The PNC Financial Services Group, Inc., as the successor in liability to

underwriter National City Corporation, d/b/a National City Capital Markets with respect to Security FFML 2006-FF8 IIA3; (3) PNC Investments LLC, as the successor in liability to underwriter NatCity Investments, Inc. with respect to Securities FFML 2006-FF14 A5, FFML 2006-FF13 A2C, FFML 2006-FF12 A3, FFML 2006-FF12 A4, and FFML 2006-FF10 A7; (4) Merrill Lynch, Pierce, Fenner & Smith Inc., as the successor in liability to underwriter Banc of America Securities LLC with respect to Securities ARSI 2005-W5 A2C, BACF 2006-C 2A1, BAFC 2006-E 2A2, BAFC 2006-E 3A1, BAFC 2006-F 2A1, BAFC 2006-F 3A1, FHASI 2006-AR1 2A1, OOMLT 2005-5 A3, OOMLT 2006-2 2A3, RASC 2005-KS12 A2, SEMT 2006-1 2A1 and SEMT 2006-1 3A1; (5) Bank of America Corporation as the successor in liability to underwriters Countrywide Securities Corp. or Merrill Lynch, Pierce, Fenner & Smith Inc., with respect to Securities CBASS 2006-CB4 AV3, HVMLT 2006-2 2A1A, HVMLT 2006-2 3A1A, MSAC 2006-HE6 A2C, OOMLT 2006-2 2A3, SEMT 2006-1 2A1, SEMT 2006-1 3A1. Underwriters H&R Block Financial Advisors, Inc., National City Corporation, d/b/a National City Capital Markets, NatCity Investments, Inc., Countrywide Securities Corp., Merrill Lynch, Pierce, Fenner & Smith Inc., and Banc of America Securities LLC are collectively referred to herein as the "Succeeded Underwriters." The Successor Liability Defendants are named herein by virtue of their assumption of the liabilities of the Succeeded Underwriters, and their status as successors-in-interest to the Succeeded Underwriters.

680. The Successor Liability Defendants are jointly and severally or otherwise vicariously liable for the wrongful conduct of their respective Succeeded Underwriters, as alleged herein, because they are the successors in liability to those entities by virtue of those entities' merger with and into the respective Successor Liability Defendants and the Successor

Liability Defendants' integration of and assumption of responsibility for the business of the merged entities, including responsibility for pre-merger liabilities.

681. This action is brought within two years after the discovery of the untrue and misleading statements or omissions in the prospectus, prospectus supplements, and other Offering Documents that the Defendants sent to the Bank, or within two years after notice of facts which in the exercise of reasonable diligence would lead to actual knowledge of the alleged violation, and within five years of the Bank's purchase of those Certificates, or within any applicable period as tolled by the pendency of other actions. Despite having exercised reasonable diligence, the Bank did not and could not reasonably have discovered earlier the untrue and misleading statements or omissions in the prospectus, prospectus supplements, and other Offering Documents and the other violations of the Illinois Securities Law alleged in this Count.

682. The Bank has timely given notice in accordance with 815 ILCS § 5/13B to Defendants of its election to void its purchases of the Certificates listed in this Count, and has offered to tender the securities to the seller or into court.

683. Under 815 ILCS § 5/13A(1), the Bank is entitled to void the transaction and have Defendants pay the Bank, jointly and severally, the amount paid for each Certificate, plus interest, as set forth in 815 ILCS § 5/13A(1), less any amounts received by the Bank with respect to that Certificate.

SECOND CAUSE OF ACTION

SIGNING OR CIRCULATING SECURITIES DOCUMENTS THAT CONTAINED MATERIAL MISREPRESENTATIONS

(Illinois Securities Law, 815 ILCS § 5/12(H)

685. The Bank hereby incorporates by reference all of the allegations herein.

686. The Bank expressly excludes from this cause of action any allegation that could be construed as alleging fraud or intentional reckless conduct.

687. In doing the acts alleged in selling to the Bank the Certificates in the securitizations referred to above, the Underwriter and Depositor/Issuer Defendants violated 815 ILCS § 5/12(H) by signing or circulating papers or documents pertaining to these securities which it knew, or as to which it reasonably should have known, contained material misrepresentations.

688. Defendants solicited the sale of these securities in Illinois, the Bank accepted the offers of sale for these securities in Illinois, and the purchase and sale of these securities was made in Illinois.

689. In connection with their offer and sale of these securities to the Bank, Defendants made numerous Offering Documents available to the Bank at its office in Cook County. These documents, which were signed by Defendants, included the prospectus, prospectus supplement filed with the SEC for each securitization, registration statements, summary term sheets, and other documents. In these Offering Documents, Defendants made untrue or false statements of material fact about the Certificates they offered and sold to the Bank.

690. In purchasing the Certificates that are the subject of this cause of action, the Bank reasonably relied on Defendants untrue or false statements of material fact about the Certificates they offered and sold to the Bank, and which were incorporated in the documents provided by Defendants to the Bank.

691. Defendants false or untrue statements alleged herein were material and were the cause of the Bank s decision to purchase these Certificates. If Defendants had made these false

or untrue statements, and had instead provided full and accurate disclosures, the Bank would not have purchased and in fact its own internal policies would have prevented it from purchasing the Certificates at issue.

692. The Controlling Person Defendants named in this Count are controlling persons as defined by ILCS § 2.4, because these Defendants offered or sold the securities that are the subject of this action, or are members of a group of persons acting in concert in the offer or sale of these securities, and these Defendants own (and did own at the time of sale) beneficially either (a) 25% or more of the outstanding voting securities of the respective Depositor/Issuer Defendants as identified above where no other person owns or controls a greater percentage of such securities; and/or (b) such number of outstanding securities of the respective Depositor/Issuer Defendants as would enable such person, or group of persons, to elect a majority of the board of directors or other managing body of such issuer. In the case of unincorporated Depositor/Issuer Defendants, the Controlling Person Defendants offered or sold the securities that are the subject of this action, or are members of a group of persons acting in concert in the offer or sale of these securities, directly or indirectly control the activities of the respective Depositor/Issuer Defendants as identified above.

693. As controlling persons under ILCS § 2.4, pursuant to ILCS § 13(A), the Controlling Person Defendants are jointly and severally liable to the Bank for the violations of 815 ILCS § 5/12(F) & (G) by the Depositor/Issuer Defendants alleged herein.

694. With respect to the Successor Liability Defendants, this Count is alleged against: (1) Successor Liability Defendant American Enterprise Investment Services, Inc. and/or Ameriprise Financial Services, Inc. as the successor or successors in liability to underwriter H&R Block Financial Advisors, Inc. with respect to Securities OOMLT 2005-5 A3 and OOMLT

2006-2 2A3; (2) The PNC Financial Services Group, Inc., as the successor in liability to underwriter National City Corporation, d/b/a National City Capital Markets with respect to Security FFML 2006-FF8 IIA3; (3) PNC Investments LLC, as the successor in liability to underwriter NatCity Investments, Inc. with respect to Securities FFML 2006-FF14 A5, FFML 2006-FF13 A2C, FFML 2006-FF12 A3, FFML 2006-FF12 A4, and FFML 2006-FF10 A7; (4) Merrill Lynch, Pierce, Fenner & Smith Inc., as the successor in liability to underwriter Banc of America Securities LLC with respect to Securities ARSI 2005-W5 A2C, BACF 2006-C 2A1, BAFC 2006-E 2A2, BAFC 2006-E 3A1, BAFC 2006-F 2A1, BAFC 2006-F 3A1, FHASI 2006-AR1 2A1, OOMLT 2005-5 A3, OOMLT 2006-2 2A3, RASC 2005-KS12 A2, SEMT 2006-1 2A1 and SEMT 2006-1 3A1; (5) Bank of America Corporation as the successor in liability to underwriters Countrywide Securities Corp. or Merrill Lynch, Pierce, Fenner & Smith Inc., with respect to Securities CBASS 2006-CB4 AV3, HVMLT 2006-2 2A1A, HVMLT 2006-2 3A1A, MSAC 2006-HE6 A2C, OOMLT 2006-2 2A3, SEMT 2006-1 2A1, and SEMT 2006-1 3A1. Underwriters H&R Block Financial Advisors, Inc., National City Corporation, d/b/a National City Capital Markets, NatCity Investments, Inc., Countrywide Securities Corp., Merrill Lynch, Pierce, Fenner & Smith Inc., and Banc of America Securities LLC are collectively referred to herein as the "Succeeded Underwriters." The Successor Liability Defendants are named herein by virtue of their assumption of the liabilities of the Succeeded Underwriters, and their status as successors-in-interest to the Succeeded Underwriters.

695. The Successor Liability Defendants are jointly and severally or otherwise vicariously liable for the wrongful conduct of their respective Succeeded Underwriters, as alleged herein, because they are the successors in liability to those entities by virtue of those entities' merger with and into the respective Successor Liability Defendants and the Successor

Liability Defendants integration of and assumption of responsibility for the business of the merged entities, including responsibility for pre-merger liabilities.

696. This action is brought within two years after the discovery of the untrue and misleading statements or omissions in the prospectus supplements and other documents that the Defendants sent to the Bank, or within two years after notice of facts which in the exercise of reasonable diligence would lead to actual knowledge of the alleged violation, and within five years of the Bank s purchase of those Certificates, or within any applicable period as tolled by the pendency of other actions. Despite having exercised reasonable diligence, the Bank did not and could not reasonably have discovered earlier the untrue and misleading statements or omissions in the prospectus, prospectus supplements, and other documents and the other violations of the Illinois Securities Law alleged in this Count.

697. The Bank has timely given notice in accordance with 815 ILCS § 5/13(B) to Defendants of its election to void its purchases of the Certificates listed in this Count, and has offered to tender the securities to the seller or into the court.

698. Under 815 ILCS § 5/12(H), the Bank is entitled to void the transaction and have Defendants pay the Bank, jointly and severally, the amount paid for each Certificate, plus interest at 10% per annum, less any amounts received by the Bank with respect to that Certificate.

THIRD CAUSE OF ACTION

UNTRUE OR MISLEADING STATEMENTS IN THE SALE OF SECURITIES

(North Carolina Securities Law, N.C.G.S.A. § 78A-8(2) & § 78A-56(a))

699. This cause of action is alleged against the following Defendants in connection with the sale of the following securities:

700. The Bank hereby incorporates by reference all allegations herein.

701. The Bank expressly excludes from this cause of action any allegation that could be construed as alleging fraud or intentional reckless conduct.

702. In doing the acts alleged in connection with the offer and sale to the Bank of the Certificates in the securitizations referred to above, the Underwriter and Depositor/Issuer Defendants violated N.C.G.S.A. § 78A-8(2) and § 78A-56(a)(2) by engaging in the offer and

sale of securities by making untrue statements of material fact and omitting to state material facts necessary in order to make the statements made, in light of the circumstances under which they are made, not misleading.

703. Defendants offered these certificates for sale in North Carolina in that the offer originated from a dealer in North Carolina.

704. In connection with their offer and sale of these securities to the Bank, Defendants originated numerous Offering Documents from North Carolina. These documents included the prospectus and prospectus supplement filed with the SEC for each securitization, registration statements, summary term sheets, and other documents. In these Offering Documents, Defendants made untrue or false statements of material fact about the Certificates they offered and sold to the Bank.

705. In purchasing the Certificates that are the subject of this cause of action, the Bank reasonably relied on Defendants business courses of action and the material misstatements and material omissions incorporated in the documents provided by Defendants to the Bank.

706. Defendants deceptive business practices, misstatements, and omissions alleged herein were material and were the cause of the Bank s decision to purchase these Certificates. If Defendants had not engaged in these materially deceptive practices, material misstatements, or omission of material information, and had instead provided full and accurate disclosures, the Bank would not have purchased and in fact its own internal policies would have prevented it from purchasing the Certificates at issue.

707. The Controlling Person Defendants named in this Count are liable in that they directly or indirectly controlled persons that violated N.C.G.S.A. § 78A-8(2) and § 78A-56(a)(2), and knew or should have known of the facts regarding the abandonment of underwriting

standards, the manipulation of the appraisal process and the LTV ratios, the unreliability of the credit ratings, the misrepresentations regarding occupancy status, and the predatory lending practices that give rise to liability of the controlled persons.

708. As controlling persons pursuant to N.C.G.S.A. § 78A-56(c), the Controlling Person Defendants are jointly and severally liable with the controlled person to the Bank for the violations of § 78A-8(2) and § 78A-56(a)(2) by the Depositor/Issuer and Underwriter Defendants alleged herein.

709. With respect to the Successor Liability Defendants, this Count is alleged against: (1) Successor Liability Defendant American Enterprise Investment Services, Inc. and/or Ameriprise Financial Services, Inc. as the successor or successors in liability to underwriter H&R Block Financial Advisors, Inc. with respect to Securities OOMLT 2005-5 A3 and OOMLT 2006-2 2A3; (2) Merrill Lynch, Pierce, Fenner & Smith Inc., as the successor in liability to underwriter Banc of America Securities LLC with respect to Securities BACF 2006-C 2A1, BAFC 2006-E 2A2, BAFC 2006-E 3A1, BAFC 2006-F 2A1, BAFC 2006-F 3A1, OOMLT 2005-5 A3, OOMLT 2006-2 2A3, RASC 2005-KS12 A2, SEMT 2006-1 2A1, and SEMT 2006-1 3A1; (3) Bank of America Corporation as the successor in liability to underwriters Countrywide Securities Corp. or Merrill Lynch, Pierce, Fenner & Smith Inc., with respect to Securities OOMLT 2006-2 2A3, SEMT 2006-1 2A1, and SEMT 2006-1 3A1. Underwriters H&R Block Financial Advisors, Inc., Countrywide Securities Corp., Merrill Lynch, Pierce, Fenner & Smith Inc., and Banc of America Securities LLC are collectively referred to herein as the Succeeded Underwriters. The Successor Liability Defendants are named herein by virtue of their assumption of the liabilities of the Succeeded Underwriters, and their status as successors-in-interest to the Succeeded Underwriters.

710. The Successor Liability Defendants are jointly and severally or otherwise vicariously liable for the wrongful conduct of their respective Succeeded Underwriters, as alleged herein, because they are the successors in liability to those entities by virtue of those entities merger with and into the respective Successor Liability Defendants and the Successor Liability Defendants integration of and assumption of responsibility for the business of the merged entities, including responsibility for pre-merger liabilities.

711. This action is brought within three years after the discovery of the untrue and misleading statements or omissions in the prospectus, prospectus supplements and other Offering Documents that the Defendants sent to the Bank and within five years of the Bank s purchase of those Certificates, or within any applicable period as tolled by the pendency of other actions. Despite having exercised reasonable diligence, the Bank did not and could not reasonably have discovered earlier the untrue and misleading statements or omissions in the prospectus, prospectus supplements, and other Offering Documents and the other violations of the North Carolina Securities law alleged in this Count.

712. The Bank has offered, or will offer, to tender the securities to the seller or into court.

713. Under N.C.G.S.A. § 78A-56(a)(2), the Bank is entitled to void the transaction and have Defendants pay the Bank the amount paid for each Certificate, plus interest, costs and reasonable attorneys fees, less any amount of any income received by the Bank with respect to that Certificate.

FOURTH CAUSE OF ACTION

UNTRUE OR MISLEADING STATEMENTS IN THE SALE OF SECURITIES

(New Jersey Securities Law N.J.S.A. 49:3-52(b) & (c))

714. This cause of action is alleged against the following Defendants in connection with the sale of the following securities:

Security	Against Defendant	As
CBASS 2006-CB4 AV3	Merrill Lynch Mortgage Investors, Inc.	Depositor/Issuer
	J.P. Morgan Securities Inc.	Underwriter
	Merrill Lynch, Pierce, Fenner & Smith Incorporated	Underwriter
	Bank of America Corporation	Successor

715. The Bank hereby incorporates by reference all allegations herein.

716. The Bank expressly excludes from this cause of action any allegation that could be construed as alleging fraud or intentional reckless conduct.

717. In doing the acts alleged in connection with the offer and sale to the Bank of the Certificates in the securitization referred to above, the Underwriter and Depositor/Issuer Defendants violated N.J.S.A. 49:3-52(b) & (c) by: (i) engaging in acts, practices, or courses of business which operated as a fraud or deceit upon the Bank as the purchaser of this security; and (ii) engaging in the sale of the security by means of untrue statements of material fact or by omitting to state material facts necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading. The above referenced Defendants knew the statements were untrue or omitted material facts necessary to make the statements true, and intended to deceive the Bank with these statements, and the Bank has suffered a financial detriment as a result of these statements and/or omissions.

718. Defendants offered the above security for sale in New Jersey, and the Bank accepted the offer of sale in New Jersey in that the offer originated in New Jersey and the Bank communicated its acceptance of the offer to a dealer in New Jersey, reasonably believing the dealer to be in New Jersey, with the dealer in fact receiving the acceptance in New Jersey.

719. In connection with their offer and sale of this security to the Bank, Defendants originated numerous Offering Documents to the bank from New Jersey. These documents included the prospectus and prospectus supplement filed with the SEC for the securitization, registration statements, summary term sheets, and other documents. In these Offering Documents, Defendants made untrue or false statements of material fact about the Certificate they offered and sold to the Bank.

720. In purchasing the Certificates that are the subject of this cause of action, the Bank reasonably relied on Defendants business courses of action and the material misstatements and material omissions incorporated in the documents provided by Defendants to the Bank.

721. Defendants deceptive business practices, misstatements, and omissions alleged herein were material and were the cause of the Bank s decision to purchase this Certificate. If Defendants had not engaged in these materially deceptive practices, material misstatements, or omission of material information, and had instead provided full and accurate disclosures, the Bank would not have purchased and in fact its own internal policies would have prevented it from purchasing the Certificate at issue.

722. The Controlling Person Defendants named in this Count are liable in that they directly or indirectly controlled persons that violated N.J.S.A. § 49:3-52(b) & (c), and knew or should have known of the facts regarding the abandonment of underwriting standards, the manipulation of the appraisal process and the LTV ratios, the unreliability of the credit ratings,

the misrepresentations regarding occupancy status, and the predatory lending practices that give rise to liability of the controlled persons.

723. As controlling persons pursuant to N.J.S.A. § 49:3-71(d), the Controlling Person Defendants are jointly and severally liable with the controlled person to the Bank for the violations of N.J.S.A. § 49:3-52(b) & (c) by the Depositor/Issuer and Underwriter Defendants alleged herein.

724. With respect to the Successor Liability Defendant, this Count is alleged against: (1) Bank of America Corporation as successor in liability to underwriter Merrill Lynch, Pierce Fenner & Smith Inc. with respect to Security CBASS 2006-CB4 AV3. Underwriter Merrill Lynch, Pierce, Fenner & Smith Inc. is referred to herein as the "Succeeded Underwriter." The Successor Liability Defendant is named herein by virtue of its assumption of the liabilities of the Succeeded Underwriter, and its status as successors-in-interest to the Succeeded Underwriter.

725. The Successor Liability Defendant is jointly and severally or otherwise vicariously liable for the wrongful conduct of its respective Succeeded Underwriter, as alleged herein, because it is the successor in liability to that entity by virtue of that entity's merger with and into the respective Successor Liability Defendant and the Successor Liability Defendant's integration of and assumption of responsibility for the business of the merged entities, including responsibility for pre-merger liabilities.

726. This action is brought within two years after the discovery of the untrue and misleading statements or omissions in the prospectus, prospectus supplements and other Offering Documents that the Defendants sent to the Bank. Despite having exercised reasonable diligence, the Bank did not and could not reasonably have discovered earlier the untrue and misleading

statements or omissions in the prospectus, prospectus supplements and other Offering Documents and the other violations of the New Jersey Securities Law alleged in this Count.

727. The Bank has offered, or will offer, to tender the security to the seller or into court.

728. Under N.J.S.A § 49:3-71(a)(2) & (3), the Bank is entitled to void the transaction and have Defendants pay the Bank the amount paid for the Certificate, plus costs and interest, as set forth in N.J.S.A. § 49:3-71(c), less any amount of income received by the Bank with respect to the Certificate.

	Successor to National City Corporation, d/b/a National City Capital Markets	FFML 2006-FF8 IIA3

730. The Bank hereby incorporates by reference all allegations herein.

731. The Defendants are and were in the business of providing information for the guidance of others in their business transactions: namely they provided Offering Documents that were central to the business transaction of purchasing the Certificates. The information in the Offering Documents was provided with full knowledge that it would be used in guiding the Bank in its business transaction of whether to purchase the offered Certificates.

732. In connection with their offer and sale of these securities to the Bank, Defendants made numerous documents available to the Bank, which documents Defendants drafted and/or

signed. The documents that Defendants sent to the Bank included the prospectus and prospectus supplement filed with the SEC for each securitization, registration statements, summary term sheets, and other documents. In these Offering Documents, Defendants negligently misrepresented material facts about the Certificates they offered and sold to the Bank.

733. The Defendants had a duty to make accurate and truthful statements in the information they provided to the Bank.

734. As alleged above and incorporated herein, the Defendants breached this duty by making untrue or misleading statements of material facts in the Offering Documents. These material misrepresentations pertain to the following non-exclusive list: (a) adherence to the originators stated underwriting guidelines and related matters; (b) the LTVs of the mortgage loans in the collateral pools of these securitizations; (c) the occupancy status rates of properties that secured the mortgage loans in these securitizations; (d) the rating process by which AAA-ratings were assigned; (e) compliance with predatory lending restrictions; and (f) purported due diligence on the loan pools that backed the PLMBS.

735. When the Defendants made these representations, they had no reasonable ground for believing them to be true. The Bank is informed and believes, and based thereon alleges, that Defendants had access to the loan files on the mortgage loans in the collateral pools for these securitizations, and, had the Defendants inspected those files, they would have learned that the information they gave the Bank contained untrue or misleading statements. In addition, Defendants were aware or should have been aware but for their negligence that the due diligence review of the loans that were being securitized and sold to the Bank identified serious concerns and that a significant percentage of these loans were identified as defective but were nonetheless bundled and sold to the Bank as part of the securitization. Thus, the Bank is

informed and believes, and based thereon alleges, that Defendants had access to information that either did or should have made the Defendants aware, had they heeded that information, that the representations they made to the Bank contained material untrue or misleading statements about the mortgage loans in the collateral pools. The Defendants were careless or negligent in ascertaining the truth of their statements.

736. In making the representations referred to above, the Defendants intended to induce the Bank to rely on those representations in making its decision to purchase the Certificates.

737. The Bank did reasonably and justifiably rely on the truth of the representations described above and alleged herein in analyzing and decided to purchase these Certificates. The Bank did not have access to the underlying loan files, and therefore was justified in relying on the Defendants statements regarding the credit quality of the mortgage pools. But for the Defendants making the false and misleading representations alleged herein, the Bank would not have purchased these Certificates.

738. As a direct and proximate result of the negligent misrepresentations by the Defendants, the Bank was damaged in an amount to be proven at trial.

739. With respect to the Successor Liability Defendants, this Count is alleged against: (1) Successor Liability Defendant American Enterprise Investment Services, Inc. and/or Ameriprise Financial Services, Inc. as the successor or successors in liability to underwriter H&R Block Financial Advisors, Inc. with respect to Securities OOMLT 2005-5 A3 and OOMLT 2006-2 2A3; (2) The PNC Financial Services Group, Inc., as the successor in liability to underwriter National City Corporation, d/b/a National City Capital Markets with respect to Security FFML 2006-FF8 IIA3; and (3) PNC Investments LLC, as the successor in liability to

underwriter NatCity Investments, Inc. with respect to Securities FFML 2006-FF13 A2C, FFML 2006-FF12 A3, FFML 2006-FF12 A4, FFML 2006-FF14 A5, and FFML 2006-FF10 A7; (4) Bank of America Corporation as successor in liability to underwriters Countrywide Securities Corp., Merrill Lynch Mortgage Investors, Inc., and Merrill Lynch, Pierce Fenner & Smith Inc. with respect to Securities HVMLT 2006-2 2A1A, HVMLT 2006-2 3A1A, MSAC 2006-HE6 A2C, SEMT 2006-1 2A1, SEMT 2006-1 3A1, CBASS 2006-CB4 AV3, and OOMLT 2006-2 2A3, (5) Merrill Lynch, Pierce, Fenner & Smith Inc. as successor in liability to underwriter Banc of America Securities LLC with respect to Securities ARSI 2005-W5 A2C, BAFC 2006-C 2A1, BAFC 2006-E 2A2, BAFC 2006-E 3A1, BAFC 2006-F 2A1, BAFC 2006-F 3A1, FHASI 2006-AR1 2A1, OOMLT 2005-5 A3, OOMLT 2006-2 2A3, RASC 2005-KS12 A2, SEMT 2006-1 2A1, and SEMT 2006-1 3A1. Underwriters H&R Block Financial Advisors, Inc., National City Corporation, d/b/a National City Capital Markets, NatCity Investments, Inc., Countrywide Securities Corp., Merrill Lynch Mortgage Investors, Inc., Merrill Lynch, Pierce, Fenner & Smith Inc., and Banc of America Securities LLC are collectively referred to herein as the "Succeeded Underwriters." The Successor Liability Defendants are named herein by virtue of their assumption of the liabilities of the Succeeded Underwriters, and their status as successors-in-interest to the Succeeded Underwriters.

740. The Successor Liability Defendants are jointly and severally or otherwise vicariously liable for the wrongful conduct of their respective Succeeded Underwriters, as alleged herein, because they are the successors in liability to those entities by virtue of those entities' merger with and into the respective Successor Liability Defendants and the Successor Liability Defendants' integration of and assumption of responsibility for the business of the merged entities, including responsibility for pre-merger liabilities.

741. To the extent that 815 ILCS § 5/13(D) may apply, this action is brought within two years after the discovery of Defendants' negligent misrepresentations, or within two years after notice of facts which in the exercise of reasonable diligence would lead to actual knowledge of the alleged negligent misrepresentations, and within five years of the Bank's purchase of those Certificates, or within any applicable period as tolled by the pendency of other actions. Despite having exercised reasonable diligence, the Bank did not and could not reasonably have discovered earlier Defendants' negligent misrepresentations alleged in this Count.

742. To the extent it was required to do so under Illinois law, the Bank has timely given notice in accordance with 815 ILCS § 5/13B to Defendants of its election to void its purchases of the Certificates listed in this Count, and has offered to tender the securities to the seller or into court.

VII. PRAYER FOR RELIEF

WHEREFORE, the Bank respectfully demands judgment as follows:

A. On the first, second, third, and fourth causes of action, an order voiding the transactions at issue and ordering Defendants to pay the Bank, jointly and severally, the amount paid for each Certificate, plus interest at 10% per annum or at the highest allowable rate, less any amounts received by the Bank with respect to that Certificate;

B. On the fifth cause of action, damages in an amount to be determined at trial, or, in the alternative;

C. On the fifth cause of action, an order of rescission;

D. Reasonable attorneys' fees and expenses or costs of suit, including expert witness fees; and

E. Such other and further relief as permitted by law or equity or as the Court may deem just.

VIII. JURY DEMAND

The Bank demands a jury on all issues triable to a jury either as of right or in the discretion of the Court pursuant to 735 ILCS § 5/2-1111.

RESPECTFULLY SUBMITTED this 8th day of April, 2011.

V. FACTUAL BACKGROUND 37

A. Mechanics of Mortgage Backed Securities 37

1. The Securitization Process 37

2. The Rating Process for PLMBS 40

B. The Mortgage Originators Abandoned Underwriting and Appraisal Standards. 42

1. The Shift from "Originate to Hold" to "Originate to Distribute" Securitization Incentivized Mortgage Originators to Disregard Loan Quality. 42

2. Mortgage Originators Abandoned Underwriting Guidelines in Order to Initiate High Cost Loans for Securitization. 49

3. Mortgage Originators Manipulated Appraisals of Collateralized Real Estate in Order to Initiate Loans for Securitization. 50

4. Widespread Defaults and Delinquencies Reflected the Inevitable Consequence of Loans Issued Without Meaningful Underwriting. 55

C. Federal and State Investigations, Press Reports, Publicly Available Documents Produced in Other Civil Lawsuits, and Analysis of the Mortgage Pools Underlying the Securities Identify Systematic Violation of Underwriting Guidelines by Mortgage Originators Whose Loans Back the PLMBS in this Case. 57

1. Countrywide Home Loans, Inc. 58

a. Government actions against Countrywide, and documents produced therein, demonstrate Countrywide's abandonment of sound underwriting practices. 58

b. Private actions against Countrywide demonstrate Countrywide's abandonment of sound underwriting practices. 69

c. Confidential witnesses provide further evidence of Countrywide's abandonment of sound underwriting practices. 76

d. The mortgages originated by Countrywide and securitized in the PLMBS purchased by the Bank provide further evidence of Countrywide's abandonment of sound underwriting practices. 81

2. GMAC and Residential Funding Corp. 82

a. Private actions against GMAC demonstrate GMAC's abandonment of sound underwriting practices. 82

b. Confidential witness statements provide further evidence of GMAC's abandonment of sound underwriting practices. 84

c. The mortgages originated by GMAC and securitized in the PLMBS purchased by the Bank provide further evidence of GMAC's abandonment of sound underwriting practices. 85

3. IndyMac Bank, FSB 86

a. Government actions and related lawsuits and investigations demonstrate IndyMac's abandonment of sound underwriting practices. 86

b. Private actions against IndyMac demonstrate IndyMac's abandonment of sound underwriting practices. 91

c. Confidential witnesses provide further evidence of IndyMac's abandonment of sound underwriting practices. 93

d. The mortgages originated by IndyMac and securitized in the PLMBS purchased by the Bank provide further evidence of IndyMac's abandonment of sound underwriting practices. 96

4. Washington Mutual Bank 97

a. Government actions and related lawsuits and investigations demonstrate WaMu's abandonment of sound underwriting practices. 97

b. WaMu manipulated the appraisal process. 101

c. WaMu engaged in reckless lending. 109

d. Confidential witnesses provide further evidence of WaMu's failures to adhere to sound underwriting practices and manipulation of the appraisal process. 113

e. The mortgages originated by WaMu and securitized in the PLMBS purchased by the Bank provide further evidence of WaMu's abandonment of sound underwriting practices. 121

5. Wells Fargo 122

a. Investigations, lawsuits and confidential witness statements demonstrate that Wells Fargo abandoned underwriting guidelines. 122

b. The mortgages originated by Wells Fargo and securitized in the PLMBS purchased by the Bank provide further evidence of Wells Fargo's abandonment of sound underwriting practices. 129

6. American Home Mortgage 130

a. Investigations, lawsuits and confidential witness statements demonstrate that AHM abandoned sound underwriting practices. 130

b. The mortgages originated by AHM and securitized in the PLMBS purchased by the Bank provide further evidence of AHM's abandonment of sound underwriting practices. 132

7. Chase Home Finance LLC and JPMorgan Chase Bank, N.A. 133

a. Investigations and confidential witness statements demonstrate that the Chase Originators abandoned sound underwriting practices. 134

b. The mortgages originated by the Chase Originators and securitized in the PLMBS purchased by the Bank provide further evidence of abandonment of sound underwriting practices. 138

8. PHH Mortgage Corp. 139

9. National City Mortgage Company 142

10. SunTrust Mortgage, Inc. 144

11. HomeComings Financial, LLC and HomeComings Financial Network, Inc. 147

12. GreenPoint Mortgage Funding, Inc. 151

13. Bank of America, N.A. 153

14. Other Mortgage Originators Also Abandoned Sound Underwriting Practices in Order to Issue Loans for Securitization. 156

D. The Securitization Process Was Plagued by Conflicts of Interest and Misplaced Incentives. 156

1. The Vertical Integration of Many of the Firms Involved in the Issuance of the PLMBS Purchased by the Bank Provided the Defendants with Access to Information Regarding the Mortgage Originators' Abandonment of Underwriting Guidelines. 157

2. Financial Ties Between the Investment Banks and Non-Bank Lenders Provided the Defendants with Access to Information Regarding the Mortgage Originators' Abandonment of Underwriting Guidelines. 162

3. The Large Financial Institutions' Conflicts of Interest Undermined Adequate Due Diligence and Disclosure to Investors. 164

4. Sponsors Undermined and Misused Loan Pool Due Diligence Results Prepared by Third-Party Firms. 166

a. Sponsors directed the due diligence process and were provided with detailed reports describing the results of the process. 166

b. The Defendants manipulated and misused due diligence results. 169

c. The Defendants should have known that defective loans were being included in loan pools. 172

5. Defendants' Own Due Diligence Identified a High Number of Defective Loans in the Mortgage Pools Backing PLMBS. 175

6. The Vertical Integration of Many of the Firms Involved in the Issuance of the PLMBS Purchased by the Bank Enabled the Controlling Person Defendants to Control the Management and Policies of the Controlled Entities. 177

E. The Securitization Process Was Supported by Credit Ratings that Materially Misstated the Credit Risk of the PLMBS. 180

1. The Credit Rating Agencies Knew That the Credit Ratings Were Unreliable, Based As They Were on Underwriting Standards That the Credit Rating Agencies Knew Had Been Abandoned. 181

2. The Credit Ratings Were Compromised by Conflicts of Interest, Manipulation and Misinformation. 182

3. The Credit Ratings Were Unreliable Due to the Use of Inaccurate, Outdated Models, and Inadequate Resources. 185

4. The Credit Rating Agencies Knew That Their PLMBS Ratings Fundamentally Differed from Their Ratings of Corporate Bonds. 188

5. Subsequent Downgrades Confirm that the Investment-Grade Ratings Reported in the Offering Documents Were Unjustifiably High and Misstated the True Credit Risk of the PLMBS Purchased by the Bank. 189

6. The Bank Reasonably Relied on the Credit Ratings Reported in the Prospectuses. 191

F. The Proper Steps Were Not Taken To Ensure That The Mortgages Underlying The Trusts Were Enforceable. 193

1. The Value of the PLMBS Is Impacted If the Mortgage Loans and Mortgages Have Not Been Validly Assigned and Transferred to the Issuing Trust Such That They Are Enforceable 193

VI. DEFENDANTS' MATERIAL UNTRUE STATEMENTS AND OMISSIONS IN CONNECTION WITH THE SALE OF PLMBS TO THE BANK 197

A. Defendants Misrepresented Underwriting Guidelines Utilized by Mortgage Lenders. 198

1. The Materiality of Underwriting Guidelines 198

2. Misstatements Regarding Underwriting Guidelines 198

3. Evidence Demonstrating Misstatements in the Offering Documents Regarding the Originators' Underwriting Practices 202

a. Government investigations, actions and settlements, confidential witnesses and evidence developed in other private lawsuits demonstrate systematic and pervasive abandonment of stated underwriting practices by the originators. 202

b. Analysis of loans that backed the PLMBS purchased by the Bank demonstrate the abandonment of stated underwriting practices by the originators. 203

B. The Offering Documents Were Materially Misleading Because They Failed to Inform Investors About Compounded High-Risk Mortgages in the Loan Pools 208

C. Defendants Misrepresented the Appraisal Process and Loan-to-Value Ratios ("LTV") That Were Based Upon Those "Appraisals." 211

1. The Materiality of Representations Regarding Appraisals and LTVs 211

2. Misstatements Regarding Appraisals and LTVs 215

a. The Offering Documents falsely state that the LTVs were based upon appraisals 215

b. Misstatements regarding the standards to which the purported "appraisals" conformed 219

c. Misstatements regarding aggregate LTVs 220

3. Evidence Demonstrating Misstatements about Appraisals and LTVs in the Offering Documents 221

a. Analysis of loans that backed the PMLBS purchased by the Bank demonstrate that appraisals were materially inflated and the LTV ratios were materially understated. 221

D. Defendants Misrepresented the Occupancy Status Rates. 230

1. The Materiality of Occupancy Status Rates 230

2. Evidence Demonstrating Misstatements about the Occupancy Status Rates 230

E. Defendants Misrepresented the Loan Documentation Process 232

1. The Materiality of the Loan Documentation Process 232

2. Evidence Demonstrating Misstatements about the Loan Documentation Process 232

F. Defendants' Statements Regarding the AAA Rating of the PLMBS Were False and Misleading 234

1. The Materiality of the Credit Rating Process and Ratings 234

2. False Representations That the Certificates the Bank Purchased Would Not Be Issued Unless They Earned Triple-A Ratings 234

3. Misstatements about the Credit Rating Process and Ratings 235

4. Evidence Demonstrating Misstatements about the Ratings and Ratings Process 237

G. Defendants Misrepresented the Due Diligence Performed on the Mortgage Pools that Backed the PLMBS Purchased by the Bank. 239

1. The Materiality of Due Diligence on the Mortgage Pools 239

2. Misstatements about Due Diligence 240

3. Evidence of Misstatements about Due Diligence 242

H. Defendants Misrepresented That Mortgages and Mortgage Loans Were Validly Assigned and Transferred to the Issuing Trusts. 242

1. The Materiality of Valid Assignment and Transfer 242

2. Misstatements Regarding Procedures for Valid Assignment and Transfer 243

3. A Material Number of Mortgages and Mortgage Notes Were Not Validly Transferred or Assigned to the Issuing Trusts in Accordance with the Offering Documents 244

Plaintiff, FEDERAL HOME LOAN BANK OF INDIANAPOLIS (hereinafter the "FHLBI" or the "Bank") alleges the following based upon personal knowledge with regard to its own acts, and upon public information as well as information and belief as to all other matters. The Bank's information and belief is based on, among other things, the investigation by its counsel. The investigation included but was not limited to: (1) review and analysis of the Offering Documents for the Certificates that are the subject of this action; (2) interviews with individuals with first hand knowledge of the events alleged herein; (3) examination of relevant SEC filings, press releases and other public statements; (4) review and analysis of pleadings in other civil actions involving certain Defendants; (5) review and analysis of investigations of and complaints filed by state and federal authorities against certain Defendants; (6) published materials, media reports, congressional testimony and additional related materials; and (7) analysis of the performance and composition of the loan pools underlying the securities. Many of the facts related to Plaintiff's allegations are known only by the Defendants, or are exclusively within their custody or control. Plaintiff believes that substantial additional evidentiary support for the allegations set forth below will be developed after a reasonable opportunity for discovery.

I. NATURE OF THE ACTION

1. The action arises from the sale of over $2.7 billion in Private Label Mortgage Backed Securities ("PLMBS" or "Certificates"), a type of Residential Mortgage Backed Security ("RMBS"), by the Defendants to the Bank. The Certificates are "securities" within the meaning of the Indiana Uniform Securities Act, I.C. § 23-19-1-2(28), and Section 2(a)(1) of the Securities Act of 1933 (the "33 Act"), 15 U.S.C. § 77b(a)(1). The Defendants include the depositors/issuers, underwriters/dealers, and certain entities controlling these parties, who

offered and sold the PLMBS to the Bank. These Defendants' roles are described in detail below.

2. The Certificates were sold to the Bank by means of registration statements, prospectuses, supplemental prospectuses, and other written offering materials (collectively, "Offering Documents") that Defendants wrote, signed, and/or circulated, and which contained untrue statements of material facts and omitted to state material facts necessary in order to make the statements made not misleading.

3. Accordingly, the Bank seeks rescission and damages under the: (a) Indiana Uniform Securities Act, I.C. §§ 23-19-1-1 *et seq.*; (b) the 33 Act, 15 U.S.C. § 77a *et seq.*; and (c) applicable common law.

4. Pursuant to I.C. § 23-19-5-9(a), with respect to any claim for rescission, the Bank will tender the Certificates prior to the entry of judgment.

II. EXECUTIVE SUMMARY

A. PMLBS Defined

5. PLMBS are mortgage pass-through certificate securities entitling the holder to income payments from pools of mortgage loans.[1] The securities are referred to as "private label" because they are issued by private entities instead of the Federal National Mortgage Association ("Fannie Mae") and the Federal Home Loan Mortgage Corporation ("Freddie Mac"), which are U.S. government-sponsored enterprises ("GSEs"). Mortgage securities issued by Fannie Mae and Freddie Mac are referred to as "agency" mortgage securities.

[1] Attached as Appendix I is a list of the PLMBS Certificates purchased by the Bank that are the subject of this action due to the Defendants' material misstatements and omissions in the Offering Documents described herein. Plaintiff identifies the PLMBS Certificates herein using the ticker symbols for each Certificate as created by Bloomberg.

6. Traditionally, the GSEs provided liquidity for the residential mortgage market by buying loans that conformed to their underwriting standards and dollar limits. In the early 2000s, PLMBS became an increasingly important adjunct to the GSEs, forming a capital market for mortgages that could not be sold to the GSEs. Certain PLMBS were secured by "prime" or "alt-a" mortgages. "Prime" mortgages were mortgages that allegedly met the credit score and other underwriting criteria of the GSEs, but were ineligible for GSE purchase because the mortgages exceeded the applicable GSE dollar limit. "Alt-A" mortgages were also ineligible for GSE due to dollar amount and/or because they contained certain disqualifying terms, such as certain types of adjustable rates, or were supported by reduced documentation. Other PLMBS were secured by "subprime" mortgages. These were mortgages that did not meet the GSE criteria for creditworthiness of the borrower but purportedly satisfied loan underwriting criteria developed by their originators.

7. Fundamentally, the value of a mortgage pass-through certificate depends on the ability of borrowers to repay the principal and interest on the underlying loans and the adequacy of the collateral the borrowers provide in the event of default. In the event that borrowers fall behind or default, the investor is exposed to loss. For this reason, rigorous and effective loan underwriting by the mortgage originators, performed in accordance with stated underwriting criteria, is of paramount importance; the absence of it – as demonstrated by this case – renders unreliable any credit rating or other attempt to assess the credit risk of the securities.

B. The Bank Purchased Only the Highest Rated (Triple-A-Rated) PLMBS

8. PLMBS are segmented into "tranches" with laddered payment priority and varying return potential for the holders of certificates representing various tranches. The most senior tranches enjoy the highest payment priority and lowest risk of default. Thus, if mortgage payments are not made, the losses are allocated first to the most junior tranches and move toward

the more senior tranches as losses cause the junior tranches to be exhausted. The senior tranches often are protected as well by certain credit enhancements, a common form of which is known as "overcollateralization." When a tranche is over-collateralized, the mortgages in that tranche have an aggregate principal balance that exceeds the aggregate principal balances of the Certificates secured thereby. For these reasons, the tranches are given different credit ratings—the higher up the ladder, the higher the rating.

9. Pursuant to both Bank policy and applicable regulatory requirements, and in order to minimize the risk of loss on the PLMBS, the Bank purchased only senior, triple-A-rated PLMBS tranches. Thus, based on the Offering Documents, the Bank believed it was buying safe and secure certificates with an extremely low risk of default—equivalent, from an investment quality standpoint, to other triple-A-rated investments. However, despite the original triple-A ratings and the abundant representations and warranties regarding the underlying mortgage pools, this was not the case, and the Bank has suffered substantial losses on these securities.

C. The Mortgage Originators Who Issued Loans Backing the Certificates Abandoned Underwriting Guidelines and Issued Loans Without Ensuring the Borrowers' Ability to Pay and Without Sufficient Collateral.

10. The mortgage originators who made the loans backing the PLMBS, many of whom were affiliates of the Defendants, sought to issue as many loans as possible to feed these Defendants' securitization machine. Whether borrowers could repay the loans and the quality of the collateral became secondary considerations to the originators' ability to sell the pooled interests on the loans. The mortgage loan originators' standard operating procedure was to approve any loan that could be sold into the secondary mortgage market. As a result, unbeknownst to the Bank, exceptions to underwriting and appraisal standards became the norm. Likewise, the originators knowingly obtained flawed appraisals of the collateral for the loans. Rather than requiring appraisals conducted in accordance with applicable appraisal standards, the

mortgage originators pressured and coerced appraisers to ensure that the appraisals came back "at value," *i.e*., the level necessary to close the loan. Consequently, the collateral for the loan pools backing the Certificates purchased by the Bank was vastly deficient.

11. The Bank also did not know that the Defendants failed to ensure that the loans they purchased and packaged into the Certificates complied with the mortgage originators' stated underwriting guidelines and appraisal standards. As revealed in recent government investigations, this approach to securitization was labeled "IBGYBG"—"I'll be gone, you'll be gone." Lost in this process was any effort by the Defendants to truthfully and accurately describe the loans in the Offering Documents so that investors such as the Bank could ascertain the true risk of the Certificates. Making matters even more egregious, the Defendants conducted a certain amount of due diligence on the loans, and were in a position to know that no real underwriting had been done.

D. The Defendants Provided Misleading Information About the Certificates in the Offering Documents They Prepared and Provided to the Bank.

12. In many arm's-length transactions, a buyer and a seller have limited disclosure obligations—buyer beware, or *caveat emptor*, is acceptable. This, however, is not the case with the sale of securities. Those who participate in the sale of securities are required to provide detailed information regarding what is being sold. Here, as required by law, the Defendants prepared detailed Offering Documents in which they purported to describe, among other things, the characteristics of the loans backing the Certificates. However, unbeknownst to the Bank, and to its great detriment, the Offering Documents contained material misstatements and omitted to disclose material information with respect to the mortgage pools backing the Certificates, and what Defendants knew about the pools. As a result, despite their original triple-A ratings and the

abundant representations and warranties regarding the underlying mortgage pools, the Certificates were far riskier than could be determined from the Offering Documents.

13. Though the Certificates themselves are complex, the abuses by the Defendants can be put in simple terms. The Offering Documents did not provide truthful or accurate information about the underwriting and appraisal standards used when the loans backing the pools were issued, or about the due diligence conducted when the loans were securitized.

14. Defendants' untrue statements and omissions of material fact went to the heart of the risk of the mortgage pools underlying the PLMBS. Specifically, Defendants failed to accurately describe key characteristics of the mortgages and the securitization of the mortgages, including, but not limited to:

a. **The Mortgage Originators' Underwriting Guidelines.** The Offering Documents contained material misstatements and omitted material information regarding the mortgage originators' abandonment of underwriting guidelines. The Defendants represented that the mortgage originators applied their stated underwriting guidelines when issuing loans to borrowers. However, the mortgage originators routinely disregarded their own guidelines and granted exceptions without proper justification.

b. **The Loan-to-Value Ratios of the Mortgage Loans and the Appraisal Standards Used to Determine the Ratios.** The Offering Documents contained material misstatements and omitted material information regarding the loan-to-value ratios ("LTVs") of the loans in the mortgage pools and the appraisal standards that were purportedly applied to determine the home values. The LTVs were purportedly based on valid appraisals performed in accordance with specific regulations and standards—but in truth, they were not based on legitimate appraisals at all. In fact, the appraisals were simply predetermined values set to ensure that the loan would close. As a result, the appraisers knew that the appraisals did not accurately reflect the value of the collateral property.

c. **The Ratings Process.** The Offering Documents contained material misstatements and omitted material information regarding the basis for the Certificates' triple-A ratings and the ratings processes. The Offering Documents represented that the rating agencies conducted analysis that was designed to assess the likelihood of delinquency and defaults in the underlying mortgage pools. However, the rating agencies knew, and the Defendants should have known, that the ratings were based on unreliable data and faulty assumptions—all of which caused the ratings to vastly understate the true risk of the PLMBS and overstate their creditworthiness.

d. Primary Residency. The Offering Documents contained material misstatements and omitted to disclose material information regarding the primary residency status of the mortgage properties – another key characteristic of the risk of the mortgage loans. The Defendants represented that certain specified percentages of the mortgage loan properties were primary residences of the borrower, instead of "second homes" or "investment properties," which carry more risk. However, in truth, the data provided by Defendants overstated the percentage of homes that were primary residences. Consequently, the statements in and omissions from the Offering Documents regarding the occupancy rates of the homes in the mortgage pools rendered the Offering Documents materially false and misleading.

e. Loan Documentation. Many of the Offering Documents contained material misstatements and omitted to disclose material information regarding the percentage of loans in the mortgage pool that were originated using full documentation.

f. Due Diligence. Many of the Offering Documents contained material misstatements and omitted material information regarding the sponsors' due diligence on the mortgage loans in the PLMBS mortgage pools. The Offering Documents stated that the underlying mortgage loans were inspected for compliance with the mortgage originators' underwriting and appraisal guidelines and documentation requirements. However, the Offering Documents omitted that the third-party due diligence firms retained to conduct the due diligence felt pressured to ignore deviations from the applicable underwriting criteria, and that even with regard to loan defects identified through the due diligence process, the sponsors nonetheless waived the defects as to a substantial percentage of these loans and, in many cases, used this information about defective loans to negotiate lower prices for the loan pools. In other words, rather than using the results of the due diligence review to eliminate defective loans from the securitization, the sponsors used them to negotiate – for *themselves* – a lower price for those loans, the risks of which they then securitized and sold to investors like the Bank.

g. Enforceability of Mortgages. Many of the Offering Documents contained material misstatements regarding the measures taken to ensure the enforceability of the mortgages and mortgage loans transferred to the trusts. In order for a mortgage to be enforced, basic steps need to be taken to validly assign the mortgage and mortgage loan to the trust and ensure that the trustee has the proper papers. These basic steps, and the representations made about these steps, were critical to investors (including the Bank), because if a mortgage cannot be enforced, then the value of the mortgage loans, and the Certificates dependent on these loans, are significantly impacted. The Offering Documents failed to disclose that in fact basic steps regarding the transfer of mortgages and mortgage loans were not followed—mortgage loans were not validly assigned, and papers necessary to ensure enforceability of the mortgage were never transferred to the trustee.

h. The Offering Documents Did Not Disclose the Compounded High-Risk Mortgages that Infected the Mortgage Pools. The Offering Documents contained certain statistical measurements of the overall mortgage pools, including measurements of the pools' weighted average LTVs, credit scores, and debt-to-income

ratios ("DTIs"). In addition to the material inaccuracy of much of this data, the Offering Documents did not disclose the compounding of risks in many mortgages in the pools. The representations in the Offering Documents indicated that a high risk according to one measure (say, a bad credit score) would be offset by a low risk according to another measure (say, a low LTV). If the Offering Documents were accurate, then, the mortgage pools would contain few if any mortgages with *compounded* high risks—with, for example, a bad credit score *and* a higher LTV. But analysis of the loans in the mortgage pools shows otherwise. Many of the mortgage loans in the pools in fact contained multiple risk factors. The undisclosed presence of a significant volume of loans with these characteristics made the Certificates much more prone to default than the Offering Documents indicated. The prevalence of these compounded high-risk loans tainted the loan pools and contributed substantially to the decline in performance and value of the Certificates.

15. The untrue, incomplete and materially misleading statements summarized above and discussed in detail below were made with respect to each of the PLMBS purchased by the Bank that are the subject of this lawsuit. The Bank reasonably relied on these statements and was misled by the omissions when deciding to purchase the securities, and the statements and omissions have caused the Bank significant losses.

16. As a result of these untrue statements in and omissions from the Offering Documents, the Bank purchased securities that were far riskier than represented by the Defendants, and that were not in truth "highest investment grade" as stated in the Offering Documents, but, instead, were low quality, high risk securities. As of the date this complaint is filed, all but four of the Certificates at issue in this case have been downgraded to below investment grade, indicating a materially higher probability of default.

E. The Bank Is Entitled to Rescission and Damages.

17. As indicated above, and described in detail below, it is not happenstance, or the result of later events, that the PLMBS failed to perform, plunged in value, and were ultimately severely downgraded. To the contrary, the PLMBS purchased by the Bank collapsed because the underlying loans were not what the Offering Documents represented them to be at the time the Certificates were issued. They were *not* backed by pools of loans issued to borrowers based on

the application of stated underwriting standards. Exceptions to underwriting guidelines were *not* justified by "compensating circumstances." Valid appraisals of the collateral for the loans were *not* performed. The Defendants did *not* engage in appropriate and effective due diligence to ensure that the loans satisfied the originators' stated underwriting guidelines.

18. Because the Offering Documents were marred by material misstatements and omissions that concealed the true risk of the Certificates, the Bank is entitled to rescission and such other make-whole relief afforded by applicable law.

19. The fair value of these Certificates has also declined dramatically. Moreover, as a result of the current and anticipated future poor performance of the mortgages underlying these Certificates, the Bank has incurred other-than-temporary impairment losses on these investments, resulting in over a hundred million dollars in losses. In addition, to the degree that the Bank has sold, and continues to sell, Certificates in the secondary market, the value of these Certificates have declined as a result of Defendants' misrepresentations and the Certificates' poor performance, and the Bank has suffered and continues to suffer losses accordingly.

20. Accordingly, the Bank seeks relief from Defendants in the manner set forth herein.

III. JURISDICTION AND VENUE

21. This Court has jurisdiction over the claims alleged in this action.

22. This Court has subject matter jurisdiction over Plaintiff's state law claims, which arise under the Indiana Uniform Securities Act, I.C. §§ 23-19-1-1 *et seq*., and under common law, because the Bank's claims arise from its transaction of business with Defendants within this State.

23. This Court has subject matter jurisdiction over Plaintiff's federal claims, which are brought pursuant to §§ 11, 12(a)(2) and 15 of the 33 Act, 15 U.S.C. §§ 77k, 77l(a)(2), and 77o, respectively, and pursuant to Section 22 of the 33 Act, 15 U.S.C. § 77v.

24. In addition, this Court has subject matter jurisdiction over the claims against Defendants pursuant to I.C. § 23-19-5-9, which creates a private right of action against any person who "sells a security in violation of" the Indiana Uniform Securities Act.

25. The Defendants are subject to personal jurisdiction in this State pursuant to Ind. Trial Rule 4.4(A) because the Bank's claims arise from the transaction of business with Defendants within this State. Furthermore, the offer and sale to the Bank of the Certificates that are the subject of this action, including certain Defendants' making of materially false and misleading statements and omission of material facts alleged herein, occurred in this State.

26. Because its activities are not localized in one state, the Bank is not a citizen of any state under 28 U.S.C. § 1332(c), so the Federal courts have no jurisdiction of this action under 28 U.S.C. § 1332(a). Furthermore, pursuant to Section 22(a) of the 33 Act, 15 U.S.C. § 77v(a), Plaintiff's claims arising under the 33 Act may not be removed to federal court.

27. Venue is proper in this County pursuant to Ind. Trial Procedure Rule 75(A). The offer and sale to the Bank of the Certificates that are the subject of this action, including certain Defendants' making of materially false and misleading statements and omission of material facts alleged herein, occurred in this County.

28. The Bank asserts no claims against any entity that has filed for bankruptcy protection.

IV. THE PARTIES

A. Plaintiff

29. Plaintiff is a bank created by the Federal Home Loan Bank Act. The headquarters of the Bank are in the city of Indianapolis, Marion County. Under its Organization Certificate, the Bank is to operate in Federal Home Loan Bank District 6, which comprises the states of Indiana and Michigan. The Bank operates in both of those states. The Bank is not an agency of the United States, and the Bank is not a citizen of any state.

30. The Bank is federally chartered, but privately capitalized and independently managed. The federal government is not involved in the day-to-day management of the Bank's operations. Management of the Bank is vested by law in the Bank's board of directors, all of whom are elected by the Bank's shareholder members. No tax dollars are involved in the operation of the Bank.

31. At the time the Bank initiated this action, the Bank had 409 members. Of those members, 217 are citizens of states other than Indiana, and 192 are citizens of Indiana.

32. As part of its business, the Bank makes advances, or loans, to its members. In 2009, 61% of those advances were made to institutions outside of Indiana. Employees of the Bank routinely travel to the offices of the Bank's members. In 2009, employees of the Bank made approximately 180 business trips to members outside of Indiana.

33. At the time the Bank initiated this action, ten of the Bank's 18 directors have their business addresses outside of Indiana, and 62% of the Bank's stock is owned by members who are based outside of Indiana.

34. In light of its public policy mission, the Bank has a very conservative investment philosophy. The Bank bought the PLMBS on the basis of factual representations designed to convince the Bank that these securities were safe, prudent, and highly rated investments. The

Bank could not and would not have purchased the PLMBS if the Offering Documents had disclosed the truth about these securities and the mortgage loans that backed them.

B. Defendants

1. The Banc of America Entities

35. Depositor/Issuer Defendant Banc of America Mortgage Securities, Inc. is a Delaware corporation. On information and belief, Banc of America Mortgage Securities, Inc. was formed and exists solely for the purpose of receiving and depositing loans into trusts for PLMBS securitization. Banc of America Mortgage Securities, Inc. was the Depositor/Issuer for Certificate BOAMS 2006-1 A1.

36. Underwriter and Seller Banc of America Securities LLC was a Delaware limited liability company that, at the time the Bank purchased the relevant Certificates, maintained a securities broker-dealer Financial Institutions Regulatory Authority ("FINRA") registration in Indiana. Banc of America Securities LLC underwrote Certificate BOAMS 2006-1 A1 and sold Certificates BOAMS 2006-1 A1, BSARM 2007-3 1A1 and WAMU 2007-HY2 1A1 directly to the Bank. Effective November 1, 2010, Banc of America Securities LLC merged with and into Successor Defendant Merrill Lynch, Pierce, Fenner & Smith Incorporated, a Delaware corporation. All references herein to Banc of America Securities LLC are also to Defendant Merrill Lynch, Pierce, Fenner & Smith Incorporated, which is liable as a matter of law as successor to Banc of America Securities LLC by virtue of its status as the surviving entity in its merger with Banc of America Securities LLC.

37. Controlling Person Defendant Bank of America Corporation is a Delaware corporation. At all relevant times, Bank of America Corporation was the parent company and a controlling entity of Banc of America Mortgage Securities, Inc. and Banc of America Securities LLC. Bank of America Corporation was also the parent company of Bank of America, National

Association (which was the sponsor of the offering in which the Bank purchased Certificate BOAMS 2006-1 A1 and originated loans for the offerings in which the Bank purchased Certificates BOAMS 2006-1 A1 and GSR 2005-2F 2A1).

38. Bank of America Corporation is also named as a Successor Defendant to CWMBS, Inc. and Countrywide Financial Corporation. *See infra* § IV.C. As set forth below, on or about July 1, 2008, Successor Defendant Bank of America Corporation acquired Countrywide Financial Corporation and all of its subsidiaries, including CWMBS, Inc.

39. Bank of America Corporation is also named as a Successor Defendant to Merrill Lynch Mortgage Investors, Inc., Merrill Lynch, Pierce, Fenner & Smith Incorporated, Merrill Lynch Mortgage Lending, Inc., and Merrill Lynch & Co., Inc. *See infra* § IV.C. As set forth below, on or about January 1, 2009, Successor Defendant Bank of America Corporation acquired Merrill Lynch & Co., Inc. and all of its subsidiaries, including Merrill Lynch Mortgage Investors, Inc., Merrill Lynch, Pierce, Fenner & Smith Incorporated, and Merrill Lynch Mortgage Lending, Inc.

2. The Bear Stearns Entities

40. Underwriter and Seller Defendant Bear, Stearns & Co. Inc., now known as J.P. Morgan Securities, LLC, (hereafter together referred to as "Bear, Stearns & Co. Inc.") is a Delaware corporation, which, at all relevant times, has maintained a securities broker-dealer FINRA registration in Indiana and is registered to do business in Indiana.[2] Bear, Stearns & Co.

[2] During the fall of 2008, Underwriter Defendant J.P. Morgan Securities Inc. merged with and into Underwriter Defendant Bear Stearns & Co., Inc. The surviving corporation changed its name from Bear Stearns & Co. Inc. to J.P. Morgan Securities Inc. The company changed its name again on or about September 1, 2010, when it converted into J.P. Morgan Securities LLC. For the sake of clarity, Plaintiff refers to this Underwriter Defendant as Bear Stearns & Co., Inc. in connection with all pre-merger acts and omissions of Bear Stearns & Co., Inc. Similarly, Plaintiff refers to this Underwriter Defendant as J.P. Morgan Securities Inc. in connection with all pre-merger acts and omissions of J.P. Morgan Securities Inc. To the extent

Inc. underwrote Certificates BSARM 2007-3 1A1 and CWHL 2007-13 A4 and sold Certificate CWHL 2007-13 A4 directly to the Bank.

41. Depositor/Issuer Defendant Structured Asset Mortgage Investments II Inc. is a Delaware corporation. On information and belief, Structured Asset Mortgage Investments II Inc. was formed and existed solely for the purpose of receiving and depositing loans into trusts for PLMBS securitization. Structured Asset Mortgage Investments II Inc. was the Depositor/Issuer for Certificate BSARM 2007-3 1A1.

42. Controlling Person Defendant The Bear Stearns Companies Inc. is a Delaware corporation. At the time the Bank acquired the relevant Certificate(s), The Bear Stearns Companies Inc. was the parent company and a controlling entity of Bear, Stearns & Co. Inc. and Structured Asset Mortgage Investments II Inc. The Bear Stearns Companies Inc. was also the parent company of EMC Mortgage Corporation (which was the sponsor for the offering in which the Bank purchased Certificate BSARM 2007-3 1A1). On or about July 6, 2008, The Bear Stearns Companies, Inc. legally changed its name to The Bear Stearns Companies LLC. All references herein to The Bear Stearns Companies, Inc. are also to The Bear Stearns Companies LLC.

3. The Countrywide Entities

43. Depositor/Issuer Defendant CWMBS, Inc. is a Delaware corporation. On information and belief, CWMBS, Inc. was formed and existed solely for the purpose of receiving and depositing loans into trusts for PLMBS securitization. CWMBS, Inc. was the Depositor/Issuer for Certificates CWHL 2007-8 1A5, CWHL 2005-8R A1 and CWHL 2007-13 A4.

---

that Underwriter Defendant J.P. Morgan Securities Inc. has undergone a change in corporate structure and/or ownership through merger, J.P. Morgan Securities LLC remains liable as the initial entity's successor.

44. Controlling Person Defendant Countrywide Financial Corporation is a Delaware corporation. At the time the Bank acquired the relevant Certificate(s), Countrywide Financial Corporation was a holding company which, through its subsidiaries, was engaged in mortgage lending and other real estate finance-related businesses, including mortgage banking, banking and mortgage warehouse lending, dealing in securities and insurance underwriting. Countrywide Financial Corporation managed its business through five business segments: Mortgage Banking; Banking; Capital Markets; Insurance; and Global Operations. The mortgage banking business segment was Countrywide Financial Corporation's core business and generated 48 percent of the Countrywide Financial Corporation's pre-tax earnings in 2006. At all relevant times, Countrywide Financial Corporation was the parent company and a controlling entity of CWMBS, Inc. Countrywide Financial Corporation was also the parent company of Countrywide Home Loans, Inc. which was the sponsor of the offerings in which the Bank purchased Certificates CWHL 2007-8 1A5 and CWHL 2007-13 A4), and originated loans for the offerings in which the Bank purchased Certificates BSARM 2007-3 1A1, CWHL 2007-8 1A5, CWHL 2005-8R A1, CWHL 2007-13 A4, GSR 2006-2F 3A1, GSR 2006-AR1 2A3, GSR 2006-1F 2A2, GSR 2005-3F 2A1, GSR 2005-1F 3A1, GSR 2005-2F 2A1, and GSR 2006-6F 2A1.

45. Bank of America Corporation is also named as a Successor Defendant to CWMBS, Inc. and Countrywide Financial Corporation. *See infra* § IV.C. As set forth below, on or about July 1, 2008, Successor Defendant Bank of America Corporation acquired Countrywide Financial Corporation and all of its subsidiaries, including CWMBS, Inc.

4. The Credit Suisse Entities

46. Depositor/Issuer Defendant Credit Suisse First Boston Mortgage Securities Corp. is a Delaware corporation. On information and belief, Credit Suisse First Boston Mortgage Securities Corp. was formed and exists solely for the purpose of receiving and depositing loans

into trusts for PLMBS securitization. Credit Suisse First Boston Mortgage Securities Corp. was the Depositor/Issuer for Certificate CSFB 2005-8 9A1.

47. Underwriter and Seller Defendant Credit Suisse First Boston LLC is a Delaware limited liability company, which, at all relevant times, has maintained a securities broker-dealer FINRA registration in Indiana and is registered to do business in Indiana. Effective January 16, 2006, Credit Suisse First Boston LLC changed its name to Credit Suisse Securities (USA) LLC. All references herein to Underwriter Credit Suisse First Boston LLC are also to Credit Suisse Securities (USA) LLC. Credit Suisse First Boston LLC underwrote Certificates CWHL 2007-8 1A5, CSFB 2005-8 9A1 and WFMBS 2006-10 A7 and sold Certificates CWHL 2007-8 1A5, CSFB 2005-8 9A1, RFMSI 2007-SA4 3A1, WAMU 2007-HY1 4A1, and WFMBS 2006-10 A7 directly to the Bank.

48. Controlling Person Defendant Credit Suisse (USA), Inc. is a Delaware corporation that was registered to do business in Indiana. Credit Suisse (USA), Inc. is the parent company and a controlling entity of wholly owned subsidiaries Credit Suisse First Boston Mortgage Securities Corp. and Credit Suisse First Boston LLC. Credit Suisse (USA), Inc. is also the parent of its wholly owned subsidiary DLJ Mortgage Capital LLC, which was the sponsor and an originator of loans for the offering in which the Bank purchased Certificate CSFB 2005-8 9A1.

49. Controlling Person Defendant Credit Suisse Holdings (USA), Inc. is a Delaware corporation. Credit Suisse Holdings (USA), Inc. is the parent company and a controlling entity of wholly owned subsidiaries Credit Suisse (USA), Inc., Credit Suisse First Boston Mortgage Securities Corp. and Credit Suisse First Boston LLC. Credit Suisse Holdings (USA), Inc. is also the parent of wholly owned subsidiary DLJ Mortgage Capital LLC.

5. The GMAC Entities

50. Depositor/Issuer Defendant Residential Funding Mortgage Securities I, Inc. is a Delaware corporation. On information and belief, Residential Funding Mortgage Securities I, Inc. was formed and exists solely for the purpose of receiving and depositing loans into trusts for PLMBS securitization. Residential Funding Mortgage Securities I, Inc. was the Depositor/Issuer for Certificates RFMSI 2007-S4 A4, RFMSI 2007-SA4 3A1 and RFMSI 2006-S4 A3.

51. Underwriter Defendant Residential Funding Securities, LLC, also known at times relevant hereto as GMAC RFC Securities (hereafter together referred to as Residential Funding Securities, LLC) is a Delaware limited liability company. Residential Funding Securities, LLC underwrote Certificate RFMSI 2007-SA4 3A1.

52. Controlling Person Defendant GMAC Mortgage Group, Inc., also known currently and at times relevant hereto as GMAC Mortgage Group LLC (hereafter, together referred to as "GMAC Mortgage Group, Inc.") is a Delaware corporation or limited liability company, respectively, that was and is registered to do business in Indiana. GMAC Mortgage Group, Inc. is the parent corporation or limited liability company, respectively, with 100% direct or indirect ownership, and controlling entity of Residential Funding Mortgage Securities I, Inc. and Residential Funding Securities, LLC. GMAC Mortgage Group, Inc. is also the parent of GMAC Mortgage, LLC (which originated loans for the offering in which the Bank purchased Certificates RFMSI 2007-S4 A4 and RFMSI 2007-SA4 3A1), GMAC Mortgage Corporation (which originated loans for the offering in which the Bank purchased Certificates GSR 2006-2F 3A1 and GSR 2006-AR1 2A3), HomeComings Financial, LLC (which originated of loans for the offering in which the Bank purchased Certificates RFMSI 2007-S4 A4 and RFMSI 2007-SA4 3A1), HomeComings Financial Network, Inc. (which originated loans for the offering in which the Bank purchased Certificate RFMSI 2006-S4 A3, Residential Funding Corporation (which

was the sponsor for the offering in which the Bank purchased Certificate RFMSI 2006-S4 A3) and Residential Funding Company, LLC (which was the sponsor for the offerings in which the Bank purchased Certificates RFMSI 2007-S4 A4 and RFMSI 2007-SA4 3A1).

53. Controlling Person Defendant GMAC Inc., also known at times relevant hereto as GMAC LLC (hereafter, together referred to as "GMAC Inc."), is a Delaware corporation or limited liability company, respectively, that was and is registered to do business in Indiana. GMAC Inc. offers mortgage services, including originating, purchasing, selling, and securitizing residential mortgage loans; servicing residential mortgage loans; and providing collateralized lines of credit to other mortgage originators. GMAC Inc. is the parent corporation or limited liability company, respectively, and controlling entity of Residential Funding Mortgage Securities I, Inc., Residential Funding Securities, LLC and GMAC Mortgage Group, Inc. GMAC Inc. is also the parent of originators GMAC Mortgage, LLC, GMAC Mortgage Corporation, HomeComings Financial, LLC, HomeComings Financial Network, Inc., and sponsors Residential Funding Corporation and Residential Funding Company, LLC. On May 10, 2010, GMAC Inc. changed its corporate name to Ally Financial Inc. All references herein to GMAC Inc. are also to Ally Financial Inc.

6. The Goldman, Sachs Entities

54. Depositor/Issuer Defendant GS Mortgage Securities Corp. is a Delaware corporation. On information and belief, GS Mortgage Securities Corp. was formed and exists solely for the purpose of receiving and depositing loans into trusts for PLMBS securitization. GS Mortgage Securities Corp. was the Depositor/Issuer for Certificates GSR 2006-2F 3A1, GSR 2006-AR1 2A3, GSR 2006-1F 2A2, GSR 2005-7F 3A7, GSR 2005-3F 2A1, GSR 2005-1F 3A1, GSR 2005-2F 2A1, GSR 2006-6F 2A1, and STARM 2007-4 2A2, as well as the sponsor for the offerings in which the Bank Purchased Certificates GSR 2005-3F 2A1 and GSR 2005-2F 2A1.

55. Underwriter and Seller Defendant Goldman, Sachs & Co. is a New York corporation. Goldman, Sachs & Co. underwrote and sold the following Certificates to the Bank: CWHL 2005-8R A1, GSR 2006-2F 3A1, GSR 2006-AR1 2A3, GSR 2006-1F 2A2, GSR 2005-7F 3A7, GSR 2005-3F 2A1, GSR 2005-1F 3A1, GSR 2005-2F 2A1, GSR 2006-6F 2A1, STARM 2007-4 2A2, WAMU 2005-AR18 1A2, and WFMBS 2007-11 A2. Goldman, Sachs & Co. was also the sponsor of Certificate CWHL 2005-8R A1.

56. Controlling Person Defendant Goldman Sachs Mortgage Company, a New York limited partnership was, at the time the Bank purchased the relevant Certificates, the parent company and a controlling entity of GS Mortgage Securities Corp., as well as the sponsor for the offerings in which the Bank purchased Certificates GSR 2006-2F 3A1, GSR 2006-AR1 2A3, GSR 2006-1F 2A2, GSR 2005-7F 3A7, GSR 2005-1F 3A1, and GSR 2006-6F 2A1.

57. Controlling Person Defendant The Goldman Sachs Group Inc., a Delaware corporation that was and is registered to do business in Indiana, is the parent company and a controlling entity of Goldman Sachs Mortgage Company, Goldman, Sachs & Co. and GS Mortgage Securities Corp.

7. Greenwich Capital Markets, Inc.

58. Underwriter and Seller Defendant Greenwich Capital Markets, Inc. is a Delaware corporation, which, at the time the Bank purchased the relevant Certificates, maintained a securities broker-dealer FINRA registration in Indiana. Greenwich Capital Markets, Inc is a registered broker-dealer engaged in the U.S. government securities market and related capital markets business, and underwrote and sold to the Bank Certificates RFMSI 2007-S4 A4, RFMSI 2006-S4 A3 and WFMBS 2007-4 A16. Pursuant to its Restated Certificate of Incorporation, dated April 1, 2009, Greenwich Capital Markets, Inc. legally changed its name to RBS Securities Inc. All references herein to Greenwich Capital Markets, Inc. are also to RBS Securities Inc.

8. IndyMac MBS, Inc.

59. Depositor/Issuer Defendant IndyMac MBS, Inc. is a Delaware corporation. On information and belief, IndyMac MBS, Inc. was formed and exists solely for the purpose of receiving and depositing loans into trusts for PLMBS securitization. IndyMac MBS, Inc. was the Depositor/Issuer for Certificates RAST 2005-A11 2A1.

9. The JP Morgan Chase Entities

60. Depositor/Issuer Defendant J.P. Morgan Acceptance Corporation I is a Delaware corporation. On information and belief, J.P. Morgan Acceptance Corporation I was formed and exists solely for the purpose of receiving and depositing loans into trusts for PLMBS securitization. J.P. Morgan Acceptance Corporation I was the Depositor/Issuer for Certificate JPMMT 2005-A8 2A2.

61. Depositor/Issuer Defendant Chase Mortgage Finance Corporation is a Delaware corporation. On information and belief, Chase Mortgage Finance Corporation was formed and exists to receive and deposit loans into trusts for PLMBS securitization. Chase Mortgage Finance Corporation was the Depositor/Issuer and sponsor for Certificate CHASE 2005-A2 1A4.

62. Underwriter and Seller Defendant J.P. Morgan Securities Inc. is a Delaware corporation, which, at all relevant times, has maintained a securities broker-dealer FINRA registration in Indiana and was and is registered to do business in Indiana. J.P. Morgan Securities Inc. underwrote and sold to the Bank Certificates CHASE 2005-A2 1A4, JPMMT 2005-A8 2A2 and WAMU 2005-AR16 1A2.

63. Controlling Person Defendant JPMorgan Securities Holdings LLC, also known at times relevant hereto as JPMorgan Securities Holdings Inc. (hereafter, together referred to as JPMorgan Securities Holdings LLC), is a Delaware corporation, JPMorgan Securities Holdings LLC is the parent company and controlling entity of J.P. Morgan Acceptance Corporation I and,

at least at the time the Bank purchased the relevant Certificates, was also the parent company of J.P. Morgan Securities Inc.

64. Controlling Person Defendant JPMorgan Chase & Co., a Delaware corporation, is the parent company and controlling entity of JPMorgan Securities Holdings LLC, J.P. Morgan Acceptance Corporation I, J.P. Morgan Securities Inc., JP Morgan Chase & Co. and Chase Mortgage Finance Corporation. JPMorgan Chase & Co. is also the parent company and a controlling entity of J.P. Morgan Mortgage Acquisition Corp., which was the sponsor for the offering in which the Bank purchased Certificate JPMMT 2005-A8 2A2, and Chase Home Finance LLC, which originated of loans for the offering in which the Bank purchased Certificate CHASE 2005-A2 1A4.

10. UBS Securities LLC

65. Underwriter and Seller Defendant UBS Securities LLC is a Connecticut limited liability company which, at all relevant times, has maintained a securities broker-dealer FINRA registration in Indiana and was and is registered to do business in Indiana. UBS Securities LLC underwrote and sold to the Bank Certificates RAST 2005-A11 2A1 and WFMBS 2007-10 1A10.

11. The WaMu Entities

66. Depositor/Issuer Defendant WaMu Asset Acceptance Corp. is a Delaware corporation. WaMu Asset Acceptance Corp. was the Depositor/Issuer for Certificates WAMU 2005-AR14 1A2, WAMU 2005-AR16 1A2, WAMU 2005-AR18 1A2, WAMU 2007-HY1 4A1 and WAMU 2007-HY2 1A1.

67. Underwriter Defendant WaMu Capital Corp. was a Delaware corporation that was registered to do business in Indiana. WaMu Capital Corp. underwrote Certificates WAMU 2005-AR14 1A2, WAMU 2005-AR16 1A2, WAMU 2005-AR18 1A2, WAMU 2007-HY1 4A1 and WAMU 2007-HY2 1A1.

12. The Wells Fargo Entities

68. Depositor/Issuer Defendant Wells Fargo Asset Securities Corporation is a Delaware corporation. On information and belief, Wells Fargo Asset Securities Corporation was formed and exists solely for the purpose of receiving and depositing loans into trusts for PLMBS securitization. Wells Fargo Asset Securities Corporation was the Depositor/Issuer for Certificates WFMBS 2007-10 1A10, WFMBS 2006-10 A7, WFMBS 2007-4 A16 and WFMBS 2007-11 A2.

69. Controlling Person Defendant Wells Fargo Bank, National Association, is a nationally chartered bank that operates branches throughout Indiana and is regulated by the Office of the Comptroller of the Currency (OCC). Wells Fargo Bank, National Association is the parent corporation and controlling entity of Wells Fargo Asset Securities Corporation. Wells Fargo Bank, National Association was also the sponsor for the offerings in which the Bank purchased Certificates WFMBS 2007-10 1A10, WFMBS 2006-10 A7, WFMBS 2007-4 A16 and WFMBS 2007-11 A2, and originated loans for the offerings in which the Bank purchased Certificates GSR 2006-AR1 2A3, GSR 2005-1F 3A1, WFMBS 2007-10 1A10, WFMBS 2006-10 A7, WFMBS 2007-4 A16 and WFMBS 2007-11 A2.

70. Controlling Person Defendant Wells Fargo & Company, a Delaware corporation, is the parent corporation—with 100% direct or indirect ownership—and controlling entity of Wells Fargo Asset Securities Corporation and Wells Fargo Bank, National Association. Wells Fargo & Company is a diversified financial services company that provides retail, commercial and corporate banking services. It has banking stores located in 39 states and the District of Columbia. Wells Fargo & Company provides additional financial services through subsidiaries that are engaged in various businesses, including: wholesale banking, mortgage banking,

consumer finance, commercial finance, securities brokerage and investment banking, insurance agency and brokerage services, and mortgage-backed securities servicing.

C. Successor Liability Allegations Against Certain Defendants

1. Successor Defendant Bank of America Corporation (Countrywide)

71. On January 11, 2008 Bank of America Corporation and Countrywide Financial Corporation announced that they had signed a merger agreement, which had been approved by the respective companies' boards of directors and was subject to regulatory and Countrywide stockholder approvals. *See* Bank of America Corporation Form 8-K filed 1/11/2008. In the press release filed as an exhibit to the 8-K, Bank of America confirmed its entry into "a definitive agreement to purchase Countrywide Financial Corp. in an all stock transaction worth approximately $4 billion." With respect to the benefits of the merger and integration of the two companies, the press release stated:

> "We are aware of the issues within the housing and mortgage industries," [Bank of America Chairman and Chief Executive Officer Kenneth D.] Lewis continued. "The transaction reflects those challenges. Mortgages will continue to be an important relationship product, and we now will have an opportunity to better serve our customers and to enhance future profitability." Countrywide's deep retail distribution will enhance Bank of America's network of more than 6,100 banking centers throughout the U.S.
>
> After closing, Bank of America plans to operate Countrywide separately under the Countrywide brand with integration occurring no sooner than 2009.

72. The merger became effective on July 1, 2008, when Successor Defendant Bank of America Corporation acquired Countrywide Financial Corporation and those entities it controlled, including Depositor/Issuer Defendant CWMBS, Inc. and sponsor Countrywide Home Loans, Inc., through an all-stock merger which, due to falling stock prices, was valued at approximately $2.3 billion. This figure is less than 16% of Countrywide's book value at the time the transaction was announced. In this transaction, Countrywide Financial Corporation merged

with and into a Bank of America Corporation subsidiary, which acquired substantially all Countrywide Financial Corporation assets and responsibility for all pre-merger liabilities and was re-named Countrywide Financial Corporation. *See* Agreement and Plan of Merger by and among Countrywide Financial Corporation, Bank of America Corporation and Red Oak Merger Corporation (Jan. 11, 2008). As the consideration for the merger, Countrywide shareholders received shares of Bank of America Corporation stock and possessed the authority to fully participate in the management of Bank of America corporation. Under the terms of the agreement, shareholders of Countrywide received .1822 of a share of Bank of America stock in exchange for each share of Countrywide

73. Bank of America repeatedly touted the benefits of the business combination, including the benefits of acquiring and incorporating into Bank of America's business model Countrywide's mortgage capabilities and deeply experienced management team, including during a January 11, 2008 call with analysts. According to at least one report, as a result of the transaction, "Bank of America gained number one market share in the origination of mortgage loans as well as additional capital markets operations involved in the packagings of mortgages into securities for investors." Rick Rothaker, *BofA Exec Tackles Countrywide*, Charlotte Observer (Oct. 21, 2008). The benefits to Bank of America were immediate. Countrywide contributed $259 million to Bank of America's operating earnings during the third quarter of 2008 alone, exclusive of restructuring and other charges. *Id.*

74. There can be no question that Bank of America assumed control of Countrywide. For instance, Bank of America stated that the merger with Countrywide was accounted for in accordance with Statement of Financial Accounting Standards ("SFAS") No. 141. Bank of America Corporation Form 10-K filed 11/10/2008 at 125. SFAS 141, which addresses mergers

and business combinations, specifies that it "applies to all transactions or other events in which an entity … obtains control of one or more businesses." SFAS No. 141 at i. Bank of America repeatedly announced that it intended to combine Countrywide's operations with its own and re-brand those combined operations with the Bank of America name, which it did in fact accomplish promptly. Countrywide did not survive with substantial assets or continue normal business operations after it was subsumed into Bank of America.

75. Bank of America issued a press release announcing that the merger had become effective and its plans with respect to combining the two companies, which stated in part:

> "Mortgages are one of the three main cornerstone consumer financial products along with deposits and credit cards," said Bank of America Chairman and Chief Executive Officer Kenneth D. Lewis. "This purchase significantly increases Bank of America's market share in consumer real estate, and as our companies combine, we believe Bank of America will benefit from excellent systems and a broad distribution network that will offer more ways to meet our customers' credit needs."
>
> * * *
>
> "Now we begin to combine the two companies and prepare to introduce our new name and way of operating," said Barbara Desoer, president of the combined mortgage, home equity and insurance businesses.
>
> * * *
>
> The company reiterated its combined national consumer mortgage division will be based in Calabasas, Calif. The combined company will begin originating mortgage and home equity products under the Bank of America brand by mid-2009.

Bank of America Corporation Press Release, Exhibit 99.1 to Form 8-K (7/1/08).

76. Moreover, Bank of America received everything it needed from Countrywide to maintain and carry on the Countrywide business and client relationships. For example, Bank of America announced that Barbara Desoer would run the combined mortgage and consumer real estate operations from Calabasas, California, where Countrywide Financial had its headquarters.

77. Inherent to the transaction was the continuity of the Countrywide business enterprise and management. For example, Bank of America named a number of Countrywide executives to Bank of America leadership roles and during various interviews and analyst calls, including the January 11, 2008 call, stated its intent to retain a number of managers, including "senior people who are very, very good operators . . . [who would] have big operating roles in this company." Bank of America announced that Countrywide Financial's incumbent president, David Sambol, would remain for at least some time to work on the transition.

78. Additionally, in the transaction, Bank of America inherited 1,000 Countrywide mortgage offices (along with, on information and belief, the ongoing business liabilities and necessary expenses attendant thereto), the majority of which it stated it intended to keep, other than as necessary to eliminate locations that overlapped with Bank of America.

79. Bank of America also assumed numerous other Countrywide-related obligations as part of the merger. For example, the Merger Agreement provided that Bank of America would provide directors' and officer's insurance for Countrywide officers and directors with respect to preexisting claims and claims arising in the future:

> (c) Parent shall cause the individuals serving as officers and directors of Company or any of its Subsidiaries immediately prior to the Effective Time to be covered for a period of six years from the Effective Time by the directors' and officers' liability insurance policy maintained by Company (provided that Parent may substitute therefor policies of at least the same coverage and amounts containing terms and conditions that are not less advantageous than such policy) with respect to acts or omissions occurring prior to the Effective Time that were committed by such officers and directors in their capacity as such; provided that in no event shall Parent be required to expend annually in the aggregate an amount in excess of 250% of the annual premiums currently paid by Company (which current amount is set forth in Section 6.7 of the Company Disclosure Schedule) for such insurance (the "Insurance Amount"), and provided further that if Parent is unable to maintain such policy (or such substitute policy) as a result of the preceding proviso, Parent shall obtain as much comparable insurance as is available for the Insurance Amount.

Agreement and Plan of Merger § 6.7 (Indemnification; Directors' and Officers' Insurance).

80. To further effect the absorption of Countrywide into Bank of America, on October 16, 2008, Bank of America announced that Countrywide Financial Corporation would no longer publicly report its own financial results and that Bank of America was transferring "substantially all of the assets and operations of Countrywide Financial Corporation and Countrywide Home Loans, Inc. to other subsidiaries of Bank of America."

81. On November 10, 2008, Bank of America publicly confirmed through an SEC filing on Form 8-K the integration of Countrywide Financial Corporation and Countrywide Home Loans, Inc. with Bank of America's other businesses and operations. That filing disclosed that, in a non-arm's length transaction dated November 7, 2008, Bank of America had transferred substantially all of the assets of Countrywide Financial Corporation and subsidiary Countrywide Home Loans, Inc. assets to Bank of America. As part of the consideration for such transfer, Bank of America Corporation assumed debt securities and related guarantees of Countrywide in an aggregate amount of approximately $16.6 billion, substituting Bank of America Corporation as the "successor corporation" and issuer/guarantor of the underlying securities. *See, for example,* 6th Supplemental Trust Deed submitted as Exhibit 4.40 to Form 8-K (11/7/08) ("Effective on and from the Effective Date, the name of the Issuer and the Guarantor (each as defined in the Trust Deed) shall be 'Bank of America Corporation,' as the successor corporation under the Trust Deed.") and other supplements submitted with the 11/7/08 Form 8-K. This amount was not sufficient, however, to satisfy Countrywide's liabilities, including the liabilities arising from its issuance of mortgage-backed securities.

82. In its 2008 Form 10-K (filed 2/27/09), Bank of America Corporation referred to itself and Countrywide as a "combined company" that would "modify or workout at least $40.0

billion in troubled mortgage loans in the next two years and estimated that these efforts will assist at least 265,000 customers."

83. On April 27, 2009, Bank of America announced that it was retiring the Countrywide name and that the combined operations of Countrywide and Bank of America would do business as Bank of America Home Loans. Many former Countrywide locations, employees, assets, and business operations now continue under the Bank of America Home Loans name. Upon information and belief, Bank of America Home Loans is a brand name that Bank of America now uses for the Countrywide mortgage origination and securitization operations that Bank of America has absorbed and consolidated with its own operations. The Form 10-K that Bank of America filed on February 26, 2010 lists Depositor/Issuer Defendant CWMBS, Inc., sponsor Countrywide Home Loans, Inc. and Controlling Person Defendant Countrywide Financial Corporation as Bank of America subsidiaries.

84. Bank of America expressly or impliedly assumed the liabilities of Countrywide Financial Corporation and its subsidiaries and specifically entered into the Countrywide merger and subsequent asset transfer with full knowledge that it was assuming substantial Countrywide liabilities.

85. Bank of America had actual or circumstantial knowledge of the potential claims against Countrywide pertaining to the securitization of Countrywide loans that failed to satisfy stated underwriting standards or were otherwise problematic as set forth herein.

86. Prior to the merger, Bank of America stated that it would conduct additional due diligence pertaining to Countrywide's exposure relating specifically to loan securitization business.

87. Upon completion of the merger, Bank of America Corporation incorporated Countrywide's mortgage-related securitization results into its own reported financial results. *See, e.g.,* Bank of America Corporation Form 10-Q (filed 11/06/2008) at 22. Bank of America continued reporting such figures until 2010, when it determined that the securitization activities it assumed from Countrywide were straining its financial performance. As a result, Bank of America recommended removal of discussion of any exposure pertaining to Countrywide-initiated securitizations from its reported results because, "Our exposure to our representations and warranties is the result of prior loan sales and securitization activities in … Countrywide Financial Corporation." Letter from John James (BofA) to Hugh West (SEC) dated August 25, 2010.

88. In a February 22, 2008 interview, Bank of America spokesman Scott Silvestri told Corporate Counsel that Bank of America had not overlooked Countrywide's legal expenses and liabilities when it decided to merge with Countrywide:

> Handling all this litigation won't be cheap, even for Bank of America, the soon-to-be largest mortgage lender in the country. Nevertheless, the banking giant says that Countrywide's legal expenses were not overlooked during negotiations. "We bought the company and all of its assets and liabilities," spokesman Scott Silvestri says. "We are aware of the claims and potential claims against the company and have factored these into the purchase."

89. A January 23, 2008 *New York Times* article similarly quotes former Bank of America Chairman and CEO Kenneth D. Lewis acknowledging that Bank of America had thought long and hard about acquiring Countrywide's liabilities:

> We did extensive due diligence. We had 60 people inside the company for almost a month. It was the most extensive due diligence we have ever done. So we feel comfortable with the valuation. We looked at every aspect of the deal, from their assets to potential lawsuits and we think we have a price that is a good price.

90. During the January 11, 2008 analyst call, Bank of America Chief Financial Officer echoed this statement:

> Now, as Ken has said the due diligence on this deal was extensive. We had more than 60 people on the ground for the better part of the last 30 days, with more focus picking up through the holidays. The focus of the due diligence, as you would expect, was on the mortgage servicing rights, credit, and legal, as well as accounting and operational areas. The results of our due diligence support our overall valuation and pricing of the transaction.

91. On January 13, 2010, Bank of America's Chief Executive Officer and President, Brian Moynihan testified to the Financial Crisis Inquiry Commission (often "FCIC") concerning the impact of the Countrywide transaction on Bank of America, including with negative and positive aspects of the acquisition:

> The Countrywide acquisition has positioned the bank in the mortgage business on a scale it had not previously achieved. There have been losses, and lawsuits, from the legacy Countrywide operation, but we are looking forward. We acquired the best mortgage servicing platform in the country, and a terrific sales force.

92. On November 16, 2010, Moynihan, publicly admitted that Bank of America had accepted liability for investors' claims concerning Countrywide's mortgage-backed securities: "There's a lot of people out there with a lot of thoughts about how we should solve this [investor demands for refunds over faulty mortgages], but at the end of the day, we'll pay for the things that Countrywide did."

93. And in a December 11, 2010 *New York Times* profile, Moynihan again publicly admitted that Bank of America would be responsible for Countrywide's liabilities:

> But what about Countrywide?
>
> "A decision was made; I wasn't running the company," Mr. Moynihan says, although he was obviously a top bank official at the time. "Our company bought it and we'll stand up; we'll clean it up."

The profile then noted that Bank of America's securities filings echoed the position taken by Moynihan that Bank of America would be responsible for Countrywide's liabilities:

> In addition to significantly increased revenues due to Countrywide's contributions, Bank of America has reported its payment on claims for defective

legacy Countrywide mortgages and announced a $4.4 billion reserve fund to pay for similar claims in the future.

94. In October 2008, Bank of America agreed to pay $8.7 billion to settle predatory lending lawsuits that various state attorneys general had filed against Countrywide. Although Countrywide originated the mortgages and was alleged to have committed the misconduct in question long before Bank of America's acquisition, Bank of America assumed financial responsibility for the settlement.

95. In May 2010, Bank of America agreed to pay $600 million to six New York retirement funds to resolve claims that Countrywide failed to properly disclose the riskiness of its lending activities. Shayandi Raice and Marshall Eckblad, *Countrywide's Mess Billed to Bank of America*, Dow Jones Newswires (June 7, 2010).

96. On June 7, 2010, Bank of America agreed to pay approximately $108 million to settle claims that its Countrywide unit assessed artificially inflated fees to approximately 200,000 Countrywide mortgage customers, even though Bank of America didn't own Countrywide when the alleged improprieties occurred. *Id.*

97. On January 3, 2011, Bank of America similarly announced that it had agreed to pay $2.8 billion to settle claims to repurchase mortgage loans that Fannie Mae and Freddie Mac had purchased from Countrywide Financial or its subsidiaries. In its press releases and presentation concerning the settlement, Bank of America admitted that it was paying to resolve claims concerning "alleged breaches of selling representations and warranties related to loans sold by legacy Countrywide."

98. Bank of America has completed actual and de facto mergers with Controlling Person Defendant Countrywide Financial Corporation and its subsidiaries, including Depositor/Issuer Defendant CWMBS, Inc. and sponsor Countrywide Home Loans, Inc., and has

absorbed Countrywide Financial and those entities controlled by it into Bank of America's own operations. Bank of America Corporation is a mere continuation of these entities. Bank of America Corporation is the successor in liability to Countrywide Financial Corporation and its subsidiaries, including CWMBS, Inc. and Countrywide Home Loans, Inc., and is jointly and severally or otherwise vicariously liable for the misstatements, omissions, and other wrongful conduct of these Defendants. Accordingly, the Bank seeks to recover any damages it is awarded against Countrywide Financial Corporation and CWMBS, Inc. from Bank of America.

2. Successor Defendant Merrill Lynch, Pierce, Fenner & Smith Incorporated (Banc of America Securities LLC).

99. As noted in § IV.B, *supra*, effective November 1, 2010, Banc of America Securities LLC merged with and into Successor Defendant Merrill Lynch, Pierce, Fenner & Smith Incorporated, a Delaware corporation. All references herein to Banc of America Securities LLC are also to Merrill Lynch, Pierce, Fenner & Smith Incorporated, which is liable as a matter of law as successor to Banc of America Securities LLC by virtue of its status as the surviving entity in its merger with Banc of America Securities LLC.

D. Summary Charts of Defendants and Certificates

100. In sum, the "Depositor/Issuer Defendants," listed below, received or purchased and transferred or sold pools of assets to the issuing trusts identified below, and securitized in the bonds listed below, and were the "issuers" of the securities:[3]

Depositor/Issuer Defendant	Issuing Trust	Certificate(s)
Banc of America Mortgage Securities, Inc.	Banc of America Mortgage 2006-1 Trust	BOAMS 2006-1 A1
Chase Mortgage Finance Corporation	Chase Mortgage Finance Trust Series 2005-A2	CHASE 2005-A2 1A4

[3] *See* 17 C.F.R. § 230.191 ("The depositor for the asset-backed securities acting solely in its capacity as depositor to the issuing entity is the issuer for purposes of the asset-backed securities of that issuing entity").

Depositor/Issuer Defendant	Issuing Trust	Certificate(s)
Credit Suisse First Boston Mortgage Securities Corp.	Credit Suisse First Boston Mortgage-Backed P/T Certificates, Series 2005-8 Trust	CSFB 2005-8 9A1

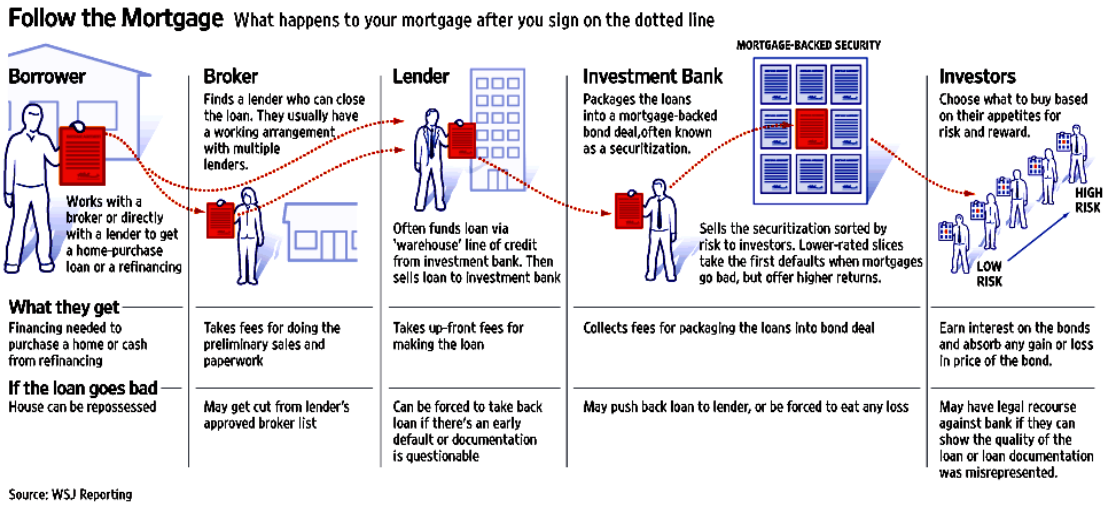
Wells Fargo Bank, National Association	Wells Fargo Asset Securities Corporation	Depositor

E. The John Doe Defendants

104. Defendants John Doe 1-50 are other Depositor/Issuers, Underwriters, Sellers, Controlling Persons, and/or others who are jointly and severally or otherwise liable for the misstatements, omissions, and other wrongful conduct alleged herein, including the liability with respect to the Certificates at issue in this case. The John Doe Defendants may include persons or entities that are not named as Defendants at this time because Plaintiff has insufficient information as to the extent, if any, of their involvement in and liability for the matters alleged herein. Plaintiff will amend this Complaint to allege the true names and capacities of these Defendants when ascertained.

V. FACTUAL BACKGROUND



A. Mechanics of Mortgage Backed Securities

1. The Securitization Process

105. Like all residential mortgage backed securities, the PLMBS purchased by the Bank were created in a process known as "mortgage securitization." Mortgage securitization is a process by which mortgage loans are acquired from "mortgage originators," pooled together, and securities constituting interests in the cash flow from the mortgage pools are then sold to investors. The securities are referred to as "mortgage pass-through securities" because the cash

flow from the pool of mortgages is "passed through" to the securities holders when payments are made by the underlying mortgage borrowers.

106. The following graphic illustrates the securitization process:

107. Securitization involves several entities who perform distinct tasks, though, as often was the case with the PLMBS purchased by the Bank, many or all of the entities may be subsidiaries or affiliates of a single parent or holding company.

108. The first step in creating a mortgage pass-through security such as the PLMBS purchased by the Bank is the acquisition by "depositor" (referred to herein as "depositor" or "depositor/issuer") of an inventory of loans from a "sponsor" or "seller" which either originates the loans or acquires the loans from other mortgage originators in exchange for cash. The depositor is often a subsidiary or other affiliate of, and controlled by, the sponsor. *See id.*

109. The depositor then securitizes the pool of loans by forming one or more mortgage pools with the inventory of loans, and creating tranches of interests in the mortgage pools with various levels of seniority. Interests in these tranches are then issued by the depositor (who then serves as the "issuer") through a trust in the form of bonds**,** or certificates.

110. Each tranche has a different level of purported risk and reward, and, often, a different credit rating. The most senior tranches often receive the highest investment grade rating, AAA. Junior tranches, which usually have lower ratings, are more exposed to risk, but offer higher potential returns. The most senior tranches of securities will be entitled to payment in full before the junior tranches. Conversely, losses on the underlying loans in the asset pool – whether due to default, delinquency, or otherwise – are allocated first to the most subordinate or junior tranche of securities, then to the tranche above that. This hierarchy in the division of cash flows is referred to as the "flow of funds" or "waterfall."

111. The depositor/issuer works with the nationally recognized credit rating agencies, Fitch, Moody's, and Standard & Poor's (collectively, "Credit Rating Agencies"), to ensure that each tranche of the mortgage pass-through certificate receives the rating desired by the depositor/issuer (and underwriter). For PLMBS, this meant a AAA rating for the senior tranche, and lower ratings for the subordinated tranches. Once the asset pool is securitized, the certificates are issued to one or more "underwriters" (typically Wall Street banks), who resell them to investors, such as the Bank.

112. Because the cash flow from the loans in the mortgage pool of a securitization is the source of funds to pay the holders of the securities issued by the trust, the credit quality of the securities depends largely on the credit quality of the loans in the mortgage pool. The collateral pool for PLMBS often includes thousands of loans. Detailed information about the credit quality of the loans is contained in the "loan files" developed and maintained by the mortgage originators – originators that are often, and as identified herein, affiliated with and/or controlled by other parties to the securitization or one or more common controlling entities – when making the loans. For residential mortgage loans, such as the loans that backed the PLMBS purchased

by the Bank, each loan file normally contains documents including the borrower's application for the loan, verification of income, assets, and employment, references, credit reports, an appraisal of the property that will secure the loan—which will provide the basis for other measures of credit quality, such as loan-to-value ratios—and occupancy status. The loan file should also include notes from the person who underwrote the loan describing the loan's purported compliance with underwriting guidelines, and documentation of "compensating factors" that justified any departure from those standards.

113. Investors in PLMBS do not have access to the loan files. Instead, the sponsors, depositors/issuers, and the underwriters – parties to the securitization that are often, and as identified herein, affiliated with and/or controlled by other parties to the securitization or one or more common controlling entities – are responsible for gathering and verifying information about the credit quality and characteristics of the loans that are deposited into the trust, and presenting this information in prospectuses or other offering documents that are prepared for potential investors. This due diligence process is a critical safeguard for investors and a fundamental legal obligation of the sponsors, the depositor/issuers and the underwriters.

2. The Rating Process for PLMBS

114. Because, like many institutional investors, the Bank was permitted to buy only AAA rated tranches of those securities, the credit rating of the tranches of PLMBS it purchased was material to its investment decision.

115. In any PLMBS, the credit rating of each tranche is negotiated between the depositor/issuer of the securities and the credit rating agencies. In this process, the depositor/issuer provides the credit rating agency with the purported characteristics of the underlying asset pool. The credit rating agency is then supposed to evaluate, among other things:

A. The appraised value of the mortgaged property.

B. The mortgagor's ability to pay.

C. The experience and underwriting standards of the originators of the underlying loans.

D. The loan characteristics that, according to the Depositor/Issuer, underlie a particular transaction.

E. The default rates and historic recovery rates of the loans.

F. The *concentration* of the loans along a number of variables, which typically include—to name just a few—the extent to which the loans come from any particular geographic area, the extent to which the mortgagors have low FICO scores[4] or other indications of low credit quality, and the extent to which the loans were "low-document" or "no-document" loans.

G. The ability of the servicer to perform all the activities for which the servicer will be responsible.

H. The extent to which the cash flow from trust assets can satisfy all of the obligations of the PLMBS transaction. The cash flow payments which must be made from the asset pool are interest and principal to investors, servicing fees, and any other expenses for which the Depositor/Issuer is liable. The credit rating agencies are supposed to stress-test the flow of funds to determine whether the cash flows match the payments that are required to be made to satisfy the Depositor/Issuer's obligations.

116. After evaluating these objective and verifiable factors, the credit rating agency issues a rating for the security. This rating constitutes a factual representation regarding the risk

[4] A FICO score is a score developed by the Fair Isaac Corporation to assess consumer credit risk; it is the most widely used credit score in the United States.

of the security made in reliance on objectively verifiable facts, including those listed immediately above. The rating should therefore be a reflection of both the riskiness of the loans in the asset pool and the seniority of the tranche. If the rating that the credit rating agency assigns to the tranche is not in accord with the sponsor's target, then the Depositor/Issuer may "credit enhance" the structure. Such credit enhancement may include:

A. Adjusting the level of support provided by subordinate tranches.

B. Overcollateralization—that is, ensuring that the aggregate principal balance of the mortgages securing the certificates exceeds the aggregate principal balances of the certificates secured thereby.

C. Cash reserve accounts.

D. Excess spread, which is defined as scheduled cash inflows from the mortgages that exceed the interest service requirements of the related certificates.

E. Third-party contracts, under which losses suffered by the asset pool are absorbed by an insurer or other counterparty.

117. By using credit enhancement, a Depositor/Issuer may be able to elevate a bond to the highest credit rating.

118. All of the Certificates that the Bank purchased were senior certificates that were rated AAA when the Bank purchased them.

B. The Mortgage Originators Abandoned Underwriting and Appraisal Standards.

1. The Shift from "Originate to Hold" to "Originate to Distribute" Securitization Incentivized Mortgage Originators to Disregard Loan Quality.

119. As noted above, the fundamental basis upon which mortgage pass-through certificates are valued is the ability of the borrowers to repay the principal and interest on the underlying loans and the adequacy of the collateral for those loans. If the borrowers cannot pay

and the collateral is insufficient, the cash flow from the certificate diminishes, and the investors are exposed to losses. For this reason, the underwriting standards and practices of the mortgage originators who issued loans that back MBS, and the representations in the Offering Documents regarding those standards, are critically important to the value of the securities and the investors' decisions to purchase the securities.

120. Yet, unbeknownst to the Bank, during the time frame that the Bank purchased the PLMBS at issue in this case, mortgage originators: (a) effectively abandoned their stated underwriting standards; (b) allowed pervasive and systematic exceptions to their stated underwriting standards without proper justification; (c) adopted practices such that variance from their stated underwriting practices was the norm; and (d) disregarded credit risk and quality controls in favor of generating loan volume. As has only now become clear, these changes in origination practices occurred in tandem with a fundamental shift in the mortgage securitization markets.

121. In the 1980s and 1990s, under the traditional model, mortgage originators held the mortgage loans they provided to borrowers through the term of the loan. They would therefore profit from the obligor's payment of interest and repayment of principal, but also bear the risk of loss if the obligor defaulted and the property value was insufficient to repay the loan. As a consequence of this arrangement, the originator was economically vested in establishing the creditworthiness of the obligor and the true value of the underlying property by appraising it before issuing the mortgage loans.

122. Additionally, the mortgage securitizations that took place in the 1980s and 1990s generally fell within the domain of GSEs Fannie Mae and Freddie Mac. These GSEs purchased the loans from the originators, securitized them, and sold them to investors. Investors in the

early GSE securitizations were provided protections because the underlying loans were originated pursuant to strict underwriting guidelines, and the GSEs guaranteed that the investors would receive timely payments of principal and interest. Because the GSEs were perceived as being backed by the federal government, investors viewed the guarantees as diminishing credit risk, if not removing it altogether.

123. Between 2001 and at least 2006, however, Wall Street investment banks and other large financial institutions moved aggressively into the securitization markets, taking market share away from the GSEs. Unlike the GSEs, which generally focused on higher-quality mortgage pools within the conforming loan limits, the Wall Street banks and large financial institutions focused primarily on "jumbo prime," "Alt-A," and "subprime" mortgage pools because of the higher fees that were available with these products. Although the definitions shifted during this period, and from originator to originator, "jumbo prime" mortgage loans were generally loans that allegedly met the credit score and other underwriting criteria of the GSEs, but were ineligible for GSE purchase because the mortgages exceeded the applicable GSE dollar limit. "Alt A" loans did not meet the GSE underwriting criteria, typically because the mortgages were supported by reduced documentation, or contained disqualifying terms, such as certain types of adjustable rates. Borrowers underlying the "Alt-A" loans typically had somewhat weaker creditworthiness than "jumbo prime" borrowers but better creditworthiness than "subprime" borrowers. "Subprime" mortgage loans were mortgages that did not meet the GSE criteria for creditworthiness of the borrower but purportedly satisfied loan underwriting criteria developed by their originators.

124. As the Financial Crisis Inquiry Commission reported in April 2010, "[t]he amount of all outstanding mortgages held in non[Agency] MBS rose notably from only $670 billion in

2004 to over $2,000 billion in 2006." This statistic demonstrates the dramatic growth of the PLMBS market during this time. FCIC, "Preliminary Staff Report: Securitization and the Mortgage Crisis." April 7, 2010.

125. This enormous increase in PLMBS securitization is reflected in the securitization volume of the sponsors of the PLMBS purchased by the Bank. For example, between 2003 and 2006, Washington Mutual Bank reported that its securitization of first lien single-family residential mortgage loans increased from $25.4 billion to $70.8 billion (an over 178% increase). Similarly, between 2003 and 2005, the Bear Stearns entities' securitizations of Alt-A mortgages more than tripled, from $6.7 billion to $22.9 billion. Other sponsors—primarily Wall Street banks—similarly expanded their securitization business during the same time period.

126. This shift was fueled by the complex interaction between record high global savings, referred to by Federal Reserve Chairman Ben Bernanke as the "global savings glut," and exceedingly low interest rates. Low interest rates made it easier and more appealing for consumers to take out home mortgage loans. But the low Federal Reserve rate also meant that the global pool of investors received only marginal returns on traditional low-risk investments, in particular U.S. Government Bonds. This created an incentive for Wall Street banks to create seemingly low-risk investment options that produced returns in excess of those of government bonds. PLMBS securitization was their answer. Thus, following the model created by the GSEs, the Wall Street banks began buying pools of mortgages from mortgage originators, securitizing the pools, and selling the bonds to global investors. Because mortgage interest rates (and even more so Alt-A and subprime rates) generally exceeded those of U.S. Government bonds, the resulting PLMBS could provide investors with the higher rate of return they were seeking.

127. The one complication that the Wall Street banks needed to solve was the rating of the securities. Debt securities secured by pools of mortgages made to lower credit quality borrowers would generally fail to meet the investment grade requirements of most institutional investors. The Wall Street banks' solution was to divide up the risks into "tranches" as discussed above, referred to generally as "structured finance." As a general rule, this allowed Wall Street to convert up to 80% of any particular PLMBS into "investment grade" securities. The remaining 20% was often purchased by hedge funds and other entities that were able to buy non-investment grade securities. The development opened the floodgates for the securitization and sale of PLMBS.

128. To ensure that the flood did not abate, the Wall Street banks bankrolled the lenders (both the ones they owned and those that were independent) so that the lenders had ample capital to issue loans. Indeed, a recent study by The Center for Public Integrity found that 21 of top 25 subprime lenders (in terms of loan volume) were either owned outright by the biggest banks or former investment houses, or had their subprime lending hugely financed by those banks, either directly or through lines of credit. *See* Who is Behind the Financial Meltdown? The Top 25 Subprime Lenders and Their Wall Street Backers, The Center for Public Integrity (May 6, 2009), http://www.publicintegrity.org/investigations/economic_meltdown/ (visited Sept. 20, 2010).

129. As the PLMBS market expanded, the traditional "originate to hold" model morphed into the "originate to distribute" model. Under the new "originate to distribute" model, mortgage originators no longer held the mortgage loans to maturity. Rather, mortgage originators sold the loans to Wall Street banks and other major financial institutions and shifted the risk of loss to the investors who purchased an interest in the securitized pool of loans.

130. The new distribution model was highly profitable for the mortgage originators in the short term. By securitizing and selling the mortgages to investors through underwriter/dealers, the mortgage originators shifted loans off their books, earned fees and, thus, were able to issue more loans. Additionally, the securitization process enabled the originators to earn most of their income from transaction and loan-servicing fees, rather than (in the traditional model) from the spread between interest rates paid on deposits and interest rates received on mortgage loans. This created an unchecked incentive to originate more and more loans to feed into the securitization machine.

131. In testimony before the Financial Crisis Inquiry Commission ("FCIC"), Sheila C. Bair, then-Chair of the Federal Deposit Insurance Corporation, explained both the misalignment of incentives arising from the sale of loans and the misalignment created by flawed compensation practices within the origination industry:

> The standard compensation practice of mortgage brokers and bankers was based on the volume of loans originated rather than the performance and quality of the loans made. From the underwriters' perspective, it was not important that consumers be able to pay their mortgages when interest rates reset, because it was assumed the loans would be refinanced, generating more profit by ensuring a steady stream of customers. The long-tail risk posed by these products did not affect mortgage brokers and bankers' incentives because these mortgages were sold and securitized.

132. An internal memorandum drafted by the former Credit Risk Officer at Countrywide Financial demonstrates how originators recognized the link between reduced underwriting standards and the ability to pass the resultant associated risks on to third parties. The Credit Risk Officer explained that "[Underwriting] Guidelines have become more aggressive …. Furthermore, the portion of our nonconforming loans that are expanded criteria has increased. Because the sub holders bear most of the credit risk we are not directly exposed to the expansion of guidelines or change in mix." Declaration of Paris Wynn In Support of

Plaintiff SEC's Ex Parte Application for Relief from Deposition Duration Limit for Deposition of John P. McMurray, *SEC v. Mozilo, et al.* (No. 09-3994) (C.D. Cal.), Ex. 1.

133. Similarly, as reported in the *Seattle Times*, executives at Washington Mutual ("WaMu") recognized and responded to the same incentive. "Now it [WaMu] began bundling ARMs and certain other mortgages into securities and selling them off -- pocketing hundreds of millions of dollars in fees immediately, while offloading any potential repayment problems. … [At this time, Kerry] Killinger hired Craig Davis, [American Savings'] director of mortgage origination, to run WaMu's lending and financial services. Davis, several former WaMu executives said, began pushing WaMu to write more adjustable-rate mortgages, especially the lucrative option ARMs. 'He only wanted production,' said Lee Lannoye, WaMu's former executive vice president of corporate administration. 'It was someone else's problem to worry about credit quality, all the details.'" Drew DeSilver, *Reckless Strategies Doomed WaMu*, Seattle Times, Oct 25, 2009, at A1.

134. As far as lenders were concerned, their profits were generated by origination of as many loans as possible, and once these loans were packaged and securitized, repayment risk was someone else's problem.

135. As Ben Bernanke, Chairman of the Federal Reserve Bank, explained in Congressional testimony:

> When an originator sells a mortgage and its servicing rights, depending on the terms of the sale, much or all of the risks are passed on to the loan purchaser. Thus, originators who sell loans may have less incentive to undertake careful underwriting than if they kept the loans. Moreover, for some originators, fees tied to loan volume made loan sales a higher priority than loan quality. This misalignment of incentives, together with strong investor demand for securities with high yields, contributed to the weakening of underwriting standards.

2. Mortgage Originators Abandoned Underwriting Guidelines in Order to Initiate High Cost Loans for Securitization.

136. The misalignment of incentives following the shift to the "originate to distribute model," noted by Mr. Bernanke and others following the collapse of the mortgage market, caused mortgage originators to violate their stated underwriting and appraisal standards, and to accept, encourage and even fabricate their own untrue information from loan applicants. This was not a problem limited to one or a few mortgage originators, but, rather, was pervasive among mortgage originators, including those that issued the loans that backed the PLMBS purchased by the Bank. Mortgage originators and the financial institutions that bankrolled them sought loan volume, not loan quality, in order to profit from the securitization market.

137. In addition—coincident with the widespread transfer to MBS purchasers of the default risk attached to mortgage loans, and in a marked departure from traditional mortgage origination procedures—originators greatly expanded their use of reduced documentation programs in which the verification or substantiation of the applicant's statements as to income, assets and employment history was limited or non-existent. While these programs were touted as providing for "streamlined" underwriting, in fact they were devices whereby originators could make loans to borrowers who would never otherwise have qualified. When these loans were securitized, investors were assured that reduced documentation programs were available only where the borrower satisfied certain FICO criteria, such as minimum FICO scores or loan-to-value and debt-to-income ratios. In fact, the originators lacked any principled basis on which to evaluate the increased credit risk posed by what would eventually become colorfully and generally accurately known as "Liar Loans," or "NINJA loans" (for "no income, no job or assets") loans. Moreover, the widespread granting of exceptions to underwriting standards meant that the minimal safeguards associated with the reduced documentation programs were

often abandoned in the headlong rush to maximize origination volume. Additionally, mortgage underwriters would often begin the underwriting of an applicant's loan under full documentation procedures, only to transfer the loan applicant to a "No Doc" program upon learning of information that would disqualify the applicant under the full documentation procedures.

138. As John C. Dugan, Comptroller of the Currency testified to the FCIC on April 8, 2010, following his description of poor underwriting practices:

> The combination of all the factors I have just described produced, on a nationwide scale, the worst underwritten mortgages in our history. When house prices finally stopped rising, borrowers could not refinance their way out of financial difficulty. And not long after, we began to see the record levels of delinquency, default, foreclosures, and declining house prices that have plagued the United States for the last two years – both directly and through the spillover effects to financial institutions, financial markets, and the real economy.

3. Mortgage Originators Manipulated Appraisals of Collateralized Real Estate in Order to Initiate Loans for Securitization.

139. Accurate appraisals prepared in accordance with established appraisal standards are absolutely essential for MBS investors to evaluate the credit risk associated with their investment. Indeed the loan-to-value metric is among the most significant characteristic of a mortgage pool because it defines the extent of the investor's "equity cushion" (*i.e.,* the degree to which values may decline without the investor suffering a loss), and it is strongly indicative of the borrower's likelihood of defaulting (because as a borrower's equity decreases, particularly to single digit percentages or below, the borrower's incentive to keep the mortgage current, or the property in good condition, decreases dramatically). But in the absence of properly prepared appraisals, the value component of the loan-to-value metric is unreliable and the metric itself becomes meaningless. The appraisal practices of the mortgage originators who issued loans that back PLMBS, and the accuracy of the representations in the Offering Documents regarding those

practices, were critically important to the value of the securities, and to the investors' decisions to purchase the securities.

140. Appraisers are governed by the Uniform Standards of Professional Appraisal Practice ("USPAP"), which are promulgated by the Appraisal Standards Board. The USPAP contains a series of ethical rules designed to ensure the integrity of the appraisal process. For example, the Third USPAP Ethics Conduct Rule provides: "An appraiser must perform assignments with impartiality, objectivity, and independence, and without accommodation of personal interests."

141. The Fifth USPAP Ethics Conduct Rule states: "An appraiser must not accept an assignment that includes the reporting of predetermined opinions and conclusions."

142. The Second USPAP Ethics Management Rule states:

> It is unethical for an appraiser to accept an assignment, or to have a compensation arrangement for an assignment, that is contingent on any of the following:
>
> 1. the reporting of a predetermined results (e.g. opinion of value);
>
> 2. a direction in assignment results that favors the cause of a client;
>
> 3. the amount of a value opinion;
>
> 4. the attainment of a stipulated results; or
>
> 5. the occurrence of a subsequent event directly related to the appraiser's opinions and specific to the assignment's purpose.

143. The USPAP Scope of Work Acceptability Rule states: "An appraiser must not allow the intended use of an assignment or a client's objectives to cause the assignment results to be biased."

144. The Appraisal Standards Board also issues Advisory Opinions regarding appropriate appraisal conduct. For example, Advisory Opinion 19 states in part:

> Certain types of conditions are unacceptable in any assignment because performing an assignment under such condition violates USPAP. Specifically, an assignment condition is unacceptable when it:
>
> - precludes an appraiser's impartiality because such a condition destroys the objectivity and independence required for the development of credible results;
>
> - limits the scope of work to such a degree that the assignment results are not credible, given the intended use of the assignment; or
>
> - limits the content of a report in a way that results in the report being misleading.

145. The USPAP Scope of Work Rule states: "For each appraisal . . . an appraiser must . . . determine and perform the scope of work necessary to develop credible assignment results."

146. Additionally, USPAP Standard 1 states: "In developing a real property appraisal, an appraiser must identify the problem to be solved, determine the scope of work necessary to solve the problem, and correctly complete research and analyses necessary to produce a credible appraisal."

147. USPAP Standards Rule 2-1 states that "[e]ach written or oral real property appraisal report must "(a) clearly and accurately set forth the appraisal in a manner that will not be misleading; (b) contain sufficient information to enable the intended users of the appraisal to understand the report properly; and (c) clearly and accurately disclose all assumptions, extraordinary assumptions, hypothetical conditions, and limiting conditions used in the assignment."

148. Despite the importance of accurate appraisals and the requirements that are designed to ensure them, during the time frame that the Bank purchased the PLMBS at issue in this case, mortgage originators routinely manipulated the process for appraising the collateralized real estate properties. They did so by pressuring and coercing appraisers, and blacklisting those

that would not "come back at value." The prevalence of this problem and its impact on the financial crisis has been extensively investigated and examined in the aftermath of the market collapse.

149. According to his statements submitted in connection with his April 7, 2010 testimony before the FCIC, Richard Bitner, a former executive of a mortgage lender for 15 years and author of the book *Confessions of a Subprime Lender*, explains:

> [T]he appraisal process [was] highly susceptible to manipulation, lenders had to conduct business as though the broker and appraiser couldn't be trusted . . . .[and] either the majority of appraisers were incompetent or they were influenced by brokers to increase the value. . . . Throwing a dart at a board while blindfolded would've produced more accurate results.
>
> …
>
> If the appraisal process had worked correctly, a significant percentage of subprime borrowers would've been denied due to lack of funds. Inevitably, this would have forced sellers to drop their exorbitant asking price to more reasonable levels. The rate of property appreciation experienced on a national basis from 1998 to 2006 was not only a function of market demand, but was due, in part, to the subprime industry's acceptance of overvalued appraisals, coupled with a high percentage of credit-challenged borrowers who financed with no money down.
>
> …
>
> [T]he demand from Wall Street investment banks to feed the securitization machine couple[d] with an erosion in credit standards led the industry to drive itself off the proverbial cliff.

The Financial Crisis Inquiry Commission, Official Transcript, Commission Hearing, Apr. 7, 2010, Session 2, at 9-10.

150. Alan Hummel, Chair of the Appraisal Institute's Government Relations Committee and Past President of the Appraisal Institute, testified before the Senate Committee on Banking that the dynamic between mortgage originators and appraisers created a "terrible conflict of interest" where appraisers "experience[d] systemic problems with coercion" and were "ordered to doctor their reports or else never see work from those parties again."

151. In testimony before the House Financial Services Committee, Subcommittee on Financial Institutions and Consumer Credit, Jim Amorin, President of the Appraisal Institute, testified similarly that:

> In recent years, many financial institutions have lost touch with fundamental risk management practices, including the separation between loan production and risk management. Unfortunately, parties with a vested interest in a transaction are often the same people managing the appraisal process within many financial institutions: a flagrant conflict of interest.
>
> . . . .
>
> Another coercion tactic is the threat of being placed on a "blacklist: (aka — "exclusionary appraiser list"), commonly used to blackball appraisers. It is one thing to maintain a list of reputable businesses to work with, or to maintain a list of firms to avoid as a result of poor performance. However, [it] is another to place an appraiser on a blacklist for refusal to hit a predetermined value.

152. Manipulation and abuse of the appraisal process was not confined to the origination of subprime mortgages. Confirming the extent of the problem, a survey of 1,200 appraisers conducted by October Research Corp. found that 90% of appraisers reported that mortgage brokers and others pressured them to raise property valuations to enable deals to go through during the period at issue. The study also "found that 75% of appraisers reported 'negative ramifications' if they did not cooperate, alter their appraisal, and provide a higher valuation."

153. As a result of widespread appraisal abuse, the Dodd-Frank Wall Street Reform and Consumer Protection Act, § 1472, amended Chapter 2 of the Truth in Lending Act, 15 U.S.C. § 1631, *et seq*., to specifically prohibit actions the violate "appraisal independence." Under the new Act, acts or practices that violate appraisal independence include:

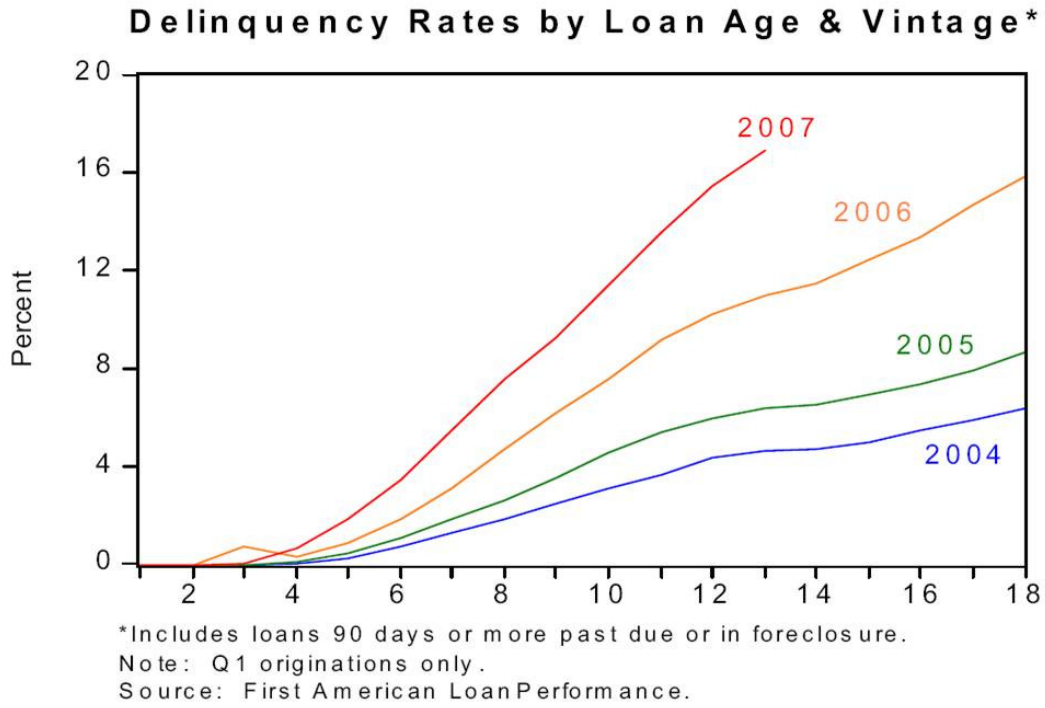
> (1) any appraisal of a property offered as security for repayment of the consumer credit transaction that is conducted in connection with such transaction in which a person with an interest in the underlying transaction compensates, coerces, extorts, colludes, instructs, induces, bribes, or intimidates a person, appraisal management company, firm, or other entity conducting or involved in an

> appraisal, or attempts, to compensate, coerce, extort, collude, instruct, induce, bribe, or intimidate such a person, for the purpose of causing the appraised value assigned, under the appraisal, to the property to be based on any factor other than the independent judgment of the appraiser;
>
> (2) mischaracterizing, or suborning any mischaracterization of, the appraised value of the property securing the extension of the credit;
>
> (3) seeking to influence an appraiser or otherwise to encourage a targeted value in order to facilitate the making or pricing of the transaction; and
>
> (4) withholding or threatening to withhold timely payment for an appraisal report or for appraisal services rendered when the appraisal report or services are provided for in accordance with the contract between the parties.

154. All of the abuses targeted by the amended Truth in Lending Act were widespread during the time frame that the Bank purchased the PLMBS at issue, causing the appraisals of the collateralized real estate backing the PLMBS to be inflated.

4. Widespread Defaults and Delinquencies Reflected the Inevitable Consequence of Loans Issued Without Meaningful Underwriting.

155. High delinquency rates are reflective of a systematic disregard for underwriting guidelines by mortgage issuers. When effective underwriting occurs, poor credit risks are screened out. Indeed, that is the purpose of underwriting. In the absence of effective underwriting, loans are made to unqualified borrowers and fraud is not detected. When borrowers are loaned money without regard to their ability to repay it, loan delinquencies (and foreclosures) ensue. Hence, high delinquency rates in loans issued by an originator provide evidence that the originator failed to adhere to prudent underwriting practices.



156. Numerous studies and analyses have traced the effect of poor underwriting on early payment default and delinquency rates. For example, the Federal Bureau of Investigation Mortgage Fraud Reports of 2006 and 2007 reported on the results of a BasePoint Analytics study of three million residential mortgage loans that found between 30% and 70% of early payment defaults were linked to significant misrepresentations in the original loan applications. The

BasePoint Analytics study found that loans containing egregious misrepresentations were five times as likely to default in the first six months as loans that did not.

157. An analysis of the same BasePoint Analytics study by Fitch Ratings concludes that "[h]igh risk products, which require sound underwriting and which are easy targets for fraud, account for some of the largest variances to expected default rates." Fitch notes that "in the absence of effective underwriting, products such as 'no money down' and 'stated income' mortgages appear to have become vehicles for misrepresentations or fraud by participants throughout the origination process."

158. Moreover, scholarly analysis of recent mortgage default rates has confirmed that increased delinquency rates during this period were not the result of deterioration in the credit characteristics set forth in the underwriting standards disclosed to investors, but rather they resulted from deterioration in credit characteristics of the borrowers that were not disclosed to investors. Research by University of Michigan economists indicates that increased use of low documentation underwriting – with its higher potential for borrower fraud and other abuses not discernible by MBS investors – correlates to excessive default rates. Of course, the defaults are not the result of the lack of full documentation in and of itself, but rather because of the underlying credit characteristics of the borrowers that could be masked by the borrowers and unscrupulous mortgage underwriters through the use of limited documentation.

159. Data collected on the performance of loans over the past several years and analyzed in these studies show that early payment default and delinquency rates have in fact soared as a result of faulty underwriting:

160. Review of current performance data of pools of loans securitized by the financial institutions who sponsored the PLMBS purchased by the Bank, as well as the specific loan pools backing the PLMBS purchased by the Bank, similarly show significantly increased incidence of delinquency, default and foreclosure, indicating pervasive underwriting failures by the mortgage originators at issue.

C. Federal and State Investigations, Press Reports, Publicly Available Documents Produced in Other Civil Lawsuits, and Analysis of the Mortgage Pools Underlying the Securities Identify Systematic Violation of Underwriting Guidelines by Mortgage Originators Whose Loans Back the PLMBS in this Case.

161. There have been numerous investigations into the practices of the mortgage originators who issued loans backing the PLMBS purchased by the Bank. A review of these investigations and related litigation, as well as confidential witness statements obtained during the Bank's investigation, demonstrate that mortgage originators in general, and those that issued loans that backed the PLMBS purchased by the Bank in particular, systematically violated and ignored their stated underwriting standards, rendering the statements in the Offering Documents

with regard to underwriting standards of the mortgage originators misleading. This evidence is reinforced further by the analysis of the performance of the actual loan pools backing the PLMBS purchased by the Bank.

162. As follows below, abundant additional information now available reveals the extent to which these mortgage originators abandoned sound underwriting practices.

1. Countrywide Home Loans, Inc.

163. Countrywide Home Loans, Inc. ("Countrywide") originated mortgage loans securing at least eleven of the PLMBS purchased by the Bank. Countrywide was the nation's largest mortgage lender between 2004 and 2007.

a. Government actions against Countrywide, and documents produced therein, demonstrate Countrywide's abandonment of sound underwriting practices.

164. On June 4, 2009, the SEC filed a complaint against certain senior executives of Countrywide's parent corporation, Countrywide Financial Corporation, including President, David Sambol, Chairman and CEO, Angelo Mozilo, and CFO, Eric Sieracki. *SEC v. Mozilo et al.*, No. 09-3994 (C.D. Cal.).[5] In this complaint, the SEC alleged that these three senior officers committed securities fraud by hiding from investors "the high percentage of loans it originated that were outside its own already widened underwriting guidelines due to loans made as exceptions to guidelines." That SEC complaint detailed how Countrywide was aware internally that its own underwriting guidelines were being ignored and that borrowers were lying about their income in the reduced-documentation application process.

165. According to the SEC:

[5] Countrywide Financial Corporation originated mortgage loans through its wholly owned subsidiary Countrywide Home Loans, Inc., which this Complaint refers to as "Countrywide" for simplicity. *See, e.g.*, Countrywide Financial Corporation 2006 Annual Report at 3 (Form 10-K). Thus, the allegations from, and evidence produced in, actions against Countrywide Financial Corporation, when they concern Countrywide Financial Corporation's mortgage origination business, really concern Countrywide Home Loans, Inc.

> [T]he actual underwriting of exceptions was severely compromised. According to Countrywide's official underwriting guidelines, exceptions were only proper where "compensating factors" were identified which offset the risks caused by the loan being outside of guidelines. In practice, however, Countrywide used as "compensating factors" variables such as FICO and loan to value which had already been assessed [in determining the loan to be outside the guidelines].

166. Countrywide's top-down involvement in the securitization process and complete abandonment of underwriting standards are confirmed by the documents produced in the SEC action, including internal emails, memos, minutes, presentations and deposition testimony, which only became publicly available as part of the briefing on the Countrywide Defendants' unsuccessful motion for summary judgment.

167. For example, Countrywide's Chief Risk Officer John McMurray testified as to Countrywide's adoption of a "matching" strategy, under which Countrywide matched whatever product was being offered by other originators in the marketplace. [Exh. 267] However, Countrywide's adoption of its competitors' guidelines (without adoption of corresponding credit risk mitigants) rendered Countrywide's origination practices "the most aggressive in the country." A June 24, 2005 e-mail from McMurray to Sambol stated that "[b]ecause the matching process includes comparisons to a variety of lenders, our [guidelines] will be a composite of outer boundaries offered across multiple lenders," and that because comparisons are only made to lender guidelines where they are more aggressive and not used where they are less aggressive, CFC's "composite guides are likely among the most aggressive in the industry." [Exh. 106].

168. As part of that matching strategy, Countrywide adopted a policy of underwriting ever more loans based on exceptions to their underwriting guidelines. As Sambol explained in a February 13, 2005 email to Countrywide management, Countrywide "should be willing to price virtually any loan that we reasonably believe we can sell/securitize without losing money, even if

other lenders can't or won't do the deal." [Exh. 220] Similarly, an internal Countrywide email from Managing Director, Carlos Garcia, to McMurray and Countrywide's Credit Risk Officer, Clifford Rossi, dated June 2, 2006 states that "[w]e should originate whatever we can sell to investors." [Exh. 118]

169. Ever in pursuit of the next deal, Countrywide routinely went beyond and around its publicly-touted Automated Underwriting System, the Countrywide Loan Underwriting Expert System ("CLUES"). If CLUES rejected an applicant, Countrywide subjected the loan application to a process of manual underwriting whereby the loan would be sent up the chain for approval, first to a loan officer, then to the Structured Loan Desk (also referred to as the "exception desk"), and if still not approved, the loan would be referred to Secondary Marketing where applications were routinely granted exceptions to stated underwriting guidelines, all in furtherance of Countrywide's matching strategy. As former Countrywide Managing Director for Secondary Marketing, Nathan "Josh" Adler, testified in the SEC action:

> Q. Do you know whether Countrywide sometimes originated loans that were considered to be exceptions to its underwriting guidelines?
>
> A. We did.
>
> Q. To your knowledge, was there a process by which such loans were approved?
>
> . . . .
>
> A: There generally was, yes.
>
> Q. And what is your understanding of that process?
>
> A. Well, I was—I was at the tail end of that process. There was—we had guidelines, we had kind of core guidelines, and then we had these shadow guidelines, which were the kind of the second tier guideline, if you will. And then there was this third tier which would come to me. But essentially there were—the tiering of guidelines related to the kind of the exception process. And there was an underwriting, they called it, Structured Loan Desk process in the divisions where loans would get referred to the Structured Loan Desk if they were outside, I believe, of kind of the core guidelines. And then if those loans were outside of

> even the shadow guidelines, then they would be referred to Secondary Marketing to determine if the loan could be sold given the exception that was being asked for.

[Exh. 234]

170. As the SEC alleged: "The elevated number of exceptions resulted largely from Countrywide's use of exceptions as part of its matching strategy to introduce new guidelines and product changes." SEC Compl. ¶ 29 (citing July 8, 2008 testimony of John P. McMurray at 373:25-375:6). [SOF 285/Exh. 267] In order to boost revenue from securitizations, Countrywide was willing to approve virtually any loan, regardless of deviation from stated underwriting standards, so long as it could package and re-sell the loan in a securitization. While not publicly disclosed, these facts were well known within Countrywide, including by Countrywide's highest levels of management.

171. For example, in a May 22, 2005 email to Sambol, McMurray, after noting that "exceptions are generally done at terms even more aggressive than [Countrywide] guidelines," identified a number of concerns regarding credit risk associated with Countrywide's exception loans, including the following:

(a) "Use of 2nds Liens as Credit Enhancement." Because many exceptions loans are structured as piggy-back transactions, Countrywide was taking on much of the loan's credit risk through the second lien, which is not sold into the secondary market;

(b) "R&W [representation and warranty] Exposure." Although Countrywide sold "much of the credit risk associated with high risk transactions away to third parties," Countrywide "will see higher rates of default on the riskier transactions and third parties coming back to us seeking a repurchase or indemnification" for losses due to the defaults;

(c) "Security Performance. To the extent our securities contain a greater concentration of higher risk transactions than those issued by our competitors, our security performance may be adversely impacted. The issue here is the extent our concern over security performance drives what we will or won't do on an exception."

172. McMurray also noted in his email that Countrywide's pricing models were inherently limited because they "are often used to price transactions (e.g., exceptions) beyond the scope of the data used to estimate the models." [SOF 288/Exh. 84]

173. At a June 28, 2005 Credit Risk Committee meeting, Countrywide senior executives received a presentation informing the attendees that nonconforming exceptions loans accounted for a staggering 40% of Countrywide's loan originations. [SOF 289]

174. On April 13, 2006, CEO Mozilo issued an email noting that he had "personally observed a serious lack of compliance with our origination system as it relates to documentation and generally a deterioration in the quality of loans originated versus the pricing of those loan[s]." Specifically, in his email, Mozilo explained that Countrywide was originating home mortgage loans "through our channels with disregard for process [and] compliance with guidelines."

175. During June 2006, a Credit Risk Leadership package reported that Countrywide underwrote, on an exceptions basis, 44.3% of its Pay-Option ARMs, 37.3% of its subprime first liens, 25.3% of its subprime second liens, and 55.3% of its standalone home equity loans. [SOF 293/Exhs. 4, 117]

176. During December 2006, the Credit Risk Leadership package reported similar percentages of loans underwritten on an exceptions basis: 45.4% of Pay-Option ARMs, 35.3% of subprime first liens, 24.1% of subprime second liens, and 52.6% of standalone home equity loans [SOF 294/Exh. 5].

177. Countrywide's Quality Control group performed a "4506 Audit" for the 10-month period ended on April 30, 2006, comparing the stated income from loan applications to the income reported by that borrower to the Internal Revenue Service [SOF 427/Exhs. 115, 117,

119], and concluded that 50.3% of the stated income loans audited by Countrywide showed a variance in income from the borrowers' IRS filings of greater than 10%. Of those, 69% had an income variance of greater than 50%. [SOF 428/Exh. 117] Available documents confirm that the audit results were widely known within Countrywide, having been distributed to Countrywide management, including its highest ranking officers, and were discussed at the April 24, 2006 Credit Risk Management Committee meeting [SOF 431/Exhs. 115, 117], where McMurray stated that the income discrepancies revealed in the audit were also being seen at Countrywide Home Loans. [SOF 432, Exhs. 115, 117] Rossi, testified that the "vast majority" of the income discrepancies revealed in the 4506 Audit were the result of fraud and misrepresentation. [SOF 434/Exh. 275]

178. By February 2007, internal risk management at Countrywide "noted that the production divisions continued to advocate for, and operated pursuant to, an approach based upon the matching strategy alone. . . . Additionally, [a senior risk manager] warned [Sambol] that 'I doubt this approach would play well with regulators, investors, rating agencies etc. To some, this approach might seem like we've simply ceded our risk standards and balance sheet to whoever has the most liberal guidelines.'" McMurray email to Sambol dated Feb. 11, 2007. [Exh. 109]

179. The deterioration of Countrywide's internal quality control process was noted by Countrywide's management and Corporate Credit Risk Committee. At the March 12, 2007 meeting, it was reported that of the loans reviewed through Countrywide's internal quality control process, 30.3% had deficiencies or were rated high risk, and 11.9% were rated severely unsatisfactory, and that one of the principal causes for such ratings included inadequate DTIs or LTVs, missing income or appraisal documentation, or failure to meet minimum FICO scores.

Similarly, at the May 29, 2007 meeting, attendees were informed that loans were being made "outside of any guidelines." A presentation made at the May 29, 2007 meeting notes that "loans continue to be originated outside guidelines primarily via the Secondary SLD desk, and that there is no formal guidance or governance surrounding SLD approvals." [Exhs. 133, 55, 176]

180. A December 2007 internal Countrywide memorandum quoted by the SEC states that "a Countrywide review of loans issued in late 2006 and early 2007 resulted in . . . the finding that borrower repayment capacity was not adequately assessed by the bank during the underwriting process . . . . More specifically, debt-to-income ratios did not consider the impact of principal [negative] amortization or any increase in interest." SEC Compl. ¶ 56 (quoting Mozilo memo dated December 13, 2007).

181. In employing its "matching" strategy and thereby making as many loans as possible, regardless of exceptions, Countrywide was able to enjoy tremendous profits from securitization of the loans, which also shifted the risk of the loans from Countrywide to investors:

> As indicated in a previous note, when we first started the SLD, the intent was to be able to offer at least one option for borrowers who wanted exceptions to our underwriting guides. The thought was that we would offer borrower exceptions in our two major loan programs: 30-year fixed rate and 5/1 ARMs. In addition, both of these programs were set up for Alt A and as such we could price and sell under these programs. While this process seemed to have worked well in the past, we have been recently seeing increased demand from Production for exceptions on all products in general and Pay Option loans in particular. In addition, Production has been expressing frustration that we were only offering major exceptions for 5/1 ARMs and 30-year fixed rates. As such, to the widest extent possible, we are going to start allowing exceptions on all requests, regardless of loan program, for loans less than $3 million effective immediately.
>
> The pricing methodology we will use will be similar to that which we use for 30-year fixed rates and 5-1 Hybrids. We will assume securitization in all cases.
>
> . . . .

> The methodology from a saleability point of view will also be similar to that used for 30-year fixed rates and 5-1 Hybrids. We will view the exception assuming securitization and will no longer take into account whole loan buyers. In the past, this has caused some exceptions to be declined for Ratios, Balances and LTV/CLTV[6] combinations. Provided we can sell all of the credit risk (i.e. not be forced to retain a first loss place due to a[n] 80% LTV, 60 Back-end ratios $3 million loan) we will approve the loan as a salable loan. Finally, we will not be reviewing loans from an underwriting point of view but will rather be relying on Production to make certain that the loan[s] meet all other underwriting Guideline and w[i]ll have been reviewed for compliance acceptability and fraud.

July 28, 2005 email from David Spector, Managing Director, to Countrywide Managing Directors and Secondary Marketing Management.

182. As Nathan Adler, Managing Director of Secondary Markets, testified in the SEC action:

> Q. Was one of the criteria for granting exceptions at the Secondary Loan Desk in Secondary Marketing whether or not the loan could be sold into the secondary market?
>
> A. That was the only criteria that we followed.

183. The widespread use of exceptions to its underwriting guidelines were well known within Countrywide, but permitted because, as recognized by John McMurray in his May 22, 2005 email discussed above, "CW's approach to exceptions has been lucrative over the past several years."

184. Yet Countrywide did not publicly disclose the amount of loans it was underwriting on an exception basis for any loan product or division. Paul Liu, a Countrywide attorney who participated in, and testified to, the legal work involved in the securitization process at Countrywide between 2004 and 2007, including review of offering documents such as prospectus supplements, testified in the SEC action that while the prospectus supplements he reviewed may have stated that "some of those mortgage loans may have . . . been originated with

[6] "CLTV" means "combined loan-to-value ratio"—the ratio of *all* liens on a property to the property's total appraised value.

exemptions that have compensating factors," they did not disclose the number or percentage of loans included in each securitization that were underwritten pursuant to exceptions, or even in many cases whether any loans within that securitization were underwritten pursuant to exceptions at all.

185. Indeed, Countrywide assured investors that the level of exceptions was low. Christopher Brendler, a Stifel Nicholas analyst who initiated coverage of Countrywide in early 2006, testified that Countrywide repeatedly advised conference call and investor presentation participants that it kept its "exceptions low." Brendler also testified that a low exception rate in the mortgage industry would have been 5% to 10% of total loans—not the extreme number of exceptions that Countrywide made. Brendler confirmed that such a disclosure would have been material:

> That's—that would have been a very disturbing disclosure, I believe, to know that you're basically seeking out the most aggressive policies and underwriting guidelines of your competitors without consideration for other factors. You're essentially creating a worst of the worst.

[Exh. 242]

186. On November 3, 2009, the District Court for the Central District of California denied a motion to dismiss the SEC complaint. Judge Walter specifically noted that "neither Countrywide's disclosures nor a careful review of the context of the statements convince this Court that the alleged omissions or misstatements were immaterial or not misleading as a matter of law." *SEC v. Mozilo, et al.*, No. 09-3994, slip op., at 10 (C.D. Cal. Nov. 3, 2009).

187. Subsequently, on September 16, 2010, Judge Walter denied Countrywide's motion for summary judgment. Among other key determinations, the court found:

> [The] SEC has also presented evidence that Countrywide routinely ignored its official underwriting guidelines to such an extent that Countrywide would underwrite *any* loan it could sell into the secondary mortgage market. According to the evidence presented by the SEC, Countrywide typically made four attempts

> to approve a loan. Countrywide first used an automated underwriting system known as "CLUES", which applied Countrywide's underwriting guidelines as set forth in Countrywide's technical manuals and loan program guides. . . . CLUES would either approve the loan or "refer" it to a loan officer for manual underwriting. If that loan officer lacked the authority to make an exception to Countrywide's underwriting guidelines, the loan was referred to the Structured Lending Desk, where yet another underwriter, with even more authority to waive guideline requirements, attempted to make the loan. If that attempt failed, the loan was referred to Countrywide's Secondary Markets Structured Lending Desk. According to the testimony of the Managing Director of Countrywide Home Loans' Secondary Marketing Division, once the loan was referred to Countrywide's Secondary Markets Structured Lending Desk, the sole criterion used for approving the loan was whether or not the loan could be sold into the secondary market. As a result of this process, a significant percentage (typically in excess of 20%) of Countrywide's loans were issued as exceptions to its official underwriting guidelines. As reported in one Corporate Credit Risk Committee meeting, one third of the loans referred from CLUES missed "major guidelines" and another one third missed "minor" guidelines. In light of this evidence, a reasonable jury could conclude that Countrywide all but abandoned managing credit risk through its underwriting guidelines, that Countrywide would originate any loan it could sell, and therefore that the statements regarding the quality of Countrywide's underwriting and loan production were misleading.

SEC v. Mozilo, et al., No. 09-3994, slip op., at 11–12 (C.D. Cal. Sept. 16, 2010) (citations to the record omitted).

188. In short, evidence presented to the court supported the claim that "Countrywide routinely ignored its official underwriting guidelines, and in practice, Countrywide's only criterion for approving a loan was whether the loan could be sold into the secondary market." *Id.* at 12.

189. The Attorneys General from many states also filed complaints against Countrywide. Among them, the Attorney General of California alleged based on its extensive investigation of Countrywide that the company, "did whatever it took to sell more loans, faster – including by … disregarding the minimal underwriting criteria it claimed to require." Cal. AG Countrywide Complaint at 20.

190. For example, the California Attorney General complaint quotes one former California loan officer explaining how stated income loans were sold, with a loan officer telling the borrower "with your credit score of X, for this house, and to make X payment, X is the income that you need to make"; after which the borrower would state that his or her income was X. *Id*. at 21.

191. A similar lawsuit instituted by the Illinois Attorney General, *People and State of Illinois v. Countrywide Financial Corporation,* No. 08-22994 (Cook County Ch. Ct), detailed how (a) one Countrywide employee estimated that approximately 90% of all reduced documentation loans sold out of the Chicago office had inflated incomes; and (b) one of Countrywide's mortgage brokers, One Source Mortgage, Inc., routinely doubled the amount of the potential borrower's income on stated income mortgage applications.

192. The Illinois complaint also detailed how Countrywide created incentives for its employees to increase the number of loans without concern for ability of the borrower to repay the loan. The *New York Times* described the allegations in the complaint as "paint[ing] a picture of a lending machine that was more concerned with volume of loans than quality."

193. Among the many other abuses described in the Illinois complaint, the Attorney General found that:

> [t]hrough the securitization process, Countrywide extracted hefty over-head charges, then shifted the risk of the failure of these non-traditional loans to investors. Moreover, securitization allowed Countrywide to tap those investors for much needed capital to fuel its origination process and reach its goal of capturing more and more market share. To facilitate the increase in loan origination volume, Countrywide relaxed its underwriting standards even more and sold risky, unaffordable and unnecessarily more expensive mortgage loans to millions of American homeowners.

Testimony of Illinois Attorney General Lisa Madigan before the FCIC, Jan. 14, 2010.

194. Similar allegations appear in a complaint filed by the Connecticut Attorney General, *State of Connecticut v. Countrywide Financial Corporation*, No. 08-40390945 (Hartford Super Ct.).

195. On October 6, 2008, Countrywide entities settled lawsuits brought by eleven State Attorneys General and potential claims by 28 other states**,** including all of the States in which loans backing the PLMBS purchased by the Bank were issued. The settlement valued at $8.4 billion resolved charges of violations of predatory lending, unfair competition, false advertising, and violations of banking laws, and required Countrywide to implement a program to modify certain existing loans, particularly high risk loans and pay-option mortgages that were the subject of the Attorneys Generals' investigations.

b. Private actions against Countrywide demonstrate Countrywide's abandonment of sound underwriting practices.

196. A multitude of private class action and individual cases raise further challenges to Countrywide's underwriting practices—and substantiate the challenges with witness testimony and documentary evidence. For example, Mark Zachary, a former Regional Vice President of Countrywide Mortgage Ventures, LLC, Countrywide's joint venture with the homebuilding company KB Home, detailed in a complaint how Countrywide blatantly ignored its underwriting policies and procedures. Compl., *Zachary v. Countrywide Financial Corp.*, No. 08-0214 (S.D. Tex). Mr. Zachary states that in September of 2006 he informed Countrywide executives that loan officers were helping loan applicants to submit applications with false income amounts.

197. Zachary's observations about problems with appraisals at KB Home are confirmed by documents reflecting internal correspondence within and between KB Home and Countrywide filed in *Johnson v. KB Home*, No. 09-972 (D. Ariz.).

198. Countrywide handled all of the mortgage financing and appraisal services for KB Home.

199. For example, on June 8, 2005, Christina Nickerson, a KB Home salesperson wrote: "We have an appraisal issue at IMR Mesa . . . . [T]he [lender's] appraiser can not obtain value. . . . I have asked the [lender] for a copy of the appraisal, and I requested that she try a more aggressive appraiser. . . . My suggestion is that we have [KB Home Mortgage Company, a wholly owned subsidiary of KB Home] order an appraisal from a KB friendly appraiser and see what happens." KB Home Director of Sales McLaury responded: "I agree, we need to order an appraisal from our KB friendly appraiser[.]" On June 16, the salesperson heard back: "Here's our appraisal at purchase price[,]" but McLaury complained: "It's $1,966 short isn't it? Can Ernie Carver bump it up?" Soon after, McLaury confirmed that the maneuvering had worked: "Christina and the Mesa Team, the appraisal will come in at the total sales price."

200. In another instance, in July 2006, KB Home Phoenix Vice President Stacie McDonald asked a KB Home salesman about a home for which an appraisal was low. The salesman responded: "It was approved at $290,000 with a VC of 38%, however, we were able to push appraisal to $300,000 and the addendum for $300,000 was done yesterday."

201. Similarly, in October 2007, KB Home Director of Sales McLaury instructed "friendly" appraiser Scott Dugan: "Please base your appraisal on today's base sales price, the options/upgrades the buyer purchased ($40,777), and comps in the neighborhood/area, particularly the one lot 44 (66 Lions Den Avenue) that closed at $248,643." Dugan responded: "ok."

202. KB Home salesperson, Peter Manesiotis, reported to his manager, Gregory Victors: "Appraisal came in low. This is a CW deal. How should we proceed?" Victors

responded: "Have Countrywide order a second appraisal. KB will pay for it. Speak to [loan officer] or processor to get someone who knows area. This process just worked at Mesquite. Buyer did not know about first appraisal." Manesiotis then instructed that a new appraisal be ordered and "do not notify the buyer about the first appraisal."

203. Countrywide senior executives were apparently not just aware but actively involved in this conduct. In an August 9, 2006 email sent after an appraisal was below contract price and below the level that KB Home's hand-picked appraiser, Harry, could reach, Countrywide/CWKB Vice President, Tim Ryan wrote: "Eric Sanford the western regional VP of landsafe is reviewing the appraisal—he is as high as it gets at landsafe. . . . As soon as I hear I will let you know. We are fighting all the way to the top for you." Ryan later reported: "We were just informed the original appraisal will be amended to Harry's appraisal. . . . So CW will be able to use the $687,000.00 value." On another occasion Ryan explained one scheme for generating self-perpetuating excessive appraisals: "Going forward I have asked ops to request Harry on homes that are 'decked' out—this way we know max value has been given. Under the new rules we cannot do it often, however once a few closing occur—we have comps!"

204. More evidence has been presented in lawsuits against Countrywide by the leading insurance companies that insured mortgage-backed securities sold by Countrywide. On September 30, 2008, MBIA Insurance, one of the largest providers of bond insurance, filed its complaint in *MBIA Insurance Corp. v. Countrywide Home Loans* (Sup. Ct. Cty of New York). This complaint explains how MBIA "provide[d] credit enhancement on the [mortgage-backed securities]—in the form of guarantee of repayment of principal and interest for the [mortgage-backed securities] notes in each securitization," and claims MBIA issued such insurance on the basis of fraudulent representations by Countrywide.

205. MBIA explains that:

> MBIA's re-underwriting review has revealed that 91% of defaulted or delinquent loans in these fifteen Countrywide securitizations show material discrepancies from underwriting guidelines. . . . For example the loan documentation may (i) lack key documentation such as verification of borrower income or assets; (ii) include an invalid or incomplete appraisal; (iii) demonstrate fraud by the borrower on the face of the application; or (iv) reflect that any of the borrower income, FICO score, debt, DTI or CLTV ratios, fails to meet stated Countrywide guidelines (without any permissible exception).

MBIA specifically notes that "the Defective Loans run across Countrywide's securitizations from 2004-2007, demonstrating the consistency of Countrywide's disregard for its underwriting guidelines during this period." On April 27, 2010, the Court denied Countrywide's motion to dismiss MBIA's fraud claims.

206. The September 28, 2010 Complaint filed by monoline insurer Ambac in *Ambac Assurance Corp. v. Countrywide Home Loans* (N.Y. Sup. Ct.) alleges:

> Because Countrywide [Financial Corporation, Countrywide Home Loans, Inc. and Countrywide Securities Corporation] was the nation's leading mortgage originator, its many public pronouncements that its underwriting practices were the industry's gold standard carried significant weight. Countrywide repeatedly asserted that the loans in its portfolio, from which the loans in the transactions at issue were drawn, were originated pursuant to Countrywide's strict underwriting standards that allowed "exceptions" only if compensating factors were present. But what Countrywide concealed is that, contrary to its representations, approval of "exceptions" became the rule. Countrywide failed to disclose that its business model was premised on the perpetual origination and refinancing of loans to borrowers who did not have the ability to make the required payments.

207. Ambac alleges that Countrywide made numerous false and misleading statements and omitted material facts about the quality of Countrywide's loan origination procedures and the collateral underlying the transactions. In particular, "[t]he Prospectus Supplements contained false and misleading statements concerning the quality of Countrywide's loan origination procedures and, in particular, failed to disclose that Countrywide had adopted a practice of making loans to borrowers who had little or no ability to repay their loans." Furthermore, the

loan tapes for the transactions provided by Countrywide—which were "large spreadsheets that purported to contain true and accurate information concerning the proposed loan pools, including key metrics for assessing the borrowers' ability to repay their loans and the sufficiency of the properties as collateral," and upon which Ambac was intended to rely to analyze the risks of and pricing for the proposed transactions—contained information that was materially false and misleading "in view of Countrywide's abandonment of sound underwriting practices and its knowledge of pervasive fraud."

208. The falsity of Countrywide's representations is evidenced by the performance of the underlying loans, which have defaulted at extraordinary rates. As of September 2010, more than 35,000 loans insured by Syncora, with an aggregate principal balance of more than $1.95 billion, had defaulted or have been charged-off. Further, by September 2010, Ambac had reviewed the origination files for 6,533 loans for conformance with Countrywide's loan-level representations and warranties and discovered that 6,362 of the loans—more than 97%—materially breached Countrywide's loan-level representations and warranties.

209. In *Financial Guaranty Insurance Co. v. Countrywide Home Loans, Inc.* (N.Y. Sup. Ct.), Financial Guaranty Insurance Company ("FGIC"), an insurer of Countrywide's mortgage-backed securities, alleges that, with respect to securitization it insured in 2006 and 2007, Countrywide and its corporate affiliates made multiple false misrepresentations and omissions, including that Countrywide: (a) failed to disclose an increase in its exceptions to, and expansion of, its mortgage-underwriting guidelines, including exceptions for which there were no compensating factors; (b) failed to disclose and deliberately concealed changes to its underwriting standards and procedures from those used for mortgage loans included in prior securitizations; (c) engaged in "adverse selection," whereby poor quality loans would be

securitized while loans that were expected to perform better were retained on Countrywide's books; (d) failed to disclose mortgage-loan-origination fraud, in which Countrywide and its corporate affiliates were participants or complicit; (e) misrepresented to FGIC the nature of key delinquency information; and (f) made numerous false and misleading public statements concerning the quality of Countrywide's mortgage origination process and securitized mortgage loans.

210. According to FGIC, beginning in early 2006, at the latest, Countrywide made continuing undisclosed changes in its mortgage loan origination practices, and started originating and securitizing lower-quality, poorly underwritten loans. These changes resulted in an undisclosed weakening of Countrywide's underwriting guidelines by permitting increased exceptions in originating mortgage loans, and permitting these exceptions without adequate, and in many cases any, compensating factors. Moreover, FGIC alleges that Countrywide admitted to it that Countrywide not only expanded the exception process, but also engaged in "adverse selection" by retaining fewer exception mortgage loans for its portfolio, while securitizing (for sale to investors) those loans with exceptions.

211. FGIC's allegations and Countrywide's purported admissions are supported by the analysis of professional residential mortgage loan review experts that were retained by FGIC to review statistically significant samples of mortgage loans from FGIC insured securitizations. These reviews determined that approximately *70%* of the mortgage loans in these securitizations significantly violated one or more of Countrywide's underwriting guidelines or standard mortgage underwriting practices. Unsurprisingly, the loss rate for mortgage loans found to be in breach of underwriting standards was two-and-a-half to three times the loss rate on non-breaching loans.

212. Similarly, in *Syncora Guarantee Inc. v. Countrywide Home Loans, Inc.* (N.Y. Sup. Ct.), Syncora, an insurer of Countrywide's mortgage-backed securities, alleges that, with respect to Countrywide securitizations it insured between 2004 and 2006:

> in originating the loans in these portfolios, Countrywide, *consistent with its business practices at the time, systematically ignored its own underwriting guidelines* and made imprudent loans that no reasonable underwriter would have made in a single-minded pursuit of generating ever-greater volumes of new loans. As a result, thousands of non-performing loans in the securitized portfolios violated Countrywide's own published guidelines should never have been made.

(emphasis added.)

213. Syncora alleges that the Countrywide offering documents, including the prospectuses and prospectus supplements, were replete with misrepresentations regarding Countrywide's underwriting process and failed to disclose its routine, material deviations from sound underwriting practices. Countrywide is also alleged to have materially misrepresented the accuracy of data, including DTIs and CLTVs, provided to Syncora for each securitized loan (commonly referred to as the "loan tape").

214. Syncora's review of underlying files for 3,700 defaulted loans in two of the securitizations it insured revealed that 2709 of the loans—almost 75%—have severe underwriting defects. The majority of these loans exceeded or ignored one or more Countrywide underwriting guidelines regarding excessive DTIs; excessive combined loan to value ratios; excessive loan amounts; improper calculation of first-lien debt, improper calculation of property values; patently unreasonable stated incomes; borrower fraud; indiscriminate availability of stated income loans; inflated appraisals; insufficient borrower credit; insufficient cash reserves; and/or missing documents. Indeed, Countrywide frequently breached a combination of underwriting guidelines for a given loan, which created a "layered risk," greatly increasing the likelihood of default.

215. With respect to inflated appraisals, Syncora alleges in part:

> In a review of non-performing loans in the 2005-K and 2006-D Securitizations, Syncora has found that Countrywide's appraisals of properties secured by non-performing loans show a clear pattern of inflation compared to sales prices achieved for comparable properties in the locale at the time Countrywide obtained its appraisals. Moreover, despite Countrywide's promise in the contractual documents and the Prospectuses to obtain "independent third party" appraisals, the properties underlying the vast majority of the loans in the Securitizations were appraised by Countrywide's own affiliated appraisal company, Landsafe, Inc. ("Landsafe"). Landsafe, like Countrywide Home Loans, is a subsidiary of Countrywide Financial [Corp.].

216. In sum, the evidence developed in numerous other actions against Countrywide substantiate that Countrywide abandoned its stated underwriting guidelines.

c. Confidential witnesses provide further evidence of Countrywide's abandonment of sound underwriting practices.

217. Confidential witnesses provide additional evidence of Countrywide's failure to adhere to sound underwriting practices and guidelines. For example, confidential witnesses, such as Confidential Witness ("CW")-A, a loan officer who worked at Countrywide from 1997 through 2007, CW-B, a former branch manager and regional vice president for Countrywide from September 2005 through December 2007, CW-C, a loan specialist at Countrywide's subprime lender, Full Spectrum Lending, from 2004 to 2005, and CW-V, a former Countrywide branch operation's manager from 2005 to 2010 (after Countrywide was taken over by Bank of America), all confirm that: (a) Countrywide employees faced intense pressure to close loans at any cost; (b) Countrywide increasingly approved risky, low- or no-documentation loans without adequate review; (c) Countrywide failed to adhere to underwriting guidelines; (d) Countrywide routinely approved loans that contained exceptions for which there were no reasonable compensating factors; (e) Countrywide employees pressured appraisers to inflate home values; and (f) Countrywide employees manipulated loan data in order to close loans.

218. Specifically, CW-A stated that employees at Countrywide always faced pressure to produce and close more loans. Because CW-A's performance was judged only on how many loans he closed each month, and not on long-term performance, he used to joke to friends that his status of employment was continually under scrutiny by his employer: "I'm fired every month, and then every month they re-hire me."

219. CW-A stated that from 2004 to 2006, Countrywide's underwriting guidelines became "looser and looser and looser." During this period, the minimum credit scores required for prime or Alt-A mortgages fell repeatedly, such that a borrower with a FICO score of 680 could get a mortgage with a 100% LTV based upon stated income/stated assets documentation. CW-A also stated that Countrywide offered no income/no asset ("NINA") loans, whereby a borrower could obtain a loan without providing any employment, income, or asset documentation, and could do so without any effort or, for that matter, any way for the originator to determine whether the borrower had an ability to repay the loan. CW-A further stated that Countrywide frequently offered loans to borrowers who had been rejected by other mortgage providers. In fact, Countrywide loan officers often emphasized to prospective borrowers that Countrywide could do loans that other lenders could not.

220. According to CW-A, Countrywide had an "Exception Desk," whose purpose was to review loans that did not strictly meet the underwriting guidelines. During the 2004-2006 time period, CW-A stated that, "It got to where loan approvals with exceptions were the norm."

221. According to both CW-A and CW-B, Countrywide loan officers pressured appraisers to return values which would allow the loans to be approved. For example, Countrywide loan officers would tell the appraisers that if they did not provide the value the loan officers needed, Countrywide would not send any more work to the appraiser.

222. Both CW-A and CW-B described that, even in circumstances where the appraisers were not directly threatened, Countrywide influenced their appraisal values by telling appraisers exactly what value they needed in order to approve the loan. CW-B also explained that in other instances, Countrywide provided appraisers with the purchase price of the home and the loan amount so that the appraisers could extrapolate the minimum value needed for the appraisal. CW-B noted that Countrywide also sent appraisers additional comparables that were higher than those the appraiser initially relied upon.

223. CW-B stated as well that Countrywide's underwriting guidelines became "way too easy" to meet. As a consequence, many of Countrywide's loans ended up in default. Numerous times, he recalled thinking to himself, "people making this kind of money shouldn't qualify for a $400,000 loan." For example, he recalled seeing loan applications for $350,000 homes, with $1,900/month loan payments, when the borrowers were making only $3,000/month. The DTI on such a loan was approximately 63%. He said such situations were "absurd, but I saw it all the time."

224. Additionally, CW-B said that most approved mortgages at Countrywide had 95-100% LTVs, and most borrowers only put down zero to five percent of the purchase price. Consequently, borrowers had "no skin in the game," and when home values started to drop and the borrowers' loans were for more than the homes were worth, they had no incentive to continue making their mortgage payments. Moreover, CW-B said that Countrywide granted numerous mortgages to borrowers with 65% DTIs, and that Countrywide did not require borrowers to have any "reserves" (*i.e.*, cash in their bank accounts)—or, at most, they only had to have one month's reserve—in order to be approved.

225. CW-B also stated that Countrywide offered a "Fast and Easy" loan program, which required minimal documentation and thereby allowed mortgages to be approved more quickly. It was Countrywide's version of the stated income/stated asset mortgage. CW-B had "no doubt" that there was a lot of upward manipulation of borrower income in order to qualify borrowers for a Fast and Easy loan. Indeed, CW-B reported one employee to Countrywide's Fraud Department when he caught the employee repeatedly entering fraudulently high income. However, the Countrywide human resources department said that such reported incidents were not enough to fire the employee, and the employee was simply suspended. While the employee was suspended, CW-B examined the employee's loan files and found four to five different applications in which the employee had nearly doubled the borrowers' reported income in order to get the loans approved.

226. CW-C also saw a practice of inflating incomes on stated-income loans when she worked at Countrywide's Full Spectrum Lending division. On instruction from the branch manager, CW-C said that loan officers "recalculated income and removed [any documents] they didn't want the underwriters to see" in order to push the loans through. In addition, CW-C knew that loan officers at Countrywide cut and pasted false information into loan documents in order to get loans approved. "It was a pretty common practice," she said.

227. Like CW-A, CW-V was aware that her bosses were under a lot of pressure to produce a high volume of loans; she noted that there was a big push on volume back then and that bonuses were tied to volume. In fact, CW-V was admonished that she was being too difficult with respect to the underwriting rules, and was told that "I had to find a way to make the loans, and not try to find a way to not make them." CW-V recalls many times during her tenure when she did not believe a loan should be made, but it nevertheless was pushed through. By way

of example, CW-V recalls a Countrywide loan officer in her branch who was allowed to originate loans for his family members, notwithstanding that this violated Countrywide policy, and even though the applications only contained names and addresses and no other information. In fact, it was only after several of these loans closed, and CW-V complained to her regional manager, that her colleague was told he could no longer make loans to family.

228. CW-V also recalls instances in which she spoke with a customer over the telephone regarding missing or questionable information, and was informed by the customer that he or she just put down what the loan officer told him or her to write. When CW-V expressed her concerns to the loan officer involved, she was told *not* to contact any customers. CW-V recalls a lot of tension between the loan officers and loan processors in the branch, with the loan officers insisting that loans be processed quickly and without questions and becoming angry when loan processors attempted to verify and validate the information on the loan.

229. CW-W, a loan officer and branch manager for Countrywide, stated that verification of income under Countrywide's Fast and Easy loan program was "a joke." Moreover, if the CLUES system—Countrywide's Automated Underwriting System—did not approve a loan at first, loan officers would often simply inflate the numbers until there was an approval. There was no limit to how many times the numbers could be re-entered. In CW-W's experience, loan officers were unlikely to seek exceptions to the underwriting guidelines from the branch manager, since they could simply commit fraud on the "front end"—i.e., by inflating the numbers.

230. CW-W also said that 50% of mortgage loans were made without formal appraisals. When appraisals were done, the appraiser was told that if the property did not "come back at value," Countrywide would simply go to another appraiser thereafter. CW-W said when

an appraised property had zoning violations, or other features that would bring down the valuation, the appraiser was told to make sure their photographs of the property didn't include those features.

d. The mortgages originated by Countrywide and securitized in the PLMBS purchased by the Bank provide further evidence of Countrywide's abandonment of sound underwriting practices.

231. Countrywide originated mortgages that secured at least Securities BSARM 2007-3 1A1, CWHL 2007-8 1A5, CWHL 2005-8R A1, CWHL 2007-13 A4, GSR 2006-2F 3A1, GSR 2006-AR1 2A3, GSR 2006-1F 2A2, GSR 2005-3F 2A1, GSR 2005-1F 3A1, GSR 2005-2F 2A1, and GSR 2006-6F 2A1. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90% and 80%, the percentage of loans secured by property not the primary residence of the borrower, and the percentage of loans originated using full documentation. Moreover, as described in Paragraphs 369-70 below, many of these Securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of Countrywide's failure to observe its stated underwriting standards. Countrywide's actual practices – including use of unreliable appraisals, routine granting of underwriting exceptions and reliance on unverified borrower-supplied information – caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

232. In summary, far from following its underwriting guidelines as described in the Offering Documents and making occasional, targeted and justified exceptions when other

evidence of ability to repay justified a deviation from the guidelines, at Countrywide variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any of the Offering Documents apprise the Bank of the extent to which Countrywide deviated from its underwriting guidelines.

2. GMAC and Residential Funding Corp.

233. GMAC Mortgage Corporation, which is now known as GMAC Mortgage, LLC, and its affiliate, Residential Funding Corp. ("RFC") (together, "GMAC") were the originators of loans for at least three of the PLMBS purchased by the Bank. Both the representations of GMAC and RFC regarding their loan origination practices have been challenged by MBIA Insurance, one of the largest providers of bond insurance, which insured MBS securities sold by GMAC and RFC. GMAC also abandoned sound underwriting practices

a. Private actions against GMAC demonstrate GMAC's abandonment of sound underwriting practices.

234. In *MBIA Insurance Corporation v. GMAC Mortgage LLC* (N.Y. Sup. Ct.), GMAC MBS insurer MBIA alleges that, with respect to GMAC securitizations it insured in 2004, 2006, and 2007, GMAC represented and warranted that (a) all of the information it provided to MBIA about the mortgage loans was accurate and not misleading; (b) all of the mortgage loans in the pools were underwritten in accordance with GMAC Mortgage's underwriting standards; and (c) in the case of each loan, after receiving all applicable employment, credit, and property information, a determination had been made that the borrower was able to meet his or her monthly payments.

235. According to MBIA, GMAC "blatantly violated its contractual representations and warranties." MBIA supports this allegation by explaining that in 2009, in the face of mounting payments caused by delinquent and "charged-off" loans, MBIA began to examine the

loan files and documentation associated with thousands of loans. The result of this review clearly demonstrates that GMAC "had wholly abandoned its own underwriting policies and instead routinely approved loans to borrowers who failed to meet basic risk criteria." At least 89% of the 4,104 delinquent or charged off loans reviewed by MBIA were not originated in material compliance with GMAC's underwriting guidelines or the contractual representations and warranties made by GMAC.

236. More specifically, MBIA alleges that many of the loans it has found to be non-compliant contained multiple breaches of representations and warranties, including:

- GMAC Mortgage routinely breached its representation and warranty that the mortgage loans were underwritten generally in compliance with GMAC Mortgage's underwriting standards.

- A significant number of mortgage loans were made on the basis of "stated incomes" that were grossly unreasonable or were approved despite DTI [debt-to-income] or CLTV [combined loan-to-value] ratios in excess of the cut-offs stated in GMAC Mortgage's Underwriting Guidelines or the Purchase Agreements or Prospectus Supplements.

- Contrary to its Underwriting Guidelines, GMAC Mortgage failed in many cases to verify the borrower's employment when required to do so or to verify prior rental or mortgage payment history, approved mortgage loans with ineligible collateral, approved mortgage loans to borrowers with ineligible credit scores, and approved loans without verifying that the borrower had sufficient funds or reserves.

- GMAC Mortgage used its proprietary automated electronic loan underwriting program, known as "Assetwise," to approve loans that did not comply with its Underwriting Guidelines. Assetwise assisted in the underwriting of mortgage loans by automating the process of determining whether a loan met pre-specified underwriting criteria set up in the program. GMAC Mortgage used the program itself and also made the program available to its affiliates. Assetwise, however, failed to analyze proposed mortgage loans using the criteria set forth in GMAC Mortgage's Underwriting Guidelines. As a result, GMAC Mortgage routinely contributed loans to the Transactions that failed to comply with its own underwriting standards.

- GMAC Mortgage routinely breached its representation and warranty that the mortgage loan files were complete and contained all required documents and instruments. Many of the of mortgage loan files are missing necessary mortgage

> loan documents, such as disclosures relating to loan transfers and notes establishing the first lien. The absence of these and other necessary documents from the loan files impedes the ability of the trustees for the Transactions to enforce their rights and remedies with respect to delinquent mortgages. The failure to maintain the required loan documentation also impairs proper servicing.

237. Similarly, MBIA explains, in its complaint in *MBIA Insurance Company v. Residential Funding Corporation*, No 603552-2008, (N.Y. Sup. Ct.): "Of the 1,847 mortgage loans [examined by MBIA] . . . only 129 mortgage loans—less than 7% of the mortgage loans reviewed—were originated or acquired in material compliance with RFC's representations and warranties . . . with respect to the underwriting of the mortgage loans contributed to the RFC transactions." The complaint notes that "The Underwriting Guidelines . . . only allowed RFC to make exceptions to the Underwriting Guidelines in very specifically defined and limited circumstances. . . . RFC's Underwriting Guidelines required that a form—Form 1600—be completed and approve for any exceptions made to the Underwriting Guidelines in connection with the underwriting of purchase of a mortgage loan. [Yet, in fact f]or a significant number of non-compliant mortgage loans, RFC did not identify any specifically defined exception that was permitted under the Underwriting Guidelines. Further for a significant number of mortgage loans, RFC failed to document the alleged exceptions on a form 1600 as required by the Underwriting Guidelines."

238. On information and belief, the practices and omissions described in the MBIA actions were also prevalent with respect to the Certificates purchased by the Bank for which GMAC originated underlying mortgage loans.

b. Confidential witness statements provide further evidence of GMAC's abandonment of sound underwriting practices.

239. Confidential witness CW-Z, who worked as a District Operations Manager for GMAC Mortgage from 2000 through 2007, provided further evidence of GMAC's failure to

adhere to sound underwriting practices and guidelines. CW-Z said that up to 50% of the loans that were approved in his California branch were pursuant to GMAC's "reduced documentation" program. Additionally, CW-Z stated that many prospective borrowers came to GMAC in the hopes of refinancing their ARM loans, which carried one- to three-year prepayment penalties of approximately $24,000 to $30,000.

c. The mortgages originated by GMAC and securitized in the PLMBS purchased by the Bank provide further evidence of GMAC's abandonment of sound underwriting practices.

240. GMAC originated mortgages that secured at least Securities GSR 2006-AR1 2A3, RFMSI 2007-S4 A4, and RFMSI 2007-SA4 3A1. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to the weighted average LTV ratios, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, these Securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of GMAC's and Residential Funding's failure to observe its stated underwriting standards. GMAC's and Residential Funding's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused GMAC and Residential Funding to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

241. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at GMAC and RFC, variance from the stated standards

was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any of the Offering Documents apprise the Bank of the extent to which GMAC and RFC deviated from their underwriting guidelines.

3. IndyMac Bank, FSB

242. IndyMac Bank, FSB ("IndyMac") originated underlying mortgage loans securing at least six of the PLMBS purchased by the Bank. IndyMac also abandoned sound underwriting practices.

a. Government actions and related lawsuits and investigations demonstrate IndyMac's abandonment of sound underwriting practices.

243. In 2010, IndyMac was identified by the OCC as the twelfth worst mortgage originator in the country based on the delinquency rates of the mortgages it originated in the ten metropolitan areas with the highest rates of delinquency.

244. As reported in the Audit Report of the Office of Inspector General, Department of Treasury, IndyMac made loans to borrowers who could not afford to repay them:

> IndyMac often made loans without verification of the borrower's income or assets, and to borrowers with poor credit histories. Appraisals obtained by IndyMac on underlying collateral were often questionable as well. As an Alt-A lender, IndyMac's business model was to offer loan products to fit the borrower's needs, using an extensive array of risky option-adjustable-rate-mortgages (option ARMs), subprime loans, 80/20 loans, and other nontraditional products. Ultimately, loans were made to many borrowers who simply could not afford to make their payments.

SAFETY AND SOUNDNESS: MATERIAL LOSS REVIEW OF INDYMAC BANK, FSB, OIG-09-032, (February 26, 2009).

245. In describing what it referred to as IndyMac's "Unsound Underwriting Practices," the Inspector General's audit explained:

> IndyMac encouraged the use of nontraditional loans. IndyMac's underwriting guidelines provided flexibility in determining whether, or how, loan applicants'

employment, income, and assets were documented or verified. The following procedures were used by the thrift:

- No doc: income, employment, and assets are not verified
- No income/no assets (NINA): income and assets are not verified; employment is verbally verified
- No ratio: no information about income is obtained; employment is verbally verified; assets are verified
- Stated income: income documentation is waived, employment is verbally verified, and assets are verified
- Fast forward: income documentation is sometimes waived, employment is verbally verified, and assets may or may not be verified.

246. The Inspector General's audit also explained that:

> [A]mong other things, we noted instances where IndyMac officials accepted appraisals that were not in compliance with the Uniform Standard of Professional Appraisal Practice (USPAP). We also found instances where IndyMac obtained multiple appraisals on a property that had vastly different values. There was no evidence to support, or explain why different values were determined. In other instances, IndyMac allowed the borrowers to select the appraiser. As illustrative of these problems, the file for one 80/20, $1.5 million loan we reviewed contained several appraisals with values ranging between $639,000 and $1.5 million. There was no support to show why the higher value appraisal was the appropriate one to use for approving the loan.

247. The Inspector General's audit contained four examples of examined loans with serious underwriting failings and questionable appraisals. These included the following examples of IndyMac's conduct and the losses resulting from IndyMac's violation of underwriting standards and reliance on faulty appraisals:

> <u>Loan 1</u>
>
> On May 2, 2007, IndyMac approved a $926,000 stated income loan for the borrower, . . . an adjustable rate mortgage with a 5-year term and a beginning interest rate of 5.875 percent, which was subject to change monthly. . . .
>
> As a stated income loan, IndyMac performed no verification of the borrower's self-employment income of $50,000 a month ($600,000 annually). IndyMac also did not verify the borrower's assets. . . .
>
> The loan file contained an appraisal which indicated that the property value was $1.43 million. This value was based on comparable properties that had been improved with single family residences. However, the comparable

properties were located closer to the ocean and bay, and their values were based on listing price instead of the actual selling price. The appraised value also did not take in consideration a slowdown in the real estate market. We saw no evidence in the loan file that IndyMac resolved these and other anomalies with the appraisal.

The borrower made payments totaling $5,389 before defaulting on the loan. The unpaid principal and interest at the time of foreclosure totaled approximately $1.01 million. At the time of our review, the property was listed for sale for an asking price of $599,000.

Loan 2

In November 2007, IndyMac approved a $3 million stated income loan, secured by the borrower's primary residence in Scottsdale, Arizona. The loan proceeds were used to refinance the primary residence which the borrower had owned for 11 years and reported its value as $4.9 million.

As a stated income loan, IndyMac performed no verification of the borrower's reported self-employment income of $57,000 a month ($684,000 annually). Contrary to IndyMac policy, the borrower selected the appraiser who appraised the property at $4.9 million.

Notes in the loan file indicated that the borrower had listed the property for sale in November 2006, first at a price of $4.9 million that was later reduced to $4.5 million before the borrower pulled the property off the market. Despite this, the appraiser concluded that the value of $4.9 million appeared to be reasonable. IndyMac accepted the appraiser's value based on a review of online sale and public records. It did not physically inspect the property.

The borrower made no payments on the loan before default. The total delinquent loan amount as of November 2008 was $3,015,625. According to the IndyMac official, the property sold in October 2008 for $2.0 million.

Loan 3

In February 2007, IndyMac provided the borrower a stated income, 80/20 loan, for a combined total of $1.475 million, to purchase a property in Marco Island, Florida. The combined loan equaled the appraised value of the property.

As a stated income loan, IndyMac performed no verification of the borrower's reported income of $28,500 a month ($342,000 annually). For 80/20 loans, IndyMac allowed an $800,000/$200,000 maximum loan amount and a maximum combined loan amount of $1 million. This loan was an exception to IndyMac policy as the combined loan amount of $1,475,000 exceeded the maximum combined loan amount. The loan exception was approved anyway.

Various appraisals in the loan file contained significant differences with no indication of how they were resolved by IndyMac. A January 2007 appraisal valued the property at $1.48 million. A valuation analysis prepared by an IndyMac employee on January 25, 2007, stated that the skill level of the appraiser was unacceptable—the appraiser had not provided accurate comparable properties to the subject property and did not accurately consider the location of the property. The IndyMac employee estimated the property value at $1 million and recommended that another appraisal be obtained. Another note in the loan indicated that the IndyMac official overruled the employee's recommendation and the appraisal was accepted. The IndyMac official, however, adjusted the appraised value approximately 10 percent lower, to $1.33 million, citing as a justification that a property on the same street had sold for $1.97 million.

The borrower made no payments before defaulting on the combined $1.48 million loans. According to the IndyMac official, the borrower deeded the property to the thrift in lieu of foreclosure. The IndyMac official estimated in November 2008 that the property was worth about $700,000.

Loan 4

In April 2002, IndyMac approved the borrower for a stated income home equity line of credit of $550,000. This line of credit was in addition to a 80/20 loan for $3 million that the borrower already had with IndyMac. The borrower reported that the property was worth $5.2 million.

As a stated income loan, IndyMac performed no verification of the borrower's reported gross income of $95,000 a month ($1.14 million annually) as the owner/manager of a limited liability corporation. The loan notes history did not indicate how IndyMac resolved negative information revealed in credit reports on the borrower. Two credit reports obtained in March 2002 listed serious and frequent delinquencies. An earlier credit report had noted a discrepancy with the borrower's social security number.

Various appraisals in the loan file also contained significant discrepancies with no indication of how they were resolved by IndyMac. Specifically, the appraisal for the original 80/20 loan, dated in October 2001, valued the property which the appraisal described as new construction at $5.2 million. This same value was reported by a second appraisal dated in March 2002. A third appraisal, dated in April 2002, placed the market value of the home at $508,500. The appraisal stated that the home was less than ½ mile from a hazardous waste facility. A fourth appraisal, also prepared in April 2002, valued the property at $730,000, with the lowest reasonable value at $590,000 and the highest reasonable at $900,000. This appraiser also reported that the home was built in 1959.

> The borrower made payments totaling about $11,000 before defaulting on the $550,000 home equity line of credit loan. According to the IndyMac official, the thrift was able to recover approximately $600,000 on both loans. . . .

248. A June 30, 2008 report issued by the Center for Responsible Lending entitled INDYMAC: WHAT WENT WRONG? HOW AN "ALT-A" LEADER FUELED ITS GROWTH WITH UNSOUND AND ABUSIVE MORTGAGE LENDING concluded that IndyMac often ignored its stated underwriting and appraisal standards and encouraged its employees to approve loans regardless of the borrower's ability to repay.

249. The Center for Responsible Lending's report quotes an IndyMac underwriting team leader, Audrey Streater, as stating of her time at IndyMac: "I would reject a loan and the insanity would begin. It would go to upper management and the next thing you know it's going to closing."

250. The Center for Responsible Lending's report describes the recollection of another former underwriter for IndyMac, Wesley Miller:

> [W]hen he rejected a loan, sales managers screamed at him and then went up the line to a senior vice president and got it okayed. "There's a lot of pressure when you're doing a deal and you know it's wrong from the get-go—that the guy can't afford it," Miller told CRL. "And then they pressure you to approve it." The refrain from managers, Miller recalls, was simple: "Find a way to make this work."

251. The Center for Responsible Lending interviewed another former Indymac underwriter:

> Scott Montilla, who worked as an underwriter for IndyMac in Arizona . . . says that when salespeople went over his head to complain about loan denials, higher-ups overruled his decisions roughly half the time. "I would tell them: 'If you want to approve this, let another underwriter do it, I won't touch it—I'm not putting my name on it,'" Montilla says. "There were some loans that were just blatantly overstated. . . . Some of these loans are very questionable. They're not going to perform."

b. Private actions against IndyMac demonstrate IndyMac's abandonment of sound underwriting practices.

252. Multiple insurers of IndyMac-originated loans, including MBIA Insurance Corporation, FGIC, and Syncora—all of whom have experienced unprecedented losses in connection with the financial guarantee insurance they provided on IndyMac loans—have filed suit against IndyMac alleging the abandonment of underwriting standards based, in part, on their analysis of the loan files for IndyMac loans. Some of the allegations made by the insurers are virtually identical to the allegations made by the Bank here—namely that IndyMac completely abandoned its underwriting standards in its rush to originate (and securitize) as many loans as possible.

253. By way of example, according to MBIA:

> IndyMac had abandoned any reasonable and prudent underwriting standards. In an effort to expand its market share during the mortgage lending boom, IndyMac systematically abandoned its own underwriting guidelines in pursuit of increased loan originations: it knowingly loaned millions of dollars to borrowers who could not afford to repay the loans, or who IndyMac personnel knew or should have known were including misstatements in their loan applications, often with the assistance and encouragement of IndyMac's employees and brokers, or who otherwise did not satisfy the basic risk criteria for prudent and responsible lending that IndyMac claimed to use.

254. This systematic abandonment of underwriting standards stands in sharp contrast to the representations made about IndyMac's underwriting standards in numerous documents, including investor prospectuses and prospectus supplements.

255. MBIA's allegations are supported by reviews of loan files backing PLMBS insured by MBIA. A review of the loan files of 418 defaulting loans in one of the PLMBS insured by MBIA indicated that *over 95%* of the defaulting loans failed to comply with IndyMac's representations and warranties with respect to its underwriting guidelines and policies. Similarly, a review of 297 defaulting loans in another PLMBS insured by MBIA

indicated that *over 99%* failed to comply with IndyMac's stated underwriting guidelines and policies.

256. Syncora also analyzed various IndyMac loans backing PLMBS it insured. Out of the 107 loans analyzed by Syncora, 105 of the loans breached representations and warranties made by IndyMac to Syncora. These include (a) 83 loans in breach of the representation that "each Mortgage Loan was originated in all material respects in accordance with the applicable Originator's underwriting criteria in effect at the time of origination"; (b) 57 loans in breach of the representation that "each Mortgage Note be a legal, valid and binding obligation, all parties had full legal capacity to execute the documents and convey real estate to the best of the Seller's knowledge, and there was no fraud involved in the origination of any Mortgage loan"; and (c) six loans in breach of the representation that "each Mortgage Loan contain an appraisal conforming to the standards of the applicable Originator."

257. In addition to similar allegations of the abandonment of underwriting guidelines by IndyMac, which are also based on a review of loan files, FGIC alleges that IndyMac materially misrepresented the accuracy of data provided to FGIC for a securitization it insured, including the owner-occupancy status of a property, the combined LTV for the property, the borrower's DTI, and the borrower's FICO credit score. Again, this allegation is supported by evidence obtained by FGIC from its review of loan files it obtained in the course of its investigation.

258. The three insurers noted above have not been able to conduct complete analyses of the loan pools for which they provided insurance because IndyMac, despite its contractual obligations to the insurers, has refused to provide complete access to the loan files. For this reason, all three insurers are seeking judicial relief to gain access to these various loan files.

259. Other entities are also pursuing claims against IndyMac for abandoning its underwriting guidelines. For example, in May of 2009, Deutsche Bank National Trust Company, in its capacity as a trustee, filed suit against IndyMac Bank and the FDIC (in its corporate capacity as well as in its capacity as receiver and conservator for IndyMac Bank and IndyMac Federal Bank) over the more than 150,000 mortgage loans that IndyMac Bank had originated or acquired and sold to the trust. *See Deutsche Bank Nat'l Trust Co. v. FDIC*, No. 09-3852 (C.D. Cal.). Deutsche Bank's complaint asserts claims for breach of contract, breach of the duty of good faith and fair dealing, and breach of fiduciary duty, and alleges that IndyMac breached numerous representations and warranties that it made to the trusts, including (a) selling mortgage loans into the trusts that failed to comply with IndyMac's credit underwriting standards and origination process; (b) providing mortgage loan origination files that failed to contain required documentation; (c) originating mortgage loans that did not comply with applicable law; and (d) selling mortgage loans into the trusts that did not possess the characteristics set forth in the schedules to the relevant governing agreements. Encompassed in the Deutsche Bank case are five of the IndyMac-originated Certificates purchased by the Bank, GSR 2005-2F 2A1, GSR 2005-3F 2A1, GSR 2006-1F 2A2, GSR 2006-6F 2A1, RAST 2005-A11 2A1. Hence, like the Bank, the trustee for these very Certificates contends that IndyMac abandoned its underwriting guidelines, contrary to the statements in the Offering Documents.

c. Confidential witnesses provide further evidence of IndyMac's abandonment of sound underwriting practices.

260. Confidential witnesses provide additional evidence of IndyMac's failure to adhere to sound underwriting practices and guidelines, as well as appraisal guidelines.

261. According to CW-X—a former underwriter for IndyMac in Missouri from June 2005 to June 2007—she was required on a daily basis to approve loans that she believed should

not be approved. IndyMac required underwriters who wanted to deny stated income loans to obtain management approval for the denial. As a result, CW-X was frequently overruled, even when the income provided in the application was obviously overstated, such as when a cab driver from Chicago claimed to have $12,000 a month in income. Upset at being forced to approve clearly inaccurate loan applications, CW-X many times noted in the file that "the loan was approved under duress."

262. CW-X noted that IndyMac underwriters were under a lot of pressure to approve loans. IndyMac underwriters received bonuses based on the number of loans that they permitted to be funded, not the number of loans that they reviewed. According to CW-X, this structure incentivized the approval of unscrupulous loans and opened the doors to committing fraud on the inside. CW-X stated that a broker could not commit fraud unless an underwriter approved it, and there were certain underwriters that would approve anything, no matter how blatant, because they wanted a larger paycheck. In fact, in 2007, CW-X recalled being required, along with the other underwriters in her department, to come in on a Saturday and review the loan files for stated income loans that had been previously funded. CW-X believes that during this time period a lot of questions were coming up about the loans being reviewed, and CW-X and her colleagues went through every loan her department had approved to see whether or not the stated salary was within the correct range—as indicated by salary.com—for the job description of the loan applicant. CW-X found a lot of overstated incomes in the files that had been reviewed by other underwriters—"some of the underwriters would rather see a bigger paycheck than do the right thing."

263. The statements of CW-Y, a former underwriter for IndyMac in California from 2006 to 2008, and CW-AA, a former underwriter for IndyMac in New Jersey from 2004 to 2007,

further confirm IndyMac's abandonment of underwriting standards. CW-Y stated that on several occasions she suspected that stated-income loan applications contained inflated income information. In particular, she recalls a gardener in California who purportedly made $10,000 a month. Notwithstanding her concerns, because the loan applicant had a sufficiently high FICO score, IndyMac's automated system—eMITS—approved him for the loan. When CW-Y questioned this approval, she was informed that because the system approved it, she needed to process the loan. CW-Y also recalled that the bonus system—which was based on the number of loans funded—incentivized underwriters to quickly approve loans. Those underwriters who failed to meet their quotas were written up. Similarly, CW-AA reported that no-documentation and stated income loans were "the norm" during CW-AA's tenure as an underwriter, and CW-AA stated that his managers approved loans that CW-AA would not have approved, and were known to overrule CW-AA on loans that he denied. CW-AA believed that IndyMac did too many no-doc and stated income loans, and approved deals that should not have been approved.

264. CW-X also discussed the loosening of appraisal standards. When CW-X first started at IndyMac, the bank had an automated system for scoring appraisals that took into account different factors such as the location of the property and the date of the comparable sales. Based on the scoring of this data, certain appraisals were sent to IndyMac's appraisal review department, which denied a lot of loans. According to CW-X, at a certain point management concluded that too many loans were being reviewed and denied, so management relaxed the standards, thereby reducing the number of appraisals automatically sent to the review department. CW-X worked on the same floor as the appraisal review department, and recalls talking with appraisal reviewers who complained "a lot" that they had a strong belief that "they

weren't seeing appraisals [they should be seeing]," i.e., that suspect appraisals were not being reviewed.

265. CW-X's statements were confirmed by CW-BB, who began working for IndyMac in California as a licensed real estate appraiser trainee and who did appraisals for IndyMac in 2006 and 2007. CW-BB recalls being blacklisted over her appraisal of a California home with a separate guest house. Consistent with standard appraisal practices, CW-BB did not include the guest house's square footage in the main house, and refused to do so even under pressure from IndyMac. CW-BB's refusal prompted IndyMac to stop sending her work, and an IndyMac representative verbally confirmed that she had been placed on a blacklist.

d. The mortgages originated by IndyMac and securitized in the PLMBS purchased by the Bank provide further evidence of IndyMac's abandonment of sound underwriting practices.

266. IndyMac originated mortgages that secured at least Securities GSR 2006-1F 2A2, GSR 2005-3F 2A1, GSR 2005-2F 2A1, GSR 2006-6F 2A1, and RAST 2005-A11 2A1. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90% and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described in paragraphs 592-593 below, these Securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of IndyMac's failure to observe its stated underwriting standards. IndyMac's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from those reported in the Offering Documents, and whose likelihood of default was

much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

267. In summary, far from following its underwriting guidelines and making occasional, targeted and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, at IndyMac variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which IndyMac deviated from its underwriting guidelines.

4. Washington Mutual Bank

268. Washington Mutual Bank ("WaMu") originated underlying mortgage loans securing at least six of the PLMBS purchased by the Bank.

269. Investigations into the practices of WaMu reveal the depth and breadth of its abandonment of underwriting standards and appraisal standards.

270. A review of the investigations and related litigation involving WaMu, as well as confidential witness statements obtained during the Bank's investigation, demonstrate that these mortgage originators systematically violated and ignored their stated underwriting guidelines, rendering materially misleading the statements in the Offering Documents regarding underwriting practices, appraisals, and LTVs. This evidence is reinforced further by the analysis of the performance of the actual loan pools backing the PLMBS purchased by the Bank.

a. Government actions and related lawsuits and investigations demonstrate WaMu's abandonment of sound underwriting practices.

271. As reported at the Senate Subcommittee hearing on Wall Street and the Financial Crisis held on April 13, 2010, the Subcommittee identified multiple high risk loan practices by WaMu, including:

> **Shoddy Lending Practices.** WaMu used shoddy lending practices riddled with credit, compliance and operational deficiencies to make tens of thousands of high risk home loans that too often contained excessive risk, fraudulent information, or errors.
>
> **Steering Borrowers to High Risk Loans**. WaMu too often steered borrowers into home loans they could not afford, allowing and encouraging them to make low initial payments that would be followed by much higher payments, and presumed that rising home prices would enable those borrowers to refinance their loans.
>
> **Securitizing Delinquency-Prone and Fraudulent Loans.** At times, WaMu selected and securitized loans that it had identified as likely to go delinquent, without disclosing its analysis to investors who bought the securities, and also securitized loans tainted by fraudulent information, without notifying purchasers of the fraud that was discovered.
>
> **Destructive Compensation.** WaMu's compensation system rewarded loan officers and loan processors for originating large volumes of high risk loans, [and] paid extra to loan officers who overcharged borrowers or added stiff prepayment penalties . . . .

272. A November internal 2005 review of WaMu loans in southern California found "an extensive level of loan fraud . . . virtually all of it stemming from employees in these areas circumventing bank policy surrounding loan verification and review." According to the *Seattle Times*, "[a]t one California office, 58 percent of loans examined in an internal review were fraudulent; at another, 83 percent." Drew DeSilver, *WaMu Execs Saw Warning Signs of Deteriorating Loans*, Seattle Times, Apr. 12, 2010, at A1.

273. A WaMu PowerPoint presentation presented to Kerry Killinger, Steve Rotella and many other WaMu executives was disclosed at the April 13, 2010 hearing before the Senate Subcommittee on Investigations. The presentation, which examined the risk management of WaMu's home loan division, examined 187 loan files that had a first payment default. The presentation revealed that of these 187 files, there was "confirmed fraud" on 115. 17 were "highly suspect." 133, or 71%, "had credit evaluation or loan decision errors." 58, or almost one-third, "had appraisal discrepancies or issues that raised concerns." Of the 187 loans, 112 had

required no documentation of income; out of these 112, 80 were identified "for lack of reasonableness of income."

274. Another internal memorandum presented at the Senate Subcommittee hearings, titled "So. California Emerging Markets Targeted Loan Review Results," explained that "[o]f the 129 detailed loan review[s] that have been conducted to date, 42% of the loans reviewed contained suspect activity or fraud, virtually all of it attributable to some sort of employee malfeasance or failure to execute company policy. . . . On average, 78% of the funded retail broker loans reviewed were found to contain fraud . . . principally centered in misrepresentation of loan qualifying data and appraisal issues."

275. Another exhibit at the April 13, 2010 Senate Subcommittee hearing explained how: "[o]ne Sales Associate admitted that during that crunch time some of the Associates would 'manufacture' asset statements from previous loan docs and submit them to the LFC [Loan Fulfillment Center]. She said the pressure was tremendous from the LFC to get them the docs since the loan had already funded and pressure from the Loan Consultants to get the loans funded [sic]."

276. At one point, the *Seattle Times* reports that over three quarters of WaMu's $58.9 billion portfolio of option-ARM loans had been issued as limited documentation loans. Drew DeSilver, *Big Dreams of WaMu Dashed By Risky Loans*, Seattle Times, Sept. 21, 2008 at H1.

277. As explained in the *Seattle Times*, WaMu increasingly favored "low-documentation" loans, "lean[ing] more and more heavily on credit scores, which could be ascertained while the borrower was still on the phone." Nancy Erken, a WaMu loan consultant in Seattle, is quoted as stating that at WaMu at this time "the big saying was 'a skinny file is a good file.'" She also explained how she would try to document borrowers' ability to afford their loans

but that her experience was that when she would "take the files over to the processing center in Bellevue . . . . [T]hey'd tell me 'Nancy, why do you have all this stuff in here? We're just going to take this stuff and throw it out.'" DeSilver, *Reckless*, Seattle Times, *supra* ¶ 133 at A1.

278. In a 2005 memo obtained by the *Seattle Times*, WaMu risk managers were told they needed to "shift ways of thinking" so they would no longer be a "regulatory burden" on lending operations and instead act as a "customer service" to support growth. *Id.*

279. The *Seattle Times* further reported that Dale George, a senior credit-risk officer in Irvine, California attended an "all hands" meeting of risk managers where Melissa Martinez, WaMu's chief compliance and risk oversight officer, emphasized "the softer side of risk management." George explained that the message was: "They weren't going to have risk management get in the way of what they [production] wanted to do, which was basically lend the customers more money." *Id*.

280. WaMu Senior Mortgage Underwriter Keysha Cooper, who started at WaMu in 2003 and left in 2007, was quoted by the *New York Times* explaining that "[a]t WaMu it wasn't about the quality of the loans; it was about the numbers . . . . They didn't care if we were giving loans to people that didn't qualify. Instead it was 'how many loans did you guys close and fund?'" Cooper continued to explain how the pressure became intense in 2007 and admitted that "I swear 60 percent of the loans I approved I was made to . . . . If I could get everyone's name, I would write them apology letters." Gretchen Morgenson, *Was There a Loan It Didn't Like?*, N.Y. Times, Nov. 1, 2008 at BU1.

281. Another *Seattle Times* report quotes Mary Kay Morse, a 20-year veteran at WaMu whose job was to persuade independent brokers to make option ARM loans, stating, as to option-ARMs: "I hated that loan . . . . It's just not a good loan. It wasn't good for the borrower." She

continued that whereas at one time: "I always felt like I worked for a really honest industry that cared for the borrowers they dealt with," in her opinion the corporate culture had changed to: "[w]e just want to do the most we can to make money for the bank." David Heath, *Hometown Bank Turned Predatory,* Seattle Times, Oct. 26, 2009, at A1.

282. The reason for WaMu's adoption of these highly risky and unsuitable products was simple. As the *Seattle Times* explained:

> As demand [for traditional loans] waned, lenders tried to entice business by slashing profit margins on conventional mortgages, such as the 30-year fixed. WaMu's chief business was making home loans, yet it lost money on that segment in the third quarter of 2003.
>
> By November, WaMu had eliminated 4,500 full-time jobs in home lending and ousted the division head. By year's end, its mortgage business had shrunk with alarming speed, down by about half from the summer.
>
> After [Kerry] Killinger [WaMu's CEO] finished speaking, Chief Financial Officer Tom Casey got up and presented WaMu's solution.
>
> WaMu had other types of loans, such as subprime and home-equity lines of credit, that remained highly profitable. He noted there was even a specialty loan for borrowers with good credit that remained lucrative, the option ARM.
>
> As Casey explained it, the bank recently had beefed up its commissions and retrained its sales force to push option ARMs. In just the past few months, they had climbed from 15 to 35 percent of its mortgage business.
>
> The loan—mind-numbingly complex and highly risky for both the bank and its customers—originally was created for the savviest and most risk-tolerant of borrowers.

Heath, *supra* ¶ 281 at A1.

b. WaMu manipulated the appraisal process.

283. WaMu manipulated the appraisal process to inflate the reported value of real estate properties thereby artificially lowering the LTVs based on the appraisals. Multiple government investigations, including ones by the Senate Permanent Subcommittee on Investigations and the New York Attorney General's office, have examined the appraisal

practices of WaMu. The internal documents recently released to the public by these investigations reveal that: (1) appraisal fraud infected the origination of mortgages; and (2) WaMu actively pressured appraisers to inflate their appraisals or manipulated the appraisals themselves so that more loans could close and subsequently be securitized.

284. Internal WaMu documents released by the Senate Subcommittee on Investigations demonstrate that appraisal fraud infected its mortgage origination process. According to an internal WaMu memorandum presented at the April 2010 Senate Subcommittee hearing regarding a review of loans from 2003-2005, *78%* of the funded retail broker loans reviewed by WaMu's Risk Mitigation department were found to contain fraud that principally involved misrepresentation of loan qualifying data and appraisal issues.

285. One specific example of appraisal fraud for a WaMu originated loan involved an appraisal value for a property that apparently was based on both the value of the property *and the value of another house located in Mexico*. As WaMu's internal "Fraud Risk" PowerPoint notes, the inclusion of this additional house might explain why the appraisal value of $400,000 was so much higher than the $240,000 sales price of the property. Moreover, the appraisal omitted other important information, including that the property use was "illegal" because there was a third unpermitted unit on the property. This appraisal was not referred to an underwriter because the WaMu office manager waived the requirement for an underwriter to review the appraisal.

286. Another specific example for a WaMu originated loan involved an appraisal that contained false data regarding the subject property's site and building sizes as well as numerous warning signs that the appraisal was unreliable. The borrowers were refinancing a first mortgage that they had previously obtained from WaMu a year earlier. According to the Fraud Report, the appraisal contained multiple red flags. The property had appreciated in value by *90%* (from

$322,000 to $610,000) in a *single year*; the occupancy type was an investment property; the automated valuation model ("AVM") reflected a more probable value of $400,000. Further, the "comparables"—properties with characteristics similar to the appraised property—did not appear comparable; two out of the three "comparable" properties were located 3-4 miles away, and the comparable properties were given large upward adjustments in value to account for differences in design, functionality, square footage and lot size. Notwithstanding these warnings, the appraisal was not reviewed by underwriters. The Fraud Report also notes that the refinancing transaction was a "cash out refinance," and that the funds from this refinancing were needed *to close another loan that WaMu was processing for the borrower*. In other words, not one, but two transactions were dependent upon the appraisal coming in at value, even if that meant a 90% increase in the appraised value over the course of a single year.

287. Another internal document dated December 2006 states that "[WaMu subsidiary] Long Beach [Mortgage] represents a real problem for WaMu," and forwards the results of the "post-funding review team" tasked with reviewing, on a monthly basis, 275 loans within 15 days of funding. The review team identified, as a "top five priority" issue "[a]ppraisal deficiencies that could impact value and were not addressed." The review also emphasized that both the Corporate Credit Review department and the Senior Credit Officer Subprime were focused on "two key facts"—that "[t]he non accrual rate had increased year over year from 3.53% to 6.13%," and that "[o]n a vintage basis the deterioration was accelerating in recent vintages with each vintage since 2002 having performed worse than the prior vintage." As noted above, LTVs and a borrower's equity in his or her home are strongly indicative of a borrower's likelihood of defaulting. To the degree that inflated appraisals understate the LTVs, and overstate a

borrower's equity, one would expect to find increasing rates of non-accrual correlated with increasingly unreliable appraisals.

288. On November 1, 2007, the New York Attorney General filed *People v. First Am. Corp. and First Am. eAppraiseIT*, No. 46796/2007 (N.Y. Sup. Ct.) ("eAppraiseIT Compl."), alleging that eAppraiseIT colluded with WaMu to inflate the appraisal value of homes.

289. eAppraiseIT was one of two appraisal management firms hired by WaMu in the Spring of 2006 when WaMu decided to close its internal appraisal office. WaMu was eAppraiseIT's largest client, and on information and belief, eAppraiseIT performed appraisals for loans included in the loan pools for Certificates purchased by the Bank.

290. The New York Attorney General's complaint, which relies on multiple internal documents and emails—many of which have only recently become publicly available—demonstrates that WaMu actively encouraged the manipulation of appraisals to facilitate the origination of more and more mortgages for securitization. In 2009, the trial court denied eAppraiseIT's motion to dismiss, finding that the complaint sufficiently alleged a violation of New York law, "insofar as the intentional misleading of consumers in this state relating to the accuracy and independence of appraisals constitutes fraudulent and deceptive business practices that the [Attorney General] may seek redress for." *People v. First Am. Corp.*, 24 Misc. 3d 672, 682 (N.Y. Sup. Ct. 2009).

291. From its inception, the relationship between WaMu and eAppraiseIT was focused on undermining the appraisal process by pressuring appraisers to come in "at value"—provide appraisals that were equal to or greater than a property's purchase price in order for a transaction to close. WaMu's efforts to pressure appraisers included (1) excessive "Reconsideration of Value" requests to reconsider appraisals that were too low to permit a loan to be funded; (2)

demanding that "business managers"—many of whom were former WaMu employees—have the authority to overrule appraisals that were too low; (3) constantly complaining that appraisals by eAppraiseIT appraisers were lower than appraisals from eAppraiseIT's chief competitor; (4) making clear to senior management at First American (eAppraiseIT's parent company) that any expanded business relationship was contingent upon the "resolution" of the appraisal issue to WaMu's satisfaction; and (5) ultimately creating a blacklist designed to punish appraisers who failed to inflate their appraisals to come in "at value."

292. According to the New York Attorney General's complaint, and the internal documents referenced therein:

- WaMu retained eAppraiseIT in Spring 2006, after WaMu decided to close its internal appraisal office and terminate its staff appraisers. WaMu quickly became eAppraiseIT's largest client.

- From the beginning, WaMu possessed the ability to pressure eAppraiseIT's staff and third party appraisers to increase their valuations. WaMu had a contractual arrangement with eAppraiseIT whereby WaMu could challenge an independent appraiser's conclusions by requesting a "Reconsideration of Value," if WaMu disagreed with an appraisal. WaMu frequently ordered Reconsiderations of Value from eAppraiseIT.

- eAppraiseIT also hired approximately 50 former WaMu appraisers as eAppraiseIT staff appraisers and Appraisal Business Managers. At WaMu's request, these "business managers" were authorized to override and revise the values reached by staff and third party appraisers. According to a September 29, 2006 email from a WaMu executive to senior executives at eAppraiseIT, the business managers would be responsible for "proactively making a decision to override and correct the third party appraiser's value or reviewer's value cut, when considered appropriate and supported."

- Almost immediately after retaining eAppraiseIT, WaMu's loan production staff began to complain that eAppraiseIT's appraisals were too low. On August 9, 2006, eAppraiseIT's President informed WaMu executives that "[w]e need to address the [Reconsideration of Value] issue . . . . The Wamu internal staff we are speaking with admonish us to be certain we solve the [Reconsideration of Value] issue quickly or we will all be in for some pretty rough seas."

- The following week, eAppraiseIT's Executive Vice President informed eAppraiseIT's President that WaMu's loan officers would often pressure WaMu

internal appraisal field managers for a "extra few thousand," or "tell[] them specifically what they needed," or "would ask for several [Reconsiderations of Value] on the same property." According to the vice president, "[h]aving loan officers ask for a few thousand dollars because it is within the range is something we do not currently do for any client . . . . It is also direct pressure on the appraiser for a higher value without any additional information."

- During the latter part of 2006, WaMu repeatedly complained to eAppraiseIT regarding low appraisals. On December 2, 2006, an internal eAppraiseIT communication notes that "we know [WaMu is] going to complain about the excessive number of low values because the majority of orders are not going to [WaMu's] preferred appraisers."

- By December 2006, WaMu had reassigned all of its Northern California appraisal work to Lender Services, Inc. and away from eAppraiseIT. One eAppraiseIT executive told his colleagues that WaMu's criticism stemmed from the fact that "values are coming in lower with [eAppraiseIT]," than with Lender Services, Inc., its top competitor for WaMu work, and that "[t]he [WaMu] managers indicated that if the loan consultants had a choice they would prefer to use [Lender Services] over eAppraiseIT because they feel they will have less problem with the values."

- In addition to pressuring eAppraiseIT regarding low appraisals, WaMu also indicated to First American, eAppraiseIT's parent company, that WaMu would be open to expanding its business relationship with First American, provided the appraisal issues were "resolved." According to a First American executive, the President of WaMu mortgage told him that "if the appraisal issues are resolved and things are working well he would welcome conversations about expanding our relationship."

- In early 2007, WaMu directed eAppraiseIT to stop using panels of staff and third party appraisers to perform WaMu appraisals, and demanded that eAppraiseIT use "Proven Appraisers" selected by WaMu. The President of eAppraiseIT explained to First American executives the reason for this change: "Performance ratings to retain position as a Wamu Proven Appraiser will be based on how many come in on value, negating the need for a[] [Reconsideration of Value]."

- eAppraiseIT's President informed the First American executives that "we have agreed to roll over and just do it." The President of eAppraiseIT also wrote to WaMu's executives stating that "Wamu proven appraisers bring the value in a greater majority of time . . . . I am fine with that, of course, and will happily assign Wamu orders to Wamu proven appraisers instead of eAppraiseIT's approved panel appraisers whenever possible."

- Internal eAppraiseIT communications indicate that WaMu's *lending department* was in charge of selecting the preferred appraisers. An eAppraiseIT Appraisal Specialist contacted the Executive Vice President, the Chief Operating Office and

the Chief Appraiser about two "good, solid long-time wonderful appraisers" that were removed from the WaMu panel "for no apparent reason" after having "value issues." The Chief Appraiser informed him that "[t]he probability that a loan officer requested him to be removed is pretty high I think because that is what they did with the Master List; they sent it out to Lending to choose."

- eAppraiseIT was willing to accede to WaMu's demands that its lending department select its appraisers, despite knowing that these demands violated federal law and professional appraisal standards by compromising appraiser independence. eAppraiseIT's President expressly acknowledged that "[w]e view this [agreeing to WaMu's demands] as a violation of the OCC, OTS, FDIC, and USPAP influencing regulation."

293. In addition, documents that have only recently become publicly available demonstrate WaMu's efforts to manipulate the appraisal process.

294. The Bank has reviewed an August 10, 2010 affidavit by Peter Gailitis, a former Chief Appraiser for eAppraiseIT. Mr. Gailitis was promoted to Chief Appraiser in 2006, and was Chief Appraiser during the time period that WaMu outsourced its appraisal business to eAppraiseIT.

295. The Gailitis Affidavit indicates that from the beginning of eAppraiseIT's relationship with WaMu in Spring 2006, WaMu began pressuring eAppraiseIT appraisers to inflate their appraisals. (*Id.*, ¶¶ 5, 6) According to Mr. Gailitis, shortly after eAppraiseIT began performing appraisals for WaMu loans, Mr. Gailitis began receiving "many complaints" from WaMu managers over the "allegedly low values" being provided by eAppraiseIT appraisers. (*Id.* ¶ 6)

296. One of WaMu's primary methods for increasing appraisals was to flood eAppraiseIT with requests for Reconsiderations of Value. According to Mr. Gailitis, WaMu submitted considerably more Reconsiderations of Value than any other eAppraiseIT client, with the volume from WaMu loan officers reaching *four hundred* Reconsiderations of Value per month at one point. (*Id.*, ¶ 6) WaMu loan officers would file a Reconsideration of Value simply

because the appraised value of a property was too low for a loan to close, and use the Reconsideration of Value as a tool for obtaining a sufficient increase in value for the transaction to go forward. (*Id*., ¶ 6)

297. In addition to abusing the Reconsideration of Value process, WaMu also sought to use its considerable economic leverage to manipulate the appraisal process. Mr. Gailitis testified that WaMu was eAppraiseIT's largest client, and that WaMu management would pass along the complaints regarding low appraisals to eAppraiseIT management, along with a threatened loss of business if the complaints from WaMu's retail divisions did not stop. (*Id*., ¶ 7)

298. An internal email from David Feldman, the Executive Vice President of eAppraiseIT, to Anthony Merlo, the President, also makes clear that WaMu's manipulation of the appraisal process pre-dated its relationship with eAppraiseIT. (Aug. 15, 2006 email from Mr. Feldman to Mr. Merlo.) According to Mr. Feldman, WaMu had an "extra few thousand" policy under which loan officers would ask for, and apparently receive, increases in appraisals of a few thousand dollars if the inflated appraisal was still "within the range." Mr. Feldman emphasized that this was something that eAppraiseIT does "not currently do for any client," and that it constitutes "direct pressure on the appraiser for a higher value without any additional information." Mr. Feldman also noted that the WaMu staff he spoke with indicated that this "policy was abused in many ways including calling the [appraisal field manager] and telling them specifically what they needed," or asking for multiple Reconsiderations of Value on the same property (a practice that became so prevalent that the appraisal field managers began allowing only one Reconsideration of Value for free and then charging $175 for each additional one).

299. A fall 2006 email from eAppraiseIT President Merlo to executives at First American (eAppraiseIT's parent company) and WaMu further illustrates WaMu's efforts to manipulate the process and eAppraiseIT's concerns. (Sept. 13, 2006 email from Mr. Merlo to Mr. Sando.) Mr. Merlo's email forwards various instances of WaMu pressure on appraisers, including WaMu production staff regularly contacting appraisers to "argue and often berate them" over their appraisals, or informing appraisers that if they do not increase their valuations, the appraisal request will be given to another appraiser to get the appropriate "price." Mr. Merlo warns that these efforts to pressure appraisers are "getting outrageously unethical and now borderline dangerous," and he implores WaMu's executives to "respond [with] what you will do to have this stopped within the WaMu organization." As Mr. Merlo candidly acknowledges, WaMu's actions are "pure pressure to commit fraud."

300. Notwithstanding President Merlo's concerns, WaMu continued its efforts to manipulate the appraisal process. In April 2007, eAppraisetIT expressed concern that WaMu loan production staff had "a great deal to do with selecting appraisers," which was "directly in contradiction" with the interagency guidelines adopted by the OTS, the agency responsible for regulating WaMu. (Apr. 17, 2007 memo to WAMU Oversight Team)

c. WaMu engaged in reckless lending.

301. At WaMu, mortgage originators were paid more for originating loans that carried higher profit margins for WaMu and had commensurately higher risk. As James G. Vanasek, WaMu Bank's former Chief Credit Officer/Chief Risk Officer, testified to the Senate Permanent Subcommittee on Investigations:

> Because of the compensation systems rewarding volume vs. quality and the independent structure of the loan originators, I am confident that at times borrowers were coached to fill out applications with overstated incomes or net worth adjusted to meet the minimum underwriting policy requirements.

In a document entitled "2007 Product Strategy," WaMu noted that it must "maintain a compensation structure that supports the high margin product strategy." The *Seattle Times* reported how a 2007 compensation grid revealed that "the company paid the highest commissions on option-ARMs, subprime loans and home-equity loans. A $300,000 option ARM, for example, would earn a $1,200 commission, versus $960 for a fixed rate loan of the same amount. The rates increased as a consultant made more loans. . . ." DeSilver, *Reckless*, Seattle Times, *supra* ¶ 133. Likewise, a WaMu "Retail Loan Consultant 2007 Incentive Plan" explained that "[i]ncentive tiers reward high margin products... such as the Options ARM, Non-prime referrals and Home Equity Loans . . . ."

302. In April 2010, the Senate Permanent Subcommittee on Investigations held a series of hearings into the causes of the financial crisis. The Senate Subcommittee concluded that WaMu often steered borrowers into home loans with low initial payments they could afford only in the short term, if at all, presuming that rising home prices would enable those borrowers to refinance or sell their homes before the loan payments increased beyond a level they could not afford. Internal compensation schemes encouraged such conduct because loan officers and loan processors were rewarded for originating high risk loans and for placing borrowers in high interest loans with large prepayment penalties.

303. The details of how WaMu paid brokers to press borrowers into buying unsuitable loans at high interest rates, and often pressured borrowers to refinance from a fixed rate loan into a variable rate loan with higher interest rates, is illustrated by the story of Bob Houk:

> Usually, Bob Houk's wife handled the family's money matters. But after being diagnosed with a brain tumor, she was in and out of the hospital, so he took over. In late 2006, he received a postcard with WaMu's logo on it.
>
> Houk already had a 30-year WaMu mortgage at a fixed rate of 4.6 percent. But the postcard promised to lower the monthly payments on their Bainbridge Island home with an adjustable-rate mortgage starting at only 1 percent interest.

He liked the idea of cutting expenses. A son was in college, his wife was on disability from her job as a nurse, and Houk, a physician assistant at Group Health, worked only part time to be at her side.

Houk called the number on the card, reached an independent mortgage broker in California, and made all the arrangements over the phone. Soon someone came to his house with papers to sign. Houk was impressed at how easy the process was.

But a couple of months later, Houk noticed something on his monthly statement that gave him a sick feeling. Instead of one low monthly payment, there were now options. His minimum monthly payment of only $1,018 was there. But there were also higher-priced options for paying interest only or for paying interest and principal. Just covering the interest that month would cost him about $1,000 more.

The 1 percent interest rate Houk thought he was getting was only good for the first month. It had reset to 7.4 percent, nearly 3 percentage points above his previous WaMu loan. This was buried in the fine print in a sheaf of legal documents he had signed. "Who in their right mind would give up a 4.6 percent loan?" Houk said. "I felt totally duped."

Houk said he called Washington Mutual, but the woman he talked to said nothing could be done. WaMu just gets the loan from the broker, he recalled her saying, so the bank's not responsible.

To drum up customers for these overpriced loans, WaMu offered hefty commissions to its sales force.

Loan officers working inside WaMu were rewarded with higher commissions for signing up a borrower for an option ARM rather than a conventional loan.

But WaMu made the vast majority of its option ARMs through its network of independent mortgage brokers. They worked in a loosely regulated industry. In many states, the job required no education, no background check and no oversight. While there are reputable brokers, the industry suddenly attracted a motley crew, who could make six figures in a year in commissions.

WaMu did not reward brokers for getting its customers the best deal. Just the opposite. The worse the terms were for borrowers, the more WaMu paid the brokers.

A WaMu daily rate sheet obtained by The Seattle Times shows how lavish the rewards could be. On an option ARM, WaMu would reward brokers as much as 3 percent of the loan amount—more than triple the standard commission at the time.

> Brokers would get an additional point—1 percent of the loan—for roughly every half-point in higher interest the borrower paid. So the broker would get 3 percent of the loan if he could get the borrower to pay 1.5 percent above the market rate.
>
> WaMu could afford to pay such high commissions, called "yield spread premiums," because the money actually came from the borrower in the form of higher interest rates and prepayment penalties.
>
> Houk's broker, for example, got paid a commission of $9,498 on a $316,000 loan, according to loan documents.

Heath, *supra* ¶ 281 at A1.

304. Of particular note among the many other cases against WaMu with regard to its loan origination practices, in September of 2010, Deutsche Bank National Trust Company, in its capacity as a trustee, filed suit alleging breach of contract and seeking a declaratory judgment and damages over 99 different trusts created, sponsored and/or serviced by WaMu, and which included loans originated by WaMu. *See* Am. Compl., *Deutsche Bank Nat'l Trust Co. v. FDIC*, No. 09-cv-1656-RMC (D.D.C. Sept. 8, 2010). The allegations in Deutsche Bank's complaint are very similar to the ones made by the Bank here. These allegations include that WaMu engaged in "shoddy lending practices," "performed inadequate underwriting," and securitized "delinquency prone and fraudulent loans." The trustee's contract claim is based on numerous breaches of representations and warranties, that the loans were written in accordance with the seller's underwriting guidelines as described in the prospectus supplement, that appraisals were conducted generally in accordance with WaMu's underwriting guidelines, that the LTV for each mortgage loan was no greater than 100% at the time of origination, and that "to the best of the seller's knowledge, no misrepresentation, negligence, fraud or similar occurrence with respect to a Mortgage loan has taken place on the part of any person, including without limitation, the Mortgagor, any appraiser, builder or developer, or any other party involved in the origination of the mortgage loan."

d. Confidential witnesses provide further evidence of WaMu's failures to adhere to sound underwriting practices and manipulation of the appraisal process.

305. Confidential witnesses such as CW-D provide further evidence that WaMu abandoned sound underwriting practices. CW-D worked at WaMu from 1987 until the fall of 2006. During her time at WaMu, CW-D held such positions as personal financial manager, assistant branch manager, and branch manager. In these capacities, CW-D worked in consumer lending, including loan origination.

306. CW-D saw many "stated income" loans at WaMu. If the borrower had false documents or if CW-D believed that the borrower's income would not be high enough (as evidenced by paystubs) to qualify for a loan, CW-D would instruct the borrower not to show her the documents and she would simply offer a "stated income" loan.

307. CW-D also said that WaMu underwriters frequently made exceptions on the loans in order to approve them; moreover, she knew who the "lenient" underwriters were and would direct her loans to them so that they would be approved. CW-D used different tactics in order to get loans approved by the underwriter; for example, she would write the documents up in a special way so that the loans would always be approved, even if a borrower was not strong enough to otherwise qualify.

308. Even if loans were declined by certain underwriters, CW-D said she could always ask for the loan to be reviewed again. Sometimes she would call the borrower to tell them why a loan was denied, and the borrower would come back with new facts or new documentation. According to CW-D, there was a lot of "fudging" that took place in those situations.

309. CW-D also confirmed that during the time period she was employed at WaMu, including 2005 and 2006, appraisals were manipulated to reach a value necessary for the loan to close. CW-D would order appraisals from the WaMu appraisal department by saying "this is

what I need," or "this is what the customer thinks it's worth." CW-D was trained to forward all information on the application to the appraisers, including the homeowner's estimate of value, even if the estimated home value looked high. The FDIC's Office of Inspector General has found this practice to be inconsistent with "standard residential appraisal methods" because providing the homeowner's estimate of the value of the home to the independent appraiser biases the appraiser's evaluation. (Evaluation of Federal Regulatory Oversight of Washington Mutual Bank at p. 11, Report No. EVAL-10-002 (April 2010)). Pursuant to USPAP Rule 1-2(b), appraisers must not allow the intended use of an assignment or a client's objectives to cause the assignment results to be biased.

310. While CW-D normally submitted appraisal requests to the appraisal department for a coordinator to handle, CW-D could, and did, request specific appraisers if she needed a certain value in a certain neighborhood. CW-D knew the appraisers' reputations for being high or low with respect to certain neighborhoods, and she used that knowledge in requesting certain appraisers in order to get the value the client needed for the loan to close.

311. If an appraisal came back lower than what was needed to close the deal, CW-D had several options available to increase the appraisal. If the appraisal was close to the required value, CW-D would call the appraiser and negotiate for a higher number. For some of the time CW-D worked at WaMu, the appraisal department was either in the same building or across the street, which allowed CW-D to walk to the appraisal department and directly negotiate with the appraisers to see what could be done to increase the value of the appraisal so the loan could close.

312. If the appraisal was significantly lower than the required value, CW-D would tell the customer to find additional comparable properties within a two-mile radius to justify

increasing the appraisal value, even though standard practice generally required a comparable to be within a one mile radius of the property. If there were not any comparables within a two-mile radius that would justify an increase, the customer would pull higher value comparables from even farther afield.

313. In addition to CW-D, CW-FF provided additional evidence confirming the manipulation of appraisals by WaMu. CW-FF was a staff appraiser at eAppraiseIT from 2002 until February 2007. CW-FF appraised homes for a variety of lender who used eAppraiseIT's services, including WaMu.

314. According to CW-FF, after WaMu closed its in-house appraisal department and chose eAppraiseIT as one of its two preferred appraisal management companies, eAppraiseIT hired several former WaMu appraisers to serve as "business managers." These business managers supervised the eAppraiseIT staff appraisers and were also "in contact" with WaMu loan officers.

315. According to CW-FF, prior to WaMu retaining eAppraiseIT, the eAppraiseIT staff appraisers were left alone and were not routinely pressured to increase values. After eAppraiseIT hired WaMu's former appraisers as managers, they pressured everyone, including CW-FF, to increase appraisal values. Beginning in approximately mid-2006, CW-FF began reporting to a business manager in Arizona. CW-FF's manager was in touch with WaMu loan officers who complained about CW-FF's low valuations on refinancing transactions. CW-FF's manager then called her, advised her of the complaints, and informed her that she was tired of getting complaints from the loan officers about CW-FF's low values.

316. CW-FF's manager constantly pressured her to increase values by modest amounts, telling her that "just a couple thousand more and the loan would go through," or

"[t]here's got to be something you're not looking at." In many instances, CW-FF's manager would tell her that WaMu had requested she look at other comparables that simply were not comparable, and force CW-FF to explain why the comparables WaMu identified were not appropriate. CW-FF estimates that this occurred for 75% of the appraisals she performed for WaMu.

317. CW-FF eventually asked not to be assigned any WaMu appraisals, despite the fact that roughly 50% of her workload was WaMu transactions. While eAppraiseIT had other clients, her business manager nevertheless informed her that she "wouldn't get any work." In February 2007, CW-FF left eAppraiseIT. Based on CW-FF's experience, "eAppraiseIT prostituted themselves for WaMu. I can't understand why they didn't treat WaMu like any other lender."

318. The statements of CW-JJ also confirms the pressure that WaMu exerted on eAppraiseIT and the appraisers working for eAppraiseIT. CW-JJ is an independent real estate appraiser who received assignments from WaMu through eAppraiseIT. CW-JJ believes that he performed work for WaMu between approximately November 2005 and April 2007. CW-JJ stated that after WaMu closed its in-house appraisal department, a former WaMu appraiser was hired by eAppraiseIT to serve as his district or regional manager. CW-JJ also noted that many former WaMu staff appraisers were hired in similar manager capacities at eAppraiseIT.

319. According to CW-JJ, "within the individual purview of the district manager, it was commonplace for them to come back for revision or reconsideration [of an appraisal]. It was understood that when they asked, you complied." CW-JJ believes that as a conservative estimate, 10% of the reports he wrote for WaMu resulted in a value adjustment that CW-JJ made at the request of the eAppraiseIT manager.

320. CW-II and CW-HH explained what occurred if an appraiser refused to bow to WaMu pressure. CW-II was an independent appraiser that received assignments through eAppraiseIT, LSI, and directly from WaMu. CW-II was placed on WaMu's list of "approved appraisers," and estimates that around 75% of her appraisals were for WaMu.

321. CW-II recalls being pressured by WaMu to increase appraisal values on several occasions, and she believes that this pressure occurred between November 2005 and April 2007. CW-II would be told that she was missing the sales price by a small amount, and that because the market was going up, her appraisal should also increase. On one occasion, an appraisal was reassigned from CW-II to a staff appraiser because her appraisals were too conservative.

322. CW-II was ultimately removed from the "approved appraiser" list because of her view that the market was declining in value. The standard appraisal form that CW-II used included a section on market condition, and required appraisers to check a box indicating whether market values were stable, increasing, or decreasing at the time the appraisal was made. Sometime between November 2005 and April 2007, CW-II indicated that property values were decreasing. According to CW-II, this was a "big no-no," because if the market was in decline, WaMu would not be able to resell the loan on the secondary market, or if they did, the loan would have to be discounted. WaMu "hassled" CW-II for her conclusion, and a WaMu employee even called her to try to convince her that market values were not declining. WaMu subsequently removed CW-II from the approved appraiser list—informing her via a telephone call—and she never received work from WaMu again.

323. CW-HH is an independent appraiser and has prepared appraisals for a variety of lenders, including WaMu. In the spring of 2006, in connection with a WaMu loan application, CW-HH appraised a home for $2.2 million. While CW-HH's supervisor reviewed the appraisal,

and agreed with the valuation, a WaMu staff appraiser subsequently sent CW-HH a letter indicating that she disagreed with the valuation, and was increasing it by $500,000 to $2.7 million. CW-HH was confident that his appraisal was accurate, in part because it was based on comparable properties on the same street as the subject property, and contacted WaMu's chief appraiser in the area to express his concerns about the inflated appraisal. Far from being concerned, WaMu's chief appraiser informed CW-HH that WaMu "could change the value to anything it wanted."

324. After this incident, CW-HH's assignments for WaMu decreased, even though he believed he remained on the "panel" of preferred appraisers. CW-HH also recalls an instance where a WaMu appraisal was assigned to him, only to be reassigned thirty minutes later at the request of the WaMu loan officer, who believed that CW-HH was "too conservative." According to CW-HH, this behavior was "typical"—it was either "their way or the highway."

325. CW-GG also confirmed that the time pressures placed on auditors hurt the quality of the loan review. From 2005 to early 2006, CW-GG was a senior staff appraiser at WaMu. CW-GG's position was eliminated in 2006 when WaMu eliminated its in-house appraisal department, but CW-GG rejoined WaMu in 2007 as an appraisal reviewer in the quality control department.

326. According to CW-GG, WaMu senior staff appraisal reviewers had to meet volume quotas that harmed the quality of their reviews. While CW-GG is not sure of the exact quota, he believes that "front-end" reviewers were required to review 20 appraisals per day, in contrast to quality control reviewers who were only expected to review 8 to 10 appraisals per day. CW-GG explained that "front-end" appraisals had an effect on production in that they were required to fund loans, whereas no one relied on quality control's appraisals for funding.

327. As a quality control review appraiser, CW-GG saw many fraudulent appraisals in approved WaMu loans. CW-GG estimates that a very high number, probably 15-20% of the appraisals he reviewed were inflated or fraudulent. Although most of the fraudulent appraisals were of collateral securing loans approved by Washington Mutual origination subsidiary, Long Beach Mortgage, CW-GG also saw many fraudulent appraisals in approved WaMu loans, as well. According to CW-GG, "the problem was on the lending side of the business. It was pure greed," fostered by a desire to make as many loans as possible.

328. CW-GG also explained that WaMu implemented an appraisal tracking and review system called OPTISValue. OPTISValue reviewed an appraisal for key characteristics, and if those characteristics were satisfied, it could approve the appraisal. WaMu could change the key characteristics that the OPTISValue system used to determine whether an appraisal would be approved or flagged for secondary review. CW-GG believes that as time went on, the key characteristics were loosened because, as a lender, WaMu wanted "to get everything approved." According to CW-GG, while OPTISValue was initially designed from a risk standpoint, it was geared towards "cookie cutter loans," and was not designed to catch fraud. For this reason, there were red flags in loan applications that a human appraiser or underwriter would have caught, that OPTISValue would not.

329. Another Confidential Witness, CW-EE, confirmed the flaws in the OPTISValue program. CW-EE was a senior staff appraiser at WaMu from 1999 until September 2006.

330. Prior to 2002, WaMu administrative staff reviewed appraisals using checklists to assist them in finding risky characteristics that warranted further review by a certified appraiser.

331. Starting in 2001 or 2002, WaMu began automating its appraisal review process by using OPTISValue. After 2002, all appraisals were automatically reviewed by the OPTISValue

system. OPTISValue performed the initial appraisal screening that humans had previously done, thus eliminating human involvement from the first stage of review, and creating a system where certain appraisals would be automatically approved without ever being reviewed by a person.

332. According to CW-EE, OPTISValue automatically approved a huge percent of appraisals; CW-EE estimates that more than 50% of all appraisals sent to WaMu were never looked at by a human. Both in-house production appraisers and fee appraisers knew that if "they came in with a value that worked"—a value that was equal to or greater than the purchase price—their appraisal would never be questioned because OPTISValue would approve it without any review. The use of an automated system, coupled with increasingly relaxed appraisal standards, resulted in inflated appraisals. CW-EE recalls seeing a "whole bunch of appraisals with inflated values," and was aware of loans that were supported with inflated or otherwise fraudulent appraisals that were still approved.

333. The confidential witness statements quoted above demonstrate that WaMu routinely accepted—in fact demanded—appraisals that were conducted in violation of USPAP standards. Because WaMu insisted upon certain results, negotiated results with appraisers, and pressured appraisers to increase values, the resulting appraisals simply were not performed with "impartiality, objectivity, and independence" as required by the USPAP Ethics Conduct Rule. Instead, appraisers routinely allowed the "intended use of an assignment or a client's objectives to cause the assignment results to be biased" in violation of the USPAP Scope of Work Acceptability Rule. Additionally, by threatening appraisers regarding the availability of future work and removing appraisers from the list of accepted appraisers, WaMu forced appraisers to violate the USPAP Ethics Management Rule, which precludes the acceptance of assignments that are contingent upon either "the reporting of a predetermined result" or "a direction in

assignment results that favors the cause of a client." Ultimately, the systemic coercion of appraisers caused a fundamental violation of USPAP Standard 1, which requires that appraisers "correctly complete research and analyses necessary to produce a credible appraisal." As discussed in public reports and confirmed by confidential witnesses, WaMu's appraisal abuse was standard operating procedure.

e. The mortgages originated by WaMu and securitized in the PLMBS purchased by the Bank provide further evidence of WaMu's abandonment of sound underwriting practices.

334. WaMu originated the mortgages that secured at least 3 securities purchased by the Bank. As discussed in detail below, the Offering Documents contained serious material misstatements and omissions regarding specific characteristics of the loan pools securing these Certificates, including misstatements with respect to their weighted average LTVs and the percentages of loans with LTVs in excess of 100%, 90% and 80%, and the failure to disclose the compounded high-risk mortgages that infected the loan pools. Moreover, as described in paragraphs 592-593 below, these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of WaMu's failure to observe its stated underwriting standards. WaMu's actual practices—including use of unreliable and biased collateral valuations in lieu of appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTVs were far different from those reported in the Offering Documents. As a result, the likelihood of default for these loans was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

335. In summary, far from following its underwriting guidelines and making occasional, targeted and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, variance from the stated standards was in fact the norm at WaMu,

and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of WaMu's pervasive and systematic disregard of its stated underwriting guidelines and its failure to adhere to standard appraisal practices.

5. Wells Fargo

336. Wells Fargo originated underlying mortgage loans securing at least six of the PLMBS purchased by the Bank.

a. Investigations, lawsuits and confidential witness statements demonstrate that Wells Fargo abandoned underwriting guidelines.

337. In denying in part a motion to dismiss in *In re Wells Fargo Mortgage-Backed Securities Litigation*, No. 3:09-1376 (N.D. Cal.) ("*Wells Fargo* Complaint"), the court found that plaintiffs had adequately pled that "variance from the stated [underwriting] standards was essentially [Wells Fargo's] norm" and that this conduct "infected the entire underwriting process."

338. The *Wells Fargo* Complaint is supported by numerous confidential witness statements substantiating the allegations that Wells Fargo abandoned underwriting guidelines, increasingly made exceptions without compensating factors, sacrificed underwriting standards to loan volume, and manipulated loan information in order to close loans without regard to borrowers' ability to repay the loans.

339. Confidential witnesses contacted in connection with the Bank's investigation provide additional evidence of Wells Fargo's repeated failure to adhere to sound underwriting practices and guidelines. Statements by confidential witnesses confirm that: (a) Wells Fargo underwriters faced intense pressure to close loans at any cost; (b) Wells Fargo increasingly approved risky, low- or no-documentation loans without adequate review; (c) Wells Fargo

routinely approved loans that contained exceptions for which there were no reasonable compensating factors; (d) Wells Fargo employees approved loans with inflated appraisal values; and (e) Wells Fargo employees manipulated data in order to close loans.

340. Confidential witnesses include CW-E, CW-F, and CW-LL. CW-E worked as an underwriter at Wells Fargo for five years and left the company in approximately 2006. She helped start one of Wells Fargo's wholesale lending offices. The wholesale lending office received mortgage applications from various brokers in the area and then underwrote, approved, and funded such mortgages. CW-F was an underwriting manager at a Wells Fargo branch in California from 2004 until late 2007, when Wells Fargo closed the branch. The branch was a "MAP" center, which was a location where Wells Fargo loans were registered, underwritten, processed, closed, and shipped out for sale in pools. CW-LL was a quality control specialist at Wells Fargo Mortgage in Maryland from January 2004 through August 2005. CW-LL audited conventional mortgage loan files from all over the United States that had already been through Wells Fargo underwriting, but which had not yet closed. CW-LL was one of five quality control specialists in the office who evaluated the work of underwriters "to make sure they were underwriting correctly."

341. CW-LL noticed an increase in the number of exceptions made in loan files, "when the sales numbers weren't where they were supposed to be at the end of a month." In such cases, CW-LL said, Wells Fargo granted more exceptions to meet sales goals. "The sales force was driving the business, as opposed to underwriting management doing the driving . . . . It came down to volume and keeping up with our lender peers and getting market share." And according to CW-F, officers and underwriters at Wells Fargo received commissions and/or bonuses based on the number of loans closed.

342. Among Wells Fargo's abuses of underwriting standards, confidential witnesses detailed a practice of approving risky loans based upon little or no documentation. CW-E explained that underwriters at Wells Fargo's branches used two Automated Underwriting Systems (often, "AUS"), which were pre-programmed with the minimum credit scores, LTVs and DTIs, cash reserve levels, and documentation levels needed for the borrower to qualify for the various mortgage products that Wells Fargo offered. If these AUS returned an "approve" or "accept" result, then Wells Fargo typically approved the application and funded the mortgage. CW-E commented that she was skeptical of the "approvals" that came from the AUS, and often thought to herself, "How did it approve *this*?" The systems approved borrowers who "never should have been approved."

343. For example, the AUS would approve a borrower with recent late payments, a 50-55% DTI, a 650 credit score, and no cash reserves. CW-E would have questioned such an application. However, so long as the AUS approved the loan, the underwriters in Wells Fargo's branches were not required to look any deeper. In CW-E's view, the integrity of mortgage origination "all fell apart when the AUS became the standard." She explained that by the mid-2000s, when the AUS were being relied upon almost exclusively, she no longer agreed with the loans that were being approved because the underwriting guidelines had become so loose.

344. CW-LL described 2004 and 2005 as the era of "creative financing programs" at Wells Fargo such as no-doc and stated income loans. "It was a free-for-all at that point. You would see a file where a janitor was stating he made $5,000 a month and his debt ratio was right where our cut-off was. CW-LL said that it was obvious that a loan officer, who would have been aware of the debt ratio required for loan approval, had either "filled out the paperwork or coached the borrower." When CW-LL inquired about facts like this, he was told "there were

compensating factors like a good FICO score or stated assets of $10,000 or something like that." However, "there was no way to verify it."

345. CW-LL saw exceptions to underwriting guidelines involving business tax returns. For example, if lending guidelines required three years of business tax returns, a borrower might provide just two years of such returns, and Wells Fargo would waive the requirement for providing documents for a third year.

346. According to CW-E, her superiors at Wells Fargo "didn't want to hear" her concerns about mortgages being approved for borrowers with questionable credit, high debt levels, high LTVs, or minimal cash reserves. Throughout her time with Wells Fargo, the origination and underwriting emphasis was completely sales-oriented. According to CW-E, the motto at the company was "sales rules," and underwriters had no say in the kinds of borrowers that the AUS approved.

347. The only time human underwriters were involved in the underwriting process was when the AUS recommended a loan for "refer" instead of "accept." A result of "refer" meant that the application did not meet the underwriting guidelines programmed into the AUS. These loans required manual underwriting, and most of the time they were still approved.

348. CW-E stated that underwriters at Wells Fargo were pressured to approve applications on which the AUS returned a "refer" result because "sales rules." Underwriters were pressured to approve the loans because if they did not, they were at risk of suddenly being fired. As stated by CW-E, "The loan officer or broker would go to the Operations Manager and complain, and suddenly people [underwriters] were no longer there." Additionally, underwriters received e-mails directly from the outside mortgage brokers or loan officers indicating that they weren't happy with the underwriter's decision not to approve an application. Many mortgage

brokers expected the underwriter to approve all of his or her loans. In general, CW-E stated that the mortgage brokers and loan officers "learned how to get away with what they needed in order to get the loans approved."

349. CW-E explained that, in deciding whether to approve loans, underwriters disregarded whether the borrower had the ability to repay the loan: "We were just supposed to ignore all the warning signs." Thus, even for government loan programs for which LTVs were often in the range of 95-100%, FICO scores were as low as 550 to 560, DTIs were as high as 55%, and cash reserves were only required "sometimes." Many of the conventional loans that CW-E underwrote between 2004 and 2006 were stated income/stated asset or no-income/no-asset loans.

350. Confidential witnesses also described Wells Fargo's standard practice of approving exceptions that deviated from prudent underwriting guidelines. According to CW-F, about 30-40% of the time, Wells Fargo loan officers issued exceptions to underwriting guidelines on loans that otherwise would have been rejected.

351. CW-F noticed that the exceptions that Wells Fargo granted increased in late 2006 or early 2007, in conjunction with Wells Fargo's decision to tighten its underwriting guidelines. Wells Fargo's sales staff could not understand why a loan that would have been approved the prior year could not be approved in the current year, and did not accept the tightened guidelines. According to CW-F, the sales staff "wouldn't take 'no' for an answer," and therefore placed tremendous pressure on the Wells Fargo underwriters to approve their loans. Even where the Wells Fargo underwriters would deny requests for exceptions, Wells Fargo's sales staff would take their loans to lead underwriters and risk managers to have the decisions overridden.

According to CW-F, the increase in exceptions countered Wells Fargo's efforts to tighten the underwriting guidelines.

352. Evidence also exists that Wells Fargo employees also manipulated loan data in order to close loans and generate volume. For example, CW-F was aware of circumstances in which loan files were doctored by sales staff in order for the loans to be approved.

353. Confidential witnesses also detailed how mortgages approved by Wells Fargo were based upon inflated appraisal values. According to CW-E, the outside mortgage brokers who brought the loans to her branch for approval chose the appraisers that they wanted to use. The outside brokers, loan officers, and appraisers all had a vested interest in the appraised value being accepted and the mortgage application being approved by Wells Fargo, since they all made money off of the transaction. Consequently, they all had a "let's make a deal mentality" about reaching an appraisal value that supported the amount of the mortgage loan.

354. CW-CC has been a licensed appraiser in Washington since 1992. In the spring of 2007, CW-CC was given an assignment by Rels Valuation—the appraisal management firm used by Wells Fargo—to appraise a home on the outskirts of Seattle. CW-CC's appraisal noted that the house was being remodeled, that the remodel was incomplete, and that the house was consequently not habitable. After submitting his appraisal, CW-CC was contacted by both Wells Fargo underwriters and Rels customer service representatives, ordering him to change his appraisal to state that the house remodel was complete. This pressure culminated with CW-CC receiving a phone call from a Rels Valuation Area Manager informing him that "you appraisers take USPAP [the uniform appraisal standards] too seriously," and that if CW-CC failed to alter his appraisal, he would be blacklisted. When CW-CC refused on the grounds that changing the

appraisal would violate appraisal standards, he was blacklisted and ceased receiving work from Wells Fargo.

355. CW-DD, who formerly worked as a review resolution coordinator for Rels Valuation from February 2007 to July 2010, confirms the problematic nature of the appraisal process. According to CW-DD, Wells Fargo had an unwritten "Five Percent Rule," whereby if a Rels review appraiser came up with a new value that was within 5% of the original value, the higher value was automatically accepted.

356. CW-DD also stated that from the beginning of his tenure at Rels in 2007, until the implementation of the new Federal Home Valuations Code of Conduct in 2009, pressure from Wells Fargo officers occurred quite frequently, with CW-DD receiving at least one call a day from a review appraiser complaining that a Wells Fargo loan officer contacted him or her directly. CW-DD also sat near 18 review resolution analysts that were tasked with resolving appraisals in which the original appraiser and the review appraiser could not agree on the value. On multiple occasions, CW-DD recalls a Rels national review manager arguing with the review analysts and telling them what he believed was the correct value. CW-DD believes that this constituted undue pressure on review analysts. According to CW-DD, "[o]n the one hand the review manager was trying to run a delicate balancing act with the client, Wells Fargo. But on the other hand, you have to draw the line. Most of the stuff that I saw I felt like it was a little over the line."

357. CW-DD also emphasized that not every appraisal ordered by Rels Valuation for Wells Fargo was reviewed by human eyes. Rels relied on a computer program, called ACE, to identify problematic appraisals. While the system caught clerical errors or omissions, appraisals

containing "egregious violations of USPAP" were sometimes not identified until after the loan had closed.

b. The mortgages originated by Wells Fargo and securitized in the PLMBS purchased by the Bank provide further evidence of Wells Fargo's abandonment of sound underwriting practices.

358. Wells Fargo originated mortgages that secured at least Securities GSR 2006-AR1 2A3, GSR 2005-1F 3A1, WFMBS 2007-10 1A10, WFMBS 2006-10 A7, WFMBS 2007-4 A16, WFMBS 2007-11 A2. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90% and 80%, the percentage of loans secured by property not the primary residence of the borrower, and the percentage of loans originated using full documentation. Moreover, as described in Paragraphs 592-593 below, these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of Wells Fargo's failure to observe its stated underwriting standards. Wells Fargo's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

359. Thus, far from following its underwriting guidelines and making occasional, targeted and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, variance from the stated standards was the norm at Wells Fargo, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay.

Nowhere did any Offering Document apprise the Bank that Wells Fargo abandoned its underwriting guidelines.

6. American Home Mortgage

360. American Home Mortgage ("AHM") originated underlying mortgage loans for at least two of the PLMBS purchased by the Bank. AHM also abandoned sound underwriting practices.

a. Investigations, lawsuits and confidential witness statements demonstrate that AHM abandoned sound underwriting practices.

361. The *Wells Fargo* Complaint details how an internal AHM "Credit Update" presentation dated from October 2005 detailed revised credit factors to be used in making loans to high risk borrowers. The Credit Update sets forth the new "guideline interpretations" under a heading "Where We Are Now" which included:

- Not requiring verification of income sources on stated income loans;
- Reducing the time that need have passed since the homeowner was in bankruptcy or credit counseling;
- Reducing the documentation required for self-employed borrowers; and
- Broadening the acceptable use of second and third loans to cover the full property value.

These new guideline interpretations, which were not disclosed in the Offering Documents, relaxed substantially, or sometimes rendered meaningless, AHM's prior underwriting guidelines.

362. The *Wells Fargo* Complaint specifically identifies an internal AHM email sent on November 2, 2006, from Steve Somerman, an AHM Senior Vice President of Product and Sales Support in California, stating that AHM would make a loan to virtually anyone, regardless of the borrower's ability to verify income, assets or even employment. The email specifically urged loan officers to make stated income loans, no income loans, no asset loans, and "No Doc" loans.

363. Confidential witness statements confirm this policy and practice at AHM. As these confidential witnesses attest, at AHM underwriting guidelines were benchmarks against which exceptions were routinely granted; they were not "strict rules."

364. CW-KK was a senior underwriter at AHM in New York from 2000 through 2007. As an underwriter at AHM, CW-KK handled a lot of "No Income, No Asset" loans, known as "NINAs," as well as No Doc loans, which required little documentation or verification. Under the company's underwriting guidelines, these loans were supposed to have certain credit scores, assets, and post-closing reserves in order to be approved.

365. Notwithstanding these supposed underwriting guidelines, CW-KK confirmed "it was a given" that AHM would make exceptions to the underwriting guidelines. The mortgage aggregators or sponsors to whom AHM sold the loans were aware that these guidelines were being abandoned, and were usually willing to accept the risk.

366. "If the file was creditworthy other than the exception, American Home Mortgage got it approved," CW-KK said. A required credit score, asset amount or reserve level could be waived by the company and those to whom it sold the loans. "They were guidelines at the end of the day; they weren't strict rules."

367. CW-KK said that loans he did not believe were creditworthy, and which he rejected, were passed on to his managers. His managers would frequently approve those loan files.

368. CW-MM worked as an underwriter at American Brokers Conduit, a wholesale originator that was a division of American Home Mortgage Investment Corporation, in its Charlotte, North Carolina office from June 2006 to August 2007.

369. CW-MM was expected every day to review five residential home loans originated by independent brokers. "There was a push in the wholesale office to get loans closed," CW-MM said.

370. CW-MM objected to closing loans that lacked documentation, such as documentation of sufficient income or asset verification. Her supervisor derided her for being such a stickler. "She felt like I over-scrutinized the loans," CW-MM said. "I thought that was what was needed." CW-MM also said that her supervisor did not like it when CW-MM rejected a loan because it failed to meet guidelines. Her supervisor sometimes would override her decisions.

371. CW-MM was verbally reprimanded for rejecting too many loans. "I was spoken to more than once because I would not approve loans that did not meet the guidelines."

372. CW-MM also saw appraisals on properties in Atlanta that she felt were inflated. However, she did not have an option to order a second appraisal. "We couldn't do anything about it," she said. When CW-MM brought to her managers' attention a loan with what she thought was an inflated appraisal, they did not want her to do any further research. Instead, they usually approved it on the spot. "We could take it to the managers and if they felt it was okay, we went with it."

b. The mortgages originated by AHM and securitized in the PLMBS purchased by the Bank provide further evidence of AHM's abandonment of sound underwriting practices.

373. AHM originated mortgages that secured at least Securities GSR 2006-AR1 2A3 and WFMBS 2007-10 1A10. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90% and 80%, the percentage of loans

secured by property not the primary residence of the borrower, and the percentage of loans originated using full documentation. Moreover, as described in paragraphs 592-593 below, these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of AHM's failure to observe its stated underwriting standards. AHM's actual practices – including the use of unreliable appraisals, routine granting of underwriting exceptions and reliance on unverified borrower-supplied information – caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

374. In summary, far from following its underwriting guidelines and making occasional, targeted and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, variance from the stated standards was the norm at AHM, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank that AHM abandoned its underwriting guidelines.

7. Chase Home Finance LLC and JPMorgan Chase Bank, N.A.

375. Chase Home Finance LLC ("Chase Home Finance") and/or JPMorgan Chase Bank, N.A. ("JPMorgan Chase") originated underlying mortgage loans for at least four of the PLMBS purchased by the Bank. Chase Home Finance and JPMorgan Chase (collectively referred to herein as the "Chase Originators") also abandoned sound underwriting practices.

376. The Chase Originators' departure from sound underwriting standards has been confirmed by JP Morgan Chase & Co. ("JPMC") Chairman and CEO, Jamie Dimon. In his January 13, 2010 testimony before the FCIC, Dimon stated that "the underwriting standards of our mortgage business should have been higher." Dimon confessed that JPMC, the parent

company of the Chase Originators, "misjudged the impact of more aggressive underwriting standards and should have acted sooner and more substantially to reduce the loan-to-value ratios."

a. Investigations and confidential witness statements demonstrate that the Chase Originators abandoned sound underwriting practices.

377. In an undated internal memorandum that became public in March 2008, Chase Originator employees circulated tips for using "Cheats & Tricks" to allow Chase loan originators to circumvent the Chase Originators' in-house automated loan underwriting system to get risky loans approved. The memo provides that the secret to getting risky loans approved is to inflate the borrower's income or to otherwise falsify their loan application.

378. The memo suggests that the Chase Originators' automated loan-origination system, called "Zippy," "can be adjusted" to "get the findings you need" by trying some of these "handy steps":

> (1) In the income section of your 1003, make sure you input all income in base income. DO NOT break it down by overtime, commissions or bonus.
>
> (2) NO GIFT FUNDS! If your borrower is getting a gift [to cover some or all of the down payment], add it to a bank account along with the rest of the assets. Be sure to remove any mention of gift funds on the rest of your 1003.
>
> (3) If you do not get Stated/Stated, try resubmitting with slightly higher income. Inch it up $500 to see if you can get the findings you want. Do the same for assets.

379. Thus, according to the memo, Chase Originator employees should "never fear" if they "do not get stated income / stated asset findings" on the first attempt because they can try and try again until they get their desired result. By lumping contingent income with base income, concealing the receipt of gifts (which are typically required to be specifically disclosed in loan applications), and artificially inflating income, Chase loan originators were able to

approve countless loans that otherwise would not have satisfied Zippy's stated underwriting guidelines.

380. As the "Zippy Cheats & Tricks" memo reveals, "If you get a "refer" or if you DO NOT get Stated Income / Stated Asset findings. . . . Never Fear!! ZiPPY can be adjusted (just ever so slightly). Try these steps next time you use Zippy! You just might get the findings you need!!"

381. Confidential witnesses confirm this prevailing attitude of using "cheats and tricks" designed to game the system and approve loans that are not in accordance with stated underwriting guidelines. These confidential witness statements provide evidence that (1) the Chase Originators' employees faced intense pressure to close loans at any cost; (2) the Chase Originators' employees manipulated loan data in order to close loans; (3) the Chase Originators approved loans based upon inflated appraisal values; and (4) the Chase Originators failed to adhere to sound underwriting guidelines.

382. CW-C was a loan processor and assistant to the branch manager at a Florida branch of Chase Home Finance from April 2006 until August 2007.[7] She stated that Chase Home Finance employees faced enormous pressure to close loans because their salaries were dependent solely upon quantity. For example, loan officers only received a salary their first two months at the company. After the second month, their income was based upon commissions for the number of loans they closed; if they did not close loans, they did not receive a paycheck. CW-H echoed similar comments, and said that staff underwriters at JPMorgan Chase received a salary plus bonus pay that was based on the quantity of funded loans.

[7] CW-C had earlier worked for Countrywide. *See supra* ¶¶ 217, 226.

383. According to CW-C, branch and regional managers pressured loan officers to meet monthly quotas. If a loan officer worked two months without closing a loan, he or she could be fired. Thus, "loan officers walked around on eggshells at month end" for fear of losing their job or not getting the commission that fed their families.

384. Underwriters at Chase Home Finance also received monthly bonuses based upon the volume of loans closed, and management pressured such underwriters to close loans. CW-C's regional manager would send the branch managers below him to Chase Home Finance's underwriting office in New Jersey "to work the magic" and close the loans.

385. Due to the pressure that was placed upon Chase Home Finance employees to close loans at any cost, many employees inflated borrowers' income and modified loan files in order to push loans through. "It was very common to take stuff out of the loan file" in order to get a loan approved, said CW-C. For example, loan officers removed bank statements, paystubs, or other documents which showed the borrower's income so that the loans would not be hindered in closing.

386. According to CW-C, "loan officers knew [the borrowers] were making less income" than was stated on the loans because, acting on orders from the branch manager, the loan officers inflated the borrowers' income. As an example, CW-C stated: "You'd see a guy that owned a pizzeria that was making millions and you knew there was just no way."

387. Knowledge of the inflated incomes flowed to management at Chase Home Finance because loan officers often brought their loans to the branch manager for help and instruction on how to make them close. In fact, said CW-C, "The branch manager often fixed the loan . . . [he] figured out what LTV [the borrower] needed to close the loan and inflated the

income to make the loan work." Branch managers also called the regional managers above them to help close problem loans.

388. CW-C summed up the overall attitude at the Chase Home Finance branch where she worked: "It's okay to do what you have to do to get the loans closed."

389. The statements of CW-G, a senior loan underwriter at Chase Home Finance from December 2004 to August 2005, illustrate similar problems, including that Chase Home Finance closed loans based upon stated incomes that were false and inflated. CW-G recalled circumstances in which mortgage brokers changed applicants' stated incomes before they submitted the loan files to Chase Home Finance. Then, after the loans closed and weren't performing, Chase Home Finance would contact the borrower and "hear the borrower say, 'I never said I make that much.'"

390. CW-G also said that he commonly reviewed loan files that contained "questionable" statements of income. In fact, "[i]t happened daily," said CW-G, and "[y]ou'd see self-employed people, like a landscaper, who stated they made $10,000 a month," without an adequate savings history or FICO score. When CW-G determined that the stated income was "not do-able," based upon his review of the website salary.com or an occupational jobs handbook, he notified his manager or other supervisors. "There was never any push-back. They wanted the loans booked and funded." However, he was always told that "it meets the FICO score and savings history guidelines so we do the loan." It was "one size fits all." According to CW-G, "It really wasn't common sense-based, but based on the FICO scores you could sell the loan to investors. [Management] wanted quantity, not quality." Loans were issued based on "FICO and income. This was not common-sense underwriting. It was not based on risk, but

almost like on the game show "Let's Make a Deal": they made a deal based on satisfaction of these two criteria" only.

391. In addition to approving loans based upon inflated incomes, CW-G also said that Chase Home Finance employees approved loans based upon inflated appraisal values. According to CW-G, Chase Home Finance employees were "not allowed to contest appraisals that appeared to be inflated." As a result of the housing bubble, appraisers overadjusted and ensured that the appraisals came in at or above the sales price. For example, CW-G said he recalled one subdivision in California in which homes sold in the second phase of the subdivision build-out doubled the value of those sold in the first phase, which had occurred just a few months earlier. In this regard, CW-G said, "[t]he first phase appraisals were valued at $200,000. The second phase, based on speculative investors buying and selling, pushed the values to $400,000. You'd look at the comps and there would be two inside the 'division' and one outside, but you couldn't contest the value."

392. CW-H, a senior underwriter at JPMorgan Chase Bank, N.A. from April 2001 to June 2008, stated that managers at JPMorgan Chase Bank, N.A. often overturned the decisions of lower-level underwriters to reject stated-income loans. According to CW-H, "If the manager felt the income made sense and the underwriter didn't, the manager could overturn it."

b. The mortgages originated by the Chase Originators and securitized in the PLMBS purchased by the Bank provide further evidence of abandonment of sound underwriting practices.

393. Chase Home Finance originated mortgages that secured at least Securities CHASE 2005-A2 1A4, GSR 2005-1F 3A1, GSR 2005-2F 2A1, and JPMMT 2005-A8 2A2. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with

LTV ratios in excess of 100%, 90% and 80%, the percentage of loans secured by property not the primary residence of the borrower, and the percentage of mortgages originated using full documentation. Moreover, as described in paragraphs 592-593 below, several of these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of Chase Home Finance's failure to observe its stated underwriting standards. Chase Home Finance's actual practices – including the use of unreliable appraisals, routine granting of underwriting exceptions and reliance on unverified borrower-supplied information – caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

394. In summary, far from following their underwriting guidelines and making occasional, targeted and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, variance from the stated standards was the norm at the Chase Originators, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank that the Chase Originators abandoned their underwriting guidelines.

8. PHH Mortgage Corp.

395. PHH Mortgage Corporation originated underlying mortgage loans securing at least one of the PLMBS purchased by the Bank. PHH Mortgage Corporation also abandoned sound underwriting practices.

396. Confidential witnesses provided evidence that PHH Mortgage Corp. failed to adhere to sound underwriting practices, and created a culture in which exceptions to underwriting standards were the norm. Statements by CW-I, a loan counselor and junior underwriter at PHH Mortgage Corp. from 1997 until October 2007, confirm that (1) PHH

Mortgage Corp. employees faced intense pressure to close loans at any cost; (2) PHH Mortgage Corp. increasingly approved risky, low- or no-documentation loans without adequate review; and (3) PHH Mortgage Corp. employees manipulated data in order to close loans.

397. As a loan counselor, CW-I worked directly with borrowers and financial advisors to process loans. When she became an underwriter in May 2005, she transitioned to evaluating high-risk mortgage loan applications to determine whether the loans met PHH Mortgage Corp.'s guidelines. As was the situation with the other mortgage origination companies identified above, loan officers at PHH Mortgage Corp. received commissions based on the number of loans closed. Thus, employees were pressured to value quantity over quality.

398. During her time at PHH Mortgage Corp., CW-I said she underwrote loans that clearly contained inflated income values. She knew that the values were inflated because the stated incomes seemed unreasonable; for example, a hairstylist would be making a lot more money per month than was typical for someone in that industry. CW-I said that she looked at the loans and thought, "There's no way." Nevertheless, CW-I approved the loans because the income was "stated and we had to take [the borrower's] word for it."

399. PHH Mortgage Corp. had a policy which prohibited underwriters from investigating the veracity of stated income. Consequently, underwriters at PHH Mortgage Corp. did not use any tools like Salary.com to verify the borrowers' income. Between 2005 and 2007, CW-I explained that it was common practice across the mortgage industry to accept stated income without further investigation. "They called them liar loans for a reason," said CW-I, "It was the nature of the beast back then."

400. CW-I also reviewed loan documents that she knew had been altered by the borrower or a loan officer at PHH Mortgage Corp. because "the data did not match up." As an

example, CW-I recalled situations in which the borrower's bank statements did not agree with other documents in the loan file.

401. CW-I said she suspected that PHH Mortgage Corp.'s loan officers removed loan documents from the files if such documents might keep the loans from closing. She knew such practices happened because, "Everybody did it to get the loan approved. That was how it was in the industry."

402. PHH Mortgage Corp. originated mortgages that secured at least Security GSR 2005-2F 2A1. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing this Security, including misstatements with respect to the percentages of loans with LTV ratios in excess of 100%, 90% and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶ 592-593, this security has exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of PHH Mortgage Corp.'s failure to observe its stated underwriting standards. PHH Mortgage Corp.'s actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

403. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at PHH Mortgage Corp., variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or

effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which PHH Mortgage Corp. deviated from its guidelines.

9. National City Mortgage Company

404. National City Mortgage Co. ("National City") was the mortgage making subsidiary of National City Corporation ("NCC"). National City originated loans for at least two of the PLMBS purchased by the Bank. National City also abandoned sound loan underwriting practices.

405. In 2008, NCC disclosed that it was the subject of an informal SEC investigation concerning, among other things, its loan underwriting practices.

406. The U.S. Department of Housing and Urban Development's Office of Inspector General ("OIG") has repeatedly called into question National City's loan origination practices. The OIG found that multiple deficiencies in compliance with HUD lending guidance "occurred as a result of the Company's dramatic increase in loan volume, and the concurrent staffing shortages caused by such increased volume" and "because National City lacked adequate procedures and controls to ensure its employees followed HUD's requirements."

407. As a result, OIG recommended that National City indemnify or reimburse HUD for the losses incurred in connection with the improperly submitted loans and pay civil monetary penalties.

408. OIG Reports in 2006 and 2008 found that National City continued to fail to comply with HUD's requirements regarding loan underwriting and quality control. Audit Report, Office of the Inspector General, National City Mortgage Company Non-Supervised Lender, No. 2006-CH-1014, at 6-8 & 10 (July 31, 2006) ("2006 Audit"); U.S. Department of Housing and Urban Development, Office of Inspector General, Semiannual Report to Congress, October 1, 2007, through March 31, 2008, at 9. The 2006 Audit found that nearly half the loans

in the OIG statistical sample did not fully meet HUD's requirements. 2006 Audit at 1. The OIG specifically concluded that "the underwriting deficiencies were material as well as technical and included errors and documentation omissions clearly contrary to prudent lending practices. Further, National City incorrectly certified to the integrity of the data supporting the underwriting deficiencies and to the due diligence used in underwriting. . . " *Id*. at 2.

409. Upon information and belief, these same "staffing shortages" and "lack[of] adequate procedures and controls" led to equally widespread "underwriting deficiencies . . . contrary to prudent lending practices" in the issuance of all National City mortgages.

410. National City originated mortgages that secured at least Securities GSR 2005-3F 2A1, and GSR 2005-2F 2A1. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, the percentage of loans secured by property not the primary residence of the borrower, and the percentage of loans originated using full documentation. Moreover, as described below, *see infra* ¶¶ 592-593, Security GSR 2005-2F 2A1 has exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of National City's failure to observe its stated underwriting standards. National City's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

411. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at National City, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any of the Offering Documents inform the Bank that National City effectively abandoned its underwriting guidelines in order to issue and securitize as many loans as possible.

10. SunTrust Mortgage, Inc.

412. SunTrust Mortgage, Inc. ("SunTrust") originated underlying mortgage loans securing at least one of the PLMBS purchased by the Bank, Certificate STARM 200-4 2A2. SunTrust abandoned sound underwriting practices.

413. CW-K, a mortgage loan officer at SunTrust from 2005 until 2008, provided evidence of SunTrust's failure to adhere to sound underwriting practices and guidelines. CW-K's statements demonstrate that (1) SunTrust employees were pressured to close loans at any cost; (2) SunTrust employees manipulated loan files in order to get loans approved; (3) SunTrust coaxed elderly borrowers into loans they could not afford; and (4) SunTrust abandoned its underwriting guidelines and granted exceptions when there were no reasonable compensating factors.

414. According to CW-K, SunTrust employees were pressured to close at least $1 million in loans each month. Inside loan officers at SunTrust received a salary and commission based upon the number of loans closed. Outside loan officers only worked for commissions, and did not receive any payments unless they surpassed the quota for closed loans. As CW-K explained, if a loan officer surpassed the $1 million quota, they received a set commission; loan

officers who surpassed $2.5 million in closed loans received a $3,000 bonus. "That's where the greed came in," said CW-K.

415. CW-K described SunTrust loan officers as being "cut-throat." For example, SunTrust loan officers would team up with realtors to coax elderly borrowers into using SunTrust as their lender on a new home purchase. "They'd approach an elderly woman and get her to list her house," said CW-K, and then the SunTrust loan officers would talk the elderly woman into buying a new home before the old one had sold. These loan officers would convince the woman "to go into a balloon note [interest only]" on the new house, but the borrower "never got her old house closed," so she was left with two mortgages, one of which she could not afford. "This happened a lot," said CW-K.

416. Besides issuing loans to borrowers who could not afford them, CW-K explained that SunTrust employees manipulated loan files in order to get loans approved. According to CW-K, "there was a lot of crazy paper" at her branch in Florida. For example, CW-K said that SunTrust loan officers ran loan applications through the desktop underwriting ("DU") system and if the borrower's "numbers" (LTV and DTI ratios) did not meet the company's guidelines, it was not uncommon for a loan officer to falsify the ratios and pretend that they never ran the loan through DU by erasing the evidence. CW-K also recalled that SunTrust loan officers called borrowers and coached them into giving a verbal statement of their ratios that would enable their loans to qualify.

417. Additionally, CW-K said that some loan officers at SunTrust knowingly assisted self-employed borrowers in inflating their income and employment histories by ignoring false data in letters provided by the borrowers' certified public accountants ("CPAs"). For example, said CW-K, if SunTrust's loan product guidelines required that a self-employed borrower had to

have worked for a company for a minimum of two years, but the borrower fell short of that timeline, the loan officer allowed the borrower to file a letter from their CPA falsely stating that the borrower had indeed been employed for two years. CW-K said that she knew the letters were falsified because she knew "the borrower had told the loan officer that they had worked for 'almost two years.'"

418. CW-K also recalled that some CPA letters falsely supported inflated incomes, but SunTrust loan officers nevertheless accepted these letters as valid documentations of income.

419. Besides these examples of manipulating loan files, CW-K also recalled that some loan officers coached borrowers on how to change their tax documentation so that the numbers would support loan approval. In this regard, CW-K said that SunTrust offered "no-ratio loans" for self-employed borrowers who had been in business for three to five years. CW-K remembered one borrower who made $250,000 in gross profit and $40,000 in net profits. Although CW-K refused to grant him a loan, "other loan officers would get the borrower to doctor up their taxes." In fact, said CW-K, it was not uncommon for CW-K to deny a loan only to have the loan transferred to another loan officer for approval.

420. CW-K described two reasons that SunTrust approved loans which should not have been approved (1) "Some loan officers knew how to smooth [CW-K's manager] over with loan documents," so that the manager would not notice false ratios or inflated income; and (2) managers approved loans that did not meet SunTrust's guidelines because the loans came from "high producers" or "strong money makers" for the company. With respect to the second issue, CW-K explained that if a loan officer closed a lot of loans, they had more room to make exceptions to guidelines.

421. CW-K said that all of these deviations from underwriting guidelines, which she said were motivated by greed, continued throughout her entire tenure at SunTrust.

422. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratios, the percentages of loans with LTV ratios in excess of 100%, 90% and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described in paragraphs 592-593 below, Security STARM 2007-4 2A2 has exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of SunTrust's failure to observe its stated underwriting standards. SunTrust's actual practices – including the use of unreliable appraisals, routine granting of underwriting exceptions and reliance on unverified borrower-supplied information – caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

423. In summary, far from following its underwriting guidelines and making occasional, targeted and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, variance from the stated standards was the norm at SunTrust. Many loans were made with essentially little to no underwriting and little to no effort to evaluate the borrower's ability to repay. Nowhere did any Offering Document apprise the Bank that SunTrust abandoned its underwriting guidelines.

11. HomeComings Financial, LLC and HomeComings Financial Network, Inc.

424. HomeComings Financial, LLC and/or HomeComings Financial Network, Inc. (collectively referred to herein as "HomeComings") originated underlying mortgage loans

securing at least three of the PLMBS purchased by the Bank. According to SEC filings, HomeComings Financial Network, Inc. changed its name to HomeComings Financial, LLC in October 2006; consequently, these entities are collectively referred to herein as "HomeComings." HomeComings is an affiliate of RFC and GMAC. HomeComings also abandoned sound underwriting practices.

425. Confidential witnesses provided evidence of HomeComings' failure to adhere to sound underwriting practices and guidelines. Statements by CW-L, an underwriter at HomeComings from January 2006 until December 2006, and CW-M, an underwriter for HomeComings from May 2005 until his office closed in October 2007, confirm that HomeComings (a) made loans to borrowers when it was clear that they could not afford to make the monthly payments; (b) approved risky, low- or no-documentation loans; (c) approved exception loans for which there were no reasonable compensating factors; and (d) abandoned sound underwriting practices.

426. CW-L said a lot of the problem with HomeComings' mortgages during his employment was due to "what became the norm" in the lending industry: underwriting guidelines became really loose, and "the gray areas became even grayer." According to CW-L, he and other underwriters thought the extent to which the guidelines relaxed was "ridiculous."

427. During his tenure at HomeComings, CW-L underwrote full-documentation, stated income, stated income/stated asset ("SISA"), and no income/no asset ("NINA") documentation loans. Of these, the majority—75%—were stated income loans. According to CW-L, it was the stated income and the option-ARM (negative amortization) loans that "killed the industry."

428. Both CW-L and CW-M explained that HomeComings employed automated underwriting systems ("AUS") to underwrite loans. According to CW-M, HomeComings

employees had the choice of two different options: (1) Desktop Underwriter ("DU"), and (2) Assetwise. As CW-M explained, HomeComings employees used DU for subprime applications from low-income applicants because it approved loans with higher debt-to-income ratios than Assetwise.

429. CW-L said that, with respect to Assetwise, HomeComings employees entered borrowers' information into the system and the computer provided its findings. As CW-L explained, "One of my problems was that [a loan application] would fit inside the guidelines, but if you read between the lines, you could see that the borrower was not going to be able to make the payments." Nevertheless, when CW-L raised such concerns to her supervisor, she was told: "It fits, you do the loan. We're going to do this deal."

430. Irrespective of which AUS HomeComings employees chose, CW-M said that virtually all of the loan applications ended up being approved. Moreover, once the AUS approved the application the underwriters could not change the decision.

431. Besides approving loans that CW-L believed borrowers could not afford, CW-L also noted that mortgage brokers often appealed loans to CW-L's supervisor that had been denied by HomeComings' underwriters. CW-L's supervisor then instructed CW-L and other underwriters that they had to sign off on the loans.

432. CW-M also explained that underwriters searched for compensating factors which would enable them to approve loans, even in the presence of "red flags." For example, if a stated income application reflected a monthly income of $10,000 or more, that would be a "red flag," and the underwriter would review the loan application to find "contributing factors" which would nevertheless allow the loan to be approved.

433. HomeComings originated mortgages that secured at least Securities RFMSI 2007-S4 A4, RFMSI 2007-SA4 3A1, and RFMSI 2006-S4 A3. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing this security, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, the percentage of loans secured by property not the primary residence of the borrower, and the percentage of the loans originated using full documentation. Moreover, as described below, *see infra* ¶¶ 592-593, these Securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of HomeComings' failure to observe its stated underwriting standards. HomeComings' actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

434. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, at HomeComings variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which HomeComings deviated from its underwriting guidelines.

12. GreenPoint Mortgage Funding, Inc.

435. GreenPoint Mortgage Funding, Inc. ("GreenPoint") originated underlying mortgage loans securing at least one of the PLMBS purchased by the Bank. GreenPoint also abandoned sound underwriting practices.

436. GreenPoint was headquartered in Novato, California and had branches in 19 states. It offered mortgage loan products in 45 states. GreenPoint was owned by Capital One Financial Corporation, which acquired it in December 2006 when Capital One bought North Fork Bancorp.

437. GreenPoint was the nation's seventh largest originator of Alt-A mortgages, and it specialized in offering programs for borrowers with credit scores down to 620, as well as option ARMS, second mortgage, jumbo loans, and other high risk products.

438. Capital One closed GreenPoint Mortgage in August 2007 because Capital One did not intend to keep mortgage loans on the balance sheets, and by August 20, 2007 it found itself "with more than $600 million in second mortgages" on its books.

439. Confidential witness CW-N, a senior loan underwriter at GreenPoint from October 1997 until the company shutdown in August 2007, confirmed that (1) GreenPoint employees faced intense pressure to close loans at any cost; (2) GreenPoint managers overrode employees' decisions to reject loans and approved loans based upon inflated incomes; (3) GreenPoint approved loans that contained exceptions for which there were no reasonable compensating factors; and (4) GreenPoint failed to adhere to sound underwriting guidelines.

440. According to CW-N, sales staff and managers at GreenPoint received bonuses based on the number of loans closed. CW-N stated that "sales had tremendous authority" at GreenPoint, and "[t]hey were in business to make more money. They would try to find any way to close a loan."

441. Due to the emphasis on sales, GreenPoint managers emphasized quantity over quality. Between 2005 and 2007, CW-N said that stated income loans became increasingly popular and GreenPoint managers approved loans based upon inflated incomes that CW-N believed should not have been approved. CW-N saw a lot of loans with stated "income that was more than could be justified by the borrower's employment." When CW-N denied loans because she believed the income was inflated, sometimes the underwriting managers, operations managers, and the regional operations manager overrode her decisions to deny the loans.

442. More often than not, CW-N believed that her managers overrode her denials due to the incentives that they received based upon loan volume. As CW-N said, "They were making the decision because they had to hit certain sales numbers." CW-N was aware of such targets because of comments made in operations meetings about the company needing to meet certain goals.

443. GreenPoint originated mortgages that secured at least Security CSFB 2005-8 9A1. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, and the percentage of loans secured by property not the primary residence of the borrower. Moreover, as described below, *see infra* ¶¶ 592-93, this Security has exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of GreenPoint's failure to observe its stated underwriting standards. GreenPoint's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that

reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

444. In summary, far from following its underwriting guidelines and making occasional, targeted and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, at GreenPoint, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which IndyMac deviated from its guidelines.

13. Bank of America, N.A.

445. Bank of America, N.A. ("Bank of America") originated underlying mortgage loans securing at least two of the PLMBS purchased by the Bank. Bank of America also abandoned sound underwriting practices.

446. Confidential witnesses provided evidence of Bank of America's failure to adhere to sound underwriting practices and guidelines. Statements by CW-O, who worked for Bank of America from August 2004 through April 2008 as a bank teller, sales and service specialist, and personal banker, confirm that Bank of America (a) adopted practices encouraging employees to disregard a borrower's ability to qualify for a loan; (b) pressured employees to generate large quantities of loans at any cost; (c) created an environment where employees manipulated loan data in order to get loans approved; and (d) failed to adhere to its own underwriting guidelines.

447. During his time at Bank of America, CW-O was involved in the bank's retail and consumer banking operations, including generating residential mortgages by taking mortgage applications from prospective borrowers who applied through his branch office. CW-O ultimately left Bank of America because of "unethical stuff" he observed in the mortgage lending side of Bank of America's business.

448. Specifically, CW-O said there was "horrible" pressure to generate quantities of loan applications and approved loans. According to CW-O, Bank of America imposed a *quarterly* requirement to book one million dollars in mortgage loans per banker. CW-O received a notice when mortgage applications that he prepared were approved for funding and were thus "booked" for purposes of meeting his one-million-dollar requirement. To meet these requirements, CW-O said he and his colleagues were told to enter mortgage applications regardless of whether it appeared the borrower would qualify for the loan. These practices led CW-O to view Bank of America's way of doing business as "fast food banking."

449. CW-O explained that there were times at quarter-end when Bank of America employees would believe that they weren't going to meet the million-dollar-per-quarter quota. Suddenly, the employee's loan would be booked because the Branch Manager had gone to the Regional Manager, who "pulled some strings" to get the loan approved.

450. Additionally, CW-O believed that Bank of America was lax on enforcing its own credit guidelines. He recalled that borrowers with a lower FICO score than was required still obtained mortgages from his branch.

451. CW-O described other practices with which he was uncomfortable, including manipulating loan data to get loans approved. For example, CW-O said that he and other bankers in his branch regularly rounded up applicants' salaries on the loan applications. Specifically, if someone's income was $34,000 annually, Bank of America employees would round it up to $40,000 to make the figure look better for loan approval purposes. CW-O said that Bank of America employees also inflated how long an applicant had worked for his or her current employer. If the applicant had only worked for an employer for one year and the

qualifications required two years with that employer, the Bank of America employee would input on the application that the person had worked for his or her company for three years.

452. CW-O said that he understood these practices were necessary in order to have greater success meeting the quarterly quota of one million dollars in booked mortgage volumes.

453. Bank of America originated mortgages that secured at least Securities BOAMS 2006-1 A1 and GSR 2005-2F 2A1. As discussed in detail below, the Offering Documents contained serious material misstatements regarding specific characteristics of the loan pools securing these Securities, including misstatements with respect to their weighted average LTV ratio, the percentages of loans with LTV ratios in excess of 100%, 90%, and 80%, the percentage of loans secured by property not the primary residence of the borrower and the percentage of loans originated using full documentation. Moreover, as described below, *see infra* ¶¶ 592-593, these securities have exhibited excessive delinquency and foreclosure rates. These circumstances are strong evidence of Bank of America's failure to observe its stated underwriting standards. Bank of America's actual practices—including the use of unreliable appraisals, routine granting of underwriting exceptions, and reliance on unverified borrower-supplied information—caused it to originate loans whose actual LTV ratios and primary residence rates were far different from that reported in the Offering Documents, and whose likelihood of default was much higher than that of loans issued under underwriting standards of the type described in the Offering Documents.

454. In summary, far from following its underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, in fact, at Bank of America, N.A., variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or

effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which Bank of America, N.A. deviated from its underwriting guidelines.

14. Other Mortgage Originators Also Abandoned Sound Underwriting Practices in Order to Issue Loans for Securitization.

455. On information and belief, based on government reports and assessment of mortgage origination practices during the time period that the loans at issue were issued, as discussed above, *see supra* §§ V.B. and V.C.1-13, and the Bank's own investigation, each of the other mortgage originators who issued loans that backed the PLMBS purchased by the Bank similarly abandoned their underwriting guidelines in order to increase loan volume. These abuses were pervasive in the mortgage origination industry and were the standard operating practice of mortgage originators who issued loans so that they could be sold and securitized either by their affiliates or other financial institutions who acted as Depositors/Issuers, and Underwriters of PLMBS.

456. Accordingly, instead of following their underwriting guidelines and making occasional, targeted, and justified exceptions when other evidence of ability to repay justified a deviation from the guidelines, at these mortgage originators, variance from the stated standards was the norm, and many loans were made with essentially little to no underwriting or effort to evaluate ability to repay. Nowhere did any Offering Document apprise the Bank of the extent to which these mortgage originators deviated from their underwriting guidelines.

D. The Securitization Process Was Plagued by Conflicts of Interest and Misplaced Incentives.

457. A handful of large financial institutions dominated every aspect of the mortgage securitization process. They owned many of the mortgage originators themselves, and funded the lending activities of many of the originators they did not own outright. As a result, these large financial institutions—and the sponsors, Depositors and Underwriters that were divisions

of these institutions—were in a position to scrutinize the practices of the originators and examine closely the mortgages placed in the pools. Indeed, they had the legal responsibility to do so and to provide investors with complete and accurate information.

1. The Vertical Integration of Many of the Firms Involved in the Issuance of the PLMBS Purchased by the Bank Provided the Defendants with Access to Information Regarding the Mortgage Originators' Abandonment of Underwriting Guidelines.

458. Most of the PLMBS purchased by the Bank were issued by vertically-integrated firms which were involved in several if not all of the stages of the securitization of the PLMBS—loan origination, sponsoring, obtaining credit ratings, issuing, underwriting, and selling the securities. The following table provides examples of the vertical integration of numerous entities involved in various of the PLMBS purchased by the Bank:

Sponsor	Certificate	Roles of Affiliated Entities
Bank of America, National Association	BOAMS 2006-1 A1	Originator: Bank of America, National Association Underwriter: Banc of America Securities LLC Depositor: Bank of America Mortgage Securities, Inc. Servicer: Bank of America, National Association
EMC Mortgage Corporation (affiliate of Bear Stearns & Co., Inc.)	BSARM 2007-3 1A1	Underwriter: Bear Stearns & Co. Inc. Depositor: Structured Asset Mortgage Investments II, Inc. (affiliate of Bear Stearns & Co., Inc.)

Sponsor	Certificate	Roles of Affiliated Entities
Chase Mortgage Finance Corporation	CHASE 2005-A2 1A4	Originator: Chase Home Finance LLC Depositor: Chase Mortgage Finance Corp. Seller: Chase Mortgage Finance Corp. Underwriter: J.P. Morgan Securities Inc. Servicer: J.P. Morgan Chase Bank, N.A.
Credit Suisse First Boston	CSFB 2005-8 9A1	Originator: DLJ Mortgage Capital, Inc. Depositor: Credit Suisse First Boston Mortgage Securities Corp. Underwriter: Credit Suisse First Boston LLC
Countrywide Home Loans, Inc.	CWHL 2007-8 1A5 CWHL 2007-13 A4	Originator : Countrywide Home Loans, Inc. Depositor: CWMBS, Inc. Underwriter: Countrywide Securities Corp. (for CWHL 2007-13 A4) Master Servicer: Countrywide Home Loans Servicing LP
Goldman Sachs Mortgage Company	GSR 2005-1F 3A1 GSR 2005-2F 2A1 GSR 2005-3F 2A1 GSR 2005-7F 3A7 GSR 2006-1F 2A2 GSR 2006-2F 3A1 GSR 2006-AR1 2A3 GSR 2006-6F 2A1	Depositor: GS Mortgage Securities Corp. Underwriter: Goldman Sachs & Co.

Washington Mutual Bank	WAMU 2005-AR14 1A2 WAMU 2005-AR16 1A2 WAMU 2005-AR18 1A2 WAMU 2007-HY1 4A1 WAMU 2007-HY2 1A1	Originator: Washington Mutual Bank Depositor: WaMu Asset Acceptance Corp. Underwriter: WaMu Capital Corp. Servicer: Washington Mutual Bank
Wells Fargo Bank, National Association	WFMBS 2006-10 A7 WFMBS 2007-4 A16 WFMBS 2007-10 1A10 WFMBS 2007-11 A2	Originator: Wells Fargo Bank, National Association Depositor: Wells Fargo Asset Securities Corporation Master Servicer: Wells Fargo Bank, National Association Custodian: Wells Fargo Bank Paying Agent: Wells Fargo Bank, National Association

459. Between 2005 and 2007, the number of vertically-integrated firms grew significantly because investment banks and other issuers of mortgage-backed securities sought to ensure a steady supply of mortgage loans for securitization and sale to investors. Yet, as a result of their direct involvement in the origination of the loans they securitized, the vertically integrated firms, and specifically, the Depositor/Issuer and Underwriter affiliates of the firms had immediate access to, and often first-hand knowledge of, the lending and underwriting practices of the mortgage originators.

460. For example, in WFMBS 2006-10 A7, WFMBS 2007-4 A16, WFMBS 2007-10 1A10, and WFMBS 2007-11 A2, the Wells Fargo entities, including Wells Fargo & Company and its subsidiaries (which were also subsidiaries of the originator) knew precisely what

mortgage originator Wells Fargo Bank, National Association was doing when it issued loans to people without regard to their ability to pay, and without any meaningful mortgage underwriting. The same is true for the other vertically integrated entities listed above.

461. The vertical integration of these firms created enormous incentives to push their affiliated originators to loosen standards so that more loans could be issued and more securitization sold. In this regard, the Depositor/Issuer Defendants and Underwriter Defendants themselves dictated and were well aware of the quality of the loans.

462. The circular nature of these integrated transactions can easily be seen by a quick examination of the Servicing Agreement for Certificate WFMBS 2007-10 1A10, which provides that Controlling Person and Master Servicer Wells Fargo Bank, National Association "will supervise, monitor and oversee the performance of" Servicer Wells Fargo Bank, National Association. Servicing Agreement for Certificate WFMBS 2007-10 1A10, dated as of June 28, 2007, Exhibit 10.1 to Wells Fargo Asset Securities Corporation Form 8-K (dated June 28, 2007), Recitals.

463. Rather than use their superior access to information about the underlying mortgage pools and their unique ability to exert influence over the underwriting standards responsibly, the Depositor/Issuer and/or Underwriter Defendants at the vertically-integrated firms accepted defective loans that their affiliates originated. The reason was straightforward. They made more money that way on the front end, when issuing the loans, and on the back end, when securitizing them. Adequate due diligence and exclusion of defective loans would have cut into their profits and slowed down the securitization machine.

2. Financial Ties Between the Investment Banks and Non-Bank Lenders Provided the Defendants with Access to Information Regarding the Mortgage Originators' Abandonment of Underwriting Guidelines.

464. Even where the parties involved in the securitization were not all affiliated under a single parent (for example, where a sponsor purchased the loans from an unaffiliated mortgage originator) the Depositor/Issuer and Underwriter Defendants had access to information about the mortgage originators' abandonment of underwriting guidelines. This was the result of the close financial ties between the unaffiliated mortgage lenders and the investment banks and large financial institutions that funded them.

465. An example of this relationship is the credit facilities mortgage originators maintained with the large financial institutions that were involved in the securitization and underwriting of the PLMBS that were backed by those originators' loans. For example, Countrywide Financial Corp., collectively with its origination subsidiary, Countrywide Home Loans, Inc., had credit agreements with Bank of America, J.P. Morgan Chase, Citicorp USA (part of Citigroup), Barclays, and Deutsche Bank, which funded Countrywide's origination business. Likewise, American Home Mortgage Investment Corp., collectively with its subsidiaries, including originator American Home Mortgage Corp., had warehouse lines of credit with Bear Stearns, Bank of America, N.A., Morgan Stanley Bank, J.P. Morgan Chase, Credit Suisse First Boston Mortgage Capital LLC, and others, which funded American Home Mortgage's origination business. *See* John Dunbar and David Donald, *The Roots of the Financial Crisis: Who is to Blame?* (May 6, 2009), *available at* http://www.publicintegrity.org/investigations/economic_meltdown/articles/entry1286 (noting that 21 of the 25 largest subprime lenders were financed by Wall Street banks); *see also* American Home Mortgage Investment Corp. 10-Q for the quarter ended Sept. 30, 2006.

466. Many mortgage originators, including those that issued loans backing the PLMBS purchased by the Bank, depended on credit facilities of this sort to fund their operations. The originators would borrow from these credit facilities, pursuant to "warehouse agreements" so that they could continue to make loans to home buyers. When loans were sold, the originators would repay the warehouse agreements. When loans serving as collateral lost value, these large financial institutions would make margin calls requiring the originators to pay cash to them. In connection with this process, the mortgage originators provided these investment banks and large financial institutions with documents about the underlying loans, including performance characteristics and early warning signs of poor credit quality. The files were then passed to other divisions of these institutions for review and securitization. *See* Mortgage Bankers Association Warehouse Flowchart: Securitization, *available at* http://www.mbaa.org/files/ResourceCenter/WarehouseLending/FlowchartSecuritization.pdf (last visited Sept. 15, 2010).

467. These large financial institutions and investment banks also entered into purchase agreements with non-bank lenders so that they were assured access to a batch of mortgages to securitize, and the originators were guaranteed a buyer for the mortgages they made. As part of the agreement, these institutions typically set the prices and quantities of the types of loans they wanted to buy, and also had access to loan information prior to purchase.

468. The large financial institutions that operated credit facilities for non-bank lenders and entered into purchase agreements did not limit their activities to just funding the lenders. To the contrary, they funded the lenders so that the lenders could issue more loans for the investment banks to securitize and sell to investors. These inter-relationships are illustrated by Certificate WFMBS 2007-10 1A10. UBS Securities LLC was an underwriter for this security,

and its affiliate, UBS Real Estate Securities Inc., provided a warehouse line of credit to American Home Mortgage Investment Corp., an originator of mortgage loans that backed the security. Because these institutions were involved in several if not all of the steps of securitization, they had access to information about the problems in the loan pools.

469. In addition, the sponsors, Depositor/Issuer and Underwriter Defendants had access to information about the mortgage originators' practices as a result of their roles negotiating with the originators regarding the quality and characteristics of the loans in the mortgage pools they purchased.

3. The Large Financial Institutions' Conflicts of Interest Undermined Adequate Due Diligence and Disclosure to Investors.

470. The multiple roles of the large financial institutions in the securitization process created conflicts of interest that prevented the institutions from engaging in adequate due diligence on the loan pools. For example, these large financial institutions did not use their influence and control over the mortgage origination process to ensure that underwriting guidelines were followed, because to do so would have jeopardized repayment of their warehouse lines of credit. By keeping the mortgage origination wheel turning, these large financial institutions (by and through the Certificate's sponsors, the Depositor/Issuer Defendants, and the Underwriter Defendants) not only secured repayment on existing warehouse lines, but also paved the way for ever increasing lines in the future, with additional short-term profits. While these financial institutions eventually shut down their lines of credit, they did so only after the originators' financial condition deteriorated to the point that the financial institutions faced the risk of non-payment. Ironically, this risk was created by ever increasing numbers of repurchase demands by the financial institutions themselves for defective loans sold to them by the originators.

471. Similarly, conflicts prevented these large financial institutions from insisting on compliance with underwriting guidelines when they purchased loans at "loan auctions." At the loan auctions, the mortgage originators would set a date and time for the sponsors to purchase a block of mortgage loans. In advance of the auction, the mortgage originator would provide certain potential bidders with a bid stipulation sheet that described the general characteristics of the loan pool being auctioned and the variance rate of the pool. Large financial institutions depended on the auctions to feed loans into their securitization machines. But they also feared that they would lose access to the bid stipulations sheets and other information from mortgage originators if they conducted rigorous quality reviews of the subject mortgage and rejected loans as being non-compliant with the mortgage originators' stated guidelines. Thus, to curry favor with the mortgage originators and assure a continued pipeline of mortgages (however flawed) for securitization, the parties who should have protected the quality of the mortgages being deposited into the pools instead ignored the flaws with the mortgages.

472. Simply put, as a result of corporation affiliations and conflicted relationships in the industry, many large financial institutions, by and through the sponsors and affiliated Depositor/Issuer and Underwriter Defendants, failed to appropriately fulfill their due diligence function with respect to the mortgages placed in the pools. Instead, they utilized the securitization process to pass the risk of default down the line to investors, such as the Bank, through the use of materially false and misleading Offering Documents.

473. Confidential witnesses confirmed the failings of the Defendants' due diligence process, and their representations about the process. For example, statements by CW-P, an associate in RBS Greenwich Capital's[8] asset-backed finance modeling group from October 2004

[8] Until April 1, 2009, RBS Greenwich Capital was the marketing name which encompassed The Royal Bank of Scotland's North American broker-dealer entities, including Underwriter and Seller Defendant Greenwich Capital

to February 2006, demonstrated that RBS Greenwich employees modeled the flow of funds for the PLMBS based upon superficial information which did not adequately account for non-conformities in the underlying asset pools. CW-P also described how employees at RBS Greenwich turned a blind eye to red flags regarding the quality of the loans that were being packaged into mortgage-backed securities. CW-P explained that employees at RBS Greenwich ignored red flags because they stood to gain significant profits from securitization: "I knew we were destroying the economy . . . . But if you're making $40 million a year, do you care? No."

4. Sponsors Undermined and Misused Loan Pool Due Diligence Results Prepared by Third-Party Firms.

a. Sponsors directed the due diligence process and were provided with detailed reports describing the results of the process.

474. Information obtained from press reports, government investigations and confidential witnesses demonstrates that the large financial institutions that retained third-party due diligence firms to conduct loan pool due diligence both manipulated the due diligence process and disregarded the results of the process. They did this to maximize their profits from issuing and selling mortgage-backed securities. Thus, in yet another way, the ability of these vertically-integrated financial institutions to shift the risk of loss to downstream investors, such as the Bank, caused the Defendants to disregard problem loans.

475. The two firms that dominated the third-party due diligence market were Clayton Holdings, Inc. ("Clayton") and The Bohan Group ("Bohan"). Upon information and belief, both Clayton and Bohan were retained by Defendants or their affiliates to conduct third-party reviews of loans pools purchased by the sponsors of the PLMBS at issue. According to Clayton's Form 10-K for the fiscal year ended December 31, 2006, Clayton monitored over $418.0 billion in

---

Markets, Inc., n/k/a RBS Securities Inc. *See* The Royal Bank of Scotland, "RBS Greenwich Capital Re-Name and Re-Brand FAQ's," March 6, 2009, *available at* http://www.rbsgc.com/images/panels/rbsm/document/faq.pdf (last visited Oct. 3, 2010). As used herein, "RBS Greenwich" is meant to encompass these entities.

loans underlying mortgage-backed securities, which represented 22.8% of the total outstanding U.S. non-GSE mortgage-backed securities at such date. During 2006, 2005, and 2004, Clayton worked with each of the 10 largest non-agency mortgage-backed securities underwriters, as ranked by *Inside MBS & ABS,* which accounted for 73%, 73%, and 78% of total underwriting volume during those respective periods.

476. Confidential witnesses, who worked at Clayton during the relevant time period and were familiar with the identity of Clayton's clients and the due diligence performed by Clayton during the relevant time period, named several different entities which they knew had hired Clayton to perform due diligence on loan pools. These confidential witnesses include CW-R, an underwriting consultant at Clayton from 1999 until 2006, who underwrote mortgage-backed securities for a "lot of investment banks" that hired Clayton; CW-S, an underwriter at Clayton from 2002 until 2008, who reviewed loans for investment banks which hired Clayton; and CW-T, who worked as a valuation specialist at Clayton from January 2006 until March 2008 and reviewed appraisals and properties in loan files on behalf of investment banks that hired Clayton. Together, CW-R, CW-S, and CW-T confirmed that Clayton was hired to perform due diligence on underlying loan pools by such sponsors/investment banks as Morgan Stanley, RBS Greenwich, Countrywide, Nomura, Washington Mutual, Webster Financial, Deutsche Bank, National City, and Lehman Brothers.

477. Less information is publicly available about Bohan's due diligence business because it is a privately held company. However, press reports and confidential witnesses confirm that Bohan provided third-party loan pool due diligence to a large number of financial institutions. For example, CW-U, who worked as an underwriter at Bohan from 2003 to 2006

and reviewed loans that Bohan's clients were considering for securitization, said that Bohan's clients included Morgan Stanley, Chase, Deutsche Bank, J.P. Morgan, and others.

478. Sponsors that retained Clayton, Bohan, and other third-party due diligence firms for loan pool review maintained close contact and control over the process. As explained by Vicki Beal, Senior Vice President of Clayton Holdings in her September 23, 2010 written testimony before the FCIC:

> The loan review process is conducted as follows:
>
> - A client reviews a pool of loans and selects a sample of loans for diligence review.
> - Client hires Clayton to perform diligence on the sample. Client gives Clayton's Client Services Manager instructions on the type and scope of review and the time frame for the deal.
> - Client sends or has sent to Clayton a tape containing loan information from the originator, which Clayton programmers "crack" and load into the CLAS system.
> - At the end of each day, the lead underwriter generates reports for the client that summarizes Clayton's findings, including exception reports.

479. In addition, during the review process, the financial institutions often put their own employees on-site to oversee the review process. For example, according to CW-S, Morgan Stanley and RBS Greenwich always sent their own employees to the mortgage originator's site.

480. Numerous confidential witnesses confirm that due diligence reports are provided to the financial institutions that retained the third-party due diligence firms. According to CW-T, Clayton's clients "had access to our [Clayton's] databases," and "could see everything." CW-S also explained that Clayton's lead underwriters could consult with the sponsor's representatives to determine if the sponsor wanted particular loans "kicked out" of the mortgage pools.

481. Indeed, as Ms. Beal reported to the FCIC: "The work product produced by Clayton is comprised of reports that include loan-level data reports and loan exception reports. Such reports are "works for hire," the property of our clients and provided exclusively to our

clients." Thus, on information and belief, the investment banks that hired Clayton (including the Defendants) should have known about the red flags that the third-party underwriters identified.

482. Similarly, Bohan employed "lead" underwriters, who communicated directly with the investment banks that retained them to review loan pools. As was the case with Clayton, CW-U said that many of the sponsors sent their own employees to the originator's sites to review the loans that were being considered for inclusion in a mortgage pool and subsequent securitization. CW-U also explained that the sponsors had access to Bohan's computer system and could view which loans were being approved or rejected. Thus, on information and belief, the investment banks (including the Defendants) should have known about the red flags that the third-party underwriters identified.

b. The Defendants manipulated and misused due diligence results.

483. As Ms. Beal testified with regard to Clayton, the large financial institutions (referred to as "clients" in her testimony) determined the type and scope of review performed on the loan pools. Yet, rather than directing the firms to conduct thorough reviews that were most likely to identify defective loans, these financial institutions pressured the loan reviewers to disregard problem loans through exceptions and offsets that did not satisfy the applicable underwriting guidelines.

484. According to confidential witnesses, third-party due diligence underwriters were pressured by the financial institutions that hired them to depart from the standards so that loans were not tagged as defective. For example, CW-S, a Clayton employee, stated that one out of every four or five loans that he reviewed on behalf of Clayton clients did not meet the originator's guidelines. Although he felt many of the loans were "dead assets" (the lowest rating Clayton gave), he was required by the client to provide "compensating factors," which were reasons why the loan should be considered for inclusion in the mortgage pool.

485. Similarly, CW-U said that she reviewed many loans requiring no documentation at Bohan. Yet, she was not allowed to challenge the borrower's claims. As CW-U said, "Whatever [the borrower] filled out on an application got through." When she informed a lead underwriter that she suspected the borrower's income was inflated, the lead underwriter pointed to the borrower's signature and fine print at the bottom of the loan application that indicated the borrower swore the information to be true. The lead underwriter told CW-U, "You can't call the borrower a liar." Due to such actions by the lead underwriters, CW-U received the impression that the investment banks who were buying the loans to securitize them did not care about inflated income.

486. Bohan employees were pressured by the investment banks and financial institutions who hired them to leave information out of their reports that detailed non-compliant loans that should have been excluded from the pool. For example, CW-U explained that many underwriters at Bohan did not include in their reviews the borrower's fee associated with rebates on wholesale loans. A rebate is negative points on a loan, whereby a borrower pays the lender for a higher interest rate in order to have lower up-front costs. The Bohan employees left such information out of their reports because if they mentioned it, the loans would often be considered predatory. CW-U recalled one rebate situation in which the borrower refinanced a property three times over a one-year period. When she reviewed the loan on the third refinancing, she discovered that the borrower was seeking the loan to pay off $5,000 in bills and to obtain $8,000 cash, but the rebate fees totaled $12,000. CW-U thought the loan was ultimately included in the mortgage pool because nothing was wrong with the loan, except that the borrower was getting nothing out of it and was "an older person that was being taken advantage of."

487. Further compounding the problems, Clayton employees were instructed to review fewer loans in the loan pools as the securitization market grew. Frank P. Filipps, Clayton's chairman and CEO, stated that "[e]arly in the decade, a securities firm might have asked Clayton to review 25 to 40 percent of the sub-prime loans in a pool, compared with typically 10% in 2006." *See* E. Scott Reckard, *Sub-Prime mortgage watchdogs kept on leash; loan checkers say their warnings of risk were met with indifference*, *Los Angeles Times,* March 17, 2008, at C1.

488. According to Ms. Beal's 2010 testimony before the FCIC, as the securitization markets grew even more frenzied "when lenders and securitizers were trying to sell off as much as they could before the market collapsed, that figure reached as low as 5 percent."

489. Notably, according to Bohan President Mark Hughes: "By contrast, loan buyers who kept the mortgages as an investment instead of packaging them into securities would have 50% to 100% of the loans examined." *See* Reckard, *supra*, at C1.

490. As explained by Paul Muolo and Matthew Padilla in Chain of Blame 228 (2010):

> There were two reasons the [Wall] Street firms reviewed only a small sample of the loans they were buying . . . . The most important reason was the relationship with the lender. "The lower the sample you requested [of the lender], the more likely it was that you'd win the bid." . . . . Lenders like Aegis and First Franklin had so many Street firms interested in buying their subprime and alt-A mortgages they could tell potential suitors that if they wanted to win the bid for the loan pool they should agree to review just a fraction of the mortgages.

491. Even though the third-party due diligence providers were instructed to review smaller samples of the mortgage pools over time, the demand for mortgage-backed securities was so great that, in the aggregate, the third-party due diligence firms were reviewing staggering quantities of loans. According to Chain of Blame at 228, "In 2006, rank-and-file clerks hired by Clayton vetted a million individual mortgages for Wall Street firms . . . ." The pressure to review such large volumes of loans forced third-party employees to hurry and prevented them from adequately reviewing the loan files.

c. The Defendants should have known that defective loans were being included in loan pools.

492. Notwithstanding pressures on loan reviewers to look the other way, the third-party due diligence process provided the Defendants with access to extensive information about loan pool defects. Yet, the Defendants to a large degree disregarded this information. As reported by the *Los Angeles Times*, Clayton and Bohan employees (including eight former loan reviewers who were cited in the article) "raised plenty of red flags about flaws so serious that mortgages should have been rejected outright—such as borrowers' incomes that seemed inflated or documents that looked fake—but the problems were glossed over, ignored, or stricken from reports." Reckard, *supra*, at C1.

493. Ironically, while the financial institutions and investment banks pressured third-party reviewers to make exceptions for defective loans, they often utilized information about bad loans to negotiate a lower price for the pool of loans from the seller (i.e. originator). Indeed, according to Clayton's former president, D. Keith Johnson's September 2010 testimony before the FCIC, this was one of the primary purposes of the due diligence review.

494. CW-U, who worked at Bohan from 2003 to 2006, confirmed that Bohan's review was used by its clients in price negotiations between the sponsors and the mortgage originators. The sponsors could request a discount if Bohan's reviewers rejected a large number of the loans. This is not to say that the investment banks actually eliminated all of the defective loans from the pools. To the contrary, they obtained a lower price for the pools because the defective loans *stayed in the pools*.

495. Recent testimony before the FCIC reveals the extent of this contrivance with regard to loans reviewed by Clayton. During 2006 and the first half of 2007, Clayton reviewed 911,039 loans issued by various originators (including Countrywide) for securitization by its

clients (Bank of America and JPMorgan Chase, Citigroup, Goldman Sachs, Morgan Stanley, Bear Stearns and Lehman Brothers). Clayton determined that 28% or 255,802 mortgages that they reviewed did not satisfy applicable underwriting guidelines. Of this number, Clayton's Wall Street clients "waived" 100,653 of them, or 39 percent of those loans that did not meet basic standards. *See* Testimony of Beal, Johnson, and supporting waiver reports documents, attached hereto at Appendix II.

496. Clayton provided the FCIC with documents showing the defect and waiver rate for some of the financial institutions and investment banks who had retained Clayton to conduct loan pool due diligence. Clayton's documents reveal the following rejection and waiver rates for entities who were involved in the securitization of the PLMBS purchased by the Bank:

Client:	**Percentage of Mortgages Rejected by Clayton:**	**Percentage of Rejected Mortgages Subsequently Waived by Client:**
Bank of America	30%	27%
Bear Stearns / EMC Mortgage Corporation	16%	42%
Countrywide	26%	12%
Goldman Sachs	23%	29%
JP Morgan Chase	27%	51%
WaMu	27%	29%

497. These large financial institutions, including the Defendants, however, did not disclose to investors, including the Bank, that (1) Clayton had informed their clients that a substantial percentage of loans in the loans pools backing PLMBS were defective; (2) that the Defendants, nonetheless, had waived the defects as to a substantial percentage of these loans; and

(3) that the Defendants had used the due diligence reports to negotiate a lower price for the loans pools.

498. Indeed, as Keith Johnson, the former President of Clayton testified to the FCIC, Clayton "looked at a lot of prospectuses" and the firm wasn't aware of any disclosure to investors of Clayton's "alarming' findings." Similarly, Clayton Vice President Ms. Beal testified that:

> To our knowledge, prospectuses do not refer to Clayton and its due diligence work. Moreover, Clayton does not participate in the securities sales process, nor does it have knowledge of our loan exception reports being provided to investors or the rating agencies as part of the securitization process.

Beal, Sept. 23, 2010 FCIC Written Testimony (attached hereto at Appendix II). The 2011 FCIC Report concurs: the disclosures in the Offering Documents were "insufficient for investors to know what criteria the mortgages they were buying actually did meet." FCIC Report at 169.

499. The Offering Documents fail to state that: (1) Clayton had informed the sponsors and Underwriters that a substantial percentage of loans in the loans pools backing PLMBS were defective; (2) that the sponsors and Underwriters, nonetheless, waived the defects as to a substantial percentage of these loans; and (3) that the sponsors used the due diligence reports to negotiate a lower price for the loans pools.

500. The 2011 FCIC Report reveals that Clayton would approve no more than 54% of the loans it reviewed as satisfying stated underwriting standards. FCIC Report at 166. In testimony before the FCIC in September 2010, Keith Johnson said that "54% to me says there [was] a quality control issue in the factory" for mortgage-backed securities. Johnson concluded that Clayton's clients often waived loans to preserve their business relationship with the loan originator, because a high number of rejections might lead the originator to sell the loans to a competitor. *Id.*

5. Defendants' Own Due Diligence Identified a High Number of Defective Loans in the Mortgage Pools Backing PLMBS.

501. The financial institutions that dominated the securitization markets did not just obtain information about defective loan pools from third-party due diligence firms, but also through their own in-house due diligence efforts.

502. By way of example, in its investigation into the "causes … of the current financial and economic crisis in the United States," the FCIC examined in particular Citigroup's securitization practices. The FCIC heard testimony from Richard M. Bowen, III, the former Senior Vice President and Chief Underwriter for Correspondent and Acquisitions for CitiFinancial Mortgage (Citigroup's subprime mortgage lending subsidiary) from 2002-2005 and starting in 2006, Business Chief Underwriter for Correspondent Lending in Citigroup's Consumer Lending Group. In the latter position, Mr. Bowen supervised 220 professional underwriters and exercised direct oversight over the underwriting or more than $90 billion of mortgages annually.

503. Mr. Bowen testified that each year since 2005, Citigroup's mortgage operation systematically acquired tens of billions of dollars of risky loans that violated Citigroup's own underwriting criteria and were likely to default. He also testified that Citigroup's Wall Street Chief Risk Officer routinely overruled underwriters' rejections of pools of both prime and subprime mortgages that did not satisfy Citigroup's underwriting criteria for purchase, causing Citigroup to purchase billions of dollars of loan pools that fell far short of underwriting standards. Mr. Bowen testified that "[d]uring 2006 and 2007, I witnessed business risk practices which made a mockery of Citi credit policy. . . ."

504. Mr. Bowen reported that he discovered that of the $50 billion of prime mortgages purchased in 2006, "over 60% of these mortgages purchased and sold were defective." He testified

further that he "started issuing warnings in June of 2006 and attempted to get management to address these critical risk issues. These warnings continued through 2007 and went to all levels of the Consumer Lending Group." Likewise, he reported systematic abuses in the subprime pools as well.

505. Mr. Bowen also testified that he recommended that Citigroup not purchase Ameriquest, because his due diligence found that the loans originated by Argent, Ameriquest's wholesale division lender, did not meet the standards they had represented to Citigroup. Specifically, Mr. Bowen testified that "we sampled the loans that were originated by Argent and we found large numbers that did not – that were not underwritten according to the representations that were there."

506. Mr. Bowen submitted with his testimony an email that he sent to Citigroup's then Chairman of the Board, Robert Rubin, in late 2007 documenting his concerns. One email stated:

> During 2006-7 there were pools of mortgage loans aggregating $10 billion which were purchased from large mortgage companies with significant numbers of files identified as "exceptions" (higher risk and substantially outside of our credit policy criteria). These exceptions were approved by the Wall Street Channel Chief Risk Officer, many times over underwriting objections and with the files having been turned down by underwriting. These pools involved files aggregated and originated by Merrill Lynch, Residential Funding Corp, New Century, First NLC and others.

Available at http://www.fcic.gov/hearings/pdfs/2010-0407-Bowen.pdf. Citigroup disregarded the warnings and red flags and completed the acquisition.

507. Citigroup's practices were not unique. On May 12, 2010, the Wall Street Journal reported that "[f]ederal prosecutors, working with securities regulators, are conducting a preliminary criminal probe into whether several major Wall Street banks misled investors about their roles in mortgage-bond deals, according to a person familiar with the matter." The article noted that:

> the banks under early-stage criminal scrutiny—J.P. Morgan Chase & Co., Citigroup Inc., Deutsche Bank AG and UBS AG—have also received civil subpoenas from the Securities and Exchange Commission as part of a sweeping investigation of banks' selling and trading of mortgage-related deals, the person says. Under similar preliminary criminal scrutiny are Goldman Sachs Group Inc. and Morgan Stanley, as previously reported by The Wall Street Journal.

508. Upon information and belief, the other Issuer/Depositor and Underwriter Defendants similarly knew of and ignored red flags generated by their own due diligence as well by third-party due diligence firms hired by the Defendants indicating that the pools of loans they purchased and sold in securitizations were far riskier than was represented to investors, including the Bank.

6. The Vertical Integration of Many of the Firms Involved in the Issuance of the PLMBS Purchased by the Bank Enabled the Controlling Person Defendants to Control the Management and Policies of the Controlled Entities.

509. The Controlling Person Defendants, which had a 100% or substantial majority direct or indirect ownership in the respective Depositor/Issuer and/or Underwriter Defendants, had the power to, and did, conduct and participate, directly and indirectly, in the management and control of all aspects of the management and policies of the Controlled Entities, including the securitizations and offer and sale of the Certificates that are the subject of this litigation, as evidenced by, inter alia,

A. The Controlling Person Defendants created the respective Depositor/Issuer Defendants as their special purpose entities for the purpose of issuing the Certificates that are the subject of this action;

B. The Controlling Person Defendants played other important and vital roles regarding the structuring and administration of the issuing trusts and Certificates, which allowed them to exercise substantial control over many parties to the securitization, including the respective Depositor/Issuer and/or Underwriter Defendants;

C. Revenue from the securitizations inured to the benefit of the Controlling Person Defendants;

D. Statements in the Controlling Person Defendants' SEC filings show control through comprehensive involvement with the Controlled Entities' operations;

E. The Controlling Person Defendants directly participated in the issuance of the Certificates, including touting their extensive activity and experience in the securitization market, particularly in initiating securitization of the residential mortgage loans they originated or acquired in the secondary mortgage market and transferring those loans to Depositor Defendants, for sale through the trust to purchasers such as the Bank;

F. The Controlling Person Defendants frequently and prominently identified themselves in the Offering Documents; and/or

G. Officers and/or directors of the Controlling Person Defendant frequently signed the respective registration statements.

510. In addition, the Controlling Person Defendants were frequently parties to the agreements necessary to the securitizations, such as the Pooling and Servicing Agreement, Mortgage Loan Purchase Agreement, Servicing Agreement, Assignment, Assumption and Recognition Agreement, including amendments, restatements and exhibits thereto, which agreements frequently:

A. Were between vertically integrated entities;

B. Were signed by the same officer or director of the Controlling Person Defendant on behalf of the Controlled Entity or someone at the same address;

C. For purposes of providing formal notice under the agreement, identified a single individual and/or address as the notice recipient for two or more parties to the agreement; and

D. Provided for indemnification by the Controlling Person Defendant.

511. The control of the vertically integrated firms of all aspects of the securitization is apparent in the following prospectus language:

> GSMC [GS Mortgage Securities Corp.] was formed in 1984. Its general partner is Goldman Sachs Real Estate Funding Corp. and its limited partner is The Goldman Sachs Group, Inc. (NYSE:GS). . . . GSMC purchases closed, independently funded, first- and subordinate-lien residential mortgage loans for its own investment, securitization, or resale.
>
> * * *
>
> GSMC has been active as a sponsor in the securitization market since 2001. As a sponsor, GSMC acquires residential mortgage loans in the secondary mortgage market and initiates the securitization of the loans it acquires by transferring the mortgage loans to the depositor, which loans will ultimately be transferred to the issuing entity for the related securitization.
>
> As of January 1, 2006, GSMC has sponsored the securitization of approximately $100,913,776,942 of residential mortgage loans, which include prime, subprime, Alt-A, FHA/VA, second lien, HELOC, "scratch and dent," re-performing and seasoned loans.
>
> * * *
>
> Prior to acquiring any mortgage loans, GSMC will conduct a review of the related mortgage loan seller. GSMC's review process consists of reviewing select financial information for credit and risk assessment and underwriting guideline review, senior level management discussion and background checks. The scope of the loan due diligence will depend on the credit quality of the mortgage loans.
>
> The underwriting guideline review considers mortgage loan origination processes and systems. In addition, such review considers corporate policy and procedures relating to HOEPA and state and federal predatory lending, origination practices by jurisdiction, historical loan level loss experience, quality control practices, significant litigation and material investors.
>
> * * *
>
> THE DEPOSITOR
>
> The Depositor is GS Mortgage Securities Corp., a Delaware corporation. The Depositor is a wholly-owned subsidiary of the Sponsor, GSMC, and is an affiliate of the Underwriter. The Depositor will not have any business operations other than securitizing mortgage assets and related activities.

THE ISSUING ENTITY

> GSR Mortgage Loan Trust 2006-1 F, the issuing entity, will be formed on the closing date pursuant to the Trust Agreement. The issuing entity will be a New York common law trust with no officers or directors and no continuing duties other than to hold and service the Mortgage Loans and related assets and issue the certificates. The fiscal year end for the issuing entity will be December 31, commencing with December 31, 2006.

GSR 2006 1F Pros. Sup. S-65-66. Substantively similar language appears in the Prospectus Supplements for the Certificates involving the other Controlling Person Defendants named herein.

512. Thus, in short, the Controlling Person Defendants controlled, influenced, or participated in essentially all material aspects relating to the acquisition, structure and sale of the Certificates purchased by the Bank identified herein.

513. The Controlling Person Defendants' control, position and influence over the Controlled Defendants made them privy to, and provided them with actual knowledge of, the material facts and omissions concealed from the Bank with regard to the underlying mortgage pools.

E. The Securitization Process Was Supported by Credit Ratings that Materially Misstated the Credit Risk of the PLMBS.

514. The triple-A credit ratings of the PLMBS played a crucial role in the Bank's purchase of PLMBS. Pursuant to Bank policy, the Bank could only purchase triple-A rated tranches of the Certificates. Without that rating, no purchase would have occurred. Thus, the Bank relied to its detriment on the ratings and the Defendants' representations regarding the ratings in the Offering Documents.

515. The Defendants well understood (and banked on) the important role the credit ratings played in the PLMBS markets. They featured the ratings prominently in the Offering Documents and discussed at length the ratings received by the different tranches of the PLMBS,

and the bases for the ratings. Yet, the Credit Rating Agencies knew, and the Defendants should have known, that the ratings were not reliable. Those ratings were bought and paid for and were based on flawed information.

1. The Credit Rating Agencies Knew That the Credit Ratings Were Unreliable, Based As They Were on Underwriting Standards That the Credit Rating Agencies Knew Had Been Abandoned.

516. The Credit Rating Agencies knew that many mortgage originators had abandoned their stated mortgage underwriting guidelines, and thus knew that the ratings were false when made.

517. The Senate Subcommittee on Investigations, for example, uncovered internal rating agency emails from the summer and fall of 2006 noting that "there has been rampant appraisal and underwriting fraud in the industry for quite some time"; that "underwriting fraud[,] appraisal fraud and the general appetite for new product among originators [are] resulting in loans being made that shouldn't be made"; and that "this is like another banking crisis potentially looming."

518. S&P became so concerned with underwriting standards that, when it was asked to rate certificates backed by loans that Fremont Investment and Loan had originated, one analyst asked his supervisors whether he should treat Fremont collateral differently. "No," one of his supervisors responded, "we don't treat their collateral any differently." The other supervisor said that as long as there were current FICO scores for the borrowers, then the analyst was "good to go," no matter how little documentation the origination process required, and regardless of any other characteristic of the mortgage loans. While Fremont Investment and Loan is not identified in the Offering Documents as a relevant originator in this case, its underwriting standards – in the documentation it required and otherwise – were typical of the underwriting standards of the relevant originators here. The concerns the analyst expressed about Fremont were just as

applicable to other originators, whose underwriting standards the Credit Rating Agencies knew just as well as they did Fremont's.

519. Based on its investigation, the Senate Subcommittee on Investigations found that from 2004 to 2007, all three of the Credit Rating Agencies knew of the increased risks caused by mortgage fraud and lax underwriting standards, but failed to factor those risks into their rating models. S. Subcomm. on Investigations, 112th Cong., *Wall Street and the Financial Crisis: Anatomy of a Financial Collapse* 311-12 (2011) (hereinafter S. Subcomm., *Anatomy of a Financial Collapse*).

520. In June 2005, for example, an outside mortgage broker wrote to Susan Barnes, the head of the S&P group that rated PLMBS, advising her that "attention to loan risk" had drastically deteriorated among mortgage originators. *Id.* at 269.

521. Here, just as in other cases, the Credit Rating Agencies did not factor the abandonment of underwriting standards into their analysis of the PLMBS that are the subject of this lawsuit. Instead, they based their ratings on underwriting standards they knew to have been abandoned in practice.

522. The problem, then, may be briefly stated: garbage in, garbage out. The Credit Rating Agencies based their ratings on underwriting standards they knew to have been abandoned. They thus knew those ratings to be unreliable.

2. The Credit Ratings Were Compromised by Conflicts of Interest, Manipulation and Misinformation.

523. The Credit Rating Agencies received enormous revenues from the sponsors, Depositors, and Underwriters who paid them for rating the products they sold.

524. Because the desired rating of a securitized product was the starting point for any securities offering, the Credit Rating Agencies were actively involved in helping Depositors,

sponsors, and Underwriters structure the products to achieve the requested rating. As a result, the Credit Rating Agencies essentially worked backwards, starting with the clients' target rating and thereafter working toward a structure that could conceivably yield the desired rating.

525. A 2008 SEC Report entitled "Summary Report of Issues Identified in the Commission Staff's Examinations of Select Credit Rating Agencies" ("Summary Report") revealed that the sponsors, Depositors, Underwriters, and Credit Rating Agencies worked together so that securities would receive the highest ratings:

> Typically, if the analyst concludes that the capital structure of the [PLMBS] does not support the desired ratings, this preliminary conclusion would be conveyed to the arranger. The arranger could accept that determination and have the trust issue the securities with the proposed capital structure and the lower rating or adjust the structure to provide the requisite credit enhancement for the senior tranche to get the desired highest rating. Generally, arrangers aim for the largest possible senior tranche, i.e., to provide the least amount of credit enhancement possible, since the senior tranche—as the highest rated tranche—pays the lowest coupon rate of the [PLMBS] tranches and, therefore, costs the arranger the least to fund.

526. As a result of this collaboration with the Credit Rating Agencies, Depositors/Issuers, sponsors, and Underwriters were able to manipulate the system to achieve inflated ratings. For example, through repeated interactions with the Credit Rating Agencies, the sponsors and Depositors/Issuers—and the Underwriters working with them—could effectively reverse engineer aspects of the ratings models and then modify the structure of a financing to improve its ratings without actually improving its credit quality. In this process, the Depositors/Issuers, sponsors, and Underwriters could change aspects of PLMBS very slightly—but without any real effect on the economic reality of the instruments—or simply present the same data in a different way, and get better ratings. Gretchen Morgenson & Louise Story, *Rating Agency Data Aided Wall Street in Deals*, N.Y. Times, Apr. 23, 2010.

527. This rating process was further compromised by "ratings shopping." The Defendants did not pay for the Credit Rating Agencies' services until after the Credit Rating

Agencies gave a preliminary rating to the clients. This practice created what were essentially bidding wars—contests in which the clients would hire the agency that provided the highest rating for the lowest price. The Credit Rating Agencies were paid only if they provided the desired ratings, and only if the transaction closed with those ratings. "Ratings shopping" jeopardized the integrity and independence of the rating process.

528. The Senate Subcommittee on Investigations has detailed numerous instances in which the Credit Rating Agencies gave "special treatment" to investment bankers who complained about rating decisions. "In many instances," the Subcommittee concluded, this special treatment "cross[ed] over form the healthy give and take involved in complex analysis to concessions made to prevent the loss of business." S. Subcomm., *Anatomy of a Financial Collapse, supra*, at 280. Thus, even the *threat* of ratings shopping had a real effect on the Credit Rating Agencies' ratings.

529. Raymond McDaniel, Moody's CEO, realized that the market-share war had undermined the Ratings Agencies' work product. In an internal presentation to Moody's Board of Directors in 2007, he stated:

> The real problem is not that the market does underweights [sic] ratings quality but rather that . . . it actually penalizes quality by awarding rating mandates based on the lowest credit enhancement needed for the highest rating. Unchecked, competition on this basis can place the entire financial system at risk.[9]

530. McDaniel described to the board how Moody's has "erected safeguards to keep teams from too easily solving the market share problem by lowering standards" but then stated, **"This does NOT solve the problem."** Turning then to a topic he referred to as "Rating Erosion by Persuasion," McDaniel observed, "Analysts and [managing directors] are continually 'pitched' by bankers, issuers, investors" and sometimes "we 'drink the kool-aid.'"

[9] Exhibit to October 22, 2008, hearing before the House Oversight Committee.

531. As these examples illustrate, the Credit Rating Agencies were aware that clients were able to—and did—manipulate the system to receive the highest possible rating without actually structuring their deals so as to merit that rating.

3. The Credit Ratings Were Unreliable Due to the Use of Inaccurate, Outdated Models, and Inadequate Resources.

532. The outdated models used by the Credit Rating Agencies turned out PLMBS ratings that the Credit Rating Agencies knew to be inaccurate.

533. The models relied on pre-2000 data—reliance that, for a number of reasons, produced wildly inaccurate results. First, this pre-2000 data ignored the dramatic changes in the mortgage industry following 2000: increased lending to riskier borrowers, increased origination of riskier kinds of mortgage loans, and a dramatic rise in housing prices. Second, the pre-2000 data, as the Congressional Research Service reported in 2009, was based on a "benign period of economic moderation in financial markets and rising house prices." Congressional Research Serv., *Credit Rating Agencies and Their Regulation* 7 (2009); *accord*, S. Subcomm, *Anatomy of a Financial Collapse, supra*, at 288-89. They were useless in predicting the likelihood of default in a time of macroeconomic crisis and falling housing prices.

534. The models had other flaws too. The Credit Rating Agencies failed to account for any risk of a nationwide decline in home prices, and they miscalculated the interdependence among loan defaults—the likelihood that an economic storm would sink more than one financial ship.

535. The Credit Rating Agencies knew of these flaws, but did nothing to fix them.

536. In 2007, for example, Vickie Tillman, an S&P Executive Vice President, stated before the Senate Banking Committee: "We are fully aware that, for all our reliance on our

historically rooted data that sometimes went as far back as the Great Depression, some of that data has proved no longer to be as useful or reliable as it has historically been."

537. In an April 27, 2008 article in the New York Times Magazine, Mark Adelson, a former Managing Director in Moody's structured finance division, criticized Moody's use of historical data about 30-year fixed mortgages to predict defaults and delinquencies in the new mortgage market—describing it as "observing 100 years of weather in Antarctica to forecast the weather in Hawaii."

538. In fact, the Credit Rating Agencies themselves did not believe the results their models turned out.

539. In an April 2007 electronic communication uncovered by the Senate Subcommittee on Investigations, two S&P analysts agreed that a particular mortgage-backed deal was "ridiculous," and that the model "definitely does not capture half the ris[k]." A month later, one of those analysts complained that "no body [sic] gives a straight answer about anything around here," and that there were no "clear cut parameters on what the hell we are supposed to do."

540. Eric Kolchinsky, a former managing director at Moody's, testified before the House Oversight and Government Reform Committee on September 30, 2009 that "[m]ethodologies produced by Moody's for rating structured finance securities are inadequate and do not realistically reflect the underlying credits. Rating models are put together in a haphazard fashion and are not validated if doing so would jeopardize revenues."

541. Compounding the inherent problems with the rating models was the fact that the Credit Rating Agencies simply did not commit the resources necessary to adequately rate residential-mortgage-backed financial products.

542. Frank L. Raiter, who from 1995 until 2005 was a Managing Director at S&P and head of its Residential Mortgage Rating Group, stated in prepared testimony before the Senate Subcommittee on Investigations that "in the residential ratings group[,] . . . between 1995 and 2005[,] rating volumes grew five or six fold without similar increases in staffing. Rating production was achieved at the expense of maintaining criteria quality."

543. This inadequate staffing had practical consequences: it meant that the Credit Rating Agencies were not able to improve the models that they knew produced inaccurate and misleading ratings. As Raiter testified, by early 2004 S&P had developed a model that took into account much more historical data than had been analyzed previously—a new model suggesting that the model then in use "was underestimating the risk of some Alt-A and subprime products." Due to inadequate staffing, this model "was never implemented." If S&P had implemented the new model, stated Raiter, it would have required much greater credit enhancement from PLMBS issuers in 2005, 2006, 2007—without which the PLMBS would have been assigned much less favorable ratings.

544. Similarly, Jerome Fons, a former Managing Director of Credit Policy at Moody's, testified before the House Oversight Committee on October 22, 2008 that when evidence arose that previously assigned ratings of PLMBS were inaccurate, the Credit Rating Agencies "did not update their models or their thinking."

545. As these examples illustrate, the Credit Rating Agencies knew that the unreliability of their models meant that their ratings of PLMBS did not accurately reflect the likelihood of payment.

4. The Credit Rating Agencies Knew That Their PLMBS Ratings Fundamentally Differed from Their Ratings of Corporate Bonds.

546. Neither the Credit Rating Agencies nor the Defendants disclosed to investors that the ratings of PLMBS were materially different from, and less reliable than, standard corporate bond ratings.

547. Instead, the Credit Rating Agencies represented that the credit ratings were comparable to corporate bonds. Moody's stated in a 2004 presentation that, "The comparability of these opinions holds regardless of the country of the issuer, its industry, asset class, or type of fixed-income debt." A May 2007 S&P document on rating methodology stated: "Our ratings represent a uniform measure of credit quality globally and across all types of debt instruments. In other words, an 'AAA' rated corporate bond should exhibit the same degree of credit quality as an 'AAA' rated securitized debt issue."

548. In fact, however, the Credit Rating Agencies did not simply estimate expected loss and/or probability of default in determining the PLMBS ratings in this case, as they do with corporate bonds. Rather, they employed mathematical credit risk models based on random event simulations to determine the estimated loss distributions associated with the great many separate assets that back the PLMBS. These models required the Credit Rating Agencies to make many estimates and assumptions regarding each of the various assets, including the degree to which losses or defaults on these assets would be correlated with each other.

549. The Credit Rating Agencies in this case knowingly made unreasonable assumptions about how frequently defaults on the assets would be correlated with each other. *See supra* § V.E.3. And, unlike the assumptions the Credit Rating Agencies use for rating other instruments, such as corporate bonds, the correlation assumptions used to rate the PLMBS in this case were based on dramatically incomplete historical data or on pure speculation.

550. In short, the Credit Rating Agencies knowingly misrepresented that their PLMBS ratings were as accurate as their ratings of other instruments.

5. Subsequent Downgrades Confirm that the Investment-Grade Ratings Reported in the Offering Documents Were Unjustifiably High and Misstated the True Credit Risk of the PLMBS Purchased by the Bank.

551. "Investment-grade" products are understood in the marketplace to be stable, secure and safe. Using S&P's scale, "investment-grade" ratings are AAA, AA, A and BBB, and represent, respectively, extremely strong credit quality, very strong credit quality, strong credit quality, and adequate credit quality. Any instrument rated below BBB is considered below investment-grade or "junk bond."

552. The Defendants' Offering Documents stated that the issuance of the PLMBS was conditioned on the assignment of particular, investment-grade ratings, and listed the ratings in a chart.

553. As noted, the Bank purchased only triple-A-rated tranches of PLMBS. However, the triple-A ratings of the PLMBS misstated the credit quality of the underlying loans. The triple-A rating denotes extremely strong credit quality and is the same rating as those typically assigned to bonds backed by the full faith and credit of the United States Government, such as Treasury Bills.

554. On or about July 10, 2007, S&P publicly announced it was revising the methodologies used to rate numerous mortgage-backed securities because the performance of the underlying collateral "called into question" the accuracy of the loan data. S&P announced it was revising its methodology assumption to require increased "credit protection" for rated transactions. S&P reiterated that it would seek in the future to review and minimize the incidence of potential underwriting abuse given "the level of loosened underwriting at the time

of loan origination, misrepresentation and speculative borrower behavior reported for the 2006 vintage" of mortgage-backed securities.

555. One day later, on July 11, 2007, Moody's announced it was also revising its methodology used to rate PLMBS, and anticipated downgrades of PLMBS. Moody's did in fact significantly downgrade many PLMBS, noting "aggressive underwriting" used in the origination of the collateral.

556. At the time these statements were made in July 2007, all of the PLMBS retained their investment-grade ratings.

557. Historically, investments with triple-A ratings had a very low expected default rate. The default rate on investment-grade corporate bonds from 1981 to 2008, for example, averaged about 0.08%, with no year's default rate higher than 0.51%.

558. Beginning in the fall of 2008, the PLMBS purchased by the Bank were downgraded. Twenty-six of the thirty triple-A rated Certificates (originally valued at over $2.7 billion) now have been downgraded to non-investment-grade ratings, *i.e.* junk status. *See infra* ¶ 651.

559. The en masse downgrade of triple-A rated PLMBS indicates that the ratings set forth in the Offering Documents were false, unreliable and inflated. As the SEC has noted, "[a]s the performance of these securities continued to deteriorate, the three rating agencies most active in rating these instruments downgraded a significant number of their ratings. The rating agencies['] performance in rating these structured finance products raised questions about the accuracy of their credit ratings generally as well as the integrity of the ratings process as a whole." *Summary Report of Issues Identified in the Commission Staff's Examinations of Select Credit Rating Agencies by the Staff of the Securities and Exchange Commission* at 2 (July 2008).

The Defendants should have known the Offering Documents' statements with respect to these ratings were misleading because of their direct involvement in and manipulation of the rating process, and awareness of the poor credit quality of the underlying loan collateral.

6. The Bank Reasonably Relied on the Credit Ratings Reported in the Prospectuses.

560. The market—including both sophisticated and unsophisticated investors—has come to rely on the Credit Rating Agencies for accurate and unbiased assessments of credit quality.

561. Fitch; Moody's Investors Service, Inc.; and Standard & Poor's Ratings Services are "Nationally Recognized Statistical Rating Organizations," or NRSROs—a special status that the SEC created in 1975 to distinguish the most credible and reliable rating agencies and to ensure the integrity of the ratings process. According to the SEC, the "single most important criterion" in their granting of NRSRO status is that "the rating organization is recognized in the United States as an issuer of credible and reliable ratings by the predominant users of securities ratings." Further, in grating NRSRO status, the SEC determines that the rating organization is independent from the firms whose issuances it rates.

562. It was thus reasonable for the Bank to rely on the Credit Rating Agencies' ratings of the PLMBS.

563. The Bank did not know, and reasonably could not have known, that the credit ratings were flawed. The Bank did not know that the credit ratings were impaired by conflicts of interest and were susceptible to manipulation. Moreover, the Bank did not know that the ratings did not in fact address the risk of the Certificates and the likelihood of payment by borrowers on the underlying mortgage loans. Indeed, no disclosure informed the Bank that the rating was the

unreliable result of inaccurate information and deficient modeling, as opposed to a legitimate evaluation of credit risk.

564. The Credit Rating Agencies continued to assure the market of the integrity of their ratings of mortgage-backed securities long after the PLMBS were purchased by the Bank. In a letter to the editor of The Wall Street Journal dated September 17, 2007, Vickie Tillman, then Executive Vice President of Credit Market Services at S&P, stated: "We have numerous safeguards in place that have helped us effectively manage" potential conflicts of interest. "Our credit ratings provide objective, impartial opinions on the credit quality of bonds." Tillman likewise testified before the Senate Committee on Banking, Housing and Urban Affairs on September 26, 2007:

> S&P maintains rigorous policies and procedures designed to ensure the integrity of our analytical processes. For example, analysts are not compensated based upon the amount of revenue they generate. Nor are analysts involved in negotiating fees. Similarly, individuals responsible for our commercial relationships with issuers are not allowed to vote at rating committees. These policies, and others, have helped ensure our long-standing track record of excellence.

565. The Credit Rating Agencies also assured the market that the ratings assigned to PLMBS were just as reliable as ratings assigned to corporate bonds. *See supra* ¶¶ 546-547.

566. At the time these statements were made in September 2007, all of the PLMBS retained their investment-grade ratings.

F. The Proper Steps Were Not Taken To Ensure That The Mortgages Underlying The Trusts Were Enforceable.

1. The Value of the PLMBS Is Impacted If the Mortgage Loans and Mortgages Have Not Been Validly Assigned and Transferred to the Issuing Trust Such That They Are Enforceable

567. For PLMBS certificates to maintain value, the issuing trust must be able to enforce the mortgage notes that back the certificates. If the trust cannot enforce the loans, they are effectively worthless—and so are the certificates.

568. The mortgage originator is the entity responsible for generating the loans that are ultimately transferred to the trusts. But if the trustee is to enforce the loans—and if PLMBS certificates are to maintain value—both the promissory note executed by the borrower and the mortgage itself must be validly transferred to the trust in the securitization process.

569. The promissory notes and mortgages are not transferred directly from the loan originator to the trust. Instead, they are typically transferred to a depositor, or to a sponsor and thence to a depositor. *See supra* ¶¶ 105-111.

570. The Offering Documents for all of the PLMBS in this action represented that the mortgage notes would be validly transferred to the issuing trust in accordance with specified procedures.

571. A trust that issues PLMBS certificates must be able to enforce not only the mortgage notes that back the certificates, but also the mortgages that secure the mortgage notes. If the mortgages cannot be enforced, then the properties that secure the mortgage notes cannot be foreclosed on if the borrower defaults. If the mortgages that secure the mortgage notes are not enforceable, PLMBS are to that extent impaired.

572. Before mortgages can be enforced by the trustee, however, they must be validly assigned to the issuing trust.

573. Before a purported mortgage holder can foreclose on a mortgaged property, state law generally requires that the purported holder—if it is not the original mortgagee—prove that it is a valid assignee of the mortgage. The assignment, or chain of assignment, must trace back without gaps to the original mortgagee, it must be in writing, and it must identify the mortgage that is assigned.

574. A material number of the mortgage notes underlying the issuing trusts have not been validly transferred in accordance with the procedures outlined in the Offering Documents.

575. The best known example of this failure is *Kemp v. Countrywide Home Loans, Inc. (In re Kemp)*, No. 08-18700 (Bankr. D.N.J.), in which Linda DeMartini, whom Countrywide had employed for a decade and who testified that in her employment, she had been "involved in every aspect of the servicing," and "had to know about everything,"[10] testified—on direct examination—that failure to deliver the promissory note to the trust was normal operating procedure for Countrywide when acting as originator and servicer.[11] Among the PLMBS at issue in this action, Countrywide was an originator for Securities BSARM 2007-3 1A1, CWHL 2007-8 1A5, CWHL 2005-8R A1, CWHL 2007-13 A4, GSR 2006-2F 3A1, GSR 2006-AR1

---

[10] *Kemp*, Hr'g Tr. 45:7, :9-10 (Aug. 11, 2009).

[11] As DeMartini testified:

> Q. [I]s it generally the custom . . . for [the trust] to hold the documents?
> A. No. They would stay with us as the servicer.
> . . .
> Q. So I believe you testified Countrywide was the originator of this loan?
> A. Yes.
> . . .
> Q. So the physical documents were retained within the corporate entity Countrywide or Bank of America?
> A. Correct.
> Q. . . . [W]ould you say that this is standard operating procedure in the mortgage banking business?
> A. Yes. It would be . . . the normal course of business . . . , as we're the ones that are doing all the servicing, and that would include retaining the documents.

Id. at 14:5-15:6.

2A3, GSR 2006-1F 2A2, GSR 2005-3F 2A1, GSR 2005-1F 3A1, GSR 2005-2F 2A1, and GSR 2006-6F 2A1.

576. In *Kemp*, the U.S. Bankruptcy Court for the District of New Jersey, applying New Jersey law, held that because the debtor's mortgage note had not been physically transferred to the issuing trust's trustee, or properly indorsed, it was not enforceable by either the issuing trust's trustee or the trustee's agent. *Kemp v. Countrywide Home Loans, Inc. (In re Kemp)*, 440 B.R. 624, 630-34 (Bankr. D.N.J. 2010).

577. These failures appear to be systemic in the industry. Even if they do not affect every mortgage underlying every issuing trust, the failures affect a sufficient number of the mortgages and materially impair the value of the PLMBS.

578. Multiple cases have been filed in courts across the country by homeowners challenging the right of financial institutions to foreclose. *See, e.g.*, *In re Mims*, 438 B.R. 52 (Bankr. S.D.N.Y. 2010); *Deutsche Bank Nat'l Trust Co. v. Tarantola (In re Tarantola)*, No. 09-09703, 2010 WL 3022038 (Bankr. D. Ariz. July 29, 2010); *In re Weisband*, 427 B.R. 13 (Bankr. D. Ariz. 2010); *Wells Fargo Bank, N.A. v. Marchione*, 887 N.Y.S.2d 615 (App. Div. 2009); *IndyMac Bank F.S.B. v. Garcia*, 28 Misc. 3d 1202(A) (N.Y. Sup. Ct. 2010); *Deutsche Bank Nat'l Trust Co. v. McRae*, 894 N.Y.S.2d 720 (Sup. Ct. 2010); *HSBC Bank USA, N.A. v. Miller*, 889 N.Y.S.2d 430 (Sup. Ct. 2009); *Deutsche Bank Nat'l Trust Co. v. Abbate*, 25 Misc. 3d 1216(A) (N.Y. Sup. Ct. 2009); *In re Adams*, 693 S.E.2d 705 (N.C. Ct. App. 2010); *HSBC Bank USA v. Thompson*, No. 23761, 2010 WL 3451130 (Ohio Ct. App. Sept. 3, 2010); *Bank of N.Y. v. Gindele*, No. C-090251, 2010 WL 571981 (Ohio Ct. App. Feb. 19, 2010).

579. According to the *New York Times*, the United States Trustee Program has taken the unusual step of intervening in bankruptcy proceedings to force the mortgage companies to

prove that they own, or otherwise have the standing required to enforce, the mortgages on which they are seeking to foreclose. *See* Gretchen Morgenson, *Don't Just Tell Us. Show Us That You Can Foreclose*, N.Y. TIMES , Nov. 27, 2010. The *Time's* article noted the Trustee's intervention in two Atlanta bankruptcy cases, one involving Wells Fargo and the other involving J.P. Morgan Chase.

580. The failure is also shown by the recent drop in foreclosures system-wide, which is attributable to lack of necessary documentation. *See, e.g.*, Dan Levy & John Gittelsohn, *Foreclosure Filings Hit Three-Year Low As U.S. Servicers in "Dysfunction"*, Bloomberg News, Mar. 9, 2011, *available at* http://www.bloomberg.com/news/2011-03-10/foreclosure-filings-drop-to-3-year-low-as-u-s-servicers-in-dysfunction-.html. In addition, in the Fall of 2010, major financial institutions such as Bank of America (which acquired Countrywide) and J.P. Morgan Chase, both originators of mortgages underlying the Certificates purchased by the Bank, announced they were suspending mortgage foreclosures because they had discovered significant problems in their ability to locate and document the ownership of mortgage notes.

581. The evidence of misconduct in this regard has been so severe and pervasive that the Attorneys General of all 50 states have announced an investigation into the Defendants' practices. In addition, major financial institutions have reserved hundreds of millions, if not billions, of dollars to address litigation and losses stemming from the financial crisis and foreclosure problems.

582. Also telling is a recent proposal by a group friendly to the mortgage industry to enact federal legislation to loosen the standards for foreclosure. Jason Gold & Anne Kim, Third Way, *Fixing "Foreclosure-gate"* (2011), *available at*

http://content.thirdway.org/publications/362/Third_Way_Memo_-_Fixing_Foreclosure-gate.pdf. The proposal would hardly be necessary if the industry's house were in order.

583. Most recently, *Fortune Magazine* examined a large number of foreclosures filed in Westchester and Bronx Counties in New York between 2006 and 2010. It examined 104 cases in which the loan was originated by Countrywide and 26 cases in which the loan had been securitized into a Countrywide-sponsored securitization (130 cases total). None of the 104 promissory notes documenting loans originated by Countrywide bore a Countrywide endorsement—"they included only the original borrower's signature." Of the other 26 loans, two-thirds lacked bank endorsements. The vast majority of the 130 promissory notes, then, lacked a complete chain of assignment and were unenforceable. Abigail Field, *At Bank of America, More Incomplete Mortgage Docs Raise More Questions*, Fortune Mag., June 3, 2011, *available at* http://finance.fortune.cnn.com/2011/06/03/at-bank-of-america-more-incomplete-mortgage-docs-and-more-questions (last visited June 22, 2011).

VI. DEFENDANTS' MATERIAL UNTRUE STATEMENTS AND OMISSIONS IN CONNECTION WITH THE SALE OF PLMBS TO THE BANK

584. As detailed above, the Depositor/Issuer Defendants purchased mortgage loans, deposited them into issuing trusts, and issued the securities, and the Underwriter Defendants – Wall Street banks and other large financial institutions – offered and sold the PLMBS to the Bank through the Offering Documents. With respect to each securitization, the Depositor/Issuer and Underwriter Defendants drafted the Offering Documents. In addition, each Depositor/Issuer Defendant and Underwriter Defendant was identified in these documents as the depositor/issuer or underwriter, respectively, of the securities, and approved the versions of these documents that were delivered by the Underwriter and Seller Defendants to the Bank.

585. The Offering Documents contained extensive material misstatements and omitted material facts with regard to the underwriting guidelines and practices purportedly applied by the mortgage originators whose loans backed the PLMBS purchased by the Bank, and a number of key characteristics of the mortgage pools that pertain to the risk of the securities. Specifically, the misstatements and omissions of material fact are as follows:

A. Defendants Misrepresented Underwriting Guidelines Utilized by Mortgage Lenders.

1. The Materiality of Underwriting Guidelines

586. As alleged above, the originator's underwriting standards, and the extent to which the originator departs from its standards, are key indicators of the risk of the mortgage loans made by the originator. And because the mortgage loans back the certificates that are issued to investors such as the Bank, the loan underwriting standards are also material to assessing the risk of the PLMBS certificates. For these reasons, the originator's underwriting standards as described in the Offering Documents were material to the Bank's decision to purchase the Certificates at issue here.

2. Misstatements Regarding Underwriting Guidelines

587. The Offering Documents contained material untrue or misleading statements and omitted material information regarding the underwriting guidelines allegedly employed in the origination of the mortgage loans that secure the PLMBS. Appendix III attached hereto and incorporated herein sets forth those statements and omissions and the reasons each is misleading. The following are examples of these materially misleading statements and omissions regarding mortgages originated or acquired by Countrywide Home Loans, Inc. ("Countrywide"), taken from the CHL Mortgage Pass-Through Trust 2007-8 Prospectus Supplement (incorporated herein by this reference):

- That the underwriting standards were applied "***to evaluate the prospective borrower's credit standing and repayment ability and the value and adequacy of the mortgaged property as collateral***." CWHL 2007-8 Pros. Sup. S-36-37.

- That "[f]or all mortgage loans originated or acquired by Countrywide," Countrywide:

> [O]btains a credit report relating to the applicant from a credit reporting company. The credit report typically contains information relating to such matters as credit history with local and national merchants and lenders, installment debt payments and any record of defaults, bankruptcy, dispossession, suits or judgments. ***All adverse information in the credit report is required to be explained by the prospective borrower to the satisfaction of the lending officer.***

CWHL 2007-8 Pros. Sup. S-36-37.

- That "a prospective borrower must generally demonstrate that the ratio of the borrower's monthly housing expenses (including principal and interest on the proposed mortgage loan and, as applicable, the related monthly portion of property taxes, hazard insurance and mortgage insurance) to the borrower's monthly gross income and the ratio of total monthly debt to the monthly gross income (the 'debt-to-income' ratios) are within acceptable limits." CWHL 2007-8 Pros. Sup. S-36-37.

- That under its Standard Underwriting Guidelines, Countrywide:

> [G]enerally permits a debt-to-income ratio based on the borrower's monthly housing expenses of up to 33% and a debt-to-income ratio based on the borrower's total monthly debt of up to 38%.

CWHL 2007-8 Pros. Sup. S-36-37.

- That under its Standard Underwriting Guidelines:

> The maximum acceptable debt-to-income ratio, which is determined on a loan-by-loan basis, varies depending on a number of underwriting criteria, including the Loan-to-Value Ratio, loan purpose, loan amount and credit history of the borrower.

BSARM 2007-3 Pros. Sup. (page numbers omitted in original).

- That "[e]xceptions to Countrywide Home Loans' underwriting guidelines may be made *if compensating factors are demonstrated by a prospective borrower*."

CWHL 2007-8 Pros. Sup. S-36.

- That "[a]ll of the mortgage loans in the trust fund will have been originated or acquired by Countrywide Home Loans in accordance with its credit, appraisal and underwriting standards." CWHL 2007-8 Pros. Sup. S-35-36.

- The Supplement further asserts the following with regard to mortgages purchased from originators other than Countrywide:

> Periodically the data used by Countrywide Home Loans to complete the underwriting analysis may be obtained by a third party, particularly for mortgage loans originated through a loan correspondent or mortgage broker. In those instances, the initial determination as to whether a mortgage loan complies with Countrywide Home Loans' underwriting guidelines may be made by an independent company hired to perform underwriting services on behalf of Countrywide Home Loans, the loan correspondent or mortgage broker.
>
> In addition, Countrywide Home Loans may acquire mortgage loans from approved correspondent lenders under a program pursuant to which Countrywide Home Loans ***delegates to the correspondent the obligation to underwrite the mortgage loans to Countrywide Home Loans' standards.*** Under these circumstances, the underwriting of a mortgage loan may not have been reviewed by Countrywide Home Loans before acquisition of the mortgage loan and the correspondent represents that Countrywide Home Loans' underwriting standards have been met. After purchasing mortgage loans under those circumstances, ***Countrywide Home Loans conducts a quality control review of a sample of the mortgage loans***. The number of loans reviewed in the quality control process varies based on a variety of factors, including Countrywide Home Loans' prior experience with the correspondent lender and the results of the quality control review process itself.

CWHL 2007-8 Pros. Sup. S-35-36.

588. These statements were materially misleading for multiple reasons, which are described in detail on Appendix III hereto. Fundamentally, they grossly distort the underwriting process that was actually employed by indicating that it was a principled process that employed numerous safeguards. Unfortunately, as described *supra*, §§ V.B. and V.C., both Countrywide and the other originators of mortgage loans that secured the PLMBS purchased by the Bank effectively abandoned their stated underwriting standards in an effort to maximize their mortgage origination volume. "Exceptions" to standards became the rule. Reduced documentation was employed not to streamline the process where warranted, but instead to mask the borrower's disqualification. Inflated valuations were accepted, whether through appraisals performed without regard for applicable appraisal standards, or through alternative valuations processes aimed at producing the result necessary to permit the loan to be made. Requirements for verification of borrower income, assets or employment were routinely ignored. Loans were purchased in bulk from third parties without meaningful due diligence of their quality. Ratios of loan-to-value or debt-to-income were meaningless because the appraised values were unreliable and the borrowers' income assertions were unverified.

589. In addition, the statements were materially misleading because they fail to disclose that Countrywide lacked any reasonable basis upon which to base its determination of "acceptable limits" for debt-to-income ratios. Due to the industry's inexperience with lending to borrowers with increased credit risks, including the explosion in Alt-A and other untraditional lending as described *supra* § V.B.1., Countrywide lacked sufficient data regarding historical patterns of borrower behavior in relation to default experience for similar types of borrower profiles. Consequently, Countrywide's assignment of "maximum acceptable debt-to-income ratio" had no reliable connection to the actual risk of default presented by borrowers assigned to

each classification. But Countrywide, and others in the industry, continued to use this data to construct "models" to justify their ever-less rigorous underwriting programs, and continued to present these models and programs to investors as prudent, thoroughly tested and well-grounded in reliable and objective data.

590. The statements were further materially misleading because they fail to disclose that Countrywide, like the other originators of mortgages that secured the PLMBS purchased by the Bank, lacked adequate procedures and practices to monitor or evaluate its underwriters' exercise of judgment, or to provide appropriate training and education to its underwriters.

3. Evidence Demonstrating Misstatements in the Offering Documents Regarding the Originators' Underwriting Practices

a. Government investigations, actions and settlements, confidential witnesses and evidence developed in other private lawsuits demonstrate systematic and pervasive abandonment of stated underwriting practices by the originators.

591. As alleged in detail above, the failure of the mortgage originators who issued the loans backing the PLMBS purchased by the Bank to apply their stated underwriting guidelines, ensure that compensating factors justified exceptions, and obtain accurate appraisals is well documented in government investigations and lawsuits, press reports, and statements of confidential witnesses who are former employees of the mortgage originators. Additional evidence has been generated by the many other private lawsuits against many of the same Defendants in connection with the sale of MBS and related securities. This evidence – and the allegations herein based on this evidence – demonstrates that the statements in the Offering Documents regarding the mortgage originators' underwriting and appraisal practices are materially false and misleading. Contrary to the representations in the Offering Documents, the mortgage originators did not genuinely attempt to determine the borrowers' ability to pay, or the

adequacy of the collateral provided for the loans they issued, but instead, abandoned these efforts in order to issue as many loans possible.

b. Analysis of loans that backed the PLMBS purchased by the Bank demonstrate the abandonment of stated underwriting practices by the originators.

592. Analysis of the delinquency and foreclosure rates of the loans in the loan pools securing the PLMBS purchased by the Bank indicates that the description of the underwriting practices set forth in the Offering Documents were materially inaccurate. For example, for the following PLMBS purchased by the Bank, the rate of delinquent loans as of April 2011 was 9 percent or greater:

- Certificate BOAMS 2006-1 A1, 19.81%
- Certificate BSARM 2007-3 1A1, 28.54%
- Certificate CWHL 2007-8 1A5, 22.91%
- Certificate CWHL 2005-8R A1, 11.71%
- Certificate CHASE 2005-A2 1A4, 24.27%
- Certificate CWHL 2007-13 A4, 17.74%
- Certificate CSFB 2005-8 9A1, 17.04%
- Certificate GSR 2006-2F 3A1, 22.64%
- Certificate GSR 2006-AR1 2A3, 16.92%
- Certificate GSR 2006-1F 2A2, 13.09%
- Certificate GSR 2005-3F 2A1, 9.22%
- Certificate GSR 2005-1F 3A1, 9.48%
- Certificate GSR 2005-2F 2A1, 19.01%
- Certificate GSR 2006-6F 2A1, 14.90%
- Certificate RAST 2005-A11 2A1, 26.60%

- Certificate JPMMT 2005-A8 2A2, 18.18%
- Certificate MSSTR 2005-2 1A1, 9.83%
- Certificate RFMSI 2007-S4 A4, 16.87%
- Certificate RFMSI 2007-SA4 3A1, 21.14%
- Certificate RFMSI 2006-S4 A3, 14.72%
- Certificate STARM 2007-4 2A2, 13.77%
- Certificate WAMU 2005-AR14 1A2, 20.08%
- Certificate WAMU 2005-AR16 1A2, 20.13%
- Certificate WAMU 2005-AR18 1A2, 17.98%
- Certificate WAMU 2007-HY1 4A1, 30.12%
- Certificate WAMU 2007-HY2 1A1, 32.04%
- Certificate WFMBS 2007-10 1A10, 9.84%
- Certificate WFMBS 2007-4 A16, 10.55%
- Certificate WFMBS 2007-11 A2, 9.34%

593. Similarly, for the following PLMBS purchased by the Bank, the rate of foreclosure as of April 2011 was 5 percent or greater:

- Certificate BOAMS 2006-1 A1, 8.45%
- Certificate BSARM 2007-3 1A1, 8.69%
- Certificate CWHL 2007-8 1A5, 6.44%
- Certificate CHASE 2005-A2 1A4, 11.47%
- Certificate CSFB 2005-8 9A1, 8.70%
- Certificate GSR 2006-2F 3A1, 6.78%
- Certificate GSR 2006-AR1 2A3, 8.10%
- Certificate GSR 2005-2F 2A1, 8.33%

- Certificate GSR 2006-6F 2A1, 7.51%
- Certificate RAST 2005-A11 2A1, 10.78%
- Certificate JPMMT 2005-A8 2A2, 6.02%
- Certificate RFMSI 2007-S4 A4, 7.93%
- Certificate RFMSI 2007-SA4 3A1, 5.70%
- Certificate STARM 2007-4 2A2, 7.29%
- Certificate WAMU 2005-AR14 1A2, 10.32%
- Certificate WAMU 2005-AR16 1A2, 10.96%
- Certificate WAMU 2005-AR18 1A2, 10.18%
- Certificate WAMU 2007-HY1 4A1, 15.37%
- Certificate WAMU 2007-HY2 1A1, 15.14%
- Certificate WFMBS 2007-4 A16, 5.14%

594. Poor performance of the loan backing the PLMBS purchased by the Bank on these and other metrics demonstrates that the statements in (and related omissions from) the Offering Documents with regard to the mortgage originators' adherence to their underwriting guidelines were false and misleading.

595. Analysis of three key metrics with respect to individual mortgage loans provides further evidence of the abandonment of stated underwriting guidelines. The LTV, DTI and credit score ("FICO") metrics are each key indicators of the riskiness of a loan and, according to the statements in the Offering Documents, were generally fundamental components of the underwriting process. Because the underwriting process as described in the Offering Documents was ostensibly aimed at assessing the risk of default on a mortgage, the mortgages should exhibit a balancing of these key risk indicators—for example, mortgages with higher LTV or DTI ratios should tend to exhibit compensatingly higher FICO scores. But analysis of the underlying

mortgages indicates otherwise. The Bank has recently been able to obtain individual loan FICO score and LTV ratio information for all of the Certificates at issue here, and individual loan DTI ratio information for 8 of the Certificates. The Bank has analyzed these loans to see how the data are correlated—that is, the extent to which changes in one metric is associated with changes in another. The Bank has also analyzed whether the loans exhibit more than one high-risk characteristic—also known as "compounded" high-risk characteristics.

596. Mortgage underwriting of the type described in the Offering Documents, which balances negative characteristics against compensating positive ones, should result in discernible correlation among the DTI, LTV and FICO metrics (i.e., higher LTVs should correlate with higher FICO scores and lower DTIs, higher DTIs with higher FICO scores and lower DTIs, and lower FICO scores with lower LTVs and DTIs), and should result in the absence of compounded high-risk factors in individual mortgages.

597. However, the Bank's analysis of the individual loan level data indicates otherwise. For the 27 Certificates listed in the following table, there is either no correlation between higher LTVs and higher FICO scores, or the correlation is negative (i.e., higher LTVs are correlated with lower FICO scores).

BOAMS 2006-1 A1	GSR 2005-7F 3A7	STARM 2007-4 2A2
BSARM 2007-3 1A1	GSR 2006-1F 2A2	WAMU 2005-AR14 1A2
CSFB 2005-8 9A1	GSR 2006-6F 2A1	WAMU 2005-AR16 1A2
CWHL 2007-8 1A5	GSR 2006-AR1 2A3	WAMU 2005-AR18 1A2
CWHL 2007-13 A4	JPMMT 2005-A8 2A2	WFMBS 2006-10 A7
CHASE 2005-A2 1A4	RFMSI 2006-S4 A3	WFMBS 2007-4 A16
GSR 2005-2F 2A1	RFMSI 2007-S4 A4	WFMBS 2007-10 1A10

GSR 2005-3F 2A1	RFMSI 2007-SA4 3A1	WFMBS 2007-11 A2

598. In addition, for 7 of the Certificates as to which the Bank has been able to obtain FICO and DTI information for individual loans, there is no correlation between higher DTI scores and higher FICO scores, or the correlation is negative (i.e., higher DTIs are correlated with lower FICO scores). Further, for 5 of the Certificates as to which the Bank has been able to obtain LTV and DTI information for individual loans, there is either no correlation between higher LTVs and lower DTIs, or the correlation is negative (i.e., higher LTVs are correlated with higher DTIs).

599. These results are summarized on the following table:

Certificates Exhibiting No Correlation or a Negative Correlation Between Higher LTVs and Lower DTIs	**Certificates Exhibiting No Correlation or a Negative Correlation Between Higher DTIs Higher FICO Scores**
GSR 2006-2F 3A1	GSR 2006-2F 3A1
GSR 2006-6F 2A1	GSR 2006-6F 2A1
GSR 2006-AR1 2A3	GSR 2006-AR1 2A3
RFMSI 2007-S4 A4	RFMSI 2007-S4 A4
RFMSI 2007-SA4 3A1	RFMSI 2007-SA4 3A1
RAST 2005-A11 2A1	STARM 2007-4 2A2
STARM 2007-4 2A2	

600. The absence of correlation among these important risk measures, and the presence of inverse correlations among them, indicate that the risk factors present in a loan application were not appropriately balanced. This is contrary to the assurances in the Offering Documents. Those assurance were thus demonstrably false and materially misleading.

B. The Offering Documents Were Materially Misleading Because They Failed to Inform Investors About Compounded High-Risk Mortgages in the Loan Pools

601. The Bank has analyzed the individual loan data it has recently been able to obtain to assess the extent to which the loan pools contained loans – referred to herein as "Compounded High-Risk Mortgages" – that exhibited multiple high risks (*i.e.*, above the 75th percentile in the pool) for two or more of the LTV, DTI or FICO metrics (the key quantitative metrics generally employed in the underwriting process), but which did not exhibit compensating low risk for the remaining metric. If risk balancing underwriting of the type described in the Offering Documents (*i.e.*, requiring that high risk factors in one or more areas be compensated for by low risk in one or more other areas) had been employed, the loan pools would be expected to contain few, if any, Compounded High-Risk Mortgages.

602. The Bank's analysis indicates that for the vast majority of the loan pools, the incidence of Compounded High-Risk Mortgages was much higher than what would be expected if risk balancing underwriting of the type described in the Offering Documents had been employed. For example, for *all* of the Certificates at issue here, the incidence of Compounded High-Risk Mortgages is greater than 80% of the rate that would be expected if the LTV, DTI and FICO metrics were independent measures. Risk balancing underwriting of the type described in the Offering Documents should produce an incidence much lower than 80% of the independent rate, however.

603. Further, the Bank's analysis indicates that for 28 of the Certificates the incidence of Compounded High-Risk mortgages in the pool was above 100% of the rate that would be expected if the metrics were independent. This data indicates for these pools that not only was risk balancing underwriting of the type described in the Offering Documents not employed, but also that the underwriting process that was employed was so deeply flawed that it produced more

mortgages at extremely high risk of failure than would have resulted from a random process. For these pools, not only were the statements in the Offering Documents regarding the underwriting process misleading, but the failure to disclose the incidence of Compounded High-Risk Mortgages was itself a materially misleading omission. The following table lists the Certificates for which the incidence of Compounded High-Risk mortgages in the pool was above 100% of the rate that would be expected if the metrics were independent, and lists the actual incidence of Compounded High-Risk Mortgages in the pool as a percentage of the rate that would be expected from a random distribution:

Certificate	Actual Incidence of Compounded High Risk Loans as a Percentage of Independent Compounded High-Risk Incidence	Certificate	Actual Incidence of Compounded High Risk Loans as a Percentage of Independent Compounded High-Risk Incidence
BOAMS 2006-1 A1	137%	JPMMT 2005-A8 2A2	126%
BSARM 2007-3 1A1	251%	RFMSI 2006-S4 A3	228%
CSFB 2005-8 9A1	119%	RFMSI 2007-S4 A4	129%
CWHL 2007-8 1A5	201%	RFMSI 2007-SA4 3A1	126%
CWHL 2007-13 A4	140%	STARM 2007-4 2A2	132%
CHASE 2005-A2 1A4	109%	WAMU 2005-AR16 1A2	112%
GSR 2005-2F 2A1	126%	WAMU 2005-AR18 1A2	120%
GSR 2005-3F 2A1	190%	WAMU 2007-HY1 4A1	134%

Certificate	Actual Incidence of Compounded High Risk Loans as a Percentage of Independent Compounded High-Risk Incidence	Certificate	Actual Incidence of Compounded High Risk Loans as a Percentage of Independent Compounded High-Risk Incidence
GSR 2005-7F 3A7	102%	WAMU 2007-HY2 1A1	410%
GSR 2006-1F 2A2	168%	WFMBS 2006-10 A7	196%
GSR 2006-2F 3A1	163%	WFMBS 2007-4 A16	192%
GSR 2006-6F 2A1	170%	WFMBS 2007-10 1A10	169%
GSR 2006-AR1 2A3	127%	WFMBS 2007-11 A2	215%

604. As the foregoing tables indicate, the risk profiles of the loans backing a substantial majority of the Certificates were seriously affected by the presence of compounded high-risk mortgage loans. The number of compounded high-risk loans not only indicates that the statements in the Offering Documents regarding mortgage underwriting were materially misleading, but also indicates that the risk of default in the loan pools was materially higher than was indicated by the averages and other pool-level data provided in the Offering Documents. Failing to disclose information with respect to the presence and extent of compounded high-risk mortgages caused the Offering Documents to be materially misleading.

C. Defendants Misrepresented the Appraisal Process and Loan-to-Value Ratios ("LTV") That Were Based Upon Those "Appraisals."

1. The Materiality of Representations Regarding Appraisals and LTVs

605. The LTV of a mortgage loan is the ratio of the amount of the mortgage loan to the value of the mortgaged property when the loan is made. For example, a loan of $200,000

secured by property valued at $500,000 has an LTV of 40%; a loan of $450,000 on the same property has an LTV of 90%. The LTV is one of the most important measures of the risk of a mortgage loan because it is a primary determinant of the likelihood of default. The lower the LTV, the greater the borrower's equity relative to the value of the house. Thus, when an LTV is low, it is less likely that a decline in the property's value will wipe out the owner's equity and give the owner an incentive to stop making mortgage payments and abandon the property (a "strategic default"). Additionally, lower LTVs indicate that the losses on loans that do default will be less severe—*i.e.*, loans with lower LTVs provide a greater equity "cushion" because there is an increased likelihood that the proceeds of foreclosure will cover the unpaid balance on the mortgage loan.

606. Because the numerator (the amount of the loan) is predetermined, the key to an accurate LTV is an accurate denominator (the value of the property). The key to an accurate denominator, in turn, is an accurate appraisal of the property. In a purchase of a property, the denominator in the LTV is usually determined by choosing the lower of the purchase price or the appraised value. In a refinancing or home equity loan, the denominator is always an appraised value because there is no purchase price. Accordingly, an inflated appraisal will inflate the denominator of the LTV. Here, as explained below, *see infra* ¶¶ 615-622, what the Offering Documents refer to as "appraisals" are in fact not appraisals at all because they fail to satisfy the definition of an appraisal as set forth in controlling regulations. For example, it is not an "appraisal" as that term is defined in the regulations to conclude based on pressure from the mortgage originator that a home's value is equal to its purchase price. The originators accepted inflated valuations, whether based on appraisals performed without regard for applicable

appraisal standards, or through alternative valuation processes aimed at producing the result necessary to permit the loan to be made.

607. A denominator that is too high will understate, sometimes greatly, the risk of a loan. In the example above, if the property's actual value is $500,000, but is valued incorrectly at $550,000, then the LTV of the $200,000 loan falls from 40% to 36.4%, and the LTV of the $450,000 loan falls from 90% to 81.8%. In either case, an LTV that is based upon an improperly inflated appraisal value understates the risk of the loan.

608. Additionally, it is important to note that at higher LTVs or higher loan amounts, even minor inflations in a property's value can translate into significantly riskier loans. In the example above, although the risk of a loan with an LTV of 40% is greater than the risk of one with an LTV of 36.4%, both imply a relatively safe loan because of the large equity cushions. By contrast, a loan with an LTV of 90% is much riskier than one with an LTV of 81.8%. In the case of a loan with an LTV of 81.8%, there is an equity cushion of 18.2% of the value of the property, while in the case of the 90% LTV loan, the equity cushion is only 10%—just over half as much. Thus, in the example in the preceding paragraph, the $50,000 overstatement in the appraisal has a far more dramatic effect on the risk profile of the $450,000 loan than on the $200,000 loan.

609. Because the riskiness of the underlying loans in the asset pool (including the risk of default and the severity of the losses on default) impacts the risk of the associated PLMBS, aggregate LTV metrics are material to an investor's decision to purchase PLMBS, and specifically, were material to the Bank. The sole source of payment on the Certificates is the cash flow from the mortgage loans that back them. If borrowers fail to make their payments, there is less cash to pay the investors in the Certificates. The safety of the Certificates

consequently depends upon the quality of the loans, and a key indicator of loan quality is an LTV resulting from an appraisal conducted in accordance with governing standards. If the LTVs of the mortgage loans in the asset pool of the securitization are not based on appraisals conducted in accordance with governing standards, as the Bank alleges here, *see infra* ¶¶ 615-626, the ratings of the certificates sold in that securitization will also be incorrect. Investors will therefore be misled about the risk of investing in a particular PLMBS.

610. LTVs also serve as indicators of prepayment patterns—that is, the number of borrowers who pay off their mortgage loans before maturity. LTVs thus predict the expected lives of the loans and the associated PLMBS that are backed by the loans. Prepayment patterns affect many aspects of the PLMBS that are material to the investors purchasing them, such as the life of the certificate and the timing and amount of cash that the investor will receive during that life.

611. Even seemingly minor differences in the aggregate LTV metrics had a significant effect on both the risk and rating of each certificate sold in the securitization. For example, assume the Offering Documents assert that the loan pool had a weighted average LTV (*i.e.*, the average of the LTVs for the mortgages in the pool, weighted by each mortgage's principal amount) of 80%. If that true weighted average LTV (after correcting flawed procedures in "appraisals" that overstated the value of the properties securing the mortgages) were 82%, the Offering Documents' assertion would constitute a material misstatement of the risk profile of the mortgage pool—and the PLMBS it secured—because the equity cushion (and the borrowers' equity interest in the properties) would be eroded by 10 percent.

612. Finally, because an LTV is only as reliable as the appraisal used to determine the value of the collateral, individual and aggregate LTVs are meaningless to PLMBS investors

unless the appraisals underlying the LTVs are done in accordance with governing standards. Thus statements regarding the valuation of collateral—including that "appraisals" were conducted in calculating the LTVs and that such appraisals conformed to uniform standards—are material to an investor's decision to purchase PLMBS, and specifically, were material to the Bank:

> Mortgage bankers and investors consider the property appraisal one of the most important documents contained in the loan file since it establishes the value of the property securing the mortgage loan. In fact, investors put review of the appraisal on the same level as the review of credit. The appraisal assists the mortgage banker in assessing the collateral risk . . . . Obviously, the ultimate investor wants to mitigate such risk and relies on the appraisal to ensure that the property falls within the investor's valuation parameters.

Handbook of Mortgage Lending 165 (Mortgage Bankers Ass'n of Am. 2003).

613. Furthermore, assertions that appraisals conformed to the applicable standards are material to PLMBS investors like the Bank because investors like the Bank have no reasonable means of verifying the LTVs asserted in the Offering Documents at the time of sale. When conducted in accordance with governing standards, appraisals and their resulting LTVs are based on knowledge of particular facts that are not available to investors in mortgage-backed securities—an investor simply does not have access to the data, let alone the time and resources, necessary to conduct an independent valuation of each piece of collateral underlying each certificate.

614. Statements regarding appraiser independence and impartiality are important as they provide assurance that the LTVs were not artificially inflated due to mortgage originator manipulation. Likewise, statements in the Offering Documents that the appraisals conformed to USPAP or Fannie Mae and Freddie Mac standards, including requirements that appraisals be independently and impartially conducted, indicate that the appraisals and the aggregate data

included in the Offering Documents based on the appraisals properly assess the value of the collateral, and provide a reliable measure of the risk of the loan pools.

2. Misstatements Regarding Appraisals and LTVs

a. The Offering Documents falsely state that the LTVs were based upon appraisals

615. The Offering Documents contained numerous material untrue or misleading statements regarding the valuation of collateral and the "appraisal" process conducted upon the origination of the mortgages underlying the PLMBS. The Prospectus or Prospectus Supplement for each Certificate states that the LTV represents a "ratio" or "fraction," the numerator of which is the "principal balance" or "principal amount" of the mortgage loan, and the denominator of which is the "lesser" or "least" of (1) the "sales price" or "purchase price" or "selling price" of the mortgaged property and (2) the "appraised value" or "appraisal" or "the appraised value determined in an appraisal" or "the appraised value . . . as established by an appraisal." *See* Appendix VI.

616. These are false statements of material fact because, contrary to the Defendants' representations that the LTVs were based on "appraisals" or "appraised values," in reality the biased and coerced valuations of collateral that the Defendants labeled as "appraisals" failed to meet the federally required definition of "appraisal" applicable to entities that are regulated by the Office of Thrift Supervision (OTS), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), or the Board of Governors of the Federal Reserve System (FRB) (collectively the "Bank Regulators"). Thus, the LTVs were not based on appraisals at all as that term is used and understood in the industry.

617. The following originators of the mortgages underlying the PLMBS were regulated by the Bank Regulators:

- Bank of America, National Association and Wells Fargo Bank, National Association, are "national banking associations" chartered with the OCC pursuant to 12 U.S.C. § 21. Therefore, under U.S.C. § 1813(q)(1), the OCC is the "appropriate Federal banking agency" with jurisdiction to regulate these banks.

- IndyMac Bank, F.S.B., and Washington Mutual Bank are "federal savings associations" within the meaning of 12 U.S.C. § 1813(b) and 12 U.S.C. § 1462(5). Pursuant to 12 U.S.C. § 1813(q)(4), the OTS is the "appropriate Federal banking agency" with jurisdiction to regulate these originators.

- GreenPoint Mortgage Funding, Inc., was a subsidiary of North Fork Bank, which was a "state nonmember bank" within the meaning of 12 U.S.C. § 1813(e). Any subsidiary of such a "state nonmember bank" is regulated by the FDIC. *See* 12 U.S.C. § 1831a(d)(1); 12 C.F.R. § 362.4(a).

- A subsidiary of a "bank holding company" is regulated by the FRB pursuant to 12 U.S.C. §§ 1813(q), 1841(n). *See also* 12 C.F.R. §§ 225.21-225.28. Countrywide Home Loans, Inc., is a nonbank subsidiary of Countrywide Financial Corporation,[12] a "bank holding company" within the meaning of 12 U.S.C. §§ 1841 and 1843, and thus was regulated by the FRB.

618. SunTrust Mortgage, Inc. is a subsidiary of SunTrust Bank, which is a "state member bank" within the meaning of 12 U.S.C. § 1813(d). Any subsidiary of a "state member bank" is regulated by the FRB. *See* 12 U.S.C. § 330; 12 U.S.C. § 1831a(d)(1); 12 C.F.R. § 362.4(a).

619. Subsidiaries of "national banking associations" are regulated by the OCC pursuant to 12 U.S.C. § 24a and 12 C.F.R. §§ 5.34, 5.39. Chase Home Finance LLC and National City Mortgage Co., were subsidiaries of the following "national banking associations," and hence were regulated by the OCC:

Originator	**Controlling "National Banking Association"**
Chase Home Finance LLC	JPMorgan Chase Bank, National Association
National City Mortgage Co.	National City Bank[13]

[12] Countrywide Financial Corporation was a "bank holding company" until March 12, 2007.

[13] National City Bank was a national bank until it was acquired by PNC Bank, N.A., on November 11, 2009.

620. Each of the Bank Regulators has issued regulations pursuant to Title XI of the Financial Institutions Reform Recovery and Enforcement Act of 1989, 12 U.S.C. § 1339, that govern the appraisal practices of the institutions they regulate. These regulations define an "appraisal" as a "written statement *independently and impartially prepared* by a qualified appraiser setting forth an opinion as to the market value of an adequately described property as of a specific date(s)." 12 C.F.R. § 564.2 (OTS); 12 C.F.R. § 34.42 (OCC); 12 C.F.R. § 323.2 (FDIC); 12 C.F.R. § 225.62 (FRB) (emphasis added). Therefore, by representing that the LTVs were based on "appraisals" of the collateral, the Defendants represented that the LTVs were based on independent and impartial valuations of the collateral.

621. The Bank Regulators define appraiser independence as follows:

> (a) Staff appraisers. If an appraisal is prepared by a staff appraiser, that *appraiser must be independent of the lending, investment, and collection functions* and not involved, except as an appraiser, in the federally related transaction, and *have no direct or indirect interest, financial or otherwise, in the property . . . .*
>
> (b) Fee appraisers. (1) If an appraisal is prepared by a fee appraiser, the appraiser shall be engaged directly by the regulated institution or its agent, and *have no direct or indirect interest, financial or otherwise, in the property or the transaction . . . .*

12 C.F.R. § 564.5 (OTS); 12 C.F.R. § 34.45 (OCC); 12 C.F.R. § 323.5 (FDIC); 12 C.F.R. § 225.65 (FRB) (emphasis added). In 2005 the Bank Regulators further elaborated on the standards for appraiser independence, stating that "[l]oan production staff should not select appraisers." Additionally, the Bank Regulators specified that although loan production staff may use a "revolving, board approved list to select a residential appraiser," the "[s]taff responsible for the development and maintenance of the list should be independent of the loan production process." *See "Frequently Asked Questions on the Appraisal Regulations and the Interagency Statement on Independent Appraisal and Evaluation Functions."* (Questions 3, 5).

622. The Defendants' statements in the Offering Documents are materially misleading because the LTVs were not based on impartial and independent appraisals, but rather were the result of manipulation and coercion by loan production staff. As described above in sections V.B and V.C, the originators' loan production staff pressured and coerced appraisers to inflate values, demanded and obtained the ability to have "business managers" overrule staff and third party appraisers, and routinely fed improper information to appraisers in an effort to manipulate their valuations, all of which served to undermine the independence of the appraisal process. Contrary to the interagency guidance, the originators' lending departments constantly pressured appraisers to increase their valuations, made clear that their continued access to work from these originators depended upon the appraisers coming in "at value," and in some cases simply overruled appraisers that refused to cooperate. The originators ultimately resorted to using lists of approved appraisers that excluded appraisers whose appraisals in the past had come in "too low" and who were unwilling to increase their appraisals to satisfy the lending departments. All of this resulted in appraisers having an indirect financial interest in each property they appraised, since their ability to obtain future work was impacted by their willingness to come in "at value" for each property they appraised. Simply put, as a result of this coercion, appraisers provided appraisals that they did not believe accurately reflected the value of the appraised property, but nevertheless was sufficiently high—i.e., "at value"—to enable the deal to close. Because these valuations were not "independently and impartially prepared" as required by the federal definition of "appraisal," the Defendants made false statements of material fact in the Offering Documents by stating that the LTVs were based on "appraisals" or "appraised values."

b. Misstatements regarding the standards to which the purported "appraisals" conformed

623. In addition, the Offering Documents contained materially untrue or misleading statements and omissions regarding the standards to which the purported "appraisals" conformed. The underwriting guidelines for each of the following originators—as stated in the Offering Documents—state that the appraisals are required to conform to USPAP: American Home Mortgage Corp; GreenPoint Mortgage Funding, Inc.; IndyMac Bank, F.S.B.; National City Mortgage Co.; and Washington Mutual Mortgage Securities Corp. *See* Appendix III.

624. Additionally, the underwriting guidelines for Countywide and PHH Mortgage Corporation—as stated in the Offering Documents—state that the appraisals conformed to Fannie Mae and Freddie Mac appraisal standards. *See* Appendix III. The Fannie Mae and Freddie Mac appraisal standards require that appraisals be conducted in accordance with USPAP. *See* 2006 Single Family Selling Guide, Part XI, 102.02.

625. These statements in the Offering Documents were materially misleading because the mortgage originators routinely accepted—and in fact overtly sought—valuations of collateral that were conducted in violation of the appraisal standards of USPAP, Fannie Mae and Freddie Mac. For example, as detailed above, the USPAP requires that an appraiser "perform assignments with impartiality, objectivity, and independence, and without accommodation of personal interests." Similarly, the Fannie Mae appraisal standards provide that "it is essential that a lender obtain an independent, disinterested examination." As alleged in paragraph 622 and further described in sections V.B and V.C, the appraisals used by the mortgage originators were the product of manipulation and coercion and thus were not impartial, objective, and independent as required by USPAP.

626. Additionally, USPAP precludes acceptance of an appraisal assignment where compensation is contingent upon "reporting a predetermined result" or "a direction in assignment results that favors the cause of a client." Similarly, it is an "unacceptable appraisal practice" under Fannie Mae standards to develop and report an appraisal "that favors either the cause of the client . . . [or] the attainment of a specific result . . . in order to receive compensation . . . and/or in anticipation of receiving future assignments." However, these are precisely the conditions that loan production staff for the mortgage originators forced upon appraisers when they repeatedly pressured appraisers to increase their valuations, implicitly or explicitly linked the receipt of continued work to "at value" appraisals, and even threatened to place appraisers on a blacklist if they did not "come back at value."

c. Misstatements regarding aggregate LTVs

627. Because the LTVs were not based on "appraisals" conducted in conformance with applicable appraisal standards, the statements in the Offering Documents regarding the aggregate LTVs of the mortgage pools were materially untrue and misleading. These statements concern the extent to which loans in the pools underlying each Certificate had LTVs in excess of 100%, 90% or 80%, and the weighted average LTV of the pools. Section VI.C.3 below sets forth those materially untrue and misleading statements as well as the reasons each is misleading.

3. Evidence Demonstrating Misstatements about Appraisals and LTVs in the Offering Documents

a. Analysis of loans that backed the PMLBS purchased by the Bank demonstrate that appraisals were materially inflated and the LTV ratios were materially understated.

628. As part of its investigation of the claims asserted herein, the Bank has analyzed the LTV ratios of mortgage loans that secure each of the PLMBS that it purchased. The Bank has tested the LTV ratios as represented in the Offering Documents against the LTV ratios that

would have been calculated had the properties been valued at the time of loan origination in accordance with accepted and reliable appraisal practices (as was represented in the Offering Documents). To perform this analysis, the Bank has employed an industry-standard automated valuation model ("AVM") that reliably calculates the values of the subject properties as of the date of mortgage loan origination. The AVM draws upon a database of 500 million sales covering ZIP codes that represent 98.7% of the homes, occupied by 99.8% of the population, in the United States. Based on that database, the AVM calculates a valuation based on criteria including the type, condition, and location of the property, as well as the actual sale prices of comparable properties in the same locale shortly before the specified date. The extensive independent testing of the AVM confirms that the AVM is a reliable and accurate means of determining the value that would have been determined for a property as of a historical date had that property been valued in accordance with accepted and reliable appraisal practices.

629. This analysis demonstrates stark misstatements in the LTV ratios information as represented in the Offering Documents. Because the LTV calculation is simply a ratio of loan amount to value, and because the loan amounts are unquestioned, the reason for the discrepancies is inescapable: the LTV ratios represented in the Offering Documents were the result of inflated and unreliable collateral valuations that were misleadingly labeled as "appraisals." Had the collateral valuation practices comported with the OTS definition of "appraisal" and with the USPAP and Fannie Mae/ Freddie Mac standards as represented in the Offering Documents, the resulting aggregate LTV ratios would have been materially different from those represented in the Offering Documents.

630. The aggregate LTV ratio representations in the Offering Documents were key metrics in the Bank's decision to purchase the PLMBS, and the Bank was materially misled by

the inaccurate information reported in the Offering Documents. Moreover, as a result of the manipulation of the appraisal process by loan originators, appraisers were coerced into providing inflated appraisals that they knew were inaccurate. *See supra* §§ V.B. As a result, the statements made in the Offering Documents based in whole or in part on the collateral values, including statements regarding LTV ratios, were false and misleading.

631. The following tables summarize four types of material LTV ratio understatements contained in the Offering Documents: the percentage of loans with over 100% LTV; the percentage of loans with over 90% LTV; the percentage of loans with over 80% LTV; and the weighted average LTV ratio for the mortgage pool. Each is a distinct and significant misrepresentation in the Offering Documents.

632. The 100% LTV representation is obviously significant because loans with over 100% LTV afford the lender no equity cushion and leave the lender with inadequate collateral from the outset of the loan. The Offering Documents consistently assured the Bank that there were no such loans in the mortgage pools. Unfortunately, as the following table indicates, the recalculated LTV ratios (which, based on the AVM, indicate what the reported LTV would have been had proper appraisal methods been employed) indicate that there were a material number of mortgage loans with LTV ratios in excess of 100%:

633. The following table lists the Certificates purchased by the Bank in which the LTV calculated using the AVM exceeds 90%, and lists the representation in the associated Offering Documents with respect to the percentage of the mortgages in the subject pool with LTVs greater than 90%. An LTV in excess of 90% represents an extremely risky mortgage for the investor, as the borrower has little equity in the property and there is a significant risk that upon foreclosure the collateral will be inadequate to pay the debt. Accordingly, for each of the Certificates listed in the following table, the statement regarding the mortgages in the subject pool with LTVs in excess of 90% was materially misleading.

Security (Certificate)	% of Loans with Greater than 90% LTV per the Prospectus	Recalculated % of Loans with Greater than 90% LTV	Prospectus Understatement

WFMBS 2007-11 (WFMBS 2007-11 A2)	1.26%	23.91%	22.65%

634. The following table lists the Certificates purchased by the Bank in which the LTV calculated using the AVM exceeds 80%, and lists the representation in the associated Offering Documents with respect to the percentage of the mortgages in the subject pool with LTVs greater than 80%. The 80% LTV metric is very significant to a PLMBS investor such as the Bank, because in traditional mortgage underwriting an LTV in excess of 80% was generally considered as affording the lender little value cushion to protect against borrower default and loss upon foreclosure. Accordingly, for each of the Certificates listed in the following table, the statement regarding the percentage of mortgages in the subject pool with LTVs in excess of 80% was materially misleading.

Security (Certificate)	% of Loans with Greater than 80% LTV per the Prospectus	Recalculated % of Loans with Greater than 80% LTV	Prospectus Understatement

635. The following table lists mortgage pools securing the PLMBS purchased by the Bank in which the representation contained in the related Offering Documents with respect to the weighted average LTV of the mortgage pool securing those PLMBS was materially understated. The weighted average LTV representation is significant because it provides the investor with an important gauge as to the overall riskiness of the mortgage pool.

D. Defendants Misrepresented the Occupancy Status Rates.

1. The Materiality of Occupancy Status Rates

636. Residential real estate can be divided into the following occupancy status categories: primary residences, second homes, and investment properties. Mortgages on primary

residences are less risky because they are less likely to default than mortgages on non-owner-occupied residences. Thus, the percentage of loans in the asset pool of a securitization which are secured by mortgages on other than primary residences is a key indicator of the risk of certificates sold in the securitization. Occupancy status rates also influence prepayment patterns (which in turn affect the timing and payments on the PLMBS certificates).

637. For these reasons, the occupancy status of the collateral backing the mortgages in loan pools was material to the Bank's decision to invest in the PLMBS Certificates. The Offering Documents for each of the PLMBS the subject hereof contained specific assertions as to the occupancy status rates of the mortgages in the subject pools.

2. Evidence Demonstrating Misstatements about the Occupancy Status Rates

638. The following table lists mortgage pools securing the PLMBS purchased by the Bank, sets forth the assertion contained in the related Offering Documents with respect to the percentage of the mortgages that were on properties that were not the borrower's primary residence, and sets forth the non-primary residence occupancy status rates generated by a review of information contained in various public and private databases. The databases reviewed contain information regarding, *inter alia*, the address to which borrower's tax bills were sent, the addresses used by borrower's other creditors to send billings, whether borrowers claimed the property as a homestead under applicable law, and whether borrowers owned other properties of record and how the amount of the subject loan compared to the amounts of mortgage loans on other properties owned. As set forth in the following table, the occupancy status rates set forth in the Offering Documents for the PLMBS listed below were materially misstated, and materially misled the Bank regarding the true risk of the Certificates it purchased:

Security (Certificate)	% of Mortgage on Non-Primary Residence per Prospectus	% of Mortgages on Non-Primary Residence per Database Review	Prospectus Understatement
BearStearnARM07-3-1 (BSARM 2007-3 1A1)	6.46%	11.61%	5.15%
CWMBS 2007-08 (CWHL 2007-8 1A5)	8.49%	10.69%	2.20%
Chase 2005-A02-1 (CHASE 2005-A2 1A4)	5.75%	8.44%	2.69%
GSR 2005-07F (GSR 2005-7F 3A7)	5.94%	7.15%	1.21%
GSR 2005-03F (GSR 2005-3F 2A1)	7.32%	12.58%	5.26%
RFC 2007-S04 (RFMSI 2007-S4 A4)	4.34%	9.20%	4.86%
RFC 2006-S04 (RFMSI 2006-S4 A3)	2.80%	12.74%	9.94%
STARM 07-04-2 (STARM 2007-4 2A2)	2.24%	6.83%	4.59%
WA Mutl 2005-AR14-1 (WAMU 2005-AR14 1A2)	6.83%	9.30%	2.46%
WA Mutl 2005-AR16-1 (WAMU 2005-AR16 1A2)	7.83%	9.22%	1.39%
WA Mutl 2005-AR18-1 (WAMU 2005-AR18 1A2)	7.89%	12.12%	4.23%
WA Mutl 2007-HY02-1 (WAMU 2007-HY2 1A1)	6.39%	9.09%	2.70%
WFMBS 2006-10 (WFMBS 2006-10 A7)	9.48%	11.65%	2.17%
WFMBS 2007-04 (WFMBS 2007-4 A16)	4.60%	7.74%	3.14%
WFMBS 2007-11 (WFMBS 2007-11 A2)	5.60%	7.90%	2.30%

639. Furthermore, unbeknownst to the Bank, as described *supra* § V.C., borrower deception with respect to occupancy status was often encouraged by unscrupulous loan originators, including the originators of the mortgages that secured the PLMBS in this action, and was commonplace during the period pertaining to the Bank's purchase of these securities.

E. Defendants Misrepresented the Loan Documentation Process.

1. The Materiality of the Loan Documentation Process

640. Each set of Offering Documents contains assertions with respect to the percentages of the loans contained in the relevant pools that were originated using "full documentation" as compared to those using a more limited documentation, no documentation and/or "stated income." Because full documentation entailed a more rigorous form of underwriting, including substantiation of borrower claims as to income, assets, and employment, while the underwriting standards employed for the limited, no documentation and/or stated income were more lax, the assertion regarding the documentation process was material to the Bank in assessing the reliability of the data set forth in the Offering Documents and the riskiness of the offered PLMBS.

2. Evidence Demonstrating Misstatements about the Loan Documentation Process

641. As discussed above and confirmed by numerous Confidential Witnesses, in many instances mortgage originators manipulated the loan documentation process by encouraging or requiring applicants to utilize low or no documentation processes when information revealed through full documentation would have disqualified the borrower. In those instances, even the low or no doc designations understated the risk of the loans since the originators knew that many borrowers were unqualified. Statements in the Offering Documents regarding the documentation process were misleading because they failed to disclose the originators' manipulation of the process.

642. In addition, the data provided in the Offering Documents regarding the number of full documentation loans was misleading with respect to several of the PLMBS purchased by the Bank. The following table sets forth the percentage of full documentation loans as set forth in

the pertinent prospectuses, and the percentage determined through a review of information recently provided by loan servicers. As to each of these PLMBS, the prospectus statement with respect to full documentation was materially misleading:

Security (Certificate)	% of Mortgages Originated Using Full Documentation per the Prospectus	% of Mortgages Originated Using Full Documentation Based on Information Provided by Servicers	Prospectus Overstatement
BAMSI 2006-1 (BOAMS 2006-1 A1)	26.36%	18.41%	7.95%
BearStearnARM07-3-1 (BSARM 2007-3 1A1)	41.05%	29.17%	11.88%
CWMBS 2007-08 (CWHL 2007-8 1A5)	36.37%	18.42%	17.95%
GSR 2006-06F-2 (GSR 2006-6F 2A1)	63.65%	32.93%	30.72%
JPMorgan 05-A8-2 (JPMMT 2005-A8 2A2)	20.29%	10.59%	9.70%
RFC 2007-S04 (RFMSI 2007-S4 A4)	48.78%	30.08%	18.70%
WA Mutl 2005-AR14-1 (WAMU 2005-AR14 1A2)	28.20%	17.99%	10.21%
WA Mutl 2005-AR16-1 (WAMU 2005-AR16 1A2)	20.11%	10.66%	9.45%
WA Mutl 2005-AR18-1 (WAMU 2005-AR18 1A2	23.31%	9.57%	13.74%
WFMBS 2007-10-1 (WFMBS 2)007-10 1A10)	41.70%	25.96%	15.74%
WFMBS 2006-10 (WFMBS 2006-10 A7)	43.12%	13.11%	30.01%
WFMBS 2007-04 (WFMBS 2007-4 A16)	55.44%	24.49%	30.95%
WFMBS 2007-11 (WFMBS 2007-11 A2)	44.33%	25.97%	18.36%

F. Defendants' Statements Regarding the AAA Rating of the PLMBS Were False and Misleading.

1. The Materiality of the Credit Rating Process and Ratings

643. The Bank only was authorized to purchase investment grade, AAA-rated tranches of the Certificates. Hence, the ratings issued by the Credit Rating Agencies were manifestly material to the Bank's decision to purchase the PLMBS at issue in this case. The ratings, moreover, purported to assess the risk of the securities and the likelihood that the bank would receive the payments contemplated by the securities. Thus, the ratings provided material information for investors, including the Bank.

2. False Representations That the Certificates the Bank Purchased Would Not Be Issued Unless They Earned Triple-A Ratings

644. As alleged above, the Credit Rating Agencies knew that the ratings were unreliable and substantially understated the riskiness of the mortgage loans which underlie the PLMBS. Consequently, the Credit Rating Agencies knew that the PLMBS did not in fact possess the characteristics necessary to qualify for accurate, bona fide triple-A ratings.

645. All the Offering Documents for the PLMBS in this action stated that it was "a condition to the issuance of the offered certificates" purchased by the Bank that those Certificates received triple-A ratings. *See* Appendix IV. The representation that the Certificates the Bank purchased would not have been issued unless they had received triple-A ratings was misleading because the Certificates had not received accurate, bona fide triple-A ratings. The triple-A ratings the Certificates received were fundamentally flawed because they were based on information about the underlying assets that was factually inaccurate.

3. Misstatements about the Credit Rating Process and Ratings

646. The Offering Documents misstated and omitted material information about the ratings issued by the Credit Rating Agencies and the rating process. Each Prospectus contained

disclosures regarding the ratings process, and the purpose and bases of the ratings. Appendix IV attached hereto and incorporated herein sets forth those statements and omissions. For example, the CHL Mortgage Pass-Through Trust 2007-8 Prospectus Supplement states:

> The ratings assigned by Fitch to mortgage pass-through certificates ***address the likelihood of the receipt of all distributions on the mortgage loans by the related certificate holders under the agreements pursuant to which the certificates are issued***. Fitch's ratings take into consideration the ***credit quality of the related mortgage pool,*** including any credit support providers, structural and legal aspects associated with the certificates, ***and the extent to which the payment stream on the mortgage pool is adequate to make the payments required by the certificates***. The ratings assigned by Fitch to the notional amount certificates do not address whether investors will recoup their initial investment . . . . The rating assigned by Fitch to the Class A-R Certificates only addresses the return of its Class Certificate Balance and interest thereon at its pass-through rate.
>
> . . .
>
> The ratings assigned by S&P to mortgage pass-through certificates ***address the likelihood of the receipt of all distributions on the Mortgage Loans by the related certificateholders under the agreements pursuant to which the certificates are issued.*** S&P's ratings take into consideration the ***credit quality of the related mortgage pool,*** including any credit support providers, structural and legal aspects associated with the certificates, ***and the extent to which the payment stream on the mortgage pool is adequate to make the payments required by the certificates.*** The ratings assigned by S&P to the notional amount certificates do not address whether investors will recoup their initial investment. The rating assigned by S&P to the Class A-R Certificates only addresses the return of its Class Certificate Balance and interest thereon at its pass-through rate.
>
> The ratings of the rating agencies listed above do not address the possibility that, as a result of principal prepayments, certificateholders may receive a lower than anticipated yield.
>
> The security ratings assigned to the offered certificates should be evaluated independently from similar ratings on other types of securities. A security rating is not a recommendation to buy, sell or hold securities and may be subject to revision or withdrawal at any time by the rating agencies.

CWHL 2007-8 Pros. Sup. S-99.

647. These disclosures, however, were incomplete, inaccurate and misleading. Specifically, the Offering Documents misrepresented and omitted the following material information:

- The Offering Documents did not disclose the Credit Rating Agencies' conflicts of interests, which compromised the rating process;
- The Offering Documents did not disclose the manipulation of the credit rating process and "ratings shopping" by issuers and underwriters;
- The Offering Documents did not disclose that the credit ratings were based on false and misleading information with respect to underwriting standards, loan-to-value ratios and other matters pertaining to the mortgages that secured the PLMBS purchased by the Bank;
- The Offering Documents did not disclose the scope and limitations of the Credit Rating Agencies' rating models, including the fact that they relied on outdated data and failed to adequately protect against misinformation provided by issuers and borrowers; and
- The Offering Documents did not disclose that the investment grade ratings stated and discussed in the Offering Documents failed to reflect the true credit risk of the PLMBS purchased by the Bank.

648. In sum, the ratings provided by the Credit Rating Agencies did not in fact assess the likelihood of the receipt of all payments on the mortgage loans by the related Certificate holders under the agreements pursuant to which such Certificates are issued, the credit quality of the related mortgage pool, or the extent to which the payment stream on the mortgage pool was adequate to make the payments required by such Certificates. As a result, the statements in the Offering Documents regarding the ratings assigned by the Credit Rating Agencies and the rating process materially misled the Bank regarding the true risk of the Certificates it purchased.

4. Evidence Demonstrating Misstatements about the Ratings and Ratings Process

649. As alleged in detail above, *see supra* § V.E., the credit rating process was deeply flawed and plagued by conflicts of interest, issuer and underwriter manipulation, misinformation

and faulty and outdated models, among other problems. Furthermore, as alleged above, the Depositor/Issuers manipulated the rating process through ratings shopping, through their direct involvement in the rating process, and their knowledge that the loan pools were of far worse quality than represented. As set forth above, these allegations are all well documented in government investigations, other litigation, and press reports. This evidence – and the allegations herein based on this evidence – demonstrates that the statements in the Offering Documents regarding the ratings and the rating process are false and misleading.

650. In addition, the en masse downgrade of the PLMBS purchased by the Bank from triple-A to junk status indicates that the initial ratings were incorrect and without any legitimate basis. Likewise, delinquency and foreclosure rates indicate that the PLMBS were far riskier and more prone to loss than the initial ratings indicated. As explained above, the Defendants, by virtue of their access to information held by their corporate affiliates and their involvement in the securitization and due diligence process, *see supra* § V.D, had access to information about the quality of the loan pools and should have known that the bundled Certificates, even though tranched and credit-enhanced, did not possess the characteristics of a triple-A-rated investment; and that the rating resulted from inaccurate information about the underwriting standards actually used in originating the mortgages backing the PLMBS. No Defendant informed the Bank that the ratings were unreliable as a result of the Credit Rating Agencies' failure to take into account the actual underwriting standards being used by mortgage originators, that the models used to produce the credit ratings were inaccurate and outdated, that the ratings were the product of reverse-engineering and conflicts of interest, and that the ratings were not anywhere near as reliable as the ratings given to other financial instruments such as corporate bonds. As a result, the rating misrepresented the risk of the PLMBS purchased by the Bank.

651. The following table sets forth the original face amounts and ratings of the securities that are the subject of this action, and the first date on which such securities' ratings were downgraded to below investment grade:

Ticker	Original Face Amount	Moody's Original Rating	S&P Original Rating	Fitch Original Rating	Date First Downgrade to Below Investment Grade
BOAMS 2006-1 A1	$70,000,000	Aaa	n/a	AAA	12/9/08

G. Defendants Misrepresented the Due Diligence Performed on the Mortgage Pools that Backed the PLMBS Purchased by the Bank.

1. The Materiality of Due Diligence on the Mortgage Pools

652. As alleged in detail above, the Bank did not have access to the loan file information generated at the time the loans were issued; only the Defendants had access to this information. Consequently, the Bank was dependent on representations made by the Defendants regarding the quality of the mortgage loans backing the PLMBS it purchased.

653. Defendants made two types of representations regarding the acquisition of mortgages that were originated by third-party originators. First, the Defendants represented that certain of the originators that are identified in the Offering Documents conducted post-purchase due diligence reviews of a sampling of mortgages they acquired from third-party originators. Second, with respect to certain PLMBS backed by mortgages acquired by sponsors from unaffiliated originators, the Defendants represented that the sponsors conducted due diligence reviews of the mortgages prior to their acquisition and securitization. In both cases, these due diligence reviews allegedly were undertaken to ensure that the mortgages were of adequate credit quality and that they were underwritten in compliance with applicable underwriting standards.

654. The representations regarding the underwriting standards employed by the originators and those regarding the sponsor's due diligence reviews of the mortgage loans provided the Bank with critical reassurances that the overall credit quality of the mortgage pools securing the PLMBS it purchased were as represented in the Offering Documents. The Bank relied on these representations in making its decisions to purchase these Certificates.

2. Misstatements about Due Diligence

655. The Offering Documents provided to the Bank contained material untrue or misleading statements and omitted material information regarding the due diligence purportedly

conducted by the sponsors and originators when they acquired mortgages from third-party originators. For example, Wells Fargo Mortgage Backed Securities 2007-10 Trust Prospectus provides the following with respect to mortgages acquired by Wells Fargo from third parties:

> The contractual arrangements with Correspondents may . . . involve the delegation of all underwriting functions to . . . Correspondents, which will result in Wells Fargo Bank not performing any underwriting functions prior to acquisition of the loan but instead relying on . . . , in the case of bulk purchase acquisitions from such Correspondents, ***Wells Fargo Bank's post-purchase reviews of samplings of mortgage loans acquired from such Correspondents regarding the Correspondents' compliance with Wells Fargo Bank's underwriting standards.*** In all instances, however, acceptance by Wells Fargo Bank is contingent upon the loans being found to satisfy Wells Fargo Bank's program standards or the standards of a pool insurer.

WFMBS 2007-10 Pros. 32. Substantively similar provisions regarding a mortgage Originator's due diligence reviews of acquired mortgages were included in the Prospectuses for many of the PLMBS purchased by the Bank. Appendix V attached hereto and incorporated herein sets forth those statements.

656. Additionally, as an example of the representations made regarding a sponsor's due diligence reviews of acquired mortgages, the GSR Mortgage Loan Trust 2006-2F Prospectus Supplement provides:

> Prior to acquiring any mortgage loans, GSMC will conduct a review of the related mortgage loan seller. GSMC's review process consists of reviewing select financial information for credit and risk assessment and underwriting guideline review, senior level management discussion and background checks. The scope of the loan due diligence will depend on the credit quality of the mortgage loans.

GSR 2006-2F Pros. Sup. S-72.

657. Substantively similar provisions were included in the Prospectuses for many of the PLMBS purchased by the Bank. Appendix V attached hereto and incorporated herein sets forth those statements. These statements were materially misleading because they omit to state the following information:

- The sponsors and originators routinely manipulated the due diligence process by determining the type and scope of review performed and pressuring the third-party due diligence firms to ignore deviations from the applicable underwriting criteria without regard to whether "compensating factors" were present;

- The sponsors and originators instructed the third-party originators to review fewer loans in loan pools as the securitization market grew, with the percentage of loans reviewed falling from between 25 and 40% early in the decade to between 5 and 10% by 2006;

- The level of due diligence performed by sponsors and originators of mortgages backing PLMBS deviated substantially from the level of due diligence performed by purchasers of mortgages who retained those mortgages as investments;

- The sponsors did not undertake any legitimate effort to determine whether the originators had satisfied their stated underwriting guidelines or the sponsor's purported standards; and instead allowed defective loans to be included in the loan pools for securitization;

- Due diligence review conducted by third-party underwriters often overlooked questionable claims by borrowers in stated income and other reduced documentation loans;

- The third-party underwriters informed the sponsors and originators that a substantial percentage of loans in the loans pools backing PLMBS were defective;

- The sponsors and originators nonetheless waived the defects as to a substantial percentage of these loans;

- In many cases, these reportedly defective loans were not removed from PLMBS deals, but rather were used by the sponsors to negotiate lower prices for the pools of mortgages (or individual mortgages) they acquired and subsequently securitized; and

- Where defective loans in the sample were removed from the pool, no further review was conducted to ensure that none of the remaining 90% of the mortgages was plagued by similar defects as those in the sample.

3. Evidence of Misstatements about Due Diligence

658. As alleged in detail above, *see supra* §§ V.D.4 and V.D.5, the manipulation and disregard of the third-party due diligence process by sponsors and originators of mortgages backing PLMBS, including those PLMBS purchased by the Bank, is documented in public testimony and press reports, as well as confidential witness statements discussed above. This

evidence – and the allegations herein based on this evidence – demonstrates that the statements in and omissions from the Offering Documents regarding the due diligence review process were materially false and misleading.

H. Defendants Misrepresented That Mortgages and Mortgage Loans Were Validly Assigned and Transferred to the Issuing Trusts.

1. The Materiality of Valid Assignment and Transfer

659. PLMBS have value because they are backed by income streams from loans and by the collateral that secure the loans. If mortgage notes and mortgages are not enforceable by the trust that issues the PLMBS, then the PLMBS are impaired. For that reason, the valid assignment and transfer of mortgage notes and mortgages in accordance with the procedures laid out in the Offering Documents was material to the Bank's decision to purchase the PLMBS Certificates at issue here.

2. Misstatements Regarding Procedures for Valid Assignment and Transfer

660. The Offering Documents misrepresented that all promissory notes had been or would be validly transferred to the trusts that issued the PLMBS Certificates.

661. By way of example, the Offering Documents for CWHL 2007-13 A4 state:

> [T]he depositor will sell, transfer, assign, set over and otherwise convey without recourse to the trustee in trust for the benefit of the certificateholders all right, title and interest of the depositor in and to all other assets included in Alternative Loan Trust 2005-86CB, including all principal and interest received on or with respect to the Closing Date Mortgage Loans . . . .
>
> In connection with the transfer and assignment of a mortgage loan, the depositor will deliver or cause to be delivered to the trustee, or a custodian for the trustee, . . . the original mortgage note . . . endorsed in blank without recourse . . . .
>
> The trustee will review each mortgage file relating to the Closing Date Mortgage Loans within 90 days of the closing date . . . , and if any document in a mortgage file is found to be missing or defective in a material respect and [the defect is not cured within 90 days of notice, the defective mortgage loan must be repurchased].
>
> . . . .

> At the time of issuance of the certificates of a series, the depositor will cause the mortgage loans comprising the related trust fund to be assigned to the trustee, together with all principal and interest received by or on behalf of the depositor on or with respect to the mortgage loans after the cut-off date, other than principal and interest due on or before the cut-off date and other than any retained interest specified in the related prospectus supplement. . . . In addition, the depositor will deliver or cause to be delivered to the trustee (or to the custodian) for each mortgage loan the mortgage note endorsed without recourse in blank or to the order of the trustee, except that the depositor may deliver or cause to be delivered a lost note affidavit in lieu of any original mortgage note that has been lost . . . .
>
> . . . .
>
> The trustee (or the custodian) will review the mortgage loan documents within [90 days] . . . . Generally, if the document is found to be missing or defective in any material respect, the trustee (or the custodian) will notify the master servicer and the depositor, and the master servicer will notify the related seller. If the seller cannot cure the omission or defect within [90 days], the seller will be obligated to purchase the related mortgage loan from the trustee at the purchase price or, if so specified in the related prospectus supplement, replace the mortgage loan with another mortgage loan that meets specified requirements.

CWHL 2007-13 A4 Pros. Sup. S-28-29; CWHL 2007-13 A4 Pros. 54-55.

662. As *Kemp* and other cases show, the procedure specified in the Offering Documents was not followed. Mortgage notes were not properly endorsed by the originators, such that the depositor could in turn properly endorse the note. Possession of the notes was not transferred to the trustee, custodian, or agent of the trustee.

663. Further, where the procedure was not followed, the defective loans have not been repurchased or substituted, as represented in the Offering Documents.

3. A Material Number of Mortgages and Mortgage Notes Were Not Validly Transferred or Assigned to the Issuing Trusts in Accordance with the Offering Documents

664. As alleged above, *see supra* § V.F, a material number of the promissory notes backing the PLMBS were not validly transferred to the trust in accordance with the procedures outlined in the Offering Documents, as is necessary before those notes can be enforced under

applicable state law. Where those procedures were not followed, the defective loan was not repurchased or substituted, as represented in the Offering Documents.

665. As alleged above, *see supra* § V.F, a material number of the mortgages backing the PLMBS were not validly assigned to the trust in accordance with the procedures outlined in the Offering Documents, as is necessary before those mortgages may be enforced under applicable state law. Where those procedures were not followed, the defective loan was not repurchased or substituted, as represented in the Offering Documents.

666. Thus, statements in relevant Offering Documents that mortgages and mortgage notes were validly assigned and transferred to the issuing trust in accordance with specified procedures—and that loans that were defective in this respect would be repurchased or substituted—were false and misleading.

VII. COUNTS

FIRST CAUSE OF ACTION

UNTRUE OR MISLEADING STATEMENTS IN THE SALE OF SECURITIES

(Indiana Uniform Securities Act, IC § 23-19-5-1(2) and IC § 23-19-5-9)

667. This cause of action is alleged jointly and severally against the following Defendants in connection with the sale of the following securities:

Security	Defendant	As
BOAMS 2006-1 A1	Banc of America Securities LLC	Underwriter/Seller
	Bank of America Corporation	Controlling Person
BSARM 2007-3 1A1	Banc of America Securities LLC	Seller
	Bank of America Corporation	Controlling Person

	The Goldman Sachs Group Inc.	Controlling Person

668. The Bank hereby incorporates by reference, as though fully set forth herein, all Paragraphs above.

669. The Defendants listed above either directly sold, or materially aided in the direct sale of, the Certificates for these securities to the Bank.

670. In doing the acts alleged in selling to the Bank the Certificates in the securitizations referred to above, the Underwriters, Sellers, and Issuer/Depositor Defendants violated IC § 23-19-5-1(2) by making untrue statements of material facts or omitting to state material facts necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading.

671. In doing the acts alleged in selling to the Bank the Certificates in the securitizations referred to above, the Underwriters, Sellers, and Issuer/Depositor Defendants

violated IC § 23-19-5-1(3) by engaging in acts, practices, or courses of business that operated or would operate as a fraud or deceit upon the Bank as the purchaser of these securities.

672. The Controlling Person Defendants directly or indirectly control the Issuer/Depositor Defendants and/or Underwriter Defendants as set forth above and are therefore liable jointly and severally with and to the same extent as the Issuer/Depositor Defendants and Underwriter Defendants.

673. Defendants solicited the sale of these securities in Indiana, the Bank accepted the offers of sale for these securities in Indiana, and the purchase and sale of these securities was made in Indiana.

674. Upon their purchase, the Bank received these securities in Indiana.

675. In connection with their offer and sale of these securities to the Bank, Defendants sent numerous documents to the Bank at its office in Marion County. These documents included the prospectus and prospectus supplement filed with the SEC for each securitization, registration statements, summary term sheets, and other documents. In these documents, Defendants made statements of material fact about the Certificates they offered and sold to the Bank.

676. In purchasing the Certificates that are the subject of this cause of action, the Bank did not know that the material misstatements incorporated in and material information omitted from the documents provided by Defendants to the Bank were untrue.

677. Defendants' misstatements and omissions alleged herein were material and were central to the Bank's decision to purchase these Certificates. If Defendants had not engaged in these material misstatements or material omissions, and had instead provided full and accurate disclosures, the Bank would not have purchased the Certificates at issue.

678. The Bank has suffered a loss on each of these Certificates.

679. The Bank has identified litigation that provides for tolling of the statute of limitations on this claim for securities BSARM 2007-3 1A1, CWHL 2007-8 1A5, CWHL 2007-13 A4, STARM 2007-4 2A2, WAMU 2007-HY1 4A1, WAMU 2007-HY2 1A1, WFMBS 2007-10 1A10, WFMBS 2006-10 A7, WFMBS 2007-4 A16, and WFMBS 2007-11 A2. The Bank will amend this complaint as appropriate as it identifies additional actions that provide for tolling of the statute for additional securities purchased by the Bank.

680. This action is brought within three years after the Bank's discovery of the violations alleged in this Cause of Action, or within any applicable period as tolled by the pendency of other actions. *See* ¶ 709. Despite having exercised reasonable diligence, the Bank did not and could not reasonably have discovered earlier the untrue and misleading statements or omissions in the prospectus supplements and other documents and the other violations of the Indiana Uniform Securities Act alleged in this Count.

681. Despite being armed with subpoena power, it took the Senate Permanent Subcommittee on Investigations two years, and the Financial Crisis Inquiry Commission a year and a half, to complete their investigations into the mortgage crisis. The FCIC reviewed millions of pages of documents, interviewed over 700 different witnesses, conducted 19 days of public hearings, and released its 662-page report in January 2011. The Senate Subcommittee conducted 150 interviews and depositions, accumulated and reviewed tens of millions of pages of documents, held multiple public hearings, and on April 13, 2011, published its 646-page report detailing the origins of the financial crisis.

682. The vast majority of information upon which the Bank's claims are based, including internal documents revealed through government investigations, an analysis of the characteristics and performance of the loan pools conducted by an outside consultant, and the

confidential witness statements by former employees of originators, was not available before October 15, 2008.

683. Furthermore, the Defendants and their affiliates have denied and disputed, and continue to deny and dispute, the conduct alleged in the Complaint, including, but not limited to, that the mortgage originators who issued the loans backing the PLMBS sold, sponsored, issued, or underwritten by the Defendants had abandoned their stated underwriting guidelines when issuing loans for securitization. The Defendants and their affiliates also controlled access to and refused to provide to investors the mortgage loan origination files that were generated by the mortgage originators when the loans backing the PLMBS were issued. The loan files are key evidence of the abandonment of underwriting guidelines, and in their absence, the Bank, like other investors, must assemble information from disparate sources in order to obtain sufficient information to substantiate its claims. The Bank has diligently and timely pursued this investigation, and the filing of its Complaint.

684. The Bank expressly excludes from this cause of action any allegation that could be construed as alleging fraud or intentional reckless conduct. This cause of action is based solely on claims of strict liability or negligence under the Indiana Uniform Securities Act.

685. Under IC § 23-19-5-9, the Bank is entitled to void the transaction and have Defendants pay the Bank, jointly and severally, the consideration paid for each security, less the amount of any income received on the security, plus interest at the greater of eight percent (8%) per annum or the rate provided for in the security from the date of the purchase, plus costs and reasonable attorneys' fees, upon the tender of the security. If the Bank has sold any Certificate, the Bank is entitled to actual damages, plus interest at the greater of eight percent (8%) per

annum or the rate provided for in the security from the date of the purchase, plus costs and reasonable attorneys' fees.

SECOND CAUSE OF ACTION

NEGLIGENCE UNDER THE COMMON LAW

686. This cause of action is alleged against the following Defendants in connection with the sale of the following securities:

Against Defendant:	As	In connection with Security:
Banc of America Mortgage Securities, Inc.	Depositor	BOAMS 2006-1 A1
Chase Mortgage Finance Corporation	Depositor	CHASE 2005-A2 1A4

687. The Bank hereby incorporates by reference, as though fully set forth herein, all Paragraphs above.

688. In carrying out the acts and omissions alleged herein in offering and selling to the Bank the Certificates in the securitizations referred to above, the Underwriter, Seller, and Issuer/Depositor Defendants were acting as professionals who, by virtue of the nature of their business, were making representations to the Bank in the course of soliciting the sale of securities or performing a contract.

689. These Defendants made negligent misrepresentations and omissions to the Bank of material facts regarding the true nature of the securities they sold to the Bank. Defendants failed to disclose all material facts within their knowledge, or that should have been within their knowledge, that were material to the sale of the securities they offered to the Bank.

690. As alleged above and incorporated herein, the Defendants breached this duty by making untrue or misleading statements of material facts in or omitting material facts from the Offering Documents. These material misrepresentations or omissions pertain to: (1) adherence to the originators' stated underwriting guidelines, and related matters; (2) the LTVs of the mortgage loans in the collateral pools of these securitizations; (3) the occupancy status rates of properties that secured the mortgage loans in these securitizations; (4) the extent to which the loans were originated based on full documentation; (5) the ratings and the ratings process by

which AAA-ratings were assigned; (6) due diligence purportedly conducted on the loan pools; (7) the enforceability of the mortgages; and (8) the compounded high-risk nature of the mortgage loans in the mortgage pools underlying the Certificates.

691. The Bank is informed and believes, and based thereon alleges, that Defendants had access to the loan files on the mortgage loans in the collateral pools for these securitizations, and, had the Defendants inspected those files, they would have learned that the information they gave the Bank contained untrue or misleading statements. In addition, Defendants were aware or should have been aware but for their negligence that the "due diligence" review of the loans that were being securitized and sold to the Bank identified serious concerns and that a significant percentage of these loans were identified as defective but were nonetheless bundled and sold to the Bank as part of the securitizations. Thus, the Bank is informed and believes, and based thereon alleges, that Defendants had access to information that either did or should have made the Defendants aware, had they heeded that information, that the representations they made to the Bank contained material untrue or misleading statements about the mortgage loans in the collateral pools and the originators' adherence to their stated underwriting guidelines. The Defendants were careless or negligent in ascertaining the truth of their statements.

692. Defendants were either in privity of contract with the Bank with respect to the securities that are the subject of this cause of action, or Defendants knew or should have known that the information they made available or omitted to disclose would be used and relied on by members of the investing public, including the Bank, to purchase the securities.

693. The Bank did not know when it purchased these Certificates that the statements in the prospectus supplements and other written Offering Documents and communications that the dealers sent the Bank, were untrue or misleading.

694. The Bank justifiably relied on Defendants' negligent misrepresentations and omissions alleged herein and these misrepresentations and omissions formed the basis of the Bank's decision to purchase these Certificates. If Defendants had not made these negligent misrepresentations and omissions, and had instead provided full and accurate disclosures, the Bank would not have purchased the Certificates at issue.

695. Defendants owed a duty of care to the Bank to convey accurate information in connection with the transactions alleged herein. Defendants failed to exercise the care and competence in obtaining and communicating the information that the Bank was justified in expecting, and accordingly, Defendants breached their duties to the Bank.

696. As a direct and proximate result of Defendants' negligence, the Bank was damaged in an amount to be proven at trial.

697. This action is brought within two years after the Bank knew, or in the exercise of ordinary diligence could have discovered, that it was damaged as a result of Defendants' negligence, or within any applicable period as tolled by the pendency of other actions. Despite having exercised reasonable diligence, the Bank did not and could not reasonably have discovered earlier Defendants' negligence alleged in this Count.

698. Despite being armed with subpoena power, it took the Senate Permanent Subcommittee on Investigations two years, and the Financial Crisis Inquiry Commission a year and a half, to complete their investigations into the mortgage crisis. The FCIC reviewed millions of pages of documents, interviewed over 700 different witnesses, conducted 19 days of public hearings, and released its 662-page report in January 2011. The Senate Subcommittee conducted 150 interviews and depositions, accumulated and reviewed tens of millions of pages of

documents, held multiple public hearings, and on April 13, 2011, published its 646-page report detailing the origins of the financial crisis.

699. The vast majority of information upon which the Bank's claims are based, including internal documents revealed through government investigations, an analysis of the characteristics and performance of the loan pools conducted by an outside consultant, and the confidential witness statements by former employees of originators, was not available before October 15, 2008.

700. Furthermore, the Defendants and their affiliates denied and disputed the conduct alleged in the Complaint, including, but not limited to, that the mortgage originators who issued the loans backing the PLMBS sold, sponsored, issued, or underwritten by the Defendants had abandoned their stated underwriting guidelines when issuing loans for securitization. The Defendants and their affiliates also controlled access to and refused to provide to investors the mortgage loan origination files that were generated by the mortgage originators when the loans backing the PLMBS were issued. The loan files are key evidence of the abandonment of underwriting guidelines, and in their absence, the Bank, like other investors, must assemble information from disparate sources in order to obtain sufficient information to substantiate its claims. The Bank has diligently and timely pursued this investigation, and the filing of its Complaint.

THIRD CAUSE OF ACTION

UNTRUE OR MISLEADING STATEMENTS IN REGISTRATION STATEMENTS

(Section 11 of the Securities Act of 1933)

701. This cause of action is alleged jointly and severally against the following Defendants in connection with the sale of the following securities:

Security	Defendant	As
BSARM 2007-3 1A1	Bear, Stearns & Co. Inc.	Underwriter
	Structured Asset Mortgage Investments II Inc.	Depositor
CWHL 2007-8 1A5	Credit Suisse First Boston LLC	Underwriter
	CWMBS, Inc.	Depositor
CWHL 2007-13 A4	Bear, Stearns & Co. Inc.	Underwriter
	CWMBS, Inc.	Depositor
STARM 2007-4 2A2	Goldman Sachs	Depositor
	Goldman, Sachs & Co.	Underwriter
WAMU 2007-HY1 4A1	WaMu Asset Acceptance Corp.	Depositor
	WaMu Capital Corp.	Underwriter
WAMU 2007-HY2 1A1	WaMu Asset Acceptance Corp.	Depositor
	WaMu Capital Corp.	Underwriter
WFMBS 2007-10 1A10	UBS Securities LLC	Underwriter
	Wells Fargo Asset Securities Corporation	Depositor
WFMBS 2006-10 A7	Credit Suisse First Boston LLC	Underwriter
	Wells Fargo Asset Securities Corporation	Depositor
WFMBS 2007-4 A16	Greenwich Capital Markets, Inc.	Underwriter
	Wells Fargo Asset Securities Corporation	Depositor
WFMBS 2007-11 A2	Goldman, Sachs & Co.	Underwriter
	Wells Fargo Asset Securities Corporation	Depositor

702. The Bank hereby incorporates by reference, as though fully set forth herein, all Paragraphs above.

703. In doing the acts alleged, the Defendants named above violated Section 11 of the 33 Act in connection with the sale to the Bank of the Certificates in the securitizations referred to above.

704. The Certificates in these securitizations were issued pursuant to or traceable to the registration statements for each Certificate, which were deficient for the reasons set forth herein in detail.

705. The entities listed as Depositors of the securitizations in Paragraph 701 above are also the issuers of the Certificates in those securitizations.

706. The entities listed as Underwriters of the securitizations in Paragraph 701 above directly or indirectly sold the Certificates to the Bank.

707. The Certificates at issue in this count were issued pursuant to or traceable to a public offering in which registration statements for these Certificates were filed.

708. With respect to securities BSARM 2007-3 1A1, WAMU 2007-HY1 4A1, and WAMU 2007-HY2 1A1, the Bank purchased the security in reliance upon the material untrue statements or omissions in the registration statement as alleged herein, and did not know of the omissions or untrue statements when it purchased the securities.

709. The Bank has identified litigation that provides for tolling of the statute of limitations and/or statute of repose on this claim for Certificates WAMU 2007-HY1 4A1 (bona fide public offering date ("offering date") of January 22, 2007), WAMU 2007-HY2 1A1 (offering date February 13, 2007), BSARM 2007-3 1A1 (offering date April 26, 2007), CWHL 2007-13 A4 (offering date June 27, 2007), CWHL 2007-8 1A5 (offering date May 29, 2007), WFMBS 2006-10 A7 (offering date July 27, 2006), WFMBS 2007-10 1A10 (offering date June 28, 2007), WFMBS 2007-11 A2 (offering date July 26, 2007), WFMBS 2007-4 A16 (offering date March 26, 2007), STARM 2007-4 2A2 (offering date September 21, 2007). Within two years of the bona fide public offering of these securities and the sale of these securities to the Bank, but before the Certificates had been downgraded or before the Bank had discovered, or

with reasonable diligence could have discovered, Defendants' materials misstatements and omissions with respect to these Certificates, actions related to these securities were filed and tolled the applicable statute of limitations. These actions include, but are not limited to, the following cases and related actions:

A. WAMU 2007-HY1 4A1 & WAMU 2007-HY2 1A1: *New Orleans Employees' Ret. Sys. & MARTA/ATU Local 732 v. Washington Mutual Inc., et al.*, No. 08-2-26210-3 (Wa. Sup. Ct.); *Boilermakers National Annuity Fund v. WaMu Mortgage Pass-Through Certificates* (*aka Doral Bank P.R. v. WaMu Asset Acceptance Corporation*), 09-0037 (W.D. Wash.).

B. BSARM 2007-3 1A1: *In Re Bear Stearns Mortgage Pass-Through Certificates Litigation*, 08-8093 (S.D.N.Y.).

C. CWHL 2007-13 A4 & CWHL 2007-8 1A5: *Maine State Retirement System v. Countrywide Financial Corporation*, 10-0302 (C.D. Cal.); *WA State Plumbing & Pipefitting Pension Trust v. Countrywide*, BC392571 (CA Sup Ct. Los Angeles).

D. WFMBS 2006-10 A7, WFMBS 2007-10 1A10, WFMBS 2007-11 A2, & WFMBS 2007-4 A16: *Boilermaker-Blacksmith National Pension Trust v. Wells Fargo Mortgage Backed Securities 2006-AR1* Trust, No. 09-00833 (S.D.N.Y.); *General Retirement System of the City of Detroit v. Wells Fargo Mortgage Backed Securities*, 09-1376 (N.D. Cal.); *New Orleans Employees' Ret. Sys. v. Wells Fargo Asset Sec. Corp.*, No. 09-1620 (N.D.Cal.); *In re Wells Fargo Mortgage Backed Certificates Litig.*, No. 09-01376 (N.D. Cal.).

E. STARM 2007-4 2A2: *NECA-IBEW Health & Welfare Fund v. Goldman, Sachs & Co.*, 8-10783 (S.D.N.Y.)

Accordingly, the Bank's section 11 and 12 claims for the Certificates listed above were either still tolled when the Bank filed its original complaint on October 15, 2010, or were within the applicable statutes of limitation or repose as set forth in section 13 of the 33 Act. The Bank's claims under the Indiana Uniform Securities Act have been similarly tolled. The Bank will seek leave to amend this complaint as appropriate as it identifies additional actions that provide for tolling of the statute of limitations or repose for these or additional Certificates.

710. This action is brought within one year after the discovery of the untrue and misleading statements in the registration statements, as amended by the prospectus supplements,

and within three years of these Certificates having been sold to the public, or within any applicable period as tolled by the pendency of other actions, as detailed above. Despite having exercised reasonable diligence, the Bank did not and could not reasonably have discovered earlier the untrue and misleading statements or omissions in the registration statement, as amended by the prospectus supplements.

711. The registration statements, as amended by the prospectus supplements, contained untrue statements of material fact and omitted to state material facts necessary in order to make the statements, in light of the circumstances under which they were made, not misleading. These untrue and misleading statements included all of the untrue and misleading statements described in this complaint and its appendices which are incorporated herein by this reference.

712. The Bank did not know when it purchased these Certificates that the statements in the registration statements, as amended by the prospectus supplements, were untrue or misleading.

713. The Bank expressly excludes from this cause of action any allegation that could be construed as alleging fraud or intentional reckless conduct. This cause of action is based solely on claims of strict liability or negligence under the 33 Act.

714. The Bank has suffered a loss on each of these Certificates. The Bank has had to impair the value of these assets, which has caused the Bank's earnings performance to decline.

715. The Bank is entitled to recover damages as described in 15 U.S.C. § 77k(e).

FOURTH CAUSE OF ACTION

UNTRUE OR MISLEADING STATEMENTS IN THE SALE OF SECURITIES

(Section 12(a)(2) of the Securities Act of 1933)

716. This cause of action is alleged jointly and severally against the following Defendants in connection with the sale of the following securities:

Securities	Settlement Date	Defendant	As
CWHL 2007-8 1A5	5/31/2007	CWMBS, Inc.	Depositor
		Credit Suisse First Boston LLC	Underwriter/Seller
CWHL 2007-13 A4	6/29/2007	CWMBS, Inc.	Depositor
		Bear, Stearns & Co. Inc.	Underwriter/Seller
STARM 2007-4 2A2	9/24/2007	GS Mortgage Securities Corp.	Depositor
		Goldman, Sachs & Co.	Underwriter/Seller
WFMBS 2007-10 1A10	6/29/2007	Wells Fargo Asset Securities Corporation	Depositor
		UBS Securities LLC	Underwriter/Seller
WFMBS 2006-10 A7	7/31/2006	Wells Fargo Asset Securities Corporation	Depositor
		Credit Suisse First Boston LLC	Underwriter/Seller
WFMBS 2007-4 A16	4/17/2007	Wells Fargo Asset Securities Corporation	Depositor
		Greenwich Capital Markets, Inc.	Underwriter/Seller
WFMBS 2007-11 A2	7/30/2007	Wells Fargo Asset Securities Corporation	Depositor
		Goldman, Sachs & Co.	Underwriter/Seller

717. The Bank hereby incorporates by reference all Paragraphs above as though fully set forth herein.

718. The entities listed in Paragraph 716 above as Depositors of the securitizations are also Issuers of the Certificates in those securitizations. In such capacity, the entities listed in

Paragraph 716 offered and/or sold these Certificates to Plaintiff in registered, primary offerings pursuant to a registration statement containing prospectuses that they had prepared and filed, or by means of other communications that constituted offers made by, on behalf of, used, or referred to by the Depositors/Issuers. The Depositors/Issuers or their agents authorized or approved the information or communications regarding these Certificates before they were provided or used.

719. The entities listed in Paragraph 716 above as Underwriters of the securitizations acted as the underwriters of the Certificates listed above and sold the Certificates directly to the Bank in the initial public offering/primary offering of the security.

720. In doing the acts alleged, the Defendants named above violated Section 12(a)(2) of the 33 Act in connection with the sale to the Bank of the Certificates in the securitizations referred to above.

721. The Defendants named in Paragraph 716 above solicited the Bank to purchase these Certificates, and sold the Certificates to the Bank, by means of the prospectus supplements and other written Offering Documents and communications. The Defendants named in Paragraph 716 passed title to the security to Plaintiff, or solicited the sale of the security to serve their own financial interests or the financial interests of the security's owner. The Bank purchased the Certificates in the initial distributions of such Certificates. The settlement dates for these transactions are listed in Paragraph 716 above.

722. The prospectus supplements and other written Offering Documents and communications that the dealers sent to the Bank contained untrue statements of material fact and omitted to state material facts necessary in order to make the statements, in light of the circumstances under which they were made, not misleading. These untrue and misleading

statements included all of the untrue and misleading statements described in this complaint and its appendices, which are incorporated herein by this reference.

723. The Bank expressly excludes from this cause of action any allegation that could be construed as alleging fraud or intentional reckless conduct. This cause of action is based solely on claims of strict liability or negligence under the 33 Act.

724. The Bank did not know when it purchased these Certificates that the statements in the prospectus supplements and other written Offering Documents and communications that the dealers directed at the Bank, were untrue or misleading.

725. The Bank has suffered a loss on each of these Certificates. The Bank has had to impair the value of these assets, which has caused the Bank's earnings performance to decline.

726. This action is brought within one year after the discovery of the untrue and misleading statements in the prospectus supplements and other written Offering Documents and communications that the dealers directed at the Bank, and within three years of these Certificates having been sold to the public, or within any applicable period as tolled by the pendency of other actions. Despite having exercised reasonable diligence, the Bank did not and could not reasonably have discovered earlier the untrue and misleading statements in these Offering Documents.

727. The Bank has identified litigation that provides for tolling of the statute of limitations and/or statute of repose on this claim as set forth in detail above, *see* ¶ 709. The Bank will seek leave to amend this complaint as appropriate as it identifies additional actions that provide for tolling of the statute of limitations or repose for these or additional Certificates.

728. The Bank is entitled to recover the consideration it paid for each of these Certificates, plus interest at the legal rate from the date of purchase to the date on which it

recovers the purchase price, minus the amount of income it has received on each Certificate, or actual damages. Pursuant to Section 12(a)(2) and in anticipation of the remedies thereunder, the Bank hereby offers to tender each Certificate set forth in this Cause of Action for which it seeks rescission.

FIFTH CAUSE OF ACTION

LIABILITY OF CONTROLLING PERSON

(Section 15 of the Securities Act of 1933)

729. This cause of action is alleged jointly and severally against the following Controlling Person Defendants and the Defendants they controlled in connection with the sale of each of the following securities:

Security	Defendant	As
BSARM 2007-3 1A1	Bank of America Corporation	Controlling Person
	The Bear Stearns Companies Inc.	Controlling Person
CWHL 2007-8 1A5	Countrywide Financial Corporation	Controlling Person
	Credit Suisse Holdings (USA), Inc.	Controlling Person
	Credit Suisse (USA), Inc.	Controlling Person
CWHL 2007-13 A4	Countrywide Financial Corporation	Controlling Person
	The Bear Stearns Companies Inc.	Controlling Person
STARM 2007-4 2A2	The Goldman Sachs Group Inc.	Controlling Person
WAMU 2007-HY1 4A1	Credit Suisse Holdings (USA), Inc.	Controlling Person
	Credit Suisse (USA), Inc.	Controlling Person
WAMU 2007-HY2 1A1	Bank of America Corporation	Controlling Person

Security	Defendant	As
WFMBS 2007-10 1A10	Wells Fargo Bank, National Association	Controlling Person
	Wells Fargo & Company	Controlling Person
WFMBS 2006-10 A7	Credit Suisse Holdings (USA), Inc.	Controlling Person
	Credit Suisse (USA), Inc.	Controlling Person
	Wells Fargo Bank, National Association	Controlling Person
	Wells Fargo & Company	Controlling Person
WFMBS 2007-4 A16	Wells Fargo Bank, National Association	Controlling Person
	Wells Fargo & Company	Controlling Person
WFMBS 2007-11 A2	Wells Fargo Bank, National Association	Controlling Person
	Wells Fargo & Company	Controlling Person
	The Goldman Sachs Group Inc.	Controlling Person

730. By or through stock ownership, agency, or otherwise, the Controlling Defendants listed below controlled the following controlled entities within the meaning of Section 15 of the 33 Act:

Controlling Person	Controls	Defendant
Bank of America Corporation	Banc of America Securities LLC	Seller
Countrywide Financial Corporation	CWMBS, Inc.	Depositor
Credit Suisse (USA), Inc.	Credit Suisse First Boston LLC	Underwriter and/or Seller
Credit Suisse Holdings (USA), Inc.	Credit Suisse First Boston LLC	Underwriter and/or Seller
The Goldman Sachs Group Inc.	Goldman, Sachs & Co.	Underwriter /Seller
Wells Fargo & Company	Wells Fargo Asset Securities Corporation	Depositor
Wells Fargo Bank, National Association	Wells Fargo Asset Securities Corporation	Depositor

731. The Bank hereby incorporates by reference all Paragraphs above as though fully set forth herein.

732. The Bank expressly excludes from this cause of action any allegation that could be construed as alleging fraud or intentional reckless conduct. This cause of action is based solely on claims of strict liability or negligence under the 33 Act.

733. The Controlling Person Defendants named above are liable because, in doing the acts alleged, the Controlled Defendants violated Sections 11 and 12(a)(2) of the 33 Act in connection with the offer and sale to the Bank of the Certificates in the securitizations referred to above and as set forth in the Third and Fourth Causes of Action.

734. The Controlling Person Defendants controlled, influenced, or participated in essentially all material aspects relating to the acquisition, structure and sale of the Certificates purchased by the Bank identified herein.

735. The Controlling Person Defendants' control, position and influence over the Controlled Defendants made them privy to, and provided them with actual knowledge of, the material facts and omissions concealed from the Bank.

736. Each of the Controlling Person Defendants, by virtue of its ownership, control, including as a parent corporation, involvement with, influence and domination over, and participation and involvement in, the management and operations of the respective Controlled Defendants (a) exercised control over the operations of the Controlled Defendants; and (b) had the power to influence and control, and exercised that power, influence and control, to cause the Controlled Defendants to engage in violations of the 33 Act, as described above.

737. Each of the Controlling Person Defendants, by virtue of its ownership, control, including as a parent corporation, involvement with, influence and domination over, and participation and involvement in, the management and operations of the respective Controlled

Defendants was, at the time of the wrongs alleged herein, a controlling person of the Controlled Defendants within the meaning of Section 15 of the 33 Act.

738. Each Defendant named above is therefore jointly and severally liable with and to the same extent as the person it controlled.

739. This action is brought within the applicable statutes of limitation and repose. This action is brought within one year after the discovery of the untrue and misleading statements in the prospectus supplements and other written Offering Documents and communications that the dealers directed at the Bank, and within three years of these Certificates having been sold to the public, or within any applicable period as tolled by the pendency of other actions. Despite having exercised reasonable diligence, the Bank did not and could not reasonably have discovered earlier the untrue and misleading statements in these Offering Documents.

740. The Bank has identified litigation that provides for tolling of the statute of limitations and/or statute of repose on this claim as set forth in detail above, *see* ¶ 709. The Bank will seek leave to amend this complaint as appropriate as it identifies additional actions that provide for tolling of the statute of limitations or repose for these or additional Certificates.

VIII. PRAYER FOR RELIEF

WHEREFORE, the Bank respectfully demands judgment as follows:

A. On the first cause of action, an order voiding the transactions at issue and ordering Defendants to pay the Bank, jointly and severally, the consideration paid for each security, less the amount of any income received on the security, or actual damages, plus interest at the greater of eight percent (8%) per annum or the rate provided for in the security from the date of the purchase;

B. On the second cause of action, damages in an amount to be determined at trial, plus pre- and post-judgment interest at the highest allowable rate;

D. On third cause of action, damages in an amount to be determined at trial;

E. On the fourth and fifth causes of action, the consideration the Bank paid for each Certificate with interest thereon, less the amount of any income that the Bank has received thereon, upon the Bank's tender of the Certificate, or actual damages;

F. Reasonable attorneys' fees and expenses or costs of suit, including expert witness fees; and

G. Such other and further relief as permitted by law or equity or as the Court may deem just.

IX. JURY DEMAND

The Bank demands a jury on all issues so triable.

RESPECTFULLY SUBMITTED this 14th day of July, 2011.

JURY DEMAND 88

Plaintiff Huntington Bancshares Inc. ("Huntington") makes the allegations in this Complaint based upon personal knowledge as to matters concerning Plaintiff and its own acts, and upon information and belief as to all other matters. This information is derived from the investigation by Plaintiff's counsel, which has included a review and analysis of annual reports and publicly filed documents, reports of governmental investigations by the United States Securities and Exchange Commission (the "SEC"), the Financial Crisis Inquiry Commission (the "FCIC"), the United States Department of Justice (the "DOJ"), the United States Senate Permanent Subcommittee on Investigations, and numerous investigations by other federal and state governmental units, as well as press releases, news articles, analysts' statements, conference call transcripts and presentations, and transcripts from speeches and remarks given by Defendants. In addition, Plaintiff's counsel conferred with counsel for other plaintiffs who have filed other complaints against these Defendants based on the same or similar activities. Based on the foregoing, Plaintiff believes that substantial additional evidentiary support exists for the allegations herein, which Plaintiff will find after a reasonable opportunity for discovery.

NATURE OF ACTION

1. This is an action by Plaintiff Huntington against Defendants for fraud, aiding and abetting fraud, negligent misrepresentation, and violation of the Minnesota Securities Act.

2. This action arises out of Huntington's purchase of certain residential mortgage-backed securities ("RMBS"), as evidenced in the form of "Certificates," in reliance on the false and misleading statements that were made by Defendants. Based on these material misrepresentations and omissions, Plaintiff purchased securities that were far riskier than had been represented, and were backed by mortgage loans worth significantly less than had been represented, which loans had been made to borrowers who were much less creditworthy than had been represented.

3. The securities purchased by Plaintiff were collateralized against mortgages originated and/or acquired by GMAC (as defined in ¶ 109, *infra*). GMAC did not, however, hold the mortgage loans it originated and/or acquired. Rather, taking advantage of an unprecedented boom in the securitization industry, it deposited the loans into special purpose entities or "trusts" and then repackaged the loans for sale to investors in the form of RMBS. Defendant Ally Securities, LLC, among other underwriters, then sold the RMBS to investors such as Plaintiff.

4. The Certificates entitled investors to receive monthly distributions of interest and principal on cash flows from the mortgages held by the trusts. The Certificates issued by each trust were divided into several classes (or "tranches") that had different seniority, priorities of payment, exposure to default, and interest payment provisions. Rating agencies, such as Moody's Investors Service, Inc. ("Moody's"), Standard & Poor's Corporation ("S&P"), DBRS, Inc. ("DBRS") and/or Fitch, Inc. ("Fitch"),[1] rated the investment quality of all tranches of Certificates based upon information provided by the Defendants about the quality of the mortgages in each mortgage pool and the seniority of the Certificate among the various Certificates issued by each trust. These ratings, in significant part, determined the price at which these Certificates were offered to investors.

5. In selling the Certificates, the Defendants prepared and filed with the Securities and Exchange Commission ("SEC") certain registration statements (the "Registration Statements"), prospectuses (the "Prospectuses") and prospectus supplements (the "Prospectus Supplements", and together with the Registration Statements and Prospectuses, the "Offering

[1] Moody's, S&P, DBRS and Fitch are approved by the Securities and Exchange Commission as "Nationally Recognized Statistical Rating Organizations" and provide credit ratings that are used to distinguish among grades of creditworthiness of various securities under the federal securities laws.

Documents"). In these Offering Documents, Defendants repeatedly touted the strength of their underwriting guidelines and standards and those of the relevant third party originators, claimed that the underwriting guidelines and standards were designed to ensure the ability of the borrowers to repay the principal and interest on the underlying loans and the adequacy of the collateral, and represented that the mortgages underlying the Certificates were originated in accordance with those stated underwriting guidelines and standards. Where Defendants had not originated the mortgage loans underlying the Certificates, they emphasized their quality control procedures, such as reviewing underwriting information provided by the originators.

6. In addition, in the Offering Documents Defendants repeatedly assured investors as to the soundness of the appraisals used to arrive at the value of the underlying properties and, specifically, that the real estate collateralizing the loans had been subjected to objective real estate appraisals performed in accordance with stated guidelines. Defendants made numerous other representations regarding the quality of the loan pools, including clean transfer of title, high owner-occupancy rates, loan-to-value and combined loan-to-value ratios, debt-to-income ratios, credit ratings, and credit enhancements.

7. Plaintiff and other investors did not have access to the underlying mortgage loan files. Instead, the Defendants were responsible for gathering and verifying information about the credit quality and characteristics of the loans that were deposited into each trust and presenting this information in the Registration Statements, Prospectuses, and Prospectus Supplements prepared for potential investors. This due diligence process is a critical safeguard for investors who rely on this information in making their investment decisions, and is a fundamental legal obligation of the Defendants.

8. As set forth below, the Offering Documents contained material misstatements and omitted material information. Contrary to Defendants' assurances, the originators of the underlying loans had not followed their touted underwriting guidelines and standards when originating and/or acquiring the mortgage loans, and Defendants had neither maintained nor conducted quality control procedures.

9. Specifically, as set forth below, Defendants knew of the wholesale and systematic abandonment of underwriting guidelines by both GMAC's own affiliated originators as well as various third party originators. Because GMAC's affiliated lenders, Defendants GMAC Mortgage Group, Inc. and Homecomings Financial, operated primarily to generate loans for GMAC's RMBS operations, they intentionally granted mortgage loans to borrowers whom they knew did not satisfy the eligibility criteria as described in the Offering Documents. Faced with GMAC's demands for as many loans as possible, the third party originators did likewise, knowing that GMAC would purchase and securitize even risky, low-quality loans. In many cases, GMAC purchased and securitized loans on a wholesale basis without reviewing their loan files or having any reason to believe that they complied with their purported underwriting standards. Furthermore, when deciding whether to originate or purchase loans, GMAC and its affiliated lenders made use of proprietary underwriting software that did not apply GMAC's purported underwriting standards or require basic documentation.

10. In addition, Defendants knew that the mortgages underlying the Certificates had been extended based on inflated collateral appraisals, such that the value of the underlying properties and the amount of credit enhancements built into the Certificates were overstated, thereby exposing investors such as Plaintiff to additional losses in the event of foreclosure. In many cases, Defendants also failed to deliver good title to the Issuing Trusts in a timely manner,

severely undermining the Issuing Trusts' capacity to manage the assets that were supposed to be underlying the Certificates and contributing to massive foreclosure backlogs and moratoriums. Defendants did not apply the rigorous quality control procedures they touted in the Offering Documents to uncover lapses, and where Defendants did discover problems in the loan pools, they deliberately overlooked them.

11. Examination of the individual mortgage files underlying GMAC's RMBS has revealed just how thoroughly and blatantly GMAC misrepresented the trust assets to investors. A review of the loans underlying several GMAC RMBS comparable to those purchased by Plaintiff revealed that at least 89% of the delinquent and charged-off loans breached one or more of GMAC's representations and warranties. Common defects included unacceptably high loan-to-value and debt-to-income ratios, implausible and unverified borrower incomes, missing documentation, and violation of predatory lending laws, all basic matters readily ascertainable in the exercise of rudimentary due diligence. The sheer volume of the violations, the fact that they went to the most basic characteristics of the pooled loans, and the ease with which Defendants could have discovered the truth all foreclose the possibility that the misrepresentations in the Offering Documents were the product of anything other than intentional wrongdoing.

12. The practices of financial institutions such as GMAC and their role in inflating the housing bubble have been and continue to be the subject of intense regulatory scrutiny. In June 2011, GMAC acknowledged receipt of subpoenas from both the U.S. Department of Justice and the SEC. The subpoena received from the SEC requests documentation relating to mortgage loans placed in securitization trusts, and the subpoena received from the Department of Justice requests documentation and information in connection with the investigation of potential fraud related to the origination and/or underwriting of mortgage loans. GMAC has also been forced to

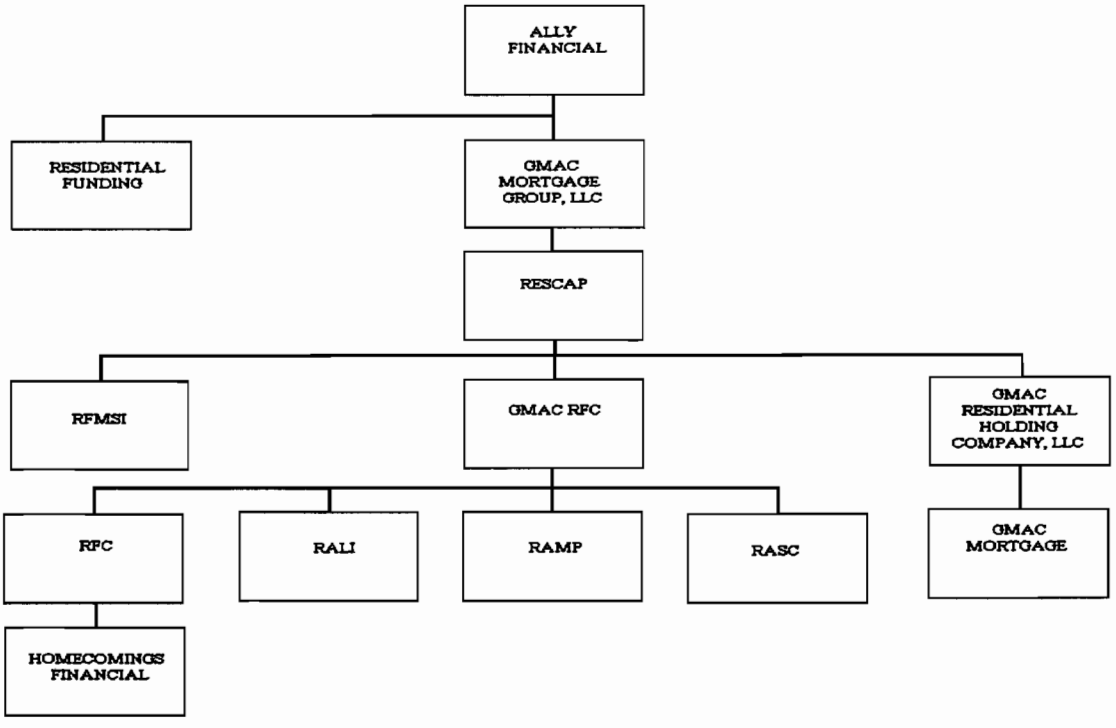
reimburse the government-sponsored entities Fannie Mae and Freddie Mac hundreds of millions of dollars for mortgages that were not underwritten as represented, and is currently being sued for securities fraud in connection with its RMBS sales by the Federal Housing Finance Agency ("FHFA").

13. As a result of the untrue statements and omissions in the Offering Documents, Plaintiff purchased Certificates that were far riskier than represented and that were not equivalent to other investments with the same credit ratings. The rating agencies significantly downgraded the Certificates purchased by Plaintiff, all of which were represented in the Offering Documents to be AAA/Aaa instruments at the time of purchase. The Certificates all were sold by Plaintiff at a loss. As a consequence, Plaintiff has suffered losses on its purchases of the Certificates.

JURISDICTION AND VENUE

14. This Court has personal jurisdiction over each of the non-domiciliary Defendants pursuant to MINN. STAT. § 543.19, subdiv. (1)(2) because each of them has transacted business within the state of Minnesota, and pursuant to MINN. STAT. § 543.19, subdiv. (1)(3) because each of them has committed tortious acts within the state of Minnesota causing property damage. Many of the acts and transactions alleged herein, including the negotiation, preparation and dissemination of many of the material misstatements and omissions contained in the Registration Statements, Prospectuses and Prospectus Supplements, occurred in substantial part in this state. Additionally, the Certificates were actively marketed and sold in this state.

15. Venue is proper in this Court pursuant to MINN. STAT. § 542.09, because Defendants Residential Capital Corporation and GMAC Residential Funding Corporation both maintain offices in Hennepin County.



PARTIES

A. PLAINTIFF

16. Plaintiff Huntington is headquartered in Columbus, Ohio. Huntington provides retail and commercial banking and financial products and services in multiple states, including Ohio, Michigan, Pennsylvania, and Indiana, among others. The Huntington Bank provides full service consumer and commercial banking services, mortgage banking services, equipment leasing, automobile leasing, trust services, investment management, brokerage services, reinsurance of credit life and disability insurance, reinsurance of private mortgage insurance, retail and commercial insurance agency services, and other financial products and services.

B. GMAC DEFENDANTS

17. Defendant Ally Financial Inc. ("Ally Financial") is a bank holding company headquartered in Detroit, Michigan. Until May 2010, Ally Financial was known as GMAC Financial Services. Ally Financial was founded to provide financing to automobile purchasers, but expanded over time into areas including mortgage securitization, commercial finance and online banking. Ally Financial is the direct or indirect owner of Defendants Residential Capital LLC; GMAC Mortgage, LLC; GMAC Residential Funding Corporation; Homecomings Financial, LLC; Residential Accredit Loans, Inc.; Residential Funding Mortgage Securities I, Inc.; Residential Asset Securities Corporation; Residential Asset Mortgage Products, Inc.; Residential Funding Company, LLC; and Ally Securities, LLC (together with Ally Financial, collectively referred to hereinafter as "GMAC."). The diagram below depicts the relationships of the GMAC corporate entities.

18. Defendant Residential Capital LLC, f/k/a Residential Capital Corporation ("ResCap") is a wholly-owned subsidiary of GMAC Mortgage Group LLC and an indirectly-owned subsidiary of Ally Financial, with its principal place of business in Minneapolis, Minnesota. ResCap originates, securitizes and services mortgage loans through its subsidiaries.

19. Defendant GMAC Mortgage, LLC, a/k/a GMAC Mortgage Corporation ("GMAC Mortgage") is an indirectly-owned subsidiary of ResCap and therefore an indirectly-owned subsidiary of Ally Financial, with its principal place of business in Fort Washington, Pennsylvania. GMAC Mortgage originates residential mortgage loans through a network of retail offices and Internet sites. GMAC Mortgage originated mortgage loans that were pooled in securitizations and purchased by Plaintiff.

20. Defendant GMAC Residential Funding Corporation, a/k/a GMAC-RFC Holding Company, LLC ("GMAC RFC") is a wholly-owned subsidiary of ResCap and therefore an

indirectly-owned subsidiary of Ally Financial, with its principal place of business in Minneapolis, Minnesota. GMAC RFC operates as a private issuer of mortgage-backed securities.

21. Defendant Homecomings Financial, LLC, f/k/a Homecomings Financial Network, Inc. ("Homecomings Financial") is an indirectly-owned subsidiary of ResCap and therefore an indirect subsidiary of Ally Financial. Homecomings Financial is a mortgage servicing and origination company. Homecomings Financial originated loans that were pooled into every securitization at issue in this case.

22. Residential Accredit Loans, Inc. ("RALI") is a wholly-owned, limited-purpose subsidiary of GMAC RFC. Like all the other depositors, RALI was created specifically as a conduit for the securitization and sale of loans. RALI was the depositor for several of the securitizations at issue.

23. Residential Funding Mortgage Securities I, Inc. ("RFMSI") is a wholly-owned, limited-purpose subsidiary of ResCap. Like all the other depositors, RFMSI was created specifically as a conduit for the securitization and sale of loans. RFMSI was the depositor for (1) RFMSI Series 2005-SA3 Trust; and (2) RFMSI Series 2006-S1 Trust.

24. Defendants RALI and RFMSI are referred to collectively hereinafter as the "Depositor Defendants."

25. Residential Funding Company, LLC ("RFC") is a Delaware corporation and a wholly-owned subsidiary of GMAC RFC. Until October 2006, RFC LLC was known as "Residential Funding Corporation." RFC was created by GMAC RFC specifically as a conduit for the securitization and sale of loans. RFC was the sponsor for all of the securitizations at issue

in this litigation. RFC is also the parent company of Homecomings Financial, an originator of mortgage loans underlying the RMBS purchased by Plaintiff.

26. Defendant RFC is referred to hereinafter as the "Sponsor Defendant."

27. Ally Securities, LLC, f/k/a Residential Funding Securities, LLC, d/b/a GMAC RFC Securities, f/k/a Residential Funding Securities Corporation ("Residential Funding"), is an SEC registered broker-dealer with its principal place of business in Minneapolis, Minnesota. Residential Funding was an underwriter of Certificates purchased by Plaintiff..

C. **INDIVIDUAL DEFENDANTS**

28. Kenneth M. Duncan ("Duncan") was, at relevant times, the Acting Chief Financial Officer of Defendant RALI. Duncan was also the Executive Vice President, Acting Chief Financial Officer and a Director of Defendant RFMSI.

29. Ralph T. Flees ("Flees") was, at relevant times, the Controller of Defendants RALI and RFMSI.

30. Jack R. Katzmark ("Katzmark") was, at relevant times, a Controller of Defendant RFMSI.

31. Lisa R. Lundsten ("Lundsten") was an Attorney-in-Fact of Defendants RALI and RFMSI.

32. Davee L. Olson ("Olson") was, at relevant times, the Executive Vice President, Chief Financial Officer, and a Director of Defendant RFMSI. Olson was also a Director of Defendant RALI.

33. Bruce J. Paradis ("Paradis") was the President and Chief Executive Officer of GMAC RFC from 1994 to 2005, and was the Chief Executive Officer of ResCap from 2005 to 2007. Paradis was also, at relevant times, the President, Chief Executive Officer, and a Director of the Depositor Defendants RALI and RFMSI.

34. Julie Steinhagen ("Steinhagen") was an Attorney-in-Fact of Defendant RFMSI.

35. David C. Walker ("Walker") was, at relevant times, a Director of Defendant RFMSI.

36. Defendants Duncan, Flees, Katzmark, Lundsten, Olson, Paradis, Steinhagen and Walker are referred to collectively hereinafter as the "Individual Defendants." The Individual Defendants signed the Registration Statements listed in the table below.

Issuing Trust(s)	Document Date	Registration/ File No.	Signatories
RFMSI 2005-SA3	July 11, 2003	333-106093	Bruce J. Paradis Davee L. Olson David C. Walker Jack R. Katzmark Julie Steinhagen (attorney-in-fact)
RFMSI 2006-S1	August 3, 2005	333-126745	Bruce J. Paradis Kenneth M. Duncan David C. Walker Ralph T. Flees Lisa R. Lundsten (attorney-in-fact)
RALI 2006-QS5 RALI 2006-QS11 RALI 2006-QS13	March 3, 2006	333-131213	Bruce J. Paradis Kenneth M. Duncan Davee L. Olson Ralph T. Flees Lisa R. Lundsten (attorney-in-fact)

D. OTHER RELEVANT NON-PARTIES

37. Non-parties, the "Issuing Trusts", are common law trusts. The Issuing Trusts were created and structured by Defendants and their affiliated entities to issue billions of dollars worth of RMBS. The Issuing Trusts issued the Certificates purchased by Plaintiff. The non-party Issuing Trusts are:

(i) RFMSI Series 2005-SA3 Trust

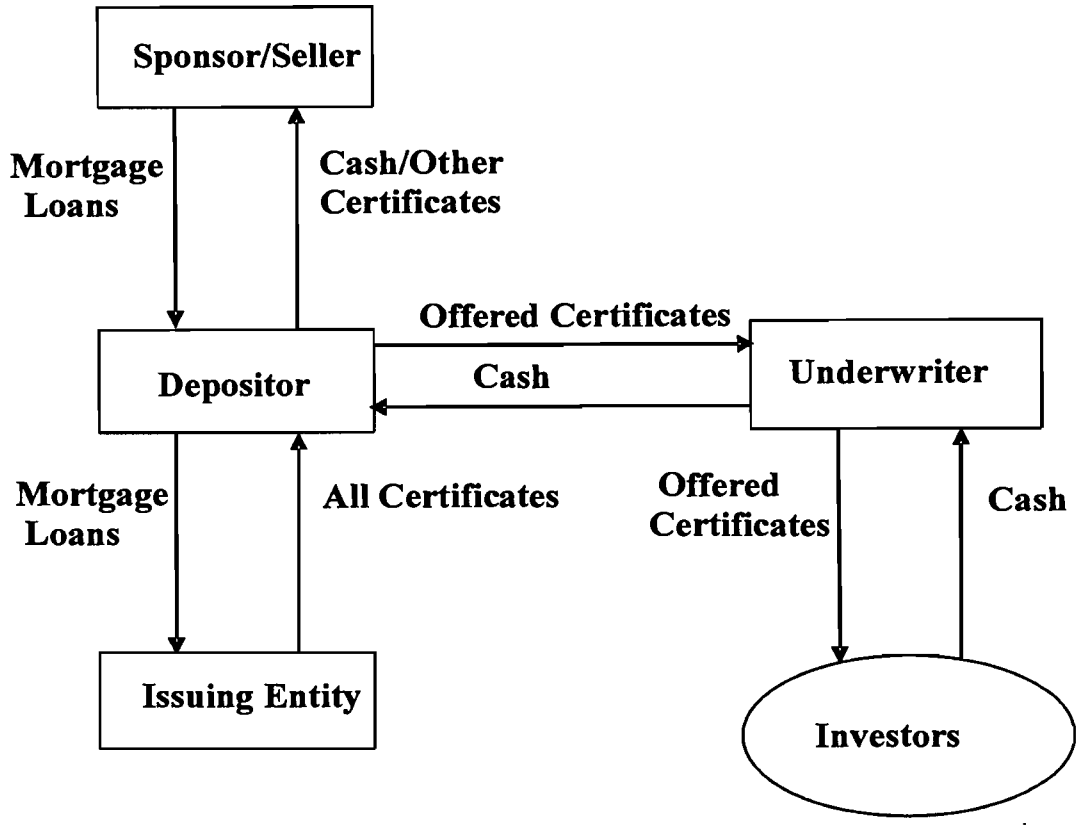
(ii) RALI Series 2006-QS5 Trust

(iii) RALI Series 2006-QS11 Trust

(iv) RALI Series 2006-QS13 Trust

(v) RFMSI Series 2006-S1 Trust

SUBSTANTIVE ALLEGATIONS



I. THE SECURITIZATION PROCESS GENERALLY

38. Traditionally, the process for extending mortgage loans to borrowers involved a lending institution (the loan originator) making a loan to a home buyer in exchange for a promise by the home buyer, documented in the form of a promissory note, to repay the principal and interest on the loan. The loan originator obtained a lien against the home as collateral in the event the home buyer defaulted on its obligation. Under this simple model, the loan originator held the promissory note until it matured, and was exposed to the risk that the borrower might fail to repay the loan. As such, the loan originator had a financial incentive to ensure that the borrower had the financial wherewithal to repay the loan and that the underlying property had sufficient value to enable the originator to recover its principal and interest in the event that the borrower defaulted.

39. Beginning in the 1990s, however, banks and other mortgage lending institutions increasingly used securitizations to finance the extension of mortgage loans to borrowers. Under the securitization process, after a loan originator issues a mortgage to a borrower, the loan originator sells the mortgage to a third-party financial institution. By selling the mortgage, the loan originator not only obtains fees, but receives the proceeds from the sale of the mortgage up-front, and thereby has new capital to issue more mortgages. The financial institutions which purchase the mortgages then pool the mortgages together and securitize the mortgages into what are commonly referred to as residential mortgage-backed securities or RMBS. In this manner, unlike the traditional process for extending mortgage loans, the loan originator is no longer

subject to the risk that the borrower may default; that risk is transferred with the mortgages to investors who purchase the RMBS.

40. The securitization of residential mortgage loans, and the creation of RMBS collateralized against these loans, typically follows the same structure and pattern in each transaction. First, a loan originator, such as a mortgage lender or bank, originates the underlying residential mortgage loans. After a loan has been made, a "sponsor" or "seller" (who either originated the loans itself or acquired the loans from other loan originators) sells the mortgage loans to a "depositor." The depositor pools these loans and deposits them into a special purpose entity or trust created by the depositor. One trust is established to hold the pool of mortgages for each proposed offering. In order to facilitate multiple offerings of RMBS, a depositor sets up multiple trusts to hold the different pools of mortgages that are to be securitized. With respect to each offering, in return for the pool of mortgages acquired from the depositor, the trust issues and distributes RMBS certificates to the depositor. The depositor then works with an underwriter to price and sell the certificates to investors. Thereafter, a servicer is appointed to service the mortgage loans held by the trust, *i.e.*, to collect the mortgage payments from the borrower in the form of principal and interest, and to remit them to the trust for administration and distribution to the RMBS investors. A trustee then determines whether the mortgage loan documents were properly documented and valid. The diagram below illustrates the typical structure of a securitization:

41. In selling the certificates to investors, the depositor and underwriters disseminate to investors various disclosure or offering documents describing the certificates being sold. The offering documents are comprised of: (1) a "shelf" registration statement (under SEC Rule 415, an issuer may file one registration statement covering several offerings of securities made during a period of up to three years after the filing of the registration statement); (2) a "base" prospectus; and (3) a "prospectus supplement." Because a depositor will create a different trust for each offering of RMBS (as described above), the depositor files one shelf registration statement and one base prospectus that apply to multiple trusts that the depositor proposes to establish. With respect to each specific trust, however, the depositor also files a prospectus supplement that applies only to that particular trust. Thus, for any given offering of securities, the relevant offering documents will typically be a shared registration statement and shared base prospectus, as well as an individual, trust-specific prospectus supplement.

42. Each investor who purchases an RMBS certificate is entitled to receive monthly payments of principal and interest from the trust. The order of priority of payment to each investor, the interest rate to be paid to each investor, and other payment rights accorded to each investor depend on which class or tranche of certificates the investor purchases.

43. The highest or senior tranche is the first to receive its share of the mortgage payments and is also the last to absorb any losses should mortgage borrowers become delinquent or default on their mortgages. Accordingly, these senior tranches receive the highest investment rating by the rating agencies, usually AAA. After the senior tranche, the middle tranches (referred to as mezzanine tranches) next receive their share of the proceeds. These mezzanine tranches are generally rated from AA to BB by the rating agencies. The process of distributing the mortgage proceeds continues down the tranches through to the bottom tranches, referred to as equity tranches. This process is repeated each month and all investors receive the payments owed to them so long as the mortgage borrowers are current on their mortgages.

II. THE SECURITIZATIONS ASSOCIATED WITH PLAINTIFF'S CERTIFICATES AND ITS INVESTMENTS IN THE CERTIFICATES

44. In this case, the five Issuing Trusts and the six Certificates purchased by Plaintiff were structured and sold by GMAC and its affiliated entities. As such, the transactions between the sponsor/sellers, depositors, underwriters, and the Issuing Trusts were not arm's length transactions, as GMAC controlled nearly all the entities.

45. Depositor Defendant RFMSI, a GMAC entity, created the Issuing Trusts RFMSI Series 2006-S1 Trust and RFMSI Series 2005-SA3 Trust. RFMSI then purchased mortgage loans from another GMAC entity, the Sponsor Defendant RFC, to place into the trusts. In addition, the Certificates issued by the RFMSI Series 2006-S1 Trust were underwritten by another GMAC entity, Defendant Residential Funding.

46. Depositor Defendant RALI, a GMAC entity, created the Issuing Trusts RALI Series 2006-QS5 Trust, RALI Series 2006-QS11 Trust, and RALI Series 2006-QS13 Trust. RALI then purchased mortgage loans from another GMAC entity, the Sponsor Defendant RFC, to place into the trusts. In addition, the Certificates issued by the RALI Series 2006-QS13 Trust were underwritten by another GMAC entity, Defendant Residential Funding.

47. In connection with their role as the depositors for the Issuing Trusts that are the subject of this action, Defendants RALI, and RFMSI prepared and filed with the SEC the following shelf registration statements, to which the Certificates purchased by Plaintiff are traceable:

Registration Statement/ File No.	**Date Filed**	**Registrant**	**Amount Registered**
333-106093	July 11, 2003	RFMSI	$20,000,000,000
333-126745	August 3, 2005	RFMSI	$15,000,000,000
333-131213	March 3, 2006	RALI	$34,723,478,970

48. At the time of filing, each Registration Statement contained an illustrative form of a prospectus supplement that would be used in the various offerings of Certificates. At the effective date of a particular offering of Certificates, one or more of the underwriters prepared and filed a final Prospectus Supplement with the SEC, which contained a description of the mortgage pool for that particular offering of Certificates and a description of the underwriting standards by which the mortgages were originated. One or more of the underwriters or Defendants then marketed and sold the Certificates pursuant to these Prospectus Supplements.

49. The following chart summarizes and identifies (1) each Issuing Trust that issued and sold the Certificates purchased by Plaintiff; (2) the dates of the Registration Statements and

Prospectus Supplements pursuant to which the Certificates were issued and sold; and (3) the identities of the depositor, the issuer, and the sponsor/seller for each offering.

Amended Registration File No. and Date	Issuing Trust	Prospectus Supplement Date	Depositor	Sponsor/ Seller
333-106093 (7/11/2003)	RFMSI Series 2005-SA3 Trust	7/27/2005	RFMSI	RFC
333-126745 (8/3/2005)	RFMSI Series 2006-S1 Trust	1/27/2006	RFMSI	RFC
333-131213 (3/3/2006)	RALI Series 2006-QS5 Trust	5/30/2006	RALI	RFC
	RALI Series 2006-QS11 Trust	8/29/2006	RALI	RFC
	RALI Series 2006-QS13 Trust	9/29/2006	RALI	RFC

III. IMPORTANT FACTORS IN THE DECISION OF INVESTORS SUCH AS PLAINTIFF TO INVEST IN THE CERTIFICATES

50. In purchasing the Certificates, Plaintiff, like other investors, attached critical importance to: (a) the underwriting standards used to originate the loans underlying the Certificates; (b) the value of the properties securing the underlying mortgage loans and the appraisal methods used to determine this; (c) the ratings assigned to the Certificates; (d) the level of credit enhancement applicable to the Certificates; and (e) the ability of the Issuing Trusts to establish legal title to the underlying loans.

51. Sound underwriting was critically important to Plaintiff because the ability of borrowers to repay principal and interest was the fundamental basis upon which the investments in the Certificates were valued.

52. Real estate appraisals are governed by USPAP, which are the generally accepted standards for professional appraisal practice in North America promulgated by the Appraisal Standards Board of the Appraisal Foundation, as authorized by Congress. With respect to real estate appraisals, USPAP requires the following:

> ***An appraiser must perform assignments with impartiality, objectivity, and independence, and without accommodation of personal interests. In appraisal practice, an appraiser must not perform as an advocate for any party or issue. An appraiser must not accept an assignment that includes the reporting of predetermined opinions and conclusions.***
>
> * * * * *
>
> ***It is unethical for an appraiser to accept an assignment, or to have a compensation arrangement for an assignment, that is contingent on any of the following:***
>
> 1. ***the reporting of a predetermined result (e.g., opinion of value);***
> 2. ***a direction in assignment results that favors the cause of the client;***
> 3. ***the amount of a value opinion;***
> 4. ***the attainment of a stipulated result; or***
> 5. ***the occurrence of a subsequent event directly related to the appraiser's opinions and specific to the assignment's purpose.***

53. Reflecting the importance of the underwriting standards, the Offering Documents contained representations concerning the standards purportedly used to originate the mortgages held by the Issuing Trusts.

54. For example, the Registration Statement filed by RALI, dated March 3, 2006, stated that:

> The depositor expects that the originator of each of the mortgage loans will have applied, consistent with applicable federal and state laws and regulations, ***underwriting procedures intended to***

> ***evaluate the borrower's credit standing and repayment ability and/or the value and adequacy of the related property as collateral.***[2]

55. Similarly, the Prospectus Supplements indicated that the underwriting guidelines were primarily intended to assess the ability and willingness of the borrower to repay the debt and to evaluate the adequacy of the mortgaged property as collateral for the mortgage loan.

56. With respect to loans acquired from third-party originators, the Prospectus Supplements represented that stated underwriting guidelines required them to consider, among other things, the mortgagor's credit history, repayment ability, and debt-to-income ratio, as well as the type and use of the mortgaged property. In addition, the Prospectus Supplements represented that in order to submit loan packages, the loans must have been made in compliance with the terms of a signed mortgage loan purchase agreement.

57. Independent and accurate real estate appraisals were also critically important to investors such as Plaintiff because they ensured that the mortgage loans underlying the Certificates were not under-collateralized, thereby protecting RMBS investors in the event a borrower defaulted on a loan. As such, by allowing RMBS investors to assess the degree to which a mortgage loan was adequately collateralized, accurate appraisals provided investors such as Plaintiff with a basis for assessing the price and risk of the Certificates.

58. One measure that uses the appraisal value to assess whether mortgage loans are under-collateralized is the loan-to-value ("LTV") ratio. The LTV ratio is a mathematical calculation that expresses the amount of a mortgage as a percentage of the total value of the property, as obtained from the appraisal. For example, if a borrower seeks to borrow $900,000 to purchase a house worth $1,000,000, the LTV ratio is $900,000/$1,000,000, or 90%. If,

[2] Unless otherwise noted, all emphases are added and internal citations are omitted.

however, the appraised value of the house is artificially increased to $1,200,000, the LTV ratio drops to just 75% ($900,000/$1,200,000).

59. From the perspective of lenders and investors, the higher the LTV ratio, the riskier the loan because it indicates the borrower has a lower equity stake, and a borrower with a lower equity position has less to lose if s/he defaults on the loan. The LTV ratio is a significant measure of credit risk, because both the likelihood of default and the severity of loss are higher when borrowers have less equity to protect in the event of foreclosure. Worse, particularly in an era of falling housing prices, a high LTV ratio creates the heightened risk that, should the borrower default, the amount of the outstanding loan may ***exceed*** the value of the property.

60. Reflecting the importance of independent and accurate real estate appraisals to investors such as Plaintiff, the Offering Documents contained extensive disclosures concerning the value of the collateral underlying the mortgages pooled in the Issuing Trusts and the appraisal methods by which such values were obtained.

61. For example, the Prospectus Supplements represented that the property securing the mortgages was to be appraised by a qualified, independent appraiser. In addition, the Prospectus Supplements represented that the appraisal procedure guidelines used by the loan originators required an appraisal report that included market data analysis based on recent sales of comparable homes in the area. If appropriate, the guidelines required a review appraisal, consisting of an enhanced desk, field review or automated valuation report confirming or supporting the original appraisal value of the mortgaged property.

62. The rating assigned to each of the Certificates was another important factor in Plaintiff's decisions to purchase the Certificates. Plaintiff and other investors relied on the ratings as an indicator of the safety and likelihood of default of the mortgage loans underlying a

particular Certificate. Consistent with their conservative corporate investment guidelines, Plaintiff purchased the Certificates because they all were rated AAA.

63. In purchasing the Certificates, Plaintiff relied on the ability of each of the Issuing Trusts to be able to show that it in fact had legal title to the underlying mortgage loans. Plaintiff would never have purchased any of the Certificates from Defendants if there was any doubt as to whether the Issuing Trusts had legal title to any of the mortgage loans that were pooled for each offering.

64. Finally, the Prospectus Supplements represented the level of credit enhancement, or loss protection, associated with the Certificates. Credit enhancements impact the overall credit rating that a Certificate receives. The amount of credit enhancements built into the Certificates was overstated, which exposed Plaintiff to additional losses. These levels of credit enhancement were material to Plaintiff.

IV. DEFENDANTS KNEW THAT A LARGE PERCENTAGE OF THE MORTGAGE LOANS UNDERLYING PLAINTIFF'S CERTIFICATES WERE MADE AS A RESULT OF THE SYSTEMATIC ABANDONMENT OF PRUDENT UNDERWRITING GUIDELINES AND APPRAISAL STANDARDS

65. Prior to underwriting and selling the Certificates to investors like Plaintiff, Defendants had identified but failed to disclose the widespread underwriting and appraisal deficiencies by the mortgage originators described below. This was in direct contrast to the representations in the Offering Documents accompanying the Certificates sold to Plaintiff.

66. As has now come to light, contrary to the representations in the Offering Documents, Defendants GMAC Mortgage, Homecomings Financial, and the third-party originators that originated the mortgages underlying the Certificates, knowingly departed from the underwriting and appraisal standards that were represented in the Offering Documents.

67. In the early 2000s an unprecedented boom in the housing market began to unfold. Between 1994 and 2004, the housing market experienced a dramatic rise in home ownership, as 12 million more Americans became homeowners. Likewise, the subprime market grew dramatically, enabling more and more borrowers to obtain credit who traditionally would have been unable to access it. According to INSIDE MORTGAGE FINANCE, from 1994 to 2006, subprime lending increased from an estimated $35 billion, or 4.5% of all one-to-four family mortgage originations, to $600 billion, or 20% of originations.

68. To ride this housing boom, financial firms aggressively pushed into the complex, high-margin business of securitization, *i.e.*, packaging mortgages and selling them to investors as RMBS. This aggressive push created a boom for the mortgage lending industry. Mortgage originators generated profits primarily through the sale of their loans to financial firms like GMAC, and the originators were therefore driven to originate and sell as many loans as possible. This high-volume business model, and the awareness of originators and RMBS issuers that RMBS investors such as Plaintiff would ultimately take the losses from defaulting loans, led to an overall decline in lending standards and tolerance of mortgage fraud. Indeed, according to the FBI, a fraud analytics company analyzed more than 3 million loans and found that between 30 and 70 percent of early payment defaults were linked to significant misrepresentations in the original loan applications.

69. Some appraisers were openly instructed to alter their valuations for the benefit of the mortgage lenders. According to the June 26, 2007 testimony of Alan Hummel, the chair of the Appraisal Institute's Government Relations Committee, before the House Committee on Financial Services on 'Legislative Proposals on Reforming Mortgage Practices,' "Unfortunately, these parties with a vested interest in the transaction are often the same people managing the

appraisal process within many financial institutions, and therein is a terrible conflict of interest. . . . [I]t is common for a client to ask an appraiser to remove details about the material condition of the property to avoid problems in the underwriting process." A 2007 study conducted by the October Research Corporation reported that 90% of appraisers had been pressured to raise property valuations so that deals could go through, and that 75% of appraisers reported "negative ramifications" if they did not alter their appraisals accordingly.

70. Even absent explicit coercion or collusion, mortgage originators could inflate apparent home values simply by offering work to only complaint appraisers. According to the April 7, 2010 testimony of Richard Bitner ("Bitner"), a former executive of a subprime mortgage originator, before the FCIC, "[B]rokers didn't need to exert direct influence. Instead they picked another appraiser until someone consistently delivered the results they needed."

71. Widespread and systematic overvaluations by mortgage originators set into motion a snowball effect that inflated housing prices all across the country and further distorted the RMBS market. As Bitner testified, "If multiple properties in an area are overvalued by 10%, they become comparable sales for future appraisals. The process then repeats itself. We saw it on several occasions. We'd close a loan in January and see the subject property show up as a comparable sale in the same neighborhood six months later. Except this time, the new subject property, which was nearly identical in size and style to the home we financed in January, was being appraised for 10% more. . . . In the end, the subprime industry's willingness to consistently accept overvalued appraisals significantly contributed to the run-up in property values experienced throughout the country."

72. In the instant action, the players that structured the Certificates purchased by Plaintiff were GMAC and its affiliated entities. GMAC embarked on a scheme to profit from the

housing boom by acquiring or partnering with subprime lenders, such as the third-party originators described in ¶¶ 105-134 below, and then directing or encouraging these lenders to originate and purchase large numbers of mortgage loans, regardless of the borrower's ability to pay, so that the loans could then be quickly flipped at a profit on to an unsuspecting secondary market (that is, RMBS investors such as Plaintiff).

73. GMAC reaped billions of dollars in profits from its activities in the RMBS space during the U.S. housing boom. GMAC's ResCap operation was a vertically integrated business with a hand in nearly every stage of the mortgage securitization business, including originating, purchasing and selling residential mortgage loans, bundling mortgages into RMBS and selling them to investors, and servicing the loans it had securitized. At nearly every stage in the mortgage securitization process, GMAC garnered enormous profits. GMAC pocketed the difference between what it paid to originate or purchase a pool of mortgage loans and what it received from selling those loans into a securitization. GMAC obtained underwriting fees and commissions from selling the RMBS it had securitized to investors. GMAC also collected fees for servicing pooled mortgages. According to *Inside Mortgage Finance,* from 2004 to 2007 GMAC issued a total of approximately $197.85 billion in non-agency RMBS (which is to say, RMBS not associated with a government agency or government-sponsored enterprise such as Fannie Mae or Freddie Mac). According to Ally Financial's Form 10-K filings, GMAC's ResCap operations produced approximately ***$12.76 billion*** in net revenue over that same time period.

74. GMAC was totally dependent upon a steady supply of mortgage loans – the raw materials of securitization – to keep its lucrative RMBS business in operation. Without such loans, GMAC would not have been able to issue and sell new RMBS. Thus, GMAC was far

more interested in originating and purchasing a high volume of loans than it was in ensuring that those loans were of high quality. As a former RFC trader quoted in a separate complaint against GMAC stated, GMAC "needed to continue to purchase more loans for the securitizations, or they would have been out of business." According to this employee, who worked at RFC from 1998 to March 2007, beginning in 2005 RFC began to purchase higher risk loans and allow more frequent exceptions to underwriting guidelines, especially if the third party originators selling the loans were good clients. At about that time the third party originators that RFC dealt with began restricting RFC's reviews of the loans it acquired in bulk. This employee also stated that RFC's sales force was paid commissions based on the volume of the loans acquired and not the creditworthiness of those loans.

75. According to another former RFC analyst quoted in the *West Virginia Investment* complaint, Defendant Paradis, the President and CEO of RFC, would directly intervene with traders who balked at buying low-quality mortgages, especially when the sellers were favored vendors. The analyst stated that, "it was not uncommon for Paradis to go down to the desk, put his arm around the trader, and say, 'come on, why not.'"

76. As represented in the Offering Documents, the originators made loans pursuant to underwriting guidelines primarily intended to assess the ability and willingness of the borrower to repay the mortgage loan, apart from the adequacy of the mortgaged property as collateral for the loan. Accordingly, the underwriting guidelines required the consideration of, among other things, the borrower's assets, liabilities, income, employment history and credit history.

77. Notwithstanding these explicit requirements in their underwriting guidelines, the originators extended numerous loans even though the borrower's financial and employment information was not provided, or even if it was, that information was patently false and the

originators knew that the borrower was misrepresenting her or his income, occupation and other information, and was engaged in outright mortgage fraud.

78. In their respective capacities as sponsor/sellers, depositors and underwriters of the Certificates purchased by Plaintiff, Defendants had an obligation to conduct due diligence regarding the accuracy and completeness of the Offering Documents prior to their dissemination to investors such as Plaintiff. In connection with that due diligence process, Defendants had access to information which should have alerted them to the various originators' systematic and widespread abandonment of stated underwriting guidelines and appraisal methods. Defendants were supposed to play a "gatekeeper" role for public investors like Plaintiff, who did not have access to non-public information through which to test the assertions in the Offering Documents.

79. Defendants did not fulfill their obligation to ensure that investors, like Plaintiff, were provided with Offering Documents containing accurate and complete information. In connection with a lawsuit, another company, MBIA Insurance Corporation ("MBIA") has conducted loan-level analyses of three (3) GMAC RMBS with a total original principal balance of more than $4 billion.

80. MBIA agreed to insure the payments of these RMBS in the event that the cash flows to the trusts were impaired. When the loans underlying the RMBS began to default at a much higher rate than had been expected, MBIA investigated the individual loan files and documentation to determine the reasons for its losses. This forensic analysis covered 4,104 delinquent and charged-off mortgage loans underlying the GMAC RMBS.

81. MBIA discovered that GMAC had flagrantly disregarded its lending and underwriting standards. At least ***89%*** of the delinquent and charged-off loans it reviewed were in breach of one or more of GMAC's representations and warranties, with most containing

multiple breaches. A significant number of mortgage loans were made on the basis of stated incomes that were "grossly unreasonable" or were approved despite debt-to-income or loan-to-value ratios in excess of those stated in GMAC's mortgage underwriting guidelines or the prospectus supplements. Furthermore, the vast majority of the loan files MBIA examined were missing basic and necessary documentation, such as disclosures establishing the chain of title.

82. On information and belief, the mortgage loans underlying the Certificates purchased by Plaintiff suffer from similar deficiencies as the mortgage loans underlying the Certificates insured by MBIA. From the sheer volume of nonconforming loans, it is apparent that Defendants either knew or acted with reckless disregard with respect to the risk that a substantial number of the loans that were included in the securitizations purchased by Plaintiff were not underwritten in compliance with the stated underwriting guidelines.

83. GMAC's fraudulent origination and purchasing practices are further evidenced by information obtained from the government sponsored entities Fannie Mae and Freddie Mac (the "GSEs"). Both of the GSEs purchase mortgage loans from financial institutions including GMAC. The mortgages that GMAC sold to the GSEs were originated through substantially the same channels and methods as the mortgages underlying Plaintiff's Certificates, but unlike the loans underlying the Certificates, not all of the mortgages sold to the GSEs were securitized. Because the GSEs purchased individual mortgages directly, rather than receiving Certificates from an Issuing Trust, the GSEs were in a better position than Plaintiff to determine whether the mortgages GMAC sold them had been originated in conformance with GMAC's stated underwriting and documentation standards. If any purchased loans did not comply with GMAC's representations, the GSEs possessed the right to demand that GMAC repurchase them.

84. According to documents provided to the Financial Crisis Inquiry Commission, as of September 10, 2010, Fannie Mae has required GMAC to repurchase 3,457 loans originated by Ally Bank, GMAC Mortgage and Residential Funding, with an unpaid principal balance of $679 million, and had requested that GMAC also repurchase an additional 776 loans with an outstanding principal balance of $159 million. In December 2010, ResCap agreed to pay Fannie Mae approximately $462 million to settle claims regarding ResCap's obligations to repurchase defective loans.

85. Freddie Mac also purchased RMBS from GMAC. On September 2, 2011, the FHFA, acting as conservator for Freddie Mac, sued GMAC in New York state court, alleging, as Plaintiff does, that the offering documents "falsely represented that the mortgage loans underlying the RMBS complied with certain underwriting guidelines and standards, and presented a false picture of the characteristics and riskiness of those loans."

86. For each of the RMBS named in its lawsuit, Freddie Mac reviewed either a random sample of 1,000 of the underlying loans, or all of the underlying loans if there were less than 1,000 in the pool. This review confirmed, on a statistically significant basis, that GMAC's representations regarding owner-occupancy rates, LTV ratios, and underwriting standards had all been materially false. In 2008, 2009 and 2010, Freddie Mac required GMAC Mortgage to repurchase 2,375 defective loans with an unpaid principal balance of $509 million.

87. GMAC had direct insight into the true quality of the loans underlying the Certificates it issued to Plaintiff. This is evidenced by GMAC's extensive relationships with the third party originators, as well as by the origination of equally defective loans through its own mortgage origination affiliates, Defendants GMAC Mortgage and Homecomings Financial. Additionally, when originating and purchasing loans, GMAC made widespread use of

proprietary underwriting software despite its awareness that the software did not apply its stated underwriting standards and would approve non-compliant loans.

A. DEFENDANTS GMAC MORTGAGE AND HOMECOMINGS FINANCIAL ABANDONED THEIR UNDERWRITING GUIDELINES AND APPRAISAL STANDARDS

1. GMAC Mortgage

88. GMAC Mortgage originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RALI Series 2006-QS13 Trust and RFMSI 2006-S1 Trust. Interviews with former GMAC Mortgage employees conducted in connection with a separate lawsuit have confirmed that GMAC Mortgage abandoned its stated underwriting and appraisal standards so as to generate increased volume. One confidential witness, a senior mortgage underwriter for GMAC Mortgage between 2003 and 2005, said that GMAC Mortgage's underwriting procedures were "pretty loose" and were referred to as "creative underwriting." Because corporate personnel wanted more loans approved, the witness said that approving loans was a way of "scratching peoples' backs."

89. Another confidential witness, a senior wholesale writer for GMAC between 1997 and 2007, said that her supervisors overrode her underwriting decisions to approve "loans they knew were bad," so as to increase their bonuses. "A lot of times the sales director would raise holy commotion with the supervisor and directors, and under pressure, they'd approve bad loans." She said that GMAC Mortgage approved many loans without verifying the borrowers' income or assets, which were called "liar loans, because we knew damn well they were lying. You can't tell me a manicurist in L.A. was making $12,000 a month." The witness also said that fraudulent appraisals that "you knew damn well did not support the value" were accepted by management. She said that she did not even trust the loan documentation, because she had heard of underwriters placing false information in loan files at management's behest.

90. This witness traced GMAC's underwriting practices to the "originate-to-securitize" model, noting that the underwriters would receive emails from the trading department instructing them that they needed additional loans to fill pools. She knew of one person who worked as a liaison between trading and underwriting, who was permitted to approve loans despite no underwriting experience. Another employee in charge of bulk loan files would approve multiple loans at once without taking into account whether they had been approved, declined or pended by the underwriters. When the witness complained to management, she was told that "everybody knew" about this conduct and that there was no problem with it.

91. In addition to adopting skewed incentive structures and tolerating mortgage fraud, GMAC Mortgage also weakened its underwriting standards by utilizing badly flawed underwriting software. In late 2004, GMAC introduced an automated loan decisionmaking engine called Assetwise to streamline loan acquisition and origination. Loan personnel could enter data regarding a proposed loan into Assetwise and receive immediate guidance as to whether that loan would be eligible for purchase by GMAC. GMAC Mortgage made extensive use of this software, and it was also provided to select third party originators to facilitate sales. As General Motors Acceptance Corporation stated in an 8-K filing, filed on June 9, 2005:

> To help ensure consistency and efficiency in its production of residential mortgage loans, much of the Residential Capital Group's underwriting analysis is conducted through the use of its proprietary underwriting technology, Assetwise Direct. This proprietary technology implements automated decision, pricing and integration tools that extend mortgage products and risk management and pricing strategies to points of origination, and facilitates secondary market acquisition of mortgage loans.

92. However, according to a lawsuit filed by MBIA, Assetwise was programmed with looser standards than GMAC's stated underwriting guidelines. As a result, Assetwise approved loans that should never have been made, which were consequently bundled into RMBS and sold

to investors such as Plaintiff. Rather than ensuring "consistency and efficiency," Assetwise created inconsistency, masked the true underwriting standards that were being applied, and permitted loan personnel to easily circumvent prudent and necessary safeguards.

93. GMAC Mortgage also made use of another underwriting program, Desktop Underwriter, which similarly failed to apply GMAC's stated underwriting standards. Former GMAC employees quoted in a complaint brought by Thrivent Financial for Lutherans have discussed the failings of Desktop Underwriter. One witness, a senior underwriter at GMAC Mortgage from 1986 to 2008, said that GMAC Mortgage used human underwriters only to approve loans that could not be processed through its software, and that the software did not require verification of income or assets. Thus, GMAC effectively abdicated its responsibility to substantiate borrower claims for any loans that its software would accept. The witness further said that, "If the application indicates it and the borrower says it, [Desktop Underwriter treated it as] truth. And we as underwriters rarely saw them." This witness also referred to GMAC Mortgage's no-documentation loans as liar loans and said that any GMAC Mortgage borrower "could say they made $8,000 a month [when] they really didn't."

94. Another witness, who was a GMAC underwriter from 1997 to 2008, stated that the Desktop Underwriter did not require documentation, had "very loose guidelines" and "rarely turned down a loan." According to this witness, when processing no-documentation loans GMAC only verified credit scores and LTV ratios. Requiring borrowers to verify their information "was just unheard of."

95. A witness who worked at GMAC as a securities trading analyst from 2006 to 2007 said that GMAC could have detected fraudulent loans had it chosen to look beyond the basic information in the computer files. However, because the underwriting was automated,

mortgage brokers could submit information based on the criteria needed to close a loan rather than the borrower's actual circumstances.

2. Homecomings Financial, LLC

96. Homecomings Financial, LLC, f/k/a Homecomings Financial Network, Inc. ("Homecomings") originated mortgage loans that were pooled into every securitization at issue in this litigation. Homecomings was founded in 1995, and was a leading originator and provider of mortgage loans.

97. Homecomings was ResCap's primary wholesale lender from 1995 until its closure in 2008. A former RFC mortgage trader quoted in the *West Virginia Investment Management Board* complaint said that RFC traders made exceptions for Homecomings loans that were higher risk and did not fit standard underwriting guidelines.

98. Homecomings has been targeted by lawsuits and come under regulatory scrutiny for offering excessively risky loans and engaging in abusive servicing practices. Tim Boyd, a former Homecomings loan officer, was quoted as saying that Homecomings' "main focus was doing Alt-A [a category of loans supposedly riskier than prime but less risky than subprime] because that's where the money was," in a March 5, 2009 PORTLAND TRIBUNE article, "Shaky Loans May Spur New Foreclosure Wave."

99. Option ARMs are an especially risky form of loan because borrowers may wind up adding to their total indebtedness by making interest-only payments. Bill Ridge, a mortgage broker quoted in the PORTLAND TRIBUNE article, noted that GMAC management was especially keen on pushing such loans, stating, "The V.P.s came down to the office beating the drums about Option ARMs. ... I had Wachovia march through there; I had GMAC." He also said that he knew of loan officers who would instruct title agents not to inform borrowers about the problematic aspects of these loans. Boyd said that while a loan officer arranging a $300,000

Option ARM loan could collect as much as $10,500 in fees, he personally did not sell such loans because it made him "sick" to see how they could get borrowers into trouble.

100. The West Virginia Attorney General's office has investigated Homecomings for predatory lending and mortgage servicing practices, including charging a wide range of excess and unlawful fees and engaging in servicing practices that made foreclosure more likely to occur. On June 9, 2005, the West Virginia Attorney General's office announced that it had reached a settlement with Homecomings and another mortgage servicing company, whereby they agreed to pay $773,000 in restitution to approximately 2,300 West Virginia consumers and cancel nearly $11 million in debt.

101. The Federal Trade Commission ("FTC") investigated Homecomings for possible violations of the Equal Credit Opportunity Act after reviewing Homecomings' mortgage loan data and discovering that African-American and Hispanic borrowers paid more for Homecomings mortgage loans than non-Hispanic whites. The FTC's investigation focused on whether the underwriting risk and credit characteristics of the borrowers justified the reported disparities in loan price. The investigation revealed that rather than applying uniform, risk-based underwriting standards to ensure that its borrowers were receiving loans that they could afford, Homecomings permitted independent brokers to tack on fees and hike interest rates on a discretionary basis, increasing the risk of default.

102. On February 7, 2008, Homecomings borrowers filed a Truth-In-Lending-Act ("TILA") class action complaint against the company, alleging that it had engaged in a "nationwide scheme of illegal, unfair, unnlawful and deceptive business practices that violate both state and federal law," including structuring account statements, "in a way that makes it extremely difficult or impossible for borrowers to determine how much they owe, or how any

mortgage payment will be allocated." The complaint further alleged that Homecomings' improper fees and collection practices increased the likelihood that borrowers would default, a matter of great concern to RMBS investors such as Plaintiff. The lawsuit settled in November 2009.

103. As discussed in ¶ 80, *supra,* the insurer MBIA has conducted loan-level analyses of several GMAC RMBS and discovered that the vast majority of the underlying mortgages in default were in violation of the representations and warranties made in the offering documents. Homecomings was one of the major originators for a number of the RMBS analyzed by MBIA.

104. On September 3, 2008, ResCap announced that it would stop offering home loans through Homecomings. According to a January 22, 2009 letter from the FTC, Homecomings has stated that it has no intention of resuming mortgage lending in the future.

B. THE THIRD PARTY ORIGINATORS OF THE MORTGAGE LOANS UNDERLYING PLAINTIFF'S CERTIFICATES ABANDONED THEIR UNDERWRITING GUIDELINES AND APPRAISAL STANDARDS

105. As discussed above, many of the underlying mortgage loans that the Defendants packaged into securities and sold to Plaintiff were originated by third-party originators and then sold *en masse* to Defendant RFC. The Offering Documents associated with each of Plaintiff's Certificates purported to describe each of the specific originators' underwriting guidelines, and represented that the underlying mortgage loans were originated in compliance with the underwriting and appraisal standards of the originators.

106. Several of the relevant originators involved in these transactions are now known to have, among other things, ignored their own underwriting guidelines and used inflated appraisals during loan generation. The questionable practices that were employed by many of these originators have led to numerous allegations and investigations into their operations. In

fact, as noted below, faulty underwriting has led to the downfall of several of the originators whose loans Defendants bundled in these offerings.

107. The Offering Documents contain material representations, relied upon by Plaintiff, that Defendants performed due diligence on the mortgage loans they acquired from third parties and undertook certain quality control measures to ensure that faulty mortgages were ***not*** included in the Certificates they underwrote and sold. *See, e.g.*, Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5) at S-48-S-49 (Sept. 29, 2006):

> ***Prior to assigning the mortgage loans to the depositor, Residential Funding will have reviewed the underwriting information provided by the mortgage collateral sellers for the mortgage loans and, in those cases, determined that the mortgage loans were generally originated in accordance with or in a manner generally consistent with the underwriting standards described in [Residential Funding's Expanded Criteria Seller Guide].***

108. Furthermore, a number of the Individual Defendants and underwriters had ownership interests and/or close business relationships with the third-party originators, providing a direct window into how the third-party originators did business and the degree to which they had abandoned prudent lending standards to profit from the securitization machine. Despite their direct knowledge that the third-party originators did not follow their stated underwriting guidelines and lent money recklessly, Defendants permitted the Issuing Trusts to purchase loans originated by them without fair disclosure.

109. The table below lists the major third party originators responsible for originating the mortgages underlying Plaintiff's Certificates.

Issuing Trust	Originators
RFMSI Series 2006-S1 Trust	Homecomings Financial
	First Savings

Issuing Trust	Originators
RFMSI Series 2005-SA3 Trust	Homecomings Financial
	National City
	First Savings
RALI Series 2006-QS5 Trust	Homecomings Financial
	National City
RALI Series 2006-QS11 Trust	Homecomings Financial
	Wachovia
	MortgageIT
RALI Series 2006-QS13 Trust	Homecomings Financial
	HSBC
	National City
	Wachovia
	GMAC Mortgage

1. First Savings Mortgage Corporation

110. First Savings Mortgage Corporation ("First Savings") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RFMSI Series 2005-SA3 Trust, and RFMSI Series 2006-S1 Trust. First Savings, a privately held Virginia corporation, is a retail mortgage lender based in Virginia and originated $3.4 billion in mortgage loans in 2005.

111. According to a complaint filed by the Federal Home Loan Bank of Indianapolis against Banc of America Mortgage Securities, Inc., First Savings, and certain other firms participating in RMBS origination and securitization, First Savings was formed and exists solely for the purpose of originating, receiving, and depositing mortgage loans into trusts for RMBS securitizations. The complaint alleges that First Savings, along with the other defendants, simply abandoned established underwriting standards. Instead of occasional, justified exceptions to underwriting standards based on other evidence of a borrower's ability to repay, variance from stated underwriting standards was the norm.

112. A lawsuit has been filed in the United States District Court for the District of Columbia alleging that First Savings engaged in a mortgage scheme to defraud consumers and that it committed TILA violations. Specifically, in connection with a loan refinance, the plaintiff alleged that First Savings failed to provide him with comparable appraisal values and instead used inflated appraisal values. Moreover, the complaint alleged that First Savings engaged in "bait and switch" tactics whereby the plaintiff ended up with a loan that he could not afford based on his income at the time of purchase.

2. HSBC Mortgage Corporation (USA)

113. HSBC Mortgage Corporation (USA) ("HSBC") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RALI Series 2006-QS13 Trust. HSBC is the mortgage banking subsidiary of HSBC Bank USA.

114. HSBC has had a history of trouble as a result of its practices of originating mortgages and targeting low-income borrowers. In 2005, HSBC began securitizing residential mortgage loans. By the end of that year, it had issued over half a billion dollars of subprime, residential mortgage-backed securities. In 2006 and 2007, HSBC issued $9.6 billion and $6.7 billion, respectively, of residential mortgage-backed securities. The financial incentive to complete as many offerings as quickly as possible was great, and this pressure contributed to the absence of controls necessary to prevent the inclusion of materially false or misleading statements in Registration Statements.

115. Clayton Holdings, Inc. ("Clayton") was retained by HSBC to analyze the loans it was considering placing in its securitizations. Clayton recommended a number of loans for exclusion, but HSBC ignored these recommendations and ***included 62 percent of the loans recommended for exclusion*** without taking adequate steps to guarantee that they had been underwritten in accordance with applicable guidelines.

116. On January 27, 2008, THE NEW YORK TIMES reported that Clayton revealed that it had entered into an agreement with the New York Attorney General ("NYAG") to help investigate whether investment banks failed to include material information in disclosures accompanying securitized loans. Clayton agreed to provide the NYAG with evidence of "significant deterioration" in lending standards and "a parallel jump in lending expectations." According to Raymond W. McDaniel Jr., the chief executive of Moody's Investors Service, "[b]oth the completeness and veracity" of Registration Statements received by his company had deteriorated.

117. In November 2008, due to extremely high delinquency rates on its mortgages, HSBC announced that it would be closing its wholesale origination operations and would stop funding all loans after January 21, 2009.

118. In addition, the SEC has also scrutinized HSBC's practices. HSBC received three subpoenas from the SEC seeking production of documents and information relating to HSBC's involvement in specified private-label residential mortgage-backed securities transactions as an issuer, sponsor, underwriter, depositor, trustee, custodian or servicer.

119. On September 2, 2011, a complaint was filed in the Southern District of New York alleging that HSBC sold to Fannie Mae and Freddie Mac certain mortgage-backed securities based on Registration Statements containing materially false or misleading statements and omissions. The complaint also alleged that HSBC falsely represented that certain mortgage loans complied with underwriting guidelines and standards.

3. MortgageIT, Inc.

120. MortgageIT, Inc. ("MortgageIT") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RALI Series 2006-QS11 Trust. The company, founded in 1988, was a residential mortgage banking company that was acquired as a

wholly-owned subsidiary of MortgageIT Holdings, a self-registered real estate investment trust, and skyrocketed to become one of the top mortgage lenders in the nation..

121. On March 13, 2006, EMC Mortgage Corp. ("EMC") filed a lawsuit in the Northern District of Texas against MortgageIT for failure to repurchase 587 loans that breached representations made by MortgageIT in its purchase agreements. EMC alleged that over $70 million in loans had defaulted during the borrowers' first three scheduled payments, triggering a duty by MortgageIT to repurchase.

122. In June 2007, MortgageIT entered into a settlement agreement with the Connecticut Department of Banking after an investigation into the company's business revealed that MortgageIT had violated Connecticut law by employing at least 48 originators without first obtaining proper registrations. As part of the settlement, MortgageIT made a $48,000 contribution to support the Nationwide Mortgage Licensing System.

123. MortgageIT was further scrutinized for its predatory lending practices, and was named as a defendant in a number of consumer lawsuits. For example, in September 2010, a TILA action was filed in the Northern District of California, claiming that the company had engaged in fraudulent mortgage lending practices. The complaint alleged, among other things, that MortgageIT participated in a scheme to obtain mortgages that "grew into a brazen plan to disregard underwriting standards and fraudulently inflate property values...." Another lawsuit, filed in October 2009 in the Central District of California, claimed that MortgageIT misrepresented mortgage terms to the borrower and extended an adjustable-rate mortgage ("ARM") to the borrower based on stated income, rather than verified income, which ultimately resulted in the borrower's default on the loan.

124. Most recently, the United States government has also honed in on MortgageIT and its questionable lending practices. On May 3, 2011, the Department of Justice announced that it had filed a civil mortgage fraud lawsuit against MortgageIT, seeking damages and penalties under the False Claims Act for allegations that MortgageIT made false compliance certifications to the Department of Housing and Urban Development ("HUD") in order to obtain approval of FHA mortgages that were not, in fact, eligible for FHA insurance under HUD rules. The complaint also claimed that MortgageIT engaged in reckless lending practices and disregarded sound underwriting guidelines by ignoring "red flags," failing to conduct due diligence and extending mortgage loans to unqualified borrowers.

4. National City Mortgage Corporation

125. National City Mortgage Corporation ("National City") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RALI Series 2006-QS5 Trust, RALI 2006-QS13 Trust, and RFMSI Series 2005-SA3 Trust. National City was a subsidiary of National City Corporation, one of the ten largest banks in America. In 1999, National City Corp. purchased First Franklin Financial Co. ("First Franklin"), an originator of subprime and non-conforming mortgages.

126. Subsequent to the First Franklin acquisition, National City increased its subprime portfolio at an alarming rate, reaping the benefits from retaining over $3.8 billion, or 60%, of First Franklin's subprime mortgage loans. In 2002, the company "express[ed] pride in the progress of its initiative to improve its net interest income" and was "continuing to bet big on its strategy of holding the majority of its subprime loans." The company soared to become the nation's sixth-largest mortgage lender, generating $130 billion in mortgages in 2003 alone.

127. National City's success, however, was the result of reckless and imprudent lending and underwriting practices, including providing high-risk mortgages to non-creditworthy

borrowers with little or no documentation regarding the borrower's ability to repay the loans. National City utilized third-party brokers across the country to originate loans, observed loose underwriting guidelines, and offered "piggyback loans" to borrowers that provided them with the luxury of no down payment but left the borrower with little or no equity in the property.

128. The company's persistently risky lending practices and the subsequent crash of the subprime market left National City facing serious financial trouble, and it eventually became the target of regulatory scrutiny. In May 2008, the Department of Justice announced that it had agreed to a settlement of $4.6 million in order to resolve charges that it brought against National City for allegations relating to mortgage fraud under the False Claims Act. The Department of Justice claimed that National City had improperly submitted 58 late endorsement loans for FHA insurance coverage that were not current, in violation of FHA regulations.

129. A month later, National City's parent corporation entered into a confidential Memorandum of Understanding with the Office of the Comptroller of the Currency, essentially placing the company on probation and signaling that regulators had "concerns" about National City regarding its capital management, risk management, asset quality and liquidity management. On August 9, 2008, the WALL STREET JOURNAL reported in the article *National City Faces Probe* that the SEC opened an informal investigation into National City and had requested "certain documents concerning its loan underwriting experience, dividends, bank regulatory matters and the sale of First Franklin Financial Corporation."

130. National City was later involved in a securities class action lawsuit, filed in the Northern District of Ohio on December 23, 2008. The complaint alleged that National City made statements regarding its underwriting standards, capitalization and liquidity and provision for loan losses that were materially false in that:

> (i) ... National City's residential real estate loan portfolio was dominated by toxic loans provided to borrowers without regard to the borrowers' creditworthiness or ability to repay the loans; (ii) an overwhelming majority of loans the Company classified as "prime" quality were made to borrowers with subprime credit scores, well below the widely-accepted industry definition of "prime" quality; (iii) National City's allowance and related provisions for loan losses were grossly deficient; (iv) the Company was not "well-capitalized" and, in reality, had insufficient liquidity to absorb the massive losses lingering in its residential real estate loan portfolio; and (v) National City's inability to absorb losses from the inherently risky loans held on its balance sheet ... subjected the Company to a debilitating financial crisis.

National City agreed to settle the class action claims in November 2010 for $22.5 million.

131. As a result of the increasing number of actions and investigations into National City's fraudulent lending practices, National City was denied bailout money by the federal government, making it the only bank out of the top twenty-five in the country not to receive such funds.

5. Wachovia Mortgage Corporation

132. Wachovia Mortgage Corporation ("Wachovia") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RALI Series 2006-QS11 Trust and RALI Series 2006-QS13 Trust. Wachovia is a wholly-owned subsidiary of Wachovia Bank, which was acquired by Wells Fargo Bank in 2008. Wachovia operates in the mortgage and home equity loan origination industry.

133. On September 2, 2011 the FHFA, as conservator for Fannie Mae and Freddie Mac, initiated action in New York State Court. The complaint alleges violations of federal securities laws arising from, *inter alia*, material false and misleading statements and omissions in the Prospectus Supplements for certain RMBS purchased by Fannie Mae and Freddie Mac, including two RMBS containing loans originated by Wachovia. The complaint alleges that Wachovia, amongst other originators, routinely ignored underwriting guidelines, and in some

cases abandoned the guidelines completely. This resulted, the suit alleges, in false and misleading statements or omissions regarding compliance with underwriting guidelines in the Prospectus Supplements for several securities purchased by Fannie Mae and Freddie Mac, in violation of federal securities laws.

134. The FHFA's examination of the loans underlying its RMBS revealed evidence that the originators, including Wachovia, had engaged in improper appraisal and underwriting practices resulting in misrepresentations of owner-occupancy data and LTV data. In particular, the Offering Documents for the two RMBS containing Wachovia loans overstated the owner-occupancy rate by 6.27% and 9.27%, respectively. The Offering Documents for these two RMBS further overstated the percentage of pooled loans with low LTV ratios (defined as LTV ratios less than or equal to 80%) by 39.47% and 36.65%, respectively, and understated the percentage of underwater loans by 10.5% and 15.2%.

V. A SIGNIFICANT NUMBER OF THE MORTGAGE LOANS WERE MADE TO BORROWERS WHO DID NOT OCCUPY THE PROPERTIES IN QUESTION

135. The Offering Documents contained information regarding the purported occupancy status of the mortgaged properties, including whether they were primary homes, investment properties, or second homes. These representations were material to investors such as Plaintiff because high owner-occupancy rates would have made the Certificates safer investments than Certificates backed by second homes or properties purchased for real estate speculation. Thus, Defendants had an incentive to overstate the owner-occupancy rates of the underlying mortgages to make them appear more secure. As noted in a January 21, 2011 article in BUSINESSWEEK, borrowers either never moved into or later vacated homes for at least ***25%*** of U.S. mortgages that were described as being for "owner occupied" properties when bundled into securities.

136. In connection with a separate lawsuit against the Sponsor Defendant RFC, the insurer Massachusetts Mutual Life Insurance Company ("Mass Mutual") conducted a forensic review of the mortgage loans underlying 18 RMBS sponsored by RFC. Part of this analysis included testing to determine if the owner-occupancy ratios given in the Offering Documents were accurate. Mass Mutual investigated whether borrowers were having tax statements and bills sent to the address of the mortgaged properties, whether the borrowers had taken tax exemptions available for owner-occupied properties, and whether property records showed that the borrowers owned multiple houses. Mass Mutual discovered that the offering documents overstated the owner-occupancy ratio by between 5.71% and 15.23% for ***each*** of the 18 RMBS that it analyzed.

137. Freddie Mac performed a similar analysis of individual loan files in connection with its lawsuit against GMAC. Its analysis covered 21 RMBS and revealed that in each case, the offering materials had overstated the owner-occupancy rates by between 8.48% and 13.10%.

138. On information and belief, the mortgage loans underlying all of the Certificates purchased by Plaintiff suffer from similar deficiencies as the mortgage loans underlying the Certificates purchased by Mass Mutual and Freddie Mac. Two separate analyses covering a total of 34 GMAC RMBS offerings[3] have uncovered material overstatements of the owner-occupancy ratio in every single offering. There is no reason to believe that the systematic and pervasive misrepresentation of owner-occupancy rates identified by Mass Mutual and Freddie Mac were confined to the RMBS they examined.

[3] The Freddie Mac analysis involved 21 RMBS and the Mass Mutual analysis involved 18 RMBS. There was some overlap between the two analyses, as five (5) RMBS were analyzed by both Freddie Mac and Mass Mutual.

VI. DEFENDANTS MISREPRESENTED THE LTV RATIOS OF THE MORTGAGE LOANS AND THE NUMBER OF PROPERTIES WORTH LESS THAN THE OUTSTANDING LOANS

139. As discussed in Section III, *supra*, the LTV ratio is one of the most important measures of the riskiness of a loan. In the Offering Documents, Defendants acknowledge that loans with high LTV ratios are more likely to default. For example, the 424B5 Prospectus Supplement (Form 4245B) for RALI Series 2006-QS11, filed on August 29, 2006, states that, "the rate of default on mortgage loans that are secured by non-owner occupied properties, mortgage loans made to borrowers whose income is not required to be provided or verified, mortgage loans made to borrowers with high debt-to-income ratios, and mortgage loans with high LTV ratios, may be higher than for other types of mortgage loans." Furthermore, if a borrower does default and the property enters foreclosure, the Issuing Trust is much more likely to recover the outstanding balance on the loan through a foreclosure sale if the LTV ratio is low.

140. Mortgage loans that are "underwater" – that is to say, those where the LTV ratio is greater than 100% because the value of the outstanding loan exceeds the value of the collateral – are extremely risky investments. In these cases, the borrower has a strong incentive to default, the possibility that the borrower will be capable of refinancing are virtually nil, and if the mortgage enters foreclosure the Issuing Trust will definitely incur a loss.

141. Appraisals that do not conform to USPAP standards can artificially lower LTV ratios by overstating the value of the mortgaged properties. In instances where LTV values have been distorted by faulty appraisals, RMBS investors may be unaware of the true value of their collateral until default and foreclosure occur. The FCIC' Final Report of the National Commission on the Causes of the Financial and Economic Crisis in the United States discussed this problem.

> As the housing market expanded, another problem emerged, in subprime and prime mortgages alike: inflated appraisals. For the lender, inflated appraisals meant greater losses if a borrower defaulted. But for the borrower or for the broker or loan officer who hired the appraiser, an inflated value could make the difference between closing and losing the deal. Imagine a home selling for $200,000 that an appraiser says is actually worth only $175,000. In this case, a bank won't lend a borrower, say, $180,000 to buy the home. The deal dies. Sure enough, appraisers began feeling pressure. One 2003 survey found that 55% of appraisers had felt pressed to inflate the value of homes; by 2006, this had climbed to 90%.

142. Defendants had a responsibility to ensure that the LTV figures they presented in the Offering Documents were not the product of fraudulent appraisals. As the U.S. Senate Permanent Subcommittee on Investigations stated in its staff report, 'Wall Street and the Financial Crisis: Anatomy of a Financial Collapse,' "Whether appraisals are conducted internally by the bank or through a vendor, the bank must take responsibility for establishing a standard process to ensure accurate, unbiased home appraisal values."

143. Mass Mutual and Freddie Mac's reviews of the loans underlying 34 GMAC RMBS revealed that, in addition to consistently misrepresenting owner-occupancy rates, GMAC also consistently misrepresented the LTV ratios of the underlying mortgages and the number of properties with high LTV ratios. For each loan they examined, Mass Mutual and Freddie Mac used an industry standard automated valuation model ("AVM") to calculate the value of the mortgaged property at the time of origination. AVMs are commonly used in the real estate industry and rely upon similar data as appraisers, including county records, tax records, and data on comparable properties.

144. Freddie Mac's review of 21 GMAC RMBS revealed that in each case, the offering documents overstated the percentage of loans with low LTV ratios (defined as LTV ratios less than 80%) by between 12.24% and 49.08%. The offering documents understated the

percentage of underwater loans (loans with LTV ratios greater than 100%) by between 8.18% and 33.81%.

145. Although Mass Mutual presented its data differently than Freddie Mac did, its review also revealed significant misrepresentations of LTV data. Mass Mutual found that for 17 of the 18 GMAC RMBS it analyzed, the offering documents had understated the weighted average LTV ratio by between 4.23% and 16.77% and understated the percentage of loans with high LTV ratios (defined as LTV ratios greater than 90% or 100%) by between 4.54% and 39.08%. Only one of the RMBS examined did not misrepresent the percentage of loans with high LTV ratios.

146. On information and belief, the mortgage loans underlying all of the Certificates purchased by Plaintiff suffer from similar deficiencies as the mortgage loans underlying the Certificates purchased by Mass Mutual and Freddie Mac. The loan-level analyses demonstrate that Defendants have engaged in a systematic practice of understating LTV ratios and the number of underwater properties.

VII. THE CREDIT RATINGS ASSIGNED TO THE CERTIFICATES MATERIALLY MISREPRESENTED THE CREDIT RISK OF THE CERTIFICATES

147. The AAA credit ratings of the Certificates were an important factor in Plaintiff's decision to purchase the Certificates. Because Plaintiff is a conservative institutional investor, it purchased only investment grade Certificates, all of which were rated AAA.

148. Investment grade securities are understood by investors to be stable, secure and safe. A rating of AAA denotes high credit quality and is the same rating as those typically assigned to bonds backed by the full faith and credit of the United States Government, such as treasury bills. Historically, before 2007, investments with AAA ratings had an expected cumulative loss rate of less than 0.5 percent, with an annual loss rate of close to zero. According

to Standard and Poor's, the default rate on all investment grade corporate bonds (including AA, A and BBB) from 1981 to 2007, for example, averaged about .094% per year and was not higher than 0.41% in any year.

149. The Defendants understood (and banked on) the importance that purchasers of mortgage-backed securities attached to credit ratings. In most cases, the purchasers were institutional investors, such as Plaintiff, who did not have the knowledge or ability to independently analyze the mortgage pools underlying any particular offering to verify for themselves that the ratings were accurately determined.

150. Accordingly, Defendants featured the ratings prominently in the Offering Documents and discussed at length the ratings assigned to the Certificates and the bases for the ratings. Each Prospectus Supplement stated that the issuance of each of the Certificates was conditioned on the assignment of particular, investment-grade ratings and listed the ratings in a chart. All of the Certificates purchased by Plaintiff were AAA-rated securities, and the remainder were also investment grade.

151. Unbeknownst to Plaintiff and other investors, at all relevant times, Defendants knew that the ratings were not reliable because those ratings were bought and paid for, and were supported by, flawed information provided by Defendants to the rating agencies. In fact, Defendants manipulated the rating agencies to obtain the desired ratings for the Certificates.

152. Specifically, the ratings of the Certificates were significantly compromised by the misinformation provided by Defendants to the rating agencies. Among other matters, Defendants did not disclose to the rating agencies that the originators, including GMAC-affiliated entities, had abandoned their underwriting standards by, among other things, manipulating the assets, liabilities, income and other important information concerning

borrowers; using false metrics to qualify borrowers; and aggressively using exceptions to qualify borrowers. Defendants did not disclose their knowledge that, in obtaining appraisals to value the underlying collateral, the originators used inflated appraisals that departed from industry-approved standards. Defendants did not otherwise disclose their knowledge of the pervasive fraud that affected the mortgages underlying the Certificates.

153. Apart from supplying incomplete and false information to the rating agencies, Defendants also manipulated their relationship with the rating agencies in order to achieve the desired ratings. The rating agencies received enormous revenues from the issuers who paid them for rating their securities. Because the desired rating of a securitized product was the starting point for any securities offering, the rating agencies were actively involved in helping issuers structure their products to achieve the requested rating. As a result, the rating agencies essentially worked backwards, starting with the issuer's target rating and then working toward a structure that would yield the desired rating. Among other things, the rating agencies instructed issuers on how much "credit enhancement" to provide to each tranche of the Certificates in order to secure the desired ratings.

154. In this manner, Defendants were able to manipulate the rating agencies to achieve the inflated ratings they desired. Through repeated communications and collaboration with the rating agencies, Defendants were effectively able to reverse engineer aspects of the ratings models and then modify the structure of an offering to improve the ratings without actually improving the underlying credit quality.

155. In a 2008 report entitled "Summary Report of Issues Identified in the Commission Staff's Examinations of Select Credit Rating Agencies," the SEC confirmed that the issuers and the rating agencies worked together so that securities would receive the highest ratings:

> Typically, if the analyst concludes that the capital structure of the RMBS does not support the desired ratings, this preliminary conclusion would be conveyed to the arranger [sponsor/issuer]. The arranger could accept that determination and have the trust issue the securities with the proposed capital structure and the lower rating or adjust the structure to provide the requisite credit enhancement for the senior tranche to get the desired highest rating. Generally, arrangers aim for the largest possible senior tranche, i.e., to provide the least amount of credit enhancement possible, since the senior tranche -- as the highest rated tranche -- pays the lowest coupon rate of the RMBS' tranches and, therefore, costs the arranger the least to fund.

156. As a result, the Certificates were not worthy of the investment-grade ratings given to them, as evidenced most clearly by the fact that many of the Certificates – all initially awarded investment grade ratings (all AAA/Aaa) – have now been downgraded to junk, a vast number of the underlying loans have been foreclosed upon, and the remaining underlying loans are suffering from crippling deficiencies and face serious risks of default. The collective steep downgrade of AAA/Aaa-rated Certificates indicates that the ratings set forth in the Offering Documents were false, unreliable and inflated.

157. According to the report, "Wall Street and the Financial Crisis," issued by the U.S. Senate Permanent Subcommittee on Investigations, former ratings agency analysts and managers said that investment banks pressured them to get their deals done quickly, to increase the size of the tranches that received AAA ratings and to reduce the credit enhancements protecting the AAA tranches from loss.

158. By including and endorsing the AAA ratings contained in the Offering Documents, Defendants falsely represented that they actually believed that the ratings were an accurate reflection of the credit quality of the Certificates.

VIII. DEFENDANTS MISREPRESENTED THE EXTENT OF CREDIT ENHANCEMENT INCLUDED IN THE CERTIFICATES

159. Defendants used a variety of credit enhancements to make the Certificates seem like more attractive and less risky investments. Credit enhancement represents the amount of "cushion" or protection from loss exhibited by a given security. This cushion is intended to improve the likelihood that holders of highly rated certificates receive the interest and principal they expect based on the Offering Documents. The level of credit enhancement offered is based on the makeup of the loans in the underlying collateral pool. Riskier pools necessarily need higher levels of credit enhancement to ensure payment to senior certificate holders. Credit enhancements for a given trust also impact the overall credit rating that a given tranche of certificates receives. The level of credit enhancement for the Certificates was material to Plaintiff because it represented the protection purportedly afforded from loss.

160. The most common form of credit enhancement in the Offering Documents was "subordination" in which the Defendants created a hierarchy of loss absorption among the tranche securities. To create that hierarchy, Defendants placed the pool's tranches in an order, with the lowest tranche required to absorb any losses first, before the next highest tranche. Losses might occur, for example, if borrowers defaulted on their mortgages and stopped making mortgage payments into the pool. Lower level tranches most at risk of having to absorb losses typically received non-investment grade ratings from the credit rating agencies, while the higher level tranches that were protected from loss typically received investment grade ratings. One key task for both Defendants and the credit rating agencies was to calculate the amount of "subordination" required to ensure that the higher tranches in a pool were protected from loss and could be given AAA or other investment grade ratings.

161. As set forth below, representations regarding the inclusion and scope of credit enhancements were made in all of the Offering Documents. These representations were false and misleading because all of the purported "enhancements" depended on or derived from inflated appraisals of the mortgaged properties, which caused the listed LTV ratios and levels of credit enhancement to be untrue.

IX. DEFENDANTS FAILED TO ENSURE THAT TITLE TO THE UNDERLYING MORTGAGE LOANS WAS EFFECTIVELY TRANSFERRED

162. A fundamental aspect of the mortgage securitization process is that the issuing trust for each offering must obtain good title to the mortgage loans comprising the pool for that offering. This is necessary in order for the holders of the RMBS, such as Plaintiff, to be legally entitled to enforce the mortgage loans in the event of default. Two documents relating to each mortgage loan must be validly transferred to the trust as part of the securitization process – a promissory note and a security instrument (either a mortgage or a deed of trust).

163. The rules for these transfers are governed by the law of the state where the property is located, by the terms of the pooling and servicing agreement ("PSA") for each securitization, and by the law governing the issuing trust (with respect to matters of trust law). In general, state laws and the PSAs require the promissory note and security instrument to be transferred by indorsement, in the same way that a check can be transferred by indorsement, or by sale. In addition, state laws generally require that the trustee of the issuing trust have physical possession of the original, manually signed promissory note in order for the loan to be enforceable by the trustee against the borrower in the event of the borrower's default.

164. In order to preserve the bankruptcy-remote status of the issuing trusts in RMBS transactions, the notes and security instruments are generally not directly transferred from the mortgage loan originator to the trust. Rather, the notes and security instruments are initially

transferred from the originator to the depositor, either directly or via one or more special-purpose entities. After this initial transfer to the depositor, the depositor transfers the notes and security interests to the issuing trust for the particular securitization. Each of these transfers must be valid under applicable state law in order for the trust to have good title to the mortgage loans.

165. To ensure that the trust qualifies as a tax-free real estate mortgage investment conduit, the PSA generally requires the transfers to the trust to be completed within a strict time limit after formation of the trust. Furthermore, the applicable trust law in each state generally requires strict compliance with the trust documents, including the PSA, so that failure to comply strictly with the timeliness, indorsement, physical delivery and other requirements of the PSA with respect to the transfers of the notes and security instruments means that the transfers would be void and the trust would not have good title to the mortgage loans.

166. The Offering Documents for the Certificates represented in substance that the Issuing Trust for the respective offering had obtained good title to the mortgage loans comprising the pool underlying the offering. In fact, however, Defendants routinely and systematically failed to comply with the requirements of applicable state laws and the PSAs for valid transfers of the notes and security instruments. In an October 20, 2010 NEW YORK TIMES article on the failure of large banks to maintain full documentation, "Battle Lines Forming In Clash Over Foreclosures," Rebel A. Cole, a professor of finance and real estate at DePaul University, was quoted as saying that banks "have essentially sidestepped 400 years of property law in the United States. ... There are so many questionable aspects to this thing it's scary."

167. On October 27, 2010, Katherine Porter, then a visiting professor at Harvard Law School specializing in consumer credit, consumer protection regulation and mortgage servicing, testified before a Congressional Oversight Panel that,

> The implications of problems with transfer are serious. If the [securitization] trust does not have the loan, homeowners may have been making payments to the wrong party. If the trust does not have the note or mortgage, it may not have standing to foreclose or legal authority to negotiate a loan modification. To the extent that these transfers are being completed retroactively, it raises issues about honesty in creating and dating the assignments/transfers and about what parties can do, if anything, if an entity in the securitization chain, such as Lehman Brothers or New Century, is no longer in existence. Moreover, retroactive transfers may violate the terms of the trust, which often prohibit the addition of new assets, or may cause the trust to lose its REMIC status, a favorable treatment under the Internal Revenue Code. Chain of title problems have the potential to expose the banks to investor lawsuits and to hinder their legal authority to foreclose or even to do loss mitigation.
>
> * * * * *
>
> I want to share with the Panel that the lawyers that I have met over years of my research on mortgage servicing both creditor lawyers and debtor lawyers have nearly universally expressed that they believe a very large number (perhaps virtually all) securitized loans made in the boom period in the mid-2000s contain serious paperwork flaws, did not meet underwriting or other requirements of the trust, and have not been serviced properly as to default and foreclosure.

168. On November 18, 2010, Adam Levitin, a professor at Georgetown University Law Center, provided similar testimony about the importance of the chain of title to investors and the consequences of faulty transfers before a hearing of the House Financial Services Committee.

> Concerns about securitization chain of title also go to the standing question; if the mortgages were not properly transferred in the securitization process ..., then the party bringing the foreclosure does not in fact own the mortgage and therefore lacks standing to foreclose. If the mortgage was not properly transferred, there are profound implications too for investors, as the mortgage-backed securities they believed they had purchased would, in fact be non-mortgage-backed securities, which would almost assuredly lead investors to demand that their investment contracts be rescinded[.]
>
> * * * * *

> Securitization is the legal apotheosis of form over substance, and if securitization is to work it must adhere to its proper, prescribed form punctiliously. The rules of the game with securitization, as with real property law and secured credit are, and always have been, that dotting "i's" and crossing "t's" matter, in part to ensure the fairness of the system and avoid confusions about conflicting claims to property. Close enough doesn't do it in securitization; if you don't do it right, you cannot ensure that securitized assets are bankruptcy remote and thus you cannot get the ratings and opinion letters necessary for securitization to work. Thus, it is important not to dismiss securitization problems as merely "technical;" these issues are no more technicalities than the borrower's signature on a mortgage. Cutting corners may improve securitization's economic efficiency, but it undermines its legal viability.

169. It is now clear that GMAC did not transfer securitized loans to the Issuing Trusts in a timely fashion, if it did so at all. For example, a September 5, 2011 National Mortgage News article, "Servicers Are Now Rewriting Their History," discusses GMAC's transfer of a mortgage to a bank trust on May 18, 2011 for a bond deal ***that closed in 2005***. This failure to ensure proper transfer of mortgage documents or maintain the chain of title – tasks which GMAC received servicing fees for supposedly fulfilling – represents a flagrant breach of the representations contained in the Offering Documents.

170. GMAC's failure to maintain the chain of title for securitized mortgages as it represented it would do in the Offering Documents has led it to take unlawful shortcuts, resulting in a costly foreclosure moratorium and multiple investigations. Around September 20, 2010, GMAC was forced to temporarily halt evictions and foreclosure sales in 23 states after a GMAC employee, Jeffrey Stephan, admitted in a deposition that he routinely submitted false affidavits in foreclosure cases and that he did not review the exhibits whose accuracy he attested to. According to a September 30, 2010 article in the NEW YORK TIMES, "Foreclosures Slow As Document Flaws Emerge," shortly after the moratorium's announcement Old Republic National

Title, one of the largest title insurers in the country, sent a bulletin to agents saying that "until further notice" it would not insure title to properties foreclosed upon by GMAC Mortgage.

171. GMAC resumed foreclosures in October, but the moratorium alerted regulators to GMAC's unlawful servicing practices and the need to take action. All fifty state attorneys general have launched a coordinated investigation into the foreclosure practices of banks including GMAC. The Board of Governors of the Federal Reserve System ("Federal Reserve") also launched its own investigation. On April 13, 2011, GMAC entered into a consent decree with the Federal Reserve and the Federal Deposit Insurance Corporation requiring it to bring its loan servicing and foreclosure processes into compliance with the law. According to the Federal Reserve's accompanying press release, GMAC and other banking organizations engaged in, "a pattern of misconduct and negligence related to deficient practices in residential mortgage loan servicing and foreclosure processing. These deficiencies represent significant and pervasive compliance failures and unsafe and unsound practices at these institutions."

X. DEFENDANTS' SPECIFIC MATERIAL MISSTATEMENTS AND OMISSIONS IN THE OFFERING DOCUMENTS

172. Defendants' representations regarding the mortgage loans underlying the Offerings were highly material to investors such as Plaintiff. Because the revenue paid to investors is derived from the stream of payments received from the mortgage loan borrowers, the value of an investment is necessarily tied to the perceived risk of default in the Mortgage Loan pool. In other words, the market value of a Certificate decreases as the perceived risk of the underlying pool increases. Plaintiff, therefore, closely examined the representations made by the Defendants regarding the mortgage loans underlying each of the Offerings at issue here.

173. Moreover, Defendants went above and beyond specific representations to warrant that if ***any material pool characteristic*** differed ***by 5% or more*** from the description in the Offering Documents, they would provide notice and repurchase those certificates:

> In the event mortgage loans are removed from or added to the mortgage pool after the date hereof prior to the closing and any material pool characteristics of the actual mortgage pool differ by 5% or more from the description of the mortgage pool in this prospectus supplement, a current report on Form 8-K describing the final mortgage pool will be filed with the Securities and Exchange Commission within four business days of the related closing.

The above misstatement was contained in the following Offering Documents: Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at S-47-48 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5), at S-42 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at S-50 (Sept. 29, 2006); Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at S-41-42 (Jan. 27, 2006); Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at S-72, 11 (July 27, 2005); Registration Statement (333-131213) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at S-46 (Mar. 3, 2006); Registration Statement (333-106093) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 14, S-27 (July 11, 2003); Registration Statement (333-126745) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 15, 53 (Aug. 3, 2005).

174. In light of the numerous departures from underwriting guidelines and appraisal standards by GMAC Mortgage, Homecomings and the third-party originators described above, the Offering Documents (Registration Statements and Prospectus Supplements) disseminated by Defendants in the course of selling the Certificates contained numerous misstatements and omissions, as set forth below.

A. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING UNDERWRITING STANDARDS AND PRACTICES

175. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospectus Supplements formed a part, contained the following misleading statements, among others, in identical or substantially similar language, regarding the underwriting standards and practices that the Originators applied in originating the mortgage loans underlying the Certificates.

> ***The depositor expects that the originator of each of the mortgage loans will have applied, consistent with applicable federal and state laws and regulations, underwriting procedures intended to evaluate the borrower's credit standing and repayment ability and/or the value and adequacy of the related property as collateral.*** All of the mortgage loans constituting the mortgage pool for a series of certificates will have been acquired either directly or indirectly by the depositor through the Expanded Criteria Program, which is described below under "--The Expanded Criteria Mortgage Program."

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at 12 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5), at 12 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at 12 (Sept. 29, 2006); Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at 13 (Jan. 27, 2006); Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at 13 (July 27, 2005); Registration Statement (333-131213) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 12 (Mar. 3, 2006); Registration Statement (333-106093) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1) (July 11, 2003); Registration Statement (333-126745) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1) (Aug. 3, 2005).

Prior to assigning the mortgage loans to the depositor, Residential Funding will have reviewed the underwriting information provided by the mortgage collateral sellers for the mortgage loans and, in those cases, determined that the mortgage loans were generally originated in accordance with or in a manner generally consistent with the underwriting standards described in the [Residential Funding's Expanded Criteria Seller Guide].

* * * * *

In accordance with the Seller Guide, the Expanded Criteria Program Seller is required to review an application designed to provide to the original lender pertinent credit information concerning the mortgagor. As part of the description of the mortgagor's financial condition, each mortgagor is required to furnish information, which may have been supplied solely in the application, regarding its assets, liabilities, income (except as described below), credit history and employment history, and to furnish an authorization to apply for a credit report which summarizes the borrower's credit history with local merchants and lenders and any record of bankruptcy.

The mortgagor may also be required to authorize verifications of deposits at financial institutions where the mortgagor had demand or savings accounts. In the case of non-owner occupied properties, income derived from the mortgaged property may be considered for underwriting purposes. For mortgaged property consisting of a vacation or second home, generally no income derived from the property is considered for underwriting purposes.

Based on the data provided in the application and certain verifications, if required, a determination is made by the original lender that the mortgagor's monthly income, if required to be stated, ***will be sufficient to enable the mortgagor to meet its monthly obligations on the mortgage loan and other expenses related to the property, including property taxes, utility costs, standard hazard insurance and other fixed obligations.*** Generally, scheduled payments on a mortgage loan during the first year of its term plus taxes and insurance and all scheduled payments on obligations that extend beyond ten months, including those mentioned above and other fixed obligations, must equal no more than specified percentages of the prospective mortgagor's gross income.

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at S-44-46 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5), at S-40-41 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at S-47-48-49 (Sept. 29, 2006); Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at 13 (Jan. 27, 2006); Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at 12 (July 27, 2005); Registration Statement (333-131213) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 14, S-43-45 (Mar. 3, 2006); Registration Statement (333-106093) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 16-17 (July 11, 2003); Registration Statement (333-126745) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 11 (Aug. 3, 2005).

176. The statements quoted above were false because they represented that the Originators applied underwriting guidelines and quality control measures to assess the value of the mortgaged properties, evaluate the adequacy of such properties as collateral for the mortgage loans and assess the applicants' abilities to repay their mortgage loans, when in fact the Originators had actually abandoned these standards so that they could increase the volume of loan origination and the resulting fees that they earned. The statements also represent that Residential Funding put quality control measures into place in order to assure that the underwriting guidelines were followed. Instead, Residential Funding ignored the underwriting tactics of the Originators. For further discussion of Originators' disregard of their stated underwriting guidelines, *see* Section IVA, *supra*.

B. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING QUALITY CONTROL PROCEDURES

177. The Offering Documents represented that numerous quality control procedures were conducted with respect to the loans underlying the Certificates. For example, the Offering Documents contained, in sum or substance, the following representation:

> All of the mortgage loans in the mortgage pool were originated in accordance with the underwriting criteria of Residential Funding described under "--The Program" in this prospectus supplement. ***Residential Funding will review each mortgage loan for compliance with its underwriting standards prior to purchase.***

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at S-47 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5), at S-41 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at S-49 (Sept. 29, 2006).

178. The above statements of material facts were untrue when made because they failed to disclose that the Sponsors and Originators did not, in fact, review each loan for compliance with its underwriting standards prior to purchase..

C. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING UNDERWRITING EXCEPTIONS

179. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, using identical or substantially similar language, regarding the circumstances under which Defendants granted underwriting exceptions for loans underlying the Certificates:

> In certain instances, the LTV ratio may have been based on the appraised value as indicated on a review appraisal conducted by the mortgage collateral seller or originator. In most cases, the

> mortgage loans were either originated and underwritten in accordance with Residential Funding Company, LLC's AlterNet Program, as discussed below, or otherwise acquired from a mortgage collateral seller based on standards consistent with the following discussion on credit grades classification or substantially similar standards acceptable to Residential Funding Company, LLC. ***Exceptions to these standards are made, however, on a case by case basis if it is determined, generally based on compensating factors, that an underwriting exception is warranted. Compensating factors may include, but are not limited to, a low LTV ratio, stable employment, a relatively long period of time in the same residence, a mortgagor's cash reserves and savings and monthly residual income.***

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at S-47 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5), at S-42 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at S-49 (Sept. 29, 2006); Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at S-41 (Jan. 27, 2006); Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at 12 (July 27, 2005); Registration Statement (333-131213) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 14 (Mar. 3, 2006); Registration Statement (333-106093) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 16 (July 11, 2003); Registration Statement (333-126745) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 11 (Aug. 3, 2005).

180. The statements quoted above were false because they represented that Residential Funding Company and the Originators only permitted exceptions to their underwriting guidelines on a case-by-case basis and when the borrowers could show some compensating factors as justification, when in fact the Originators systematically granted exceptions to virtually every borrower who did not qualify for a mortgage loan. For further discussion of Originators' wholesale and systematic abuse of exceptions, *see* Section IV, *supra*.

D. DEFENDANTS MADE UNTRUE STATEMENTS AND OMISSIONS REGARDING LOAN-TO-VALUE RATIOS AND APPRAISALS

181. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, regarding loan-to-value ratios and appraisals of the properties securing the mortgage loans underlying the Certificates:

> The adequacy of the mortgaged property as security for repayment of the related mortgage loan generally is determined by an appraisal in accordance with appraisal procedure guidelines described in [Residential Funding's Expanded Criteria Seller Guide]. Appraisers may be staff appraisers employed by the originator. The appraisal procedure guidelines generally require the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property is in good condition and that construction, if new, has been substantially completed. The appraiser is required to consider a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property, or replacement cost analysis based on the current cost of constructing or purchasing a similar property. In certain instances, the LTV ratio is based on the appraised value as indicated on a review appraisal conducted by the mortgage collateral seller or originator.

The above misstatement in identical or substantially similar language was contained in the following Offering Documents: Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at S-46 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5), at S-41 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at S-48 (Sept. 29, 2006); Registration Statement (333-131213) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 13 (Mar. 3, 2006).

> In determining the adequacy of the mortgaged property as collateral, an appraisal is made of each property considered for financing. The appraiser is required to verify that the property is in good condition and that construction, if new, has been completed.

> The appraisal is based on various factors, including the market value of comparable homes and the cost of replacing the improvements. Alternatively, property valuations may be made under various other methods, including automated valuation models.

The above misstatement in identical or substantially similar language was found in the following Offering Documents: Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at 14 (Jan. 27, 2006); Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at 13-14 (July 27, 2005); Registration Statement (333-126745) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 12 (Aug. 3, 2005); Registration Statement (333-106093) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 18 (July 11, 2003).

182. The statements quoted above were false because they represented that the properties securing the loans underlying the Certificates had been appraised based on the market values of comparable properties and replacement cost analyses, when in fact the Originators systematically pressured appraisers to overvalue properties and falsify appraisal reports. For further discussion of the corruption of the appraisal system, *see* Section IV, *supra*.

183. Furthermore, each Prospectus contained tables substantially similar to that below, purporting to provide data on the LTV ratios of the mortgage loans underlying the Certificates so that investors could reach their own conclusions about whether or not those loans were backed by sufficient collateral. Not only did the tables indicate that no original loan-to-value ratio was greater than 100% (or in some instances 95%), but also that less than ten percent of the loans had an original loan-to-value ratio greater than 80%. The statements were materially untrue and misleading, however, because the value data underlying the LTV calculations had been systematically skewed by fraudulent appraisals. Thus, these statements understated the true LTV ratios of the loans and the true risk inherent in the Certificates.

Original Mortgage Loan-to-Value Ratios of the Mortgage Loans

<TABLE>
<CAPTION>

Original Loan-to-Value Ratio (%)	Number of Mortgage Loans	Principal Balance	Percentage of Mortgage Loans	Average Principal Balance	Weighted Average Credit Score
<S>	<C>	<C>	<C>	<C>	<C>
00.01 - 50.00	69	$ 29,579,210	8.06%	$ 428,684	741
50.01 - 55.00	43	16,556,105	4.51	385,026	750
55.01 - 60.00	62	31,091,749	8.47	501,480	742
60.01 - 65.00	70	29,022,892	7.91	414,613	732
65.01 - 70.00	112	50,826,167	13.85	453,805	741
70.01 - 75.00	103	43,799,610	11.93	425,239	733
75.01 - 80.00	428	153,782,539	41.89	359,305	729
80.01 - 85.00	10	1,998,693	0.54	199,869	677
85.01 - 90.00	38	7,768,485	2.12	204,434	699
90.01 - 95.00	13	2,663,829	0.73	204,910	726
Total	948	$ 367,089,279	100.00%	$ 387,225	733

</TABLE>

The weighted average loan-to-value ratio at origination of the mortgage loans will be approximately 70.46%.

The above misstatement in identical or substantially similar language was found in the following Offering Documents: Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at III-2 (Jan. 27, 2006); Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at I-20 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5), at I-7 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at I-7 (Sept. 29, 2006); Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at S-64 (July 27, 2005).

E. DEFENDANTS MATERIALLY MISREPRESENTED THE ACCURACY OF THE CREDIT RATINGS ASSIGNED TO THE CERTIFICATES

184. As set forth in the following paragraph, Defendants represented in the Offering Documents that it was a condition of the issuance of the Certificates that they be rated investment grade, and indeed, all of the Certificates purchased by Plaintiff were rated "AAA/Aaa," signifying that the risk of loss was virtually non-existent.

> ***Each class of certificates offered hereby and by the accompanying prospectus supplement will be rated at the date of issuance in one of the four highest rating categories by at least one rating agency.***

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at 102 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5), at 102 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at 102 (Sept. 29, 2006); Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at 98 (Jan. 27, 2006); Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at 98 (July 27, 2005); Registration Statement (333-131213) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 128 (Mar. 3, 2006); Registration Statement (333-106093) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 129 (July 11, 2003); Registration Statement (333-126745) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 82 (Aug. 3, 2005).

185. By touting the ratings of the Certificates, and in making the above statements in the Offering Documents, Defendants represented that they believed that the information provided to the rating agencies to support these ratings accurately reflected the guidelines and practices of Defendants GMAC Mortgage and Homecomings Financial, as well as the third party originators, and the specific qualities of the underlying loans. These representations were false because Defendants did not disclose to the rating agencies the extent of their and the third party originator's improper underwriting and appraisals and that Defendants otherwise gamed the rating agencies to ensure that they obtained the highest ratings even when those ratings were not warranted. The falsity of these representations is further evidenced by the rapid downgrades of all of the Certificates within a few years of issuance.

F. DEFENDANTS MADE UNTRUE STATEMENTS REGARDING THE CREDIT ENHANCEMENTS APPLICABLE TO THE CERTIFICATES

186. Each of the Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, in identical or substantially similar language, regarding credit enhancements.

> ***Credit enhancement*** for all of these certificates will be provided by additional classes of subordination.
>
> ...
>
> ***Allocation of Losses; Subordination***
>
> The subordination provided to the Senior Certificates by the Class B Certificates and Class M Certificates and the subordination provided to each class of Class M Certificates by the Class B Certificates and by any class of Class M Certificates subordinate thereto will cover Realized Losses on the mortgage loans that are Defaulted Mortgage Losses, Fraud Losses, Bankruptcy Losses and Special Hazard Losses. Any Realized Losses which are not Excess Special Hazard Losses, Excess Fraud Losses, Excess Bankruptcy Losses or Extraordinary Losses will be allocated as follows:
>
> o first, to the Class B Certificates;
>
> o second, to the Class M-3 Certificates;
>
> o third, to the Class M-2 Certificates; and
>
> o fourth, to the Class M-1 Certificates,
>
> in each case until the Certificate Principal Balance of that class of certificates has been reduced to zero; and thereafter, among all the remaining classes of related Senior Certificates on a pro rata basis.

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at S-1, S-86 (July 27, 2005); Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at S-1, S-65 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5), at S-1, S-58

(May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at S-1, S-79 (Sept. 29, 2006); Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at S-1, S-63 (Jan. 27, 2006).

187. These representations were false because all of the purported "enhancements" depended on or derived from the false representations regarding the quality of the mortgage loans underlying the Certificates. Highly risky, misrepresented loans piled on top of other highly risky, misrepresented loans is not a true "enhancement."

G. DEFENDANTS MADE UNTRUE STATEMENTS REGARDING OWNER-OCCUPANCY STATISTICS

188. Each of the Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained tables substantially similar to that below, purporting to provide data on the owner occupancy rates of mortgage loans underlying the Certificates. The figures contained in these tables were materially false and misleading, however, because Defendants systematically overstated the owner occupancy rates.

Occupancy Types of the Mortgage Loans

<TABLE>
<CAPTION>

Occupancy Type	Number of Mortgage Loans	Principal Balance	Percentage of Mortgage Loans	Average Principal Balance	Weighted Average Credit Score	Weighted Average Loan-to-Value Ratio
<S>	<C>	<C>	<C>	<C>	<C>	<C>
Primary Residence	915	$ 353,770,656	96.37%	$ 386,635	732	70.53%
Second/Vacation	33	13,318,623	3.63	403,595	769	68.72
Total	948	$ 367,089,279	100.00%	$ 387,225	733	70.46%

</TABLE>

The above misstatements in identical or substantially similar language were found in the following Offering Documents: Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at III-4 (Jan. 27, 2006); Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at S-12 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5

Trust (Form 424B5), at S-10 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at S-13 (Sept. 29, 2006); Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at S-66 (July 27, 2005).

189. An analysis by Mass Mutual found that only 6,785 of the loans included in this particular mortgage pool were truly primary residences of the mortgagors, not 7,615, as represented above, and that the true owner occupancy rate was only 83.04%, not 93.94%. *See* Section V, *supra*.

190. Contrary to Defendants' representations, far fewer borrowers actually occupied the mortgaged properties than was represented to investors such as Plaintiff in the Offering Documents.

H. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING THE SUFFICIENCY OF THE BORROWERS' INCOMES

191. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, regarding the sufficiency of the borrowers' incomes to repay the loans underlying the Certificates:

> Once all applicable employment, credit and property information is received, a determination is made as to whether the prospective borrower has sufficient monthly income available to meet the borrower's monthly obligations on the proposed mortgage loan and other expenses related to the home (such as property taxes and hazard insurance) and other financial obligations and monthly living expenses.

The above misstatement in identical or substantially similar language was found in the following Offering Documents: Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at 15 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5),

at 15 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at 15 (Sept. 29, 2006); Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at 15 (Jan. 27, 2006); Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at 14 (July 27, 2005); Registration Statement (333-131213) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 15 (Mar. 3, 2006); Registration Statement (333-106093) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 19 (July 11, 2003); Registration Statement (333-126745) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 13 (Aug. 3, 2005).

192. The statements quoted above were false because in fact, the Originators had willfully turned a blind eye to the creditworthiness of their borrowers, lending money without making even cursory attempts to ensure that the loans would be repaid. Indeed, the Originators extended numerous loans even though the borrower's information was not provided, or if it was, that information was patently false and the Originators knew that the borrower was misrepresenting her or his income, occupation and other information, and was engaged in outright mortgage fraud. For further discussion of the Originators' purposeful disregard for income verification, *see* Section IV, *supra*.

I. DEFENDANTS MADE UNTRUE STATEMENTS REGARDING THE TRANSFER OF TITLE TO THE ISSUING TRUSTS

193. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, regarding the transfer of title to the Issuing Trusts.

> At the time of issuance of a series of certificates, the depositor will cause the mortgage loans or mortgage securities and any other assets being included in the related trust to be assigned to the trustee or its nominee, which may be the custodian, together with,

> if specified in the accompanying prospectus supplement, all principal and interest received on the mortgage loans or mortgage securities after the cut-off date, other than principal and interest due on or before the cut-off date and any Spread. The trustee will, concurrently with that assignment, deliver a series of certificates to the depositor in exchange for the mortgage loans or mortgage securities. Each mortgage loan or mortgage security will be identified in a schedule appearing as an exhibit to the related pooling and servicing agreement. Each schedule of mortgage loans will include, among other things, information as to the principal balance of each mortgage loan as of the cut-off date, as well as information respecting the mortgage rate, the currently scheduled monthly payment of principal and interest, the maturity of the mortgage note and the LTV ratio, at origination or modification, without regard to any secondary financing.

The above misstatement, in identical or substantially similar language, was found in the following Offering Documents: Prospectus Supplement for RALI Series 2006-QS11 Trust (Form 424B5), at 26 (Aug. 29, 2006); Prospectus Supplement for RALI Series 2006-QS5 Trust (Form 424B5), at 26 (May 30, 2006); Prospectus Supplement for RALI Series 2006-QS13 Trust (Form 424B5), at 26 (Sep. 29, 2006); Prospectus Supplement for RFMSI Series 2006-S1 Trust (Form 424B5), at 26 (Jan. 27, 2006); Prospectus Supplement for RFMSI Series 2005-SA3 Trust (Form 424B5), at 24 (July 27, 2005); Registration Statement (333-131213) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 31 (Mar. 3, 2006); Registration Statement (333-106093) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 32 (July 11, 2003); Registration Statement (333-126745) filed by Residential Funding Mortgage Securities I, Inc. (Form S-3/A, Am. 1), at 21 (Aug. 3, 2005).

194. These representations were false because Defendants routinely failed to physically deliver the original promissory notes and security instruments for the mortgage loans to the issuing trusts, as required by applicable state laws and the PSAs. These representations were also false because Defendants routinely failed to execute valid endorsements of the documents at the time of the purported transfer, as also required by applicable state laws and the

PSAs. The Issuing Trusts therefore did not possess good title to many of the mortgage loans and lacked legal authority to enforce many of the mortgage loans against the borrowers in the event of default.

XI. DEFENDANTS KNEW THAT THE OFFERING DOCUMENTS CONTAINED MATERIAL MISSTATEMENTS AND OMISSIONS

195. The allegations below are made in support of Plaintiff's common-law fraud, aiding and abetting claims and Minnesota Securities Act claims, and not in support of its negligent misrepresentation claim, which is based solely on negligence.

196. As set forth above, at all relevant times, Defendants knew or were reckless in not knowing that the Offering Documents contained material misstatements and omissions. Defendants' knowledge or recklessness is evidenced by, among other things, the following:

- Defendants knew or should have known, from the due diligence reports they received on the mortgage loans being pooled for securitization, their relationships with the third party originators, and their oversight of their affiliated originators GMAC Mortgage and Homecomings Financial, that there were significant and extensive defects in the mortgage loans underlying the Certificates. Defendants were aware that a significant proportion of the loans they originated or purchased had defects, including breaches of their and the third party originators' underwriting guidelines, improper appraisals and lack of documentation, or were reckless in not discovering this information. GMAC was aware that its underwriting software, including Assetwise and Desktop Underwriter, did not apply its stated underwriting standards and would not screen out non-conforming loans. Defendants nonetheless allowed large numbers of defective mortgages to be included in the mortgage pools used to collateralize the Certificates sold to Plaintiff and other investors. *See* ¶¶ 72-103.

- The Defendants also knew or were reckless in not knowing that those mortgages were being issued to borrowers that were likely to default, as evidenced by the high percentage of loans underlying the Certificates that are currently in foreclosure, as well as the percentage of loans underlying the Certificates that are currently delinquent by more than 90 days. *See infra* ¶ 223.

- Defendants knew or were reckless in not knowing that the appraisal and owner-occupancy data presented in the Offering Documents was false, as evidenced by the degree to which the Offering Documents consistently overstated owner-occupancy rates and understated LTV ratios. Defendants knew or should have known that their underwriting procedures were inadequate to verify that the

mortgaged properties had been independently appraised and that the statistical data presented in the Offering Documents was accurate. *See supra* ¶¶ 135-138; 143-146.

- Defendants knew or were reckless in not knowing that the mortgages they were acquiring from the various originators as quickly as possible and packaging into the Certificates sold to investors such as Plaintiff were not worthy of their high credit ratings. The ratings of the Certificates, which were in all cases rated AAA at the time they were sold to Plaintiff, have declined substantially to their current non-investment grade and/or junk ratings. *See supra* ¶¶ 151-154; 156; 158; 218-222.

- Defendants did not disclose the extent to which they abandoned their underwriting guidelines or used improper appraisals to solicit more favorable ratings from the rating agencies. Defendants collaborated with the rating agencies to obtain sufficient "credit enhancement" to obtain the highest ratings possible. *See supra* ¶¶ 159-161.

- Defendants had control over the loan files, promissory notes and security instruments of the underlying mortgages, and were responsible for ensuring that the documents were properly indorsed and transferred so as to accord with state law and the terms of the applicable PSAs. Defendants were aware that they routinely failed to transfer title to the Issuing Trusts, and attempted to conceal this fact through fraudulent filings when foreclosing on securitized mortgages. *See supra* ¶¶ 165-166; 169-170.

XII. PLAINTIFF JUSTIFIABLY RELIED ON DEFENDANTS' MISREPRESENTATIONS TO THEIR DETRIMENT

197. Plaintiff, through its agents, purchased senior classes of mortgage-backed securities (*i.e.*, those rated AAA/Aaa by the rating agencies Standard & Poor's and Moody's Investors Service). The Certificates were purchased to generate income and total return through safe investments. The securities were purchased with the expectation that the investments could be—and indeed some would be and were—purchased and sold on the secondary market.

198. In making the investments, Plaintiff and/or its agents relied upon Defendants' representations and assurances regarding the quality of the mortgage collateral underlying the Certificates, including the quality of the underwriting processes related to the underlying mortgage loans. Plaintiff and/or their agents received, reviewed, and relied upon the Offering

Documents, which described in detail the mortgage loans underlying each offering. Offering Documents containing the representations outlined above (or nearly identical, materially similar counterparts thereto) were obtained, reviewed, and relied upon before any purchase was made.

199. In purchasing the Certificates, Plaintiff and/or its agents justifiably relied on Defendants' false representations and omissions of material fact detailed above, including the misstatements and omissions in the Offering Documents. These representations materially altered the total mix of information upon which Plaintiff and/or its agents made their purchasing decisions.

200. But for the misrepresentations and omissions in the Offering Documents, Plaintiff and its agents would not have purchased or acquired the Certificates as they ultimately did, because those representations and omissions were material to their decisions to acquire the Certificates, as described above.

201. As discussed *supra*, Plaintiff is a conservative institutional investor that relied on Defendants' representations in the Offering Documents that the Certificates purchased by Plaintiff were safe, AAA-rated securities. Because Plaintiff did not have access to the loan files, appraisals or other supporting documentation for the loans underlying the Certificates, Plaintiff had no reasonable means or ability to conduct its own due diligence regarding the quality of the mortgage pool. As such, Plaintiff and its agents were forced to and did rely on the representations made by Defendants in the Offering Documents, and it was because of those representations that Plaintiff purchased the Certificates at issue in this Complaint.

A. THE INDIVIDUAL DEFENDANTS.

1. Duncan

202. As Acting Chief Financial Officer (Principal Financial Officer) of Defendant RALI and Director, Executive Vice President and Acting Chief Financial Officer (Principal

Financial Officer) of Defendant RFMSI, Duncan had the power to direct RALI and RFMSI policies relating to securitization. Duncan aided and abetted the fraud by permitting RALI and RFMSI to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Duncan personally participated in the fraud by, inter alia, signing the RFMSI Registration Statement dated August 3, 2005 and the RALI Registration Statement dated March 3, 2006.

203. In addition to serving as an officer of RALI and RFMSI, according to SEC filings, Duncan was also the Acting Chief Financial Officer of Defendants RFC, GMAC RFC and Homecomings. As Homecomings' Acting Chief Financial Officer, Duncan either knew of Homecomings' abandonment of its underwriting standards, as discussed in ¶¶ 96-104, or was reckless for not knowing of these critical matters. Furthermore, Duncan was familiar with and participated in GMAC's RMBS operations through his high-ranking positions with GMAC RFC, the parent corporation of the Depositor Defendants, and RFC, the Sponsor Defendant.

2. Flees

204. As Controller (Principal Accounting Officer) of Defendants RALI and RFMSI, Flees had the power to direct RALI and RFMSI policies relating to securitization. Flees aided and abetted the fraud by permitting RALI and RFMSI to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Flees personally participated in the fraud by, inter alia, signing the RFMSI Registration Statement dated August 3, 2005 and the RALI Registration Statement dated March 3, 2006.

205. In addition to serving as an officer of RALI and RFMSI, according to SEC filings, Flees was also the Principal Accounting Officer of Defendants RFC, GMAC RFC and Homecomings. As such, Flees either knew of Homecomings' abandonment of its underwriting standards, as discussed in ¶¶ 96-104, or was reckless for not knowing of these critical matters.

Furthermore, Flees was familiar with and participated in GMAC's RMBS operations through his high-ranking position with GMAC RFC, the parent corporation of the Depositor Defendants and Sponsor Defendant.

3. Katzmark

206. As Controller of Defendant RFMSI, Katzmark had the power to direct RFMSI policies relating to securitization. Katzmark aided and abetted the fraud by permitting RMSI to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Katzmark personally participated in the fraud by, inter alia, signing the RFMSI Registration Statement dated July 11, 2003.

4. Lundsten

207. As Attorney-in-Fact of Defendants RALI and RFMSI, Lundsten had the power to direct RALI's and RFMSI's policies relating to securitization. Lundsten aided and abetted the fraud by permitting RALI and RFMSI to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Lundsten personally participated in the fraud by, inter alia, signing the RFMSI Registration Statement dated August 3, 2005 and the RALI Registration Statement dated March 3, 2006.

208. Lundsten was familiar with and participated in GMAC's RMBS operations. According to a September 19, 2005 article in the ASSET SECURITIZATION REPORT, Lundsten became the Senior Vice President of Securitization Management at GMAC RFC in September 2005.

5. Olson

209. As a Director of Defendant RALI, and the Director, Executive Vice President and Chief Financial Officer (Principal Financial Officer) for Defendant RFSMI, Olson had the power to direct RALI's and RFMSI's policies relating to securitization. Olson aided and abetted the

fraud by permitting RALI and RFMSI to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Olson personally participated in the fraud by, inter alia, signing the RFSMI Registration Statement dated July 11, 2003 and the RALI Registration Statement dated March 3, 2006.

210. In addition to serving as a director of RALI and an officer of RFMSI, according to SEC filings, Olson was also the Chief Financial Officer of ResCap, the indirect parent company of GMAC Mortgage, and a Director of GMAC RFC, RFC, and Homecomings. As such, Olson either knew of GMAC Mortgage and Homecomings' abandonment of their underwriting standards, as discussed in ¶¶ 96-104, or was reckless for not knowing of these critical matters. According to a September 18, 2006 article in the NATIONAL MORTGAGE NEWS, Olsen was appointed the Senior Managing Director of ResCap's warehouse lending business in May 2006, a position believed to involve significant contact with and analysis of third-party mortgage originators. Furthermore, Olson was familiar with and participated in GMAC's RMBS operations through his positions with ResCap and GMAC RFC, the indirect and direct parent corporations of the Sponsor Defendant and Depositor Defendants.

6. Paradis

211. As Director, President and Chief Executive Officer (Principal Executive Officer) of Defendants RALI and RFMSI, Paradis had the power to direct RALI and RFMSI policies relating to securitization. Paradis aided and abetted the fraud by permitting RALI and RFMSI to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Paradis personally participated in the fraud by, inter alia, signing the RFSMI Registration Statements dated July 11, 2003 and August 3, 2005, and the RALI Registration Statement dated March 3, 2006.

212. In addition to serving as an officer of RALI and RFMSI, according to SEC filings, Paradis was also the co-Chief Executive Officer of ResCap, the indirect corporate parent of GMAC Mortgage and Homecomings Financial, and the Chief Executive Officer of GMAC RFC and RFC. As such, Paradis either knew of GMAC Mortgage and Homecomings' abandonment of their underwriting standards, as discussed in ¶¶ 96-104, or was reckless for not knowing of these critical matters. Furthermore, Paradis was familiar with and participated in GMAC's RMBS operations through his top-ranking positions with ResCap and GMAC RFC, the indirect and direct parents of the Sponsor Defendant and Depositor Defendants. As discussed in ¶ 75, a former GMAC employee has said that Paradis personally exhorted GMAC personnel to buy even defective loans from favored vendors so as to maintain good business relationships.

7. Steinhagen

213. As Attorney-in-Fact of Defendant RFMSI, Steinhagen had the power to direct RFMSI policies relating to securitization. Steinhagen aided and abetted the fraud by permitting RFMSI to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Steinhagen personally participated in the fraud by, inter alia, signing the RFMSI Registration Statement dated July 11, 2003.

214. In addition to serving as the Attorney-in-Fact of RFMSI, according to an April 27, 2005 article in NATIONAL MORTGAGE NEWS, Steinhagen was also the Managing Director of capital market investor relations at GMAC RFC. As such, Steinhagen was familiar with and participated in GMAC's RMBS operations through her position with GMAC RFC, the parent of the Sponsor Defendant and Depositor Defendants.

8. Walker

215. As a Director of Defendant RFMSI, Walker had the power to direct RFMSI's policies relating to securitization. Walker aided and abetted the fraud by permitting RFMSI to

purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Walker personally participated in the fraud by, inter alia, signing the RFMI Registration Statement dated July 11, 2003 and August 3, 2005.

216. In addition to serving as an officer of RFMSI, according to SEC filings, Walker was also a Director of ResCap, GMAC RFC, GMAC Mortgage, RFC, and Homecomings. As such, Walker either knew of GMAC Mortgage and Homecomings' abandonment of their underwriting standards, as discussed in ¶¶ 96-104, or was reckless for not knowing of these critical matters. Furthermore, Walker was familiar with and participated in GMAC's RMBS operations through his positions with ResCap and GMAC RFC, the indirect and direct parents of the Sponsor Defendant and Depositor Defendants.

XIII. PLAINTIFF HAS SUFFERED LOSSES AS A RESULT OF ITS PURCHASES OF THE CERTIFICATES

217. The false and misleading statements of material facts and omissions of material facts in the Offering Documents directly caused Plaintiff damage, because the Certificates were in fact far riskier than Defendants had described them to be. As set forth below, the loans underlying the Certificates experienced default and delinquency at very high rates due to Defendants' abandonment of their purported underwriting guidelines. The resulting downgrades to the Certificates ratings made them unmarketable at anywhere near the prices Plaintiff paid, causing losses to Plaintiff when those Certificates were sold.

218. Plaintiff purchased Certificates issued by RALI Series 2006-QS5 A4, when they were rated Aaa by Moody's, but the Certificates have since been downgraded twice and are currently rated Caa3.

219. Plaintiff purchased Certificates issued by RALI Series 2006-QS5 A5, when they were rated Aaa by Moody's, but the Certificates have since been downgraded twice and are

currently rated Caa3. Plaintiff purchased Certificates issued by RALI Series 2006-QS11 Trust, when they were rated Aaa by Moody's, but the Certificates have since been downgraded three times and are currently rated Caa3.

220. Plaintiff purchased Certificates issued by RALI Series 2006-QS13 Trust, when they were rated Aaa by Moody's, but the Certificates have since been downgraded three times and are currently rated Caa3.

221. Plaintiff purchased Certificates issued by RFMSI Series 2005-SA3 Trust, when they were rated Aaa by Moody's, but the Certificates have since been downgraded twice and are currently rated B3.

222. Plaintiff purchased Certificates issued by RFMSI Series 2006-S1 Trust, when they were rated Aaa by Moody's, but the Certificates have since been downgraded three times and are currently rated Caa2.

223. As a result of the multiple and material misrepresentations contained in the Offering Documents, Plaintiff has suffered losses on its purchases of Certificates. As of the filing of this Complaint, the mortgage loans in the pools held by the Issuing Trusts and underlying Plaintiff's Certificates have suffered escalating default rates and mounting foreclosures, resulting in across-the-board ratings downgrades and other negative actions by the rating agencies, as shown in the table below.

Certificates	90 Day Delinquency Rate (%)	Foreclosure Rate (%)	Current Moody's Rating
RFMSI 2005-SA3 4A	1.53	0.84	B3
RALI 2006-QS5 A4	20.18	14.23	Caa3
RALI 2006-QS5 A5	20.18	14.23	Caa3
RALI 2006-QS11 1A8	20.35	15.23	Caa3
RALI 2006-QS13 1A10	21.97	15.63	Caa3
RFMSI 2006-S1 2A	10.46	7.17	Caa2

CAUSES OF ACTION

FIRST CAUSE OF ACTION
(Common-Law Fraud)

224. Plaintiff realleges each and every allegation contained above as if fully set forth herein.

225. This claim is brought against the Depositor Defendants, the Individual Defendants, and Residential Funding (the "Common-Law Fraud Defendants").

226. As alleged in detail above, the Offering Documents contained untrue statements of material fact regarding the present creditworthiness of the Certificates and the quality of the underlying assets, omitted to state material facts necessary to make the untrue statements not misleading, and concealed and failed to disclose material facts. The Common-Law Fraud Defendants promoted and sold the Certificates purchased by Plaintiff pursuant to the defective Offering Documents. The Common-Law Defendants possessed accurate information regarding the present creditworthiness of the Certificates and the quality of the underlying assets, which was never disclosed to Plaintiff or other investors.

227. Each of the Common-Law Fraud Defendants either knew their representations and omissions were false and/or misleading at the time they were made, or made their representations with reckless disregard for their truth or falsity.

228. Each of the Common-Law Fraud Defendants made the representations and omissions in the Prospectuses and Prospectus Supplements with the intention to induce Plaintiff and other investors to act in reliance thereon.

229. At the time of the Common-Law Fraud Defendants' false statements, misrepresentations and omissions, Plaintiff was ignorant of their falsity and believed them to be true. Plaintiff justifiably relied on the Common-Law Fraud Defendants' false and misleading

representations and omissions in purchasing the Certificates. The true facts regarding the creditworthiness of the Certificates and the quality of the underlying assets, including the Originators' abandonment of their underwriting practices, the use of improper appraisal methods to value collateral, the inaccuracy of the ratings assigned by the rating agencies, and the failure to convey to the Issuing Trusts legal title to the underlying mortgages, were peculiarly within the Common-Law Fraud Defendants' knowledge and not ascertainable by Plaintiff or other investors through ordinary channels. Had Plaintiff known about these matters, Plaintiff would not have purchased the Certificates.

230. As a direct and proximate result of Plaintiff's reliance on the Common-Law Fraud Defendants' false and misleading statements and omissions, Plaintiff has suffered pecuniary damages in connection with its purchase of the Certificates.

SECOND CAUSE OF ACTION
(Aiding & Abetting Fraud)

231. Plaintiff realleges each and every allegation contained above as if fully set forth herein.

232. This claim is brought against all Defendants (the "Aiding and Abetting Defendants") for aiding and abetting the fraudulent and reckless misrepresentations by all Defendants and/or RALI, RFMSI, and Residential Funding. Each of these Defendants aided and abetted the fraud committed by all of the other Defendants

233. As alleged in detail above, RALI, RFMSI and Residential Funding knowingly promoted and sold Certificates to Plaintiff pursuant to materially misleading Offering Documents, thereby damaging Plaintiff. The Aiding and Abetting Defendants knew of the fraud perpetrated on Plaintiff by RALI, RFMSI and Residential Funding. The Aiding and Abetting Defendants directed, supervised and otherwise knew of the abandonment of underwriting

practices and the utilization of improper appraisal methods; the inaccuracy of the ratings assigned by the rating agencies; and the failure to convey to the Issuing Trusts legal title to the underlying mortgages.

234. The Aiding and Abetting Defendants provided RALI, RFMSI and Residential Funding with substantial assistance in perpetrating the fraud. The Aiding and Abetting Defendants participated in the violation of mortgage loan underwriting and appraisal standards; made false public statements about mortgage loan underwriting and appraisal standards; provided false information about the mortgage loans underlying the Certificates to the rating agencies; provided false information for use in the Offering Documents; and/or participated in the failure to properly endorse and deliver the mortgage notes and security documents to the Issuing Trusts.

235. It was foreseeable to the Aiding and Abetting Defendants at the time they actively assisted in the commission of the fraud that Plaintiff would be harmed as a result of their assistance.

236. As a direct and natural result of the fraud committed by RALI, RFMSI and Residential Funding, and the knowing and active participation by the Aiding and Abetting Defendants, Plaintiff has suffered substantial damages.

THIRD CAUSE OF ACTION
(Negligent Misrepresentation)

237. Plaintiff realleges each and every allegation contained above as if fully set forth herein.

238. This claim is brought against the Depositor Defendants, the Individual Defendants, and Residential Funding (the "Negligent Misrepresentation Defendants").

239. The Negligent Misrepresentation Defendants were in the business of underwriting home mortgage loans, pooling the mortgage assets for securitization, issuing RMBS, and marketing RMBS to investors. The Negligent Misrepresentation Defendants received pecuniary compensation from the sale of the Certificates.

240. In the course of selling the Certificate, the Negligent Misrepresentation Defendants drafted and distributed the Offering Documents for the guidance of investors such as Plaintiff. The Offering Documents purported to contain material information regarding the creditworthiness of the Certificates and the quality of the underlying assets, and the Negligent Misrepresentation Defendants anticipated that investors would rely on this information in deciding whether or not to purchase Certificates.

241. As an investor in the Certificates, Plaintiff is one of a limited group of persons whom the Negligent Misrepresentation Defendants intended would rely on the information in the Offering Documents.

242. The true facts regarding the creditworthiness of the Certificates and the quality of their underlying assets, including the Originators' abandonment of their underwriting practices, the use of improper appraisal methods to value collateral, the inaccuracy of the ratings assigned by the rating agencies, and the failure to convey to the Issuing Trusts legal title to the underlying mortgages, were peculiarly within the Negligent Misrepresentation Defendants' knowledge and not ascertainable by Plaintiff or other investors through ordinary channels. Because the Negligent Misrepresentation Defendants possessed special knowledge on these matters, they owed Plaintiff a duty to use reasonable care to ensure that their statements on these matters were not untrue or misleading.

243. The Negligent Misrepresentation Defendants negligently breached and violated this duty to use reasonable care. As alleged above, the Offering Documents contained untrue statements of material fact regarding the present creditworthiness of the Certificates and the quality of the underlying assets, omitted to state material facts necessary to make the untrue statements not misleading, and concealed and failed to disclose material facts. At the time the Negligent Misrepresentation Defendants provided the Offering Documents to Plaintiff, the Negligent Misrepresentation Defendants had no reasonable grounds to believe that the information contained therein regarding the creditworthiness of the Certificates and the quality of the underlying assets was true.

244. At the time of the Negligent Misrepresentation Defendants' false statements, misrepresentations and omissions, Plaintiff was ignorant of their falsity and believed them to be true. Plaintiff justifiably relied on the Negligent Misrepresentation Defendants' false and misleading representations and omissions in purchasing the Certificates. Had Plaintiff known the truth about the creditworthiness of the Certificates and the quality of the underlying assets, Plaintiff would not have purchased the Certificates.

245. As a direct and proximate result of Plaintiff's reliance on the Negligent Misrepresentation Defendants to provide accurate information regarding the Certificates and their underlying assets, and the Negligent Misrepresentation Defendants' negligent breach of that duty of care, Plaintiff has suffered pecuniary damages in connection with its purchase of the Certificates.

FOURTH CAUSE OF ACTION
(Violation of Minnesota Securities Act)

246. Plaintiff realleges each and every allegation contained above as if fully set forth herein.

247. This claim is brought under the Minnesota Securities Act against the Depositor Defendants, the Individual Defendants, and Residential Funding (the "MSA Defendants"). The MSA Defendants (a) employed devices, schemes, and artifices to defraud; (b) made untrue statements of material fact and/or omitted material facts necessary to make the statements not misleading; and (c) engaged in acts, practices and a course of business which operated as a fraud and deceit upon Plaintiff, in violation of Minn. Stat §§ 80A.68 and 80A.76(b).

248. As alleged in detail above, the Offering Documents contained untrue statements of material fact regarding the present creditworthiness of the Certificates and the quality of the underlying assets, omitted to state material facts necessary to make the untrue statements not misleading, and concealed and failed to disclose material facts. The MSA Defendants promoted and sold the Certificates purchased by Plaintiff pursuant to the defective Offering Documents.

249. Each of the MSA Defendants either knew their representations and omissions were false and/or misleading at the time they were made, or made their representations with reckless disregard for their truth or falsity.

250. Each of the MSA Defendants made the representations and omissions in the Prospectuses and Prospectus Supplements with the intention to induce Plaintiff and other investors to act in reliance thereon.

251. At the time of the MSA Defendants' false statements, misrepresentations and omissions, Plaintiff was ignorant of their falsity and believed them to be true. Plaintiff justifiably relied on the MSA Defendants' false and misleading representations and omissions in purchasing the Certificates. The true facts regarding the creditworthiness of the Certificates and the quality of the underlying assets, including the Originators' abandonment of their underwriting practices, the use of improper appraisal methods to value collateral, the inaccuracy

of the ratings assigned by the rating agencies, and the failure to convey to the Issuing Trusts legal title to the underlying mortgages, were peculiarly within the MSA Defendants' knowledge and not ascertainable by Plaintiff or other investors through ordinary channels. Had Plaintiff known about these matters, Plaintiff would not have purchased the Certificates.

252. As a direct and proximate result of Plaintiff's reliance on the MSA Defendants' false and misleading statements and omissions, Plaintiff has suffered pecuniary damages in connection with its purchase of the Certificates.

253. By virtue of the foregoing, the MSA Defendants have violated Minn. Stat § 80A.68 and are liable to Plaintiff pursuant to Minn. Stat. § 80A.76(b).

PRAYER FOR RELIEF

WHEREFORE, Plaintiff prays for relief and judgment, as follows:

An award in favor of Plaintiff against Defendants, jointly and severally, for all damages sustained as a result of Defendants' wrongdoing, in an amount to be proven at trial, but including at a minimum:

(i) Plaintiff's monetary losses, including loss of market value and loss of principal and interest payments;

(ii) Rescission and recovery of the consideration paid for the Certificates, with interest thereon;

(iii) Plaintiff's costs and disbursements in this suit, including reasonable attorneys' fees and expert fees;

(iv) Prejudgment interest at the maximum legal rate; and

(v) Such other and further relief as the Court deems just and proper.

JURY DEMAND

Plaintiff hereby demands a trial by jury.

Exhibit 9

IN THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF MASSACHUSETTS

MASSACHUSETTS MUTUAL LIFE INSURANCE COMPANY,

Plaintiff,

v.

RESIDENTIAL FUNDING COMPANY, LLC (F/K/A RESIDENTIAL FUNDING CORPORATION); RESIDENTIAL ACCREDIT LOANS, INC.; RESIDENTIAL ASSET MORTGAGE PRODUCTS, INC.; RESIDENTIAL ASSET SECURITIES CORPORATION; RESIDENTIAL FUNDING SECURITIES, LLC (F/K/A RESIDENTIAL FUNDING SECURITIES CORPORATION); UBS SECURITIES LLC; BRUCE J. PARADIS; DAVEE L. OLSON; DAVID C. WALKER; KENNETH M. DUNCAN; RALPH T. FLEES; JAMES G. JONES; and DAVID M. BRICKER,

Defendants.

Civil Action No. 3:11-30035-MAP

[PROPOSED] FIRST AMENDED COMPLAINT

JURY TRIAL DEMANDED

Plaintiff Massachusetts Mutual Life Insurance Company ("MassMutual"), by and through its attorneys, brings this action against Residential Funding Company, LLC (f/k/a Residential Funding Corporation); Residential Accredit Loans, Inc.; Residential Asset Mortgage Products, Inc.; Residential Asset Securities Corporation; and Residential Funding Securities, LLC (f/k/a Residential Funding Securities Corporation) (collectively, "RFC" or the "RFC Defendants"); UBS Securities LLC (the "Underwriter Defendant"); and Bruce J. Paradis; Davee L. Olson; David C. Walker; Kenneth M. Duncan; Ralph T. Flees; James G. Jones; and David M. Bricker (collectively, the "Officer Defendants"), and alleges as follows:

NATURE OF ACTION

1. This action arises out of the sale of certain residential mortgage-backed securities (the "Certificates") to MassMutual. The Certificates were sold pursuant to public filings and offering materials that contained untrue statements and omissions of material facts, in violation of the Massachusetts Uniform Securities Act, Mass. Gen. Laws ch. 110A, § 410.

2. In 2004, General Motors Acceptance Corporation formed Residential Capital, LLC ("Residential Capital") to take advantage of the exploding market for residential mortgage-backed securities. Residential Capital's business focused on the origination, purchase, service, sale, and securitization of residential mortgage loans.

3. The RFC Defendants, all wholly owned subsidiaries of Residential Capital, originated and purchased mortgage loans that could not be sold to the Federal Home Loan Mortgage Corporation ("Freddie Mac") or the Federal National Mortgage Association ("Fannie Mae"). Instead, the RFC Defendants securitized these non-conforming loans for sale to investors, such as MassMutual. They earned substantial profits originating and securitizing the loans, but they did not have to bear the loss if the loans defaulted.

4. In marketing the Certificates to MassMutual, the RFC Defendants and Underwriter Defendant represented that the loans backing the securities were underwritten in accordance with prudent underwriting standards that ensured a borrower could repay the loan. The RFC Defendants and Underwriter Defendant also represented that the loans had certain characteristics, including defined loan-to-value ratios and specific owner-occupancy statistics.

5. These representations were material to MassMutual's decision to purchase Certificates because the RFC Defendants and Underwriter Defendant were the exclusive source of information regarding the loans backing the securities. Unlike the RFC Defendants and Underwriter Defendant, MassMutual did not have access to loan files. MassMutual therefore depended on the RFC Defendants and Underwriter Defendant to perform the necessary due diligence to verify that the information presented to it and other investors was true and accurate.

6. In reality, however, the loans backing the Certificates deviated substantially from what was represented to MassMutual. To generate an ever-growing volume of loans to sell to investors, the RFC Defendants abandoned their disclosed underwriting guidelines, often originating or purchasing loans issued to borrowers regardless of ability to repay. The loans were issued on the basis of overstated incomes, inflated appraisals, false verifications of employment, and exceptions to underwriting criteria that had no proper justification.

7. Just years after MassMutual purchased the Certificates, they now qualify as junk. In a majority of the 18 securitizations in which MassMutual purchased Certificates, over 40% of the loans backing the securities have now defaulted, been foreclosed upon, or are delinquent. A subsequent forensic analysis commissioned by MassMutual has demonstrated that the representations about the loans in all the securitizations were materially false. Under the

Massachusetts Uniform Securities Act, MassMutual is entitled to rescind its purchase of these securities.

PARTIES

A. Plaintiffs

8. Plaintiff Massachusetts Mutual Life Insurance Company is a Massachusetts mutual life insurance company with its principal place of business in Springfield, Massachusetts. Founded in 1851, MassMutual is a leading, diversified financial services organization providing life insurance, disability income insurance, long-term care insurance, annuities, retirement and income products, investment management, mutual funds, and trust services to individual and institutional customers.

B. RFC Defendants

9. Defendant Residential Funding Company, LLC is a Delaware limited liability company with its principal place of business in Minneapolis, Minnesota. Prior to approximately October 2006, Residential Funding Company, LLC operated as Residential Funding Corporation, a Delaware corporation with its principal place of business in Minneapolis, Minnesota. Residential Funding Company, LLC and its predecessor, Residential Funding Corporation, are referred to herein as "Residential Funding." Residential Funding was the Sponsor for all securitizations at issue in this action.

10. Defendant Residential Accredit Loans, Inc. ("RALI") is a Delaware corporation with its principal place of business in Minneapolis, Minnesota. RALI was the Depositor for 10 of the 18 securitizations at issue in this action.

11. Defendant Residential Asset Mortgage Products, Inc. ("RAMP") is a Delaware corporation with its principal place of business in Minneapolis, Minnesota. RAMP was the Depositor for 6 of the 18 securitizations at issue in this action.

12. Defendant Residential Asset Securities Corporation ("RASC") is a Delaware corporation with its principal place of business in Minneapolis, Minnesota. RASC was the Depositor for 2 of the 18 securitizations at issue in this action.

13. Defendant Residential Funding Securities, LLC is a Delaware limited liability company with its principal place of business in Minneapolis, Minnesota. Prior to approximately April 2006, Residential Funding Securities, LLC operated as Residential Funding Securities Corporation, a Delaware corporation with its principal place of business in Minneapolis, Minnesota. Residential Funding Securities, LLC and Residential Funding Securities Corporation are referred to herein as "Residential Securities." Residential Securities was the Underwriter for 4 of the 18 securitizations at issue in this action.

C. Underwriter Defendant

14. Defendant UBS Securities LLC ("UBS") is a Delaware limited liability company with its principal place of business in Stamford, Connecticut. UBS was the Underwriter for 1 of the 18 securitizations at issue in this action.

D. Officer Defendants

15. Defendant Bruce J. Paradis joined Residential Funding in 1983, and served in several executive positions prior to becoming its President and Chief Executive Officer in 1994. At all relevant times, Paradis also served as President of Residential Securities. In addition, Paradis served as President, Chief Executive Officer, and a director of each of RALI, RAMP, and RASC. Paradis signed registration statements for 17 of the 18 securitizations at issue in this action.

16. Defendant Davee L. Olson served as an officer of Residential Funding for over 15 years. He served as a vice president of finance from 1987 until 1990, as a senior vice president of finance from 1990 until 1991, and as the Chief Financial Officer from 1991 to January 2005.

Olson also served as a director of RALI, as the Chief Financial Officer and a director of RAMP, and as a director of RASC. Olson signed registration statements for 14 of the 18 securitizations at issue in this action.

17. Defendant David C. Walker joined General Motors Acceptance Corporation, the parent company of Residential Funding, in 1985. He served as managing director, Chief Financial Officer, and a member of the board of directors of GMAC Mortgage Group since January 2000, and as director of U.S. funding and securitization at GMAC from September 1998 until December 1999. Walker also served as a director of each of Residential Funding, RALI, and RAMP. Walker signed registration statements for 4 of the 18 securitizations at issue in this action.

18. Defendant Kenneth M. Duncan served as Acting Chief Financial Officer of each of Residential Funding, RALI, RAMP, and RASC. Duncan signed registration statements for 16 of the 18 securitizations at issue in this action.

19. Defendant Ralph T. Flees served as Controller and Principal Accounting Officer of each of RALI, RAMP, and RASC. Flees signed registration statements for 17 of the 18 securitizations at issue in this action.

20. Defendant James G. Jones was President, Chief Financial Officer, and a director of RALI. Jones signed the registration statement for one securitization at issue in this action.

21. Defendant David M. Bricker was the Chief Financial Officer and a director of RALI. Bricker signed the registration statement for one securitization at issue in this action.

E. Relevant Non-Parties

22. The Certificates for each securitization relevant to this action were issued by a trust established by the Depositor. The 18 issuing trusts (collectively, the "Trusts") were: RALI Series 2005-QO3 Trust, RALI Series 2005-QO4 Trust, RAMP Series 2005-RZ1 Trust, RAMP

Series 2006-EFC2 Trust, RASC Series 2006-EMX6 Trust, RALI Series 2006-QA6 Trust, RALI Series 2006-QO1 Trust, RALI Series 2006-QO3 Trust, RALI Series 2006-QO4 Trust, RALI Series 2006-QO5 Trust, RALI Series 2006-QO6 Trust, RALI Series 2006-QO9 Trust, RAMP Series 2006-RS4 Trust, RAMP Series 2006-RS6 Trust, RAMP Series 2006-RZ3 Trust, RASC Series 2007-KS3 Trust, RALI Series 2007-QH6 Trust, and RAMP Series 2007-RZ1 Trust.

23. At all relevant times, the defendants committed the acts, caused or directed others to commit the acts, or permitted others to commit the acts alleged in this Complaint. Any allegations about acts of corporate defendants means that those acts were committed through their officers, directors, employees, agents, and/or representatives while those individuals were acting within the actual or implied scope of their authority.

JURISDICTION AND VENUE

24. This Court has diversity jurisdiction pursuant to 28 U.S.C. § 1332(a), as there is complete diversity of citizenship between the parties, and the amount in controversy exceeds $75,000, exclusive of interest and costs.

25. This Court has personal jurisdiction over the defendants by virtue of their securities sales in Massachusetts.

26. Venue is proper in the District of Massachusetts pursuant to 28 U.S.C. § 1391, because substantial events giving rise to this Complaint took place in Massachusetts.

SUBSTANTIVE ALLEGATIONS

27. During the time that MassMutual purchased the Certificates, the RFC Defendants were all wholly owned subsidiaries of Residential Capital, LLC, formerly Residential Capital Corporation (Residential Capital). The RFC Defendants operated collectively, as an enterprise, to structure and market the 18 securitizations at issue in this action.

28. Residential Capital was formed by General Motors Acceptance Corporation in 2004 to take advantage of the exploding market for residential mortgage-backed securities.

I. THE MARKET FOR RESIDENTIAL MORTGAGE-BACKED SECURITIES

29. In the 1980's and 1990's, mortgage originators followed a traditional model for originating mortgage loans. Under the traditional model, they either held the mortgage loans they provided to borrowers through the terms of the loans, or sold the mortgage loans to governmental agencies Fannie Mae and Freddie Mac.

30. Loans held by mortgage originators were typically conservative, first-lien loans to prime borrowers because the originator would profit if the borrower made timely interest and principal payments, but would bear the loss if the borrower defaulted and the property value was insufficient to repay the loan. As a result, the originator had economic incentives to establish the creditworthiness of the borrower and the true value of the underlying property by appraising it fairly before issuing the mortgage loan.

31. Loans sold to Fannie Mae and Freddie Mac were also conservative loans to prime borrowers because the loans had to meet specific guidelines for sale. By law, Fannie Mae and Freddie Mac can purchase only those mortgage loans that conform to certain regulatory guidelines. These loans are known in the industry as conforming loans, and are historically the most conservative loans with the lowest rates of delinquency and default. Mortgage loans that fail to meet the regulatory guidelines are known in the industry as non-conforming loans.

32. In the 1980's and 1990's, Fannie Mae and Freddie Mac securitized the loans they purchased from mortgage originators and sold the securities backed by the loans, referred to as residential mortgage-backed securities, to investors. Investors in these early mortgage-backed securities were provided protections not only because the underlying loans conformed to strict regulatory guidelines, but also because Fannie Mae and Freddie Mac guaranteed that investors

would receive timely payments of principal and interest. Because Fannie Mae and Freddie Mac were perceived as being backed by the federal government, investors viewed the guarantees as diminishing credit risk, if not removing it altogether.

33. In the early 2000's, the demand for securities backed by mortgage loans increased. Private financial institutions stepped in to meet the demand by originating an ever-growing number of non-conforming loans, such as loans based on reduced documentation, loans issued to subprime borrowers, and adjustable loans where the interest rate increases after a period of time. These loans were then securitized for sale to private investors. By 2001, $240 billion in residential mortgage-backed securities were issued through private securitizations. By 2006, that amount had increased by almost five times to $1.033 trillion.

34. Residential Capital was formed to take advantage of this exploding market. According to Inside Mortgage Finance, Residential Capital issued $42.336 billion in residential mortgage-backed securities in 2004 and $56.93 billion in 2005. In 2005, Residential Capital was the fifth-largest issuer of securities backed by non-conforming loans. In 2006, Residential Capital increased its production to $66.2 billion in residential mortgage-backed securities, and became the fourth-largest issuer of securities backed by non-conforming loans. In 2007, Residential Capital issued $6.6 billion of subprime residential mortgage-backed securities and an additional $22.2 billion of Alt-A securities.

II. THE SECURITIZATION PROCESS

35. To create residential mortgage-backed securities, such as the Certificates purchased by MassMutual, a process known as mortgage securitization is used. Mortgage loans are acquired from mortgage originators and pooled together, with securities constituting interests in the cash flow from the mortgage pools then sold to investors. The securities are also referred to as mortgage pass-through securities because the cash flow from the pool of mortgages is

passed through to the securities holders when payments are made by the underlying mortgage borrowers.

36. Each securitization involves several entities that perform distinct tasks. The first step in creating a residential mortgage-backed security, such as the Certificates, is the acquisition by the Depositor of an inventory of mortgage loans from a Sponsor (also referred to as a Seller), which either originates the loans or acquires the loans from other mortgage originators in exchange for cash. The Depositor is often a subsidiary or other affiliate of the Sponsor.

37. The Depositor then securitizes the pool of loans by forming one or more mortgage pools with the inventory of loans, and creating tranches of interests in the mortgage pools with various levels of seniority. Interests in these tranches are then issued by the Depositor (who then serves as the Issuer) through a trust in the form of bonds, or certificates.

38. Each tranche has a different level of purported risk and reward, and, often, a different credit rating. The most senior tranches often receive the highest investment grade rating (triple-A). Junior tranches, which usually have lower ratings, are more exposed to risk, but offer higher potential returns. The most senior tranches of securities will be entitled to payment in full before the junior tranches. Conversely, losses on the underlying loans in the asset pool □whether due to default, delinquency, or otherwise □are allocated first to the most subordinate or junior tranche of securities, then to the tranche above that. This hierarchy in the division of cash flows is referred to as the flow of funds or waterfall.

39. The Depositor works with one or more of the nationally recognized credit-rating agencies to ensure that each tranche of the mortgage-backed securities receives the rating desired by the Depositor (and Underwriter). Once the asset pool is securitized, the certificates are issued

to one or more Underwriters (typically Wall Street banks), who resell them to investors, such as MassMutual.

40. Because the cash flow from the loans in the mortgage pool of a securitization is the source of funds to pay the holders of the securities issued by the trust, the credit quality of the securities depends primarily on the credit quality of the loans in the mortgage pool, which often includes thousands of loans. Detailed information about the credit quality of the loans is contained in the loan files developed and maintained by the mortgage originators when making the loans. For residential mortgage loans, such as the loans that backed the Certificates purchased by MassMutual, each loan file normally contains documents including the borrower's application for the loan, verification of income, assets, and employment, references, credit reports, and an appraisal of the property that will secure the loan and provide the basis for other measures of credit quality, such as loan-to-value ratios, and occupancy status. The loan file should also include notes from the person who underwrote the loan describing the loan's purported compliance with underwriting guidelines, and documentation of compensating factors that justified any departure from those standards.

41. Investors do not have access to the loan files. Instead, the Sponsor, Depositor, and Underwriter are responsible for gathering and verifying information about the credit quality and characteristics of the loans that are deposited into the trust, and presenting this information in the registration statements, prospectuses, and prospectus supplements (collectively, the "Offering Materials") prepared for potential investors. This due diligence process is a critical safeguard for investors and a fundamental legal obligation of the Sponsor, Depositor, and Underwriter.

III. MASSMUTUAL'S PURCHASES OF RFC CERTIFICATES

42. MassMutual purchased Certificates sponsored by Residential Funding between March 2005 and June 2007. MassMutual made the following purchases of Certificates, representing a total investment of approximately $300 million, from the following defendants:

Asset	Full Name of Offering	Purchase Price	Seller Defendants
RAMP Series 2005-RZ1, Class M1 and Class M2	Residential Asset Mortgage Products, Inc. Series 2005-RZ1	9,250,000.00	Residential Funding Corporation (Sponsor) Residential Asset Mortgage Products, Inc. (Depositor)
RALI Series 2005-QO3 , Class A1	Residential Accredit Loans, Inc. Series 2005-QO3	23,544,062.50	Residential Funding Corporation (Sponsor) Residential Accredit Loans, Inc. (Depositor) Residential Funding Securities Corporation (Underwriter)

TOTAL		295,067,936.78	

IV. DEFENDANTS' ABANDONMENT OF THEIR DISCLOSED UNDERWRITING STANDARDS TO FACILITATE SALE OF LOW-QUALITY LOANS TO INVESTORS

A. RFC's Representations That It Consistently Followed Underwriting Standards

43. The fundamental basis upon which residential mortgage-backed securities are valued is the ability of the borrowers to repay the principal and interest on the underlying loans and the adequacy of the collateral for those loans. If the borrowers cannot pay, and the collateral is insufficient, the investors incur losses. For this reason, the underwriting standards and practices of the mortgage originator that issued the loans backing the certificates, and the representations in the Offering Materials regarding those standards, are critically important to the value of the securities, and to investors decisions to purchase the securities.

44. As Sponsor of the securitizations at issue, Residential Funding either originated the underlying mortgage loans through its wholly owned subsidiary, Homecomings Financial,

LLC, formerly Homecomings Financial Network, Inc. ("Homecomings"), or purchased them from other originators. Each loan was purportedly underwritten according to a set of underwriting guidelines, which are specified criteria that the mortgage loans must meet depending upon the individual loan program and circumstances of each mortgage loan. In general, the underwriting guidelines stipulated what documentation was required to be included in the mortgage loan files for each loan product (which may include, depending upon the loan product, verifications of income, assets, closing funds and payment histories, among others) and criteria for eligibility, including tests for debt-to-income ("DTI") and combined loan-to-value ("CLTV") ratios.

45. The RFC Defendants represented to investors that the securitized loans were underwritten according to meaningful underwriting standards.

46. From 2005 to 2007, Residential Capital consistently reported in its public filings for itself and its subsidiaries, including all RFC Defendants, that underwriting standards were consistently applied, even for non-conforming loans, to confirm a borrower's credit profile and to produce performing loans:

> All mortgage loans that we originate and most of the mortgage loans we purchase are subject to our underwriting guidelines and loan origination standards. When originating mortgage loans . . . , we follow established lending policies and procedures that require consideration of a variety of factors, including:
>
> - the borrower's capacity to repay the loan;
> - the borrower's credit history;
> - the relative size and characteristics of the proposed loan; and
> - the amount of equity in the borrower's property (as measured by the borrower's loan-to-value ratio).

> Our underwriting standards have been designed to produce loans that meet the credit needs and profiles of our borrowers, thereby creating more consistent performance characteristics for investors in our loans.

47. Residential Capital also consistently reported from 2005 to 2006 that quality control and periodic audits ensured the consistent application of underwriting standards:

> We also conduct a variety of quality control procedures and periodic audits to ensure compliance with our origination standards, including our responsible lending standards and legal requirements. Although many of these procedures involve manual reviews of loans, we seek to leverage our technology in further developing our quality control procedures. For example, we have programmed many of our compliance standards into our loan origination systems and continue to use and develop automated compliance technology to mitigate regulatory risk.

48. Representations about the underwriting standards were repeated in the Offering Materials for each of the 18 securitizations.

49. The Offering Materials promised investors that the mortgage originators for the loans had collected a variety of financial information about a borrower to ensure that the borrower could repay the loan:

> As part of the description of the mortgagor s financial condition, each mortgagor is required to furnish information . . . regarding its assets, liabilities, income (except as described below), credit history and employment history, and to furnish an authorization to apply for a credit report which summarizes the borrower s credit history with local merchants and lenders and any record of bankruptcy. The mortgagor may also be required to authorize verifications of deposits at financial institutions where the mortgagor had demand or savings accounts.

50. The Offering Materials promised investors that only borrowers who could repay loans had received them:

> Based on the data provided in the application and certain verifications, if required, and the appraisal or other valuation of the mortgaged property, a determination will have been made by the original lender that the mortgagor s monthly income, if required to be stated, would be sufficient to enable the mortgagor to meet its monthly obligations on the mortgage loan and other expenses related to the property . . . . Generally, scheduled

> payments on a mortgage loan during the first year of its term plus taxes and insurance and all scheduled payments on obligations that extend beyond ten months, including those mentioned above and other fixed obligations, must equal no more than specified percentages of the prospective mortgagor's gross income.

51. The Offering Materials also promised investors that Residential Funding itself had reviewed the underwriting information to confirm compliance with underwriting standards:

> Prior to assigning the mortgage loans to the depositor, Residential Funding will have reviewed the underwriting information provided . . . for the mortgage loans and, in those cases, determined that the mortgage loans were generally originated in accordance with or in a manner generally consistent with the underwriting standards . . . .

52. The review by Residential Funding including sampling mortgage loans to confirm conformity with underwriting standards and likelihood of repayment:

> Residential Funding Corporation, on behalf of the depositor, typically will review a sample of the mortgage loans purchased by Residential Funding Corporation for conformity with the applicable underwriting standards and to assess the likelihood of repayment of the mortgage loan from the various sources for such repayment, including the mortgagor, the mortgaged property, and primary mortgage insurance, if any.

53. Finally, the Offering Materials promised investors that all loans were issued in substantial compliance with underwriting standards, and that any deviation from a specific criteria was justified by sufficient positive compensating factors:

> [A] mortgage loan will be considered to be originated in accordance with the underwriting standards described above if, based on an overall qualitative evaluation, the loan is in substantial compliance with the underwriting standards. For example, a mortgage loan may be considered to comply with the underwriting standards described above, even if one or more specific criteria included in the underwriting standards were not satisfied, if other factors positively compensated for the criteria that were not satisfied.

B. RFC's Abandonment of Underwriting Standards to Generate a Large Volume of Loans for Securitization, With Investors Bearing the Risk of Loss

54. The securitization process incentivized RFC to abandon underwriting standards so that it could originate and purchase huge volumes of low-quality loans to securitize.

55. As the private residential mortgage-backed securities market expanded, the traditional "originate to hold" model morphed into the "originate to distribute" model. Under the "originate to distribute" model, mortgage companies, such as the RFC Defendants, no longer held the mortgage loans to maturity. Rather, they shifted the risk of loss to the investors who purchased an interest in the securitized pool of loans.

56. The new distribution model was highly profitable for the RFC Defendants and other mortgage companies. By securitizing and selling mortgage loans to investors through underwriters, mortgage companies received immediate payment for the loans, shifted the loans off their books, and were able to issue more loans. The securitization process enabled the mortgage companies to earn most of their income from transaction and loan-servicing fees. Because the mortgage companies did not have to bear the risk of loss, they had an unchecked incentive to originate more and more loans to feed into the securitization machine.

57. The Attorney General for the Commonwealth of Massachusetts explained this unchecked incentive in her investigation into the subprime mortgage industry:

> Historically, the vast majority of home mortgages were written by banks which held the loans in their own portfolios, knew their borrowers, and earned profit by writing good loans and collecting interest over many years. Those banks had to live with their "bad paper" and thus had a strong incentive to avoid making bad loans. In recent years, however, the mortgage market has been driven and funded by the sale and securitization of the vast majority of loans. Lenders now frequently make mortgage loans with the intention to promptly sell the loan and mortgage to one or more entities. ... The lenders' incentives thus changed from writing good loans to writing a huge volume of loans to re-sell, extracting their profit at the front end, with considerably less regard to the ultimate performance of the loans.

58. Ben Bernanke, Chairman of the Federal Reserve Bank, also explained the incentive to abandon underwriting standards in Congressional testimony:

> When an originator sells a mortgage and its servicing rights, depending on the terms of the sale, much or all of the risks are passed on to the loan purchaser. Thus, originators who sell loans may have less incentive to undertake careful underwriting than if they kept the loans. Moreover, for some originators, fees tied to loan volume made loan sales a higher priority than loan quality. This misalignment of incentives, together with strong investor demand for securities with high yields, contributed to the weakening of underwriting standards.

59. To take advantage of the exploding market for residential mortgage-backed securities, the RFC Defendants abandoned their disclosed underwriting guidelines to originate and purchase as many loans as possible for securitization.

60. Unbeknownst to MassMutual, the RFC Defendants originated or purchased loans that had been issued to borrowers, regardless of their ability to pay. The loans were often issued on the basis of overstated incomes, inflated appraisals, false verifications of employment, or exceptions to underwriting criteria that had no proper justification. The origination practices engaged in by the RFC Defendants and the originators from which they purchased were in blatant disregard of RFC's disclosed underwriting standards, and any semblance of reasonable and prudent underwriting.

61. The RFC Defendants' abandonment of their underwriting guidelines has been the subject of multiple investigations and lawsuits. For example, in the case *MBIA Insurance Co. v. Residential Funding Corp.*, No 603552-2008 (NY State Supreme Court), MBIA states that it obtained mortgage loans for multiple RFC transactions and found that out of 7,913 loans examined, "at least 7,019 [more than 88% of the mortgage loans that MBIA reviewed] were not originated or acquired in material compliance with RFC's representations and warranties." Similarly, in *New Jersey Carpenters Health Fund, et al v. Residential Capital, LLC*, et al, 08-

CV-8781 (S.D.N.Y. 2008), plaintiff pension funds alleged violations of underwriting guidelines and misrepresentations relating to underwriting guidelines by RFC in the Offering Materials of 10 RFC sponsored securities, including 2 at issue here—RALI 2006-QO6 and RALI 2006-QO9. In that complaint, plaintiffs state, "The descriptions of the underwriting guidelines included in the Offering Documents described the policies employed by RFC, by way of its wholly-owned subsidiary [Homecomings] in examining borrower creditworthiness and verifying borrower information . . . and in conducting appraisals of the mortgaged properties . . . . These portions of the Offering Documents also contained misstatements and omissions since, as has emerged only well after issuance of the Certificates, [Homecomings] and its correspondent lenders systematically disregarded the stated underwriting guidelines set forth in the Offering Documents."

C. Widespread Defaults That Confirm RFC's Abandonment of Its Underwriting Standards

62. Even though the Certificates purchased by MassMutual were supposed to be long-term, stable investments, just years after their issuance, a substantially high percentage of the mortgage loans backing the Certificates have defaulted, been foreclosed upon, or are delinquent, resulting in massive losses to the certificateholders, including MassMutual. The following table contains the most recent performance data available for the loan pools:

Transaction	Number of Loans in Pool at Closing	Current Number of Loans in Pool	Number of Loans Liquidated or Foreclosed Upon	Number of Loans in Default or Delinquent	% of Loans Liquidated, Foreclosed Upon, in Default or Delinquent
RALI 2005-QO3	1414	254	348	91	31.05%
RALI 2005-QO4	2306	458	600	154	32.70%
RALI 2006-QA6	2226	627	860	75	42.00%
RALI 2006-QO1	2807	589	856	177	36.80%
RALI 2006-QO3	1897	422	644	154	42.07%
RALI 2006-QO4	2470	579	881	215	44.37%
RALI 2006-QO5	2975	715	1119	294	47.50%
RALI 2006-QO6	3651	926	1393	325	47.06%

RALI 2006-QO9	2553	723	1062	286	52.80%
RALI 2007-QH6	1549	563	603	222	53.26%
RAMP 2005-RZ1	1379	315	184	10	14.07%
RAMP 2006-EFC2	2385	727	778	80	35.97%
RAMP 2006-RS4	5288	1400	576	170	14.11%
RAMP 2006-RS6	1610	480	704	33	45.78%
RAMP 2006-RZ3	4604	1455	1704	152	40.31%
RAMP 2007-RZ1	1904	683	692	71	40.07%
RASC 2006-EMX6	3989	773	1944	156	52.64%
RASC 2007-KS3	8173	3022	2812	365	38.87%

63. Many of MassMutual's investments initially received the highest possible Standard & Poor's rating—AAA—which has historically represented an expected loss rate of less than .05%. This is the same rating typically given to bonds backed by the full faith and credit of the United States government, such as treasury bills. According to S&P's whitepaper, "Understanding Standard & Poor's Rating Definitions," a AAA rating represents an "extremely strong capacity to meet its financial commitments."

64. Because of the high delinquency and default rates, among other things, however, most of the Certificates have been downgraded to junk-bond ratings, as can be seen in the following table:

Certificate	Original S&P Rating	Current S&P Rating	Original Moody's Rating	Current Moody's Rating
RALI 2005-QO3 A1	AAA	CCC	Aaa	Caa2
RALI 2005-QO4 2A1	AAA	CCC	Aaa	Caa3
RALI 2006-QA6 A2	AAA	CC	Aaa	Caa3
RALI 2006-QA6 A3	AAA	CC	Aaa	Caa3
RALI 2006-QO1 3A1	AAA	CCC	Aaa	Caa3
RALI 2006-QO3 A1	AAA	CCC	Aaa	Caa2
RALI 2006-QO4 2A1	AAA	B-	Aaa	Caa3
RALI 2006-QO5 2A1	AAA	B-	Aaa	Caa3
RALI 2006-QO6 A2	AAA	CC	Aaa	Caa3
RALI 2006-QO9 M8	BBB	No Longer Rated[1]	A3	No Longer Rated
RALI 2007-QH6 A1	AAA	B-	Aaa	Caa3
RAMP 2005-RZ1 M1	AA	AA	Aaa	Aaa
RAMP 2005-RZ1 M2	AA	AA	Aa1	Aa1
RAMP 2006-RS4 M9	BBB-	No Longer Rated	Baa2	No Longer Rated
RAMP 2006-RS6 M7	BBB	No Longer Rated	Baa1	No Longer Rated

[1] Each bond indicated "No Longer Rated" has been entirely written off due to losses.

RAMP 2006-RZ3 M8	NR	No Longer Rated	Baa2	No Longer Rated
RAMP 2007-RZ1 M6	A-	No Longer Rated	A3	No Longer Rated
RAMP 2007-RZ1 M7	BBB	No Longer Rated	A3	No Longer Rated
RAMP 2007-RZ1 M8	BBB	No Longer Rated	A3	No Longer Rated
RASC 2006-EMX6 M8	BBB	No Longer Rated	Baa2	No Longer Rated
RASC 2006-EMX6 M9	BBB-	No Longer Rated	Baa3	No Longer Rated
RASC 2007-KS3 M3S	AA-	No Longer Rated	Aa3	No Longer Rated

65. The poor performance of the loan pools and the rapidly dropping credit ratings of the Certificates have caused a massive decline in the market values of the Certificates. According to the most recent data, the Certificates should be worth approximately $177 million, but their market value is substantially lower approximately $84 million.

66. The economic downturn cannot explain the abnormally high percentage of defaults, foreclosures, and delinquencies observed in the loan pools. Loan pools that were properly underwritten and contained loans with the represented characteristics would have experienced substantially fewer payment problems and substantially lower percentages of defaults, foreclosures, and delinquencies.

V. MISREPRESENTATIONS ABOUT APPRAISALS AND LOAN-TO-VALUE RATIOS REVEALED BY A FORENSIC REVIEW OF THE MORTGAGE LOANS

A. Appraisal and LTV Testing

67. MassMutual commissioned a forensic review of the mortgage loans underlying the Certificates to determine whether the characteristics of the mortgage loans, as represented in the Offering Materials, were accurate.

68. As part of the forensic review, data relating to the collateral loans underlying each of the securitizations was gathered from multiple public sources, including assessor, DMV, credit, and tax records, as well as proprietary sources such as loan servicing, securitization, and mortgage application records. The data relating to individual mortgage loans was then compared to the representations made in the Offering Materials.

69. The forensic review tested the appraised values and loan-to-value ratio ("LTV") of each property, as represented in the Offering Materials, through an industry-standard automated valuation model ("AVM").

70. The LTV is the ratio of a mortgage loan's original principal balance to the appraised value of the mortgaged property. This ratio was material to MassMutual and other investors because higher ratios are correlated with a higher risk of default. A borrower with a small equity position in a property has less to lose if he or she defaults on the loan. There is also a greater likelihood that a foreclosure will result in a loss for the lender if the borrower fully leveraged the property. LTV is a common metric for analysts and investors to evaluate the price and risk of mortgage-backed securities.

71. For each of the loans reviewed, the underlying property was valued by an industry-standard AVM. AVMs are routinely used in the industry as a way of valuing properties during prequalification, origination, portfolio review, and servicing. AVMs have become ubiquitous enough that their testing and use is specifically outlined in regulatory guidance and discussed in the Dodd-Frank Act. AVMs rely upon similar data as in-person appraisals—primarily county assessor records, tax rolls, and data on comparable properties. AVMs produce independent, statistically-derived valuation estimates by applying modeling techniques to this data. The AVM that MassMutual used incorporates a database of 500 million mortgage transactions covering ZIP codes that represent more than 97% of the homes, occupied by more than 99% of the population, in the United States. Independent testing services have determined that this AVM is the most accurate of all such models.

72. For purposes of MassMutual's forensic review, a retrospective AVM was conducted for each loan to calculate the value of the underlying property at the time each loan

was originated. The inputs for each calculation included, *inter alia*, (1) any subsequent sale prices of the target property, (2) sale prices and appraisals of comparable properties in the neighborhood, and (3) changes in home price indices over time.

73. Applying the AVM results to the available data for the loans underlying the Certificates shows that the appraised values given to the properties were often significantly higher than what the properties were actually worth. This affected the LTV ratios by decreasing the actual value of the properties relative to the loan amounts, which increased the overall ratios. This overvaluation affected numerous statistics in the Offering Materials, as described in detail for each transaction in Section V.B below.

B. Specific Misrepresentations in the Offering Materials.

(1) RALI 2005-QO3

74. The Prospectus Supplement for the RALI 2005-QO3 securitization represented that the weighted average LTV ratio of the mortgage loans was 73.84%. It also represented that only 8 mortgage loans would have an LTV above 90%, which was 0.51% of the collateral pool.

75. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RALI 2005-QO3 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation, as described above under "--Loan-to-Value Ratio." Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated

> from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

76. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

77. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	73.84%	81.35%
Percentage of Collateral Loans with LTV of Greater than 90%	0.51% (8 loans)	16.56% (221 loans)

78. In total, 37% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 29% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

79. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(2) RALI 2005-QO4

80. The Prospectus Supplement for the RALI 2005-QO4 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 74.25%. It also represented that only 40 Mortgage Loans would have an LTV greater than 90%, which represented 1.21% of the pool.

81. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RALI 2005-QO4 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation, as described above under "--Loan-to-Value Ratio." Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

82. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

83. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	74.25%	83.71%
Percentage of Collateral Loans with LTV of Greater than 90%	1.21% (40 loans)	19.81% (457 loans)

84. In total, 41% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 35% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

85. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data,

along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(3) RALI 2006-QA6

86. The Prospectus Supplement for the RALI 2006-QA6 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 76.97%. It also represented that only 24 Mortgage Loans had an LTV ratio greater than 90%, which represented 1.01% of the pool.

87. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RALI 2006-QA6 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation, as described above under "--Loan-to-Value Ratio." Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

88. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

89. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	76.97%	85.58%
Percentage of Collateral Loans with LTV of Greater than 90%	1.01% (24 loans)	18.84% (395 loans)

90. In total, 35% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 30% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

91. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV

and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(4) RALI 2006-QO1

92. The Prospectus Supplement for the RALI 2006-QO1 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 74.51%. It also represented that only 55 Mortgage Loans had an LTV ratio greater than 90%, which represented just 1.61% of the pool.

93. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RALI 2006-QO1 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation, as described above under "--Loan-to-Value Ratio." Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

94. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an

appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

95. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	74.51%	84.06%
Percentage of Collateral Loans with LTV of Greater than 90%	1.61% (55 loans)	24.71% (694 loans)

96. In total, 45% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 40% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

97. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the

properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(5) RALI 2006-QO3

98. The Prospectus Supplement for the RALI 2006-QO3 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 74.31%. It also represented that only 27 Mortgage Loans would have an LTV above 90, which was 1.22% of the collateral pool.

99. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RALI 2006-QO3 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation. . . . Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

100. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

101. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	74.31%	85.53%
Percentage of Collateral Loans with LTV of Greater than 90%	1.22% (27 loans)	20.94% (383 loans)

102. In total, 46% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 39% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

103. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties.

They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(6) The RALI 2006-QO4 Securitization

104. The Prospectus Supplement for the RALI 2006-QO4 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 74.27%. It also represented that only 33 Mortgage Loans would have an LTV above 90, which was 0.92% of the collateral pool.

105. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RALI 2006-QO4 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation . . . . Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

106. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

107. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above.

MassMutual's forensic review revealed that these representations were false. The true LTV ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	74.27%	83.10%
Percentage of Collateral Loans with LTV of Greater than 90%	.92% (33 loans)	21.64% (535 loans)

108. In total, 42% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 34% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

109. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(7) RALI 2006-QO5

110. The Prospectus Supplement for the RALI 2006-QO5 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 74.67%. It also represented that only 51 Mortgage Loans would have an LTV above 90, which was 1.26% of the collateral pool.

111. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RALI 2006-QO5 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation. . . . Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

112. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

113. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV

ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	74.67%	84.15%
Percentage of Collateral Loans with LTV of Greater than 90%	1.26% (51 loans)	19.54% (584 loans)

114. In total, 45% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 37% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

115. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(8) RALI 2006-QO6

116. The Prospectus Supplement for the RALI 2006-QO6 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 74.66%. It also represented that only 75 Mortgage Loans would have an LTV above 90, which was 1.56% of the collateral pool.

117. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RALI 2006-QO6 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation. . . . Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

118. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

119. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV

ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	74.66%	85.69%
Percentage of Collateral Loans with LTV of Greater than 90%	1.56% (75 loans)	23.98% (861 loans)

120. In total, 48% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 40% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

121. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(9) RALI 2006-QO9

122. The Prospectus Supplement for the RALI 2006-QO9 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 75.15%. It also represented that only 17 Mortgage Loans would have an LTV above 90%, which was 0.54% of the collateral pool.

123. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RALI 2006-QO9 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation. . . . Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

124. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

125. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV

ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	75.15%	89.46%
Percentage of Collateral Loans with LTV of Greater than 90%	.54% (17 loans)	32.42% (770 loans)

126. In total, 60% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 53% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

127. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(10) RALI 2007-QH6

128. The Prospectus Supplement for the RALI 2007-QH6 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 73.89%. It also represented that only 32 Mortgage Loans would have an LTV above 90%, which was 1.62% of the collateral pool.

129. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RALI 2007-QH6 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation. . . . Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

130. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

131. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV

ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	73.89%	90.66%
Percentage of Collateral Loans with LTV of Greater than 90%	1.62% (32 loans)	36.07% (559 loans)

132. In total, 61% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

133. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(11) RAMP 2005-RZ1

134. The Prospectus Supplement for the RAMP 2005-RZ1 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 102.23%. It also represented

that 758 Mortgage Loans would have an LTV above 100%, which was 58.07% of the collateral pool.

135. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus Supplement for RAMP 2005-RZ1 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan generally has been determined by an appraisal in accordance with pre-established appraisal procedure guidelines for appraisals established by or acceptable to the originator. At least one full appraisal is obtained (plus a field review or an additional appraisal for Credit Grade A4) for the mortgaged property. Appraisers are either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by the originator. The appraisal procedure guidelines generally will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal would have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

136. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described above, currently supports, except with respect to Home Loans, and is anticipated to support in the future, the outstanding loan balance.

137. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	102.23%	106.46%
Percentage of Collateral Loans with LTV of Greater than 100%	58.07% (758 loans)	62.61% (804 loans)

138. In total, 27% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 29% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

139. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(12) RAMP 2006-EFC2

140. The Prospectus Supplement for the RAMP 2006-EFC2 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 83.28%. It also represented that 685 Mortgage Loans would have an LTV above 90%, which was 19.18% of the collateral pool.

141. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus Supplement for RAMP 2006-EFC2 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan generally has been determined by an appraisal in accordance with pre-established appraisal procedure guidelines for appraisals established by or acceptable to the originator. Appraisers are either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by the originator. The appraisal procedure guidelines generally will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal would have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

142. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described above, currently supports, except with respect to Home Loans, and is anticipated to support in the future, the outstanding loan balance.

143. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV

ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	83.28%	91.71%
Percentage of Collateral Loans with LTV of Greater than 90%	19.18% (685 loans)	38.31% (759 loans)

144. In total, 50% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 41% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

145. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(13) RAMP 2006-RS4

146. The Prospectus Supplement for the RAMP 2006-RS4 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 88.12%. It also represented that 2,827 Mortgage Loans would have an LTV above 90%, which was 46.23% of the collateral pool.

147. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RAMP 2006-RS4 represented as follows:

> The adequacy at origination of a mortgaged property as security for repayment of the related loan will typically have been determined by an appraisal. Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with guidelines established by or acceptable to the originator. The appraisal procedure guidelines in most cases will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

148. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described above, currently supports, except with respect to Home Loans, and is anticipated to support in the future, the outstanding loan balance.

149. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	88.12%	97.02%
Percentage of Collateral Loans with LTV of Greater than 90%	46.23% (2827 loans)	56.92% (3146 loans)

150. In total, 38% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 37% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

151. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(14) RAMP 2006-RS6

152. The Prospectus Supplement for the RAMP 2006-RS6 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 80.68%. It also represented that

only 69 Mortgage Loans would have an LTV above 90%, which was 3.73% of the collateral pool.

153. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus for RAMP 2006-RS6 represented as follows:

> The adequacy at origination of a mortgaged property as security for repayment of the related loan will typically have been determined by an appraisal. Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with guidelines established by or acceptable to the originator. The appraisal procedure guidelines in most cases will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

154. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described above, currently supports, except with respect to Home Loans, and is anticipated to support in the future, the outstanding loan balance.

155. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	80.68%	92.56%
Percentage of Collateral Loans with LTV of Greater than 90%	3.73% (69 loans)	26.9% (380 loans)

156. In total, 40% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 37% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but that the representations relating appraisal practices were false as well. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

157. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(15) RAMP 2006-RZ3

158. The Prospectus Supplement for the RAMP 2006-RZ3 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 100.25%. It also represented that 379 loans would have LTVs greater than 100%, which represented 8.56% of the pool.

159. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus Supplement for RAMP 2006-RZ3 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan generally has been determined by an appraisal in accordance with pre-established appraisal procedure guidelines for appraisals established by or acceptable to the originator. At least one full appraisal is obtained for the mortgaged property. Appraisers are either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by the originator. The appraisal procedure guidelines generally will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal would have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

160. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described above, currently supports, except with respect to Home Loans, and is anticipated to support in the future, the outstanding loan balance.

161. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	100.25%	109.65%
Percentage of Collateral Loans with LTV of Greater than 100%	8.56% (379 loans)	38.56% (1499 loans)

162. In total, 35% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 38% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

163. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(16) RAMP 2007-RZ1

164. The Prospectus Supplement for the RAMP 2007-RZ1 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 99.56%. It also represented that 71 Mortgage Loans would have an LTV above 100%, which was 3.54% of the collateral pool.

165. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus Supplement for RAMP 2007-RZ1 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan generally has been determined by an appraisal in accordance with pre-established appraisal procedure guidelines for appraisals established by or acceptable to the originator. At least one full appraisal is obtained for the mortgaged property. Appraisers are either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by the originator. The appraisal procedure guidelines generally will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal would have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

166. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described above, currently supports, except with respect to Home Loans, and is anticipated to support in the future, the outstanding loan balance.

167. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV

ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	99.56%	109.2%
Percentage of Collateral Loans with LTV of Greater than 100%	3.54% (71 loans)	42.62% (672 loans)

168. In total, 36% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 39% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

169. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(17) RASC 2006-EMX6

170. The Prospectus Supplement for the RASC 2006-EMX6 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 83.09%. It also represented that only 1,403 Mortgage Loans would have an LTV above 90%, which was 15.61% of the collateral pool.

171. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus Supplement for RASC 2006-EMX6 represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan generally has been determined by an appraisal in accordance with pre-established appraisal procedure guidelines for appraisals established by or acceptable to the originator. Appraisers were either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by the originator. The appraisal procedure guidelines generally will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal would have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property.

172. The Prospectus also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described above, currently supports and is anticipated to support in the future the outstanding loan balance.

173. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV

ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV/CLTV of the Collateral Loans	83.09%	91.58%

174. In total, 45% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 29% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

175. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

(18) RASC 2007-KS3

176. The Prospectus Supplement for the RASC 2007-KS3 securitization represented that the weighted average LTV ratio of the Mortgage Loans was 82.63%. It also represented that

2,346 of the Mortgage Loans would have an LTV above 90, which was 21.55% of the collateral pool.

177. Additionally, the Offering Materials represented that independent appraisals were obtained for certain of the Mortgage Loans. The Prospectus Supplement for RASC 2007-KS3, RFC represented as follows:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan generally has been determined by an appraisal in accordance with pre-established appraisal procedure guidelines for appraisals established by or acceptable to the originator. Appraisers were either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by the originator.
>
> The appraisal procedure guidelines generally will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed. The appraisal would have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property. In certain instances, the LTV ratio may have been based on the appraised value as indicated on a review appraisal conducted by the mortgage collateral seller or originator.

178. The Prospectus Supplement also stated:

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance.

179. These representations regarding appraisals were material to MassMutual and other investors because they signaled the reliability of the LTV ratios discussed above. MassMutual's forensic review revealed that these representations were false. The true LTV

ratios for the collateral loans were actually much higher than represented, as shown in the chart below:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Weighted Average LTV of the Collateral Loans	82.63%	92.72%
Percentage of Collateral Loans with LTV of Greater than 90%	21.55% (2,346 loans)	38.96% (2528 loans)

180. In total, 51% of the loans tested were shown to have appraisals that were inflated by 10% or more, and 42% of the loans tested had LTVs that were 10 or more points less than was represented. These results not only demonstrate that the loan statistics in the Offering Materials were false, but also that the representations relating to appraisal practices were false. Independent appraisers following proper practices would not systematically generate appraisals that deviate so significantly from the true values of the appraised properties.

181. The RFC Defendants had full access to the appraisal records and all data relating to the collateral loans. The Underwriter Defendant also had full access to the records and data, along with an affirmative obligation to conduct due diligence to verify the accuracy of the LTV and appraisal representations. Based on these defendants' involvement in originating and securitizing the loans and conducting due diligence, they knew that the estimations of the properties' values bore no relationship to the actual data and characteristics of the properties. They therefore knew that the estimations of the properties' values were not justified, unreasonable, and inaccurate.

VI. MISREPRESENTATIONS ABOUT OWNER-OCCUPANCY STATISTICS REVEALED BY A FORENSIC REVIEW OF THE MORTGAGE LOANS

A. Owner-Occupancy Testing

182. The forensic review commissioned by MassMutual also tested the accuracy of the representations of owner-occupancy in the Offering Materials.

183. Owner-occupancy statistics were material to MassMutual and other investors because high owner-occupancy rates would have made the Certificates safer investments than Certificates backed by second homes or investment properties. Homeowners who reside in mortgaged properties are less likely to default than owners who purchase homes as investments or second homes and live elsewhere.

184. MassMutual's forensic review tested the accuracy of the representations of owner-occupancy in the Offering Materials. To determine whether a given borrower actually occupied the property as claimed, MassMutual investigated tax information for the loans. One would expect that a borrower residing at a property would have the tax bills sent to that address, and would take applicable tax exemptions available to residents of that property. If a borrower had his or her tax records sent to another address, that is evidence that that borrower was not actually residing at the mortgaged property. If a borrower declined to make certain tax exemption elections that depend on the borrower living at the property, that also is evidence the borrower was living elsewhere. MassMutual also reviewed: (1) borrower credit records, because one would expect that people have bills sent to their primary address. If a borrower was telling creditors to send bills to another address, even six months after buying the property, that is evidence the borrower was living elsewhere; (2) property records, because it is unlikely that a borrower lives in any one property if in fact that borrower owns multiple properties. It is even more unlikely that the borrower resides at the mortgaged property if a concurrently-owned

separate property did not have its own tax bills sent to the property included in the mortgage pool; and (3) records of other liens, because if the property was subject to additional liens but those materials were sent elsewhere, that is evidence the borrower was not living at the mortgaged property. If the other lien involved a conflicting declaration of residency, that too would be evidence that the borrower did not live in the subject property .

185. If a property fails more than one of the above tests, that is strong evidence the borrower did not in fact reside at the mortgaged property. As described more fully in Section VI.B below, the results of MassMutual's loan-level analysis of true owner-occupancy rates on the mortgage loans underlying its Certificates show that, despite the prospectus representations, a much higher percentage of borrowers did not occupy the mortgaged properties than was represented.

B. Specific Misrepresentations in the Offering Materials.

(1) RALI 2005-QO3

186. The Offering Materials for RALI 2005-QO3 represented that 1190 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 12.9% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 1190 of the loans being owner occupied, as represented in the Offering Materials, only 1036 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	1190 loans (84.16%)	1036 loans (73.26%)

(2) RALI 2005-QO4

187. The Offering Materials for RALI 2005-QO4 represented that 1836 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 14.4% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 1836 of the loans being owner occupied, as represented in the Offering Materials, only 1572 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	1836 loans (79.62%)	1572 loans (68.17%)

(3) RALI 2006-QA6

188. The Offering Materials for RALI 2006-QA6 represented that 1624 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 16.5% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 1624 of the loans being owner occupied, as represented in the Offering Materials, only 1345 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	1624 loans (72.96%)	1345 loans (60.42%)

(4) RALI 2006-QO1

189. The Offering Materials for RALI 2006-QO1 represented that 2292 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 13.2% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 2292 of the loans being owner occupied, as represented in the Offering Materials, only 1989 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	2292 loans (81.65%)	1989 loans (70.86%)

(5) RALI 2006-QO3

190. The Offering Materials for RALI 2006-QO3 represented that 1606 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 10.8% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 1606 of the loans being owner occupied, as represented in the Offering Materials, only 1432 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	1606 loans (84.66%)	1432 loans (75.49%)

(6) The RALI 2006-QO4 Securitization

191. The Offering Materials for RALI 2006-QO4 represented that 2084 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 13.5% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 2084 of the loans being owner occupied, as represented in the Offering Materials, only 1803 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	2084 loans (84.37%)	1803 loans (72.98%)

(7) RALI 2006-QO5

192. The Offering Materials for RALI 2006-QO5 represented that 2538 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 11.9% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 2538 of the loans being owner occupied, as represented in the Offering Materials, only 2235 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	2538 loans (85.31%)	2235 loans (75.12%)

(8) RALI 2006-QO6

193. The Offering Materials for RALI 2006-QO6 represented that 3124 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 14.4% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 3124 of the loans being owner occupied, as represented in the Offering Materials, only 2673 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	3124 loans (85.57%)	2673 loans (73.21%)

(9) RALI 2006-QO9

194. The Offering Materials for RALI 2006-QO9 represented that 2141 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 15.3% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 2141 of the loans being owner occupied, as represented in the Offering Materials, only 1813 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	2141 loans (83.86%)	1813 loans (71.05%)

(10) RALI 2007-QH6

195. The Offering Materials for RALI 2007-QH6 represented that 1282 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 18.4% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 1282 of the loans being owner occupied, as represented in the Offering Materials, only 1046 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	1282 loans (82.76%)	1046 loans (67.53%)

(11) RAMP 2005-RZ1

196. The Offering Materials for RAMP 2005-RZ1 represented that 1184 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 9.6% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 1184 of the loans being owner occupied, as represented in the Offering Materials, only 1070 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	1184 loans (85.86%)	1070 loans (77.59%)

(12) RAMP 2006-EFC2

197. The Offering Materials for RAMP 2006-EFC2 represented that 2267 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 9.3% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 2267 of the loans being owner occupied, as represented in the Offering Materials, only 2056 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	2267 loans (93.48%)	2056 loans (84.78%)

(13) RAMP 2006-RS4

198. The Offering Materials for RAMP 2006-RS4 represented that 3989 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 8.9% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 3989 of the loans being owner occupied, as represented in the Offering Materials, only 3634 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	3989 loans (75.43%)	3634 loans (69.72%)

(14) RAMP 2006-RS6

199. The Offering Materials for RAMP 2006-RS6 represented that 933 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 13.3% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 933 of the loans being owner occupied, as represented in the Offering Materials, only 809 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	933 loans (57.7%)	809 loans (50.03%)

(15) RAMP 2006-RZ3

200. The Offering Materials for RAMP 2006-RZ3 represented that 3683 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 8.3% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 3683 of the loans being owner occupied, as represented in the Offering Materials, only 3375 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	3683 loans (80.13%)	3375 loans (73.43%)

(16) RAMP 2007-RZ1

201. The Offering Materials for RAMP 2007-RZ1 represented that 1460 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 10.8% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 1460 of the loans being owner occupied, as represented in the Offering Materials, only 1302 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	1460 loans (76.68%)	1302 loans (68.38%)

(17) RASC 2006-EMX6

202. The Offering Materials for RASC 2006-EMX6 represented that 3871 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 11.9% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 3871 of the loans being owner occupied, as represented in the Offering Materials, only 3410 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	3871 loans (95.34%)	3410 loans (83.99%)

(18) RASC 2007-KS3

203. The Offering Materials for RASC 2007-KS3 represented that 7615 of the Mortgage Loans were for primary residences, i.e. owner-occupied properties. In MassMutual's subsequent loan-level analysis, however, 12.9% of the Mortgage Loans reported to be owner-occupied failed multiple tests for owner occupancy. Thus, as shown in the chart below, instead of 7615 of the loans being owner occupied, as represented in the Offering Materials, only 6785 were:

	As Represented in the Offering Materials	Actual Values Per Forensic Review
Number of Loans Covering Primary Residences	7615 loans (93.20%)	6785 loans (83.04%)

VII. LIABILITY OF THE SPONSOR, DEPOSITORS, AND UNDERWRITERS AS SELLERS OF SECURITIES TO MASSMUTUAL

204. The defendants that qualify as sellers of securities under the Massachusetts Uniform Securities Act are the Sponsor (Residential Funding), Depositors (RALI, RAMP, and RASC), and Underwriters (Residential Funding and UBS). Each of these is primarily liable for misrepresentations in the Offering Materials under Massachusetts General Laws, Chapter 110A, Section 410(a)(2).

205. As the Sponsor for the securitizations at issue, Residential Funding originated or acquired the mortgage loans that were pooled together in the securitizations, and then sold, transferred, or otherwise conveyed title to those loans to the Depositors. Residential Funding had responsibility for preparing the Offering Materials that were used to solicit purchases of the Certificates, and was identified as the Sponsor or Seller on the Prospectuses and Prospectus Supplements. Residential Funding profited from the sales of the Certificates.

206. As the Depositors for the securitizations at issue, RALI, RAMP, and RASC purchased the mortgage loans from Residential Funding. The Depositors then sold, transferred, or otherwise conveyed the mortgage loans to the Trusts, which held the loans as collateral for the Certificates. The Depositors had responsibility for preparing the Offering Materials that were used to solicit purchases of the Certificates, and were identified on the Prospectuses and Prospectus Supplements. In addition, the Depositors were responsible for registering the offerings with the Securities and Exchange Commission. The Depositors profited from the sales of the Certificates.

207. The Trusts issued the Certificates that were sold to investors, including MassMutual. The Trusts had no autonomy or assets of their own, but were mere agents of the Depositors created for the sole purposes of holding the pools of mortgage loans assembled by the Sponsor and Depositors and issuing the Certificates for sale to the investors.

208. The Sponsor and Depositors used Residential Securities and UBS, among others, as the Underwriters to market and sell the Certificates. The Underwriters were responsible for underwriting and managing the sale of Certificates, including screening the mortgage loans for compliance with the appropriate underwriting guidelines. The Underwriters profited from the sales of the Certificates.

209. The Sponsor, Depositors, and Underwriters successfully solicited MassMutual's purchase of the Certificates at issue. The Underwriters transferred title in the Certificates to MassMutual.

VIII. LIABILITY OF THE REMAINING DEFENDANTS AS CONTROL PERSONS

Bruce Paradis

210. As President of Residential Securities (the Underwriter), Paradis was involved in and controlled the day-to-day affairs of this primary violator. In addition, as President and Chief

Executive Officer of Residential Funding, RALI, RAMP, and RASC, Paradis was involved in and controlled the day-to-day affairs of the Sponsor and Depositors. Paradis also had control over the securitizations at issue, as evidenced by his signature on the registration statements for the following 17 securitizations:

Residential Asset Mortgage Products, Inc. Series 2005-RZ1
Residential Accredit Loans, Inc. Series 2005-QO3
Residential Accredit Loans, Inc. Series 2005-QO4
Residential Accredit Loans, Inc. Series 2006-QO1
Residential Accredit Loans, Inc. Series 2006-QO3
Residential Accredit Loans, Inc. Series 2006-QO4
Residential Accredit Loans, Inc. Series 2006-QO5
Residential Asset Mortgage Products Series 2006-RS4
Residential Accredit Loans, Inc. Series 2006-QO6
Residential Asset Securities Corp. Series 2006-EMX6 Class M9
Residential Accredit Loans, Inc. Series 2006-QA6
Residential Asset Mortgage Products Series 2006-RZ3
Residential Asset Mortgage Products Series 2006-RS6
Residential Asset Mortgage Products, Inc. Series 2006-EFC2
Residential Accredit Loans, Inc. Series 2006-QO9
Residential Asset Mortgage Products, Inc. Series 2007-RZ1
Residential Asset Securities Corp. Series 2007-KS3

Davee Olson

211. As Chief Financial Officer of Residential Funding and RAMP, Olson was involved in the day-to-day financial affairs of these primary violators. Olson also had control over the securitizations at issue, as evidenced by his signature on the registration statements for the following 14 securitizations:

Residential Asset Mortgage Products, Inc. Series 2005-RZ1
Residential Accredit Loans, Inc. Series 2006-QO3
Residential Accredit Loans, Inc. Series 2006-QO4
Residential Accredit Loans, Inc. Series 2006-QO5
Residential Asset Mortgage Products Series 2006-RS4
Residential Accredit Loans, Inc. Series 2006-QO6
Residential Asset Securities Corp. Series 2006-EMX6 Class M9
Residential Accredit Loans, Inc. Series 2006-QA6
Residential Asset Mortgage Products Series 2006-RZ3
Residential Asset Mortgage Products Series 2006-RS6

Residential Asset Mortgage Products, Inc. Series 2006-EFC2
Residential Accredit Loans, Inc. Series 2006-QO9
Residential Asset Mortgage Products, Inc. Series 2007-RZ1
Residential Asset Securities Corp. Series 2007-KS3

David Walker

212. As Chief Financial Office and director of U.S. funding and securitization for Residential Funding Corporation's parent, Walker was intimately involved with the securitization strategy for the enterprise. Walker used his knowledge of securitizations at RALI and RAMP when he served as an inside director of those companies. Walker also had control over the securitizations at issue, as evidenced by his signature on the registration statements for the following 4 securitizations:

Residential Asset Mortgage Products, Inc. Series 2005-RZ1
Residential Accredit Loans, Inc. Series 2005-QO3
Residential Accredit Loans, Inc. Series 2005-QO4
Residential Accredit Loans, Inc. Series 2006-QO1

Kenneth Duncan

213. As Acting Chief Financial Officer of each of Residential Funding, RALI, RAMP, and RASC, Duncan was involved in the day-to-day financial affairs of these primary violators. Duncan also had control over the securitizations at issue, as evidenced by his signature on the registration statements for the following 16 securitizations:

Residential Accredit Loans, Inc. Series 2005-QO3
Residential Accredit Loans, Inc. Series 2005-QO4
Residential Accredit Loans, Inc. Series 2006-QO1
Residential Accredit Loans, Inc. Series 2006-QO3
Residential Accredit Loans, Inc. Series 2006-QO4
Residential Accredit Loans, Inc. Series 2006-QO5
Residential Asset Mortgage Products Series 2006-RS4
Residential Accredit Loans, Inc. Series 2006-QO6
Residential Asset Securities Corp. Series 2006-EMX6 Class M9
Residential Accredit Loans, Inc. Series 2006-QA6
Residential Asset Mortgage Products Series 2006-RZ3
Residential Asset Mortgage Products Series 2006-RS6

Residential Asset Mortgage Products, Inc. Series 2006-EFC2
Residential Accredit Loans, Inc. Series 2006-QO9
Residential Asset Mortgage Products, Inc. Series 2007-RZ1
Residential Asset Securities Corp. Series 2007-KS3

Ralph Flees

214. As Controller and Principal Accounting Officer of each of RALI, RAMP, and RASC, Flees was involved in the day-to-day financial affairs of these primary violators. Flees also had control over the securitizations at issue, as evidenced by his signature on the registration statements for the following 17 securitizations:

Residential Accredit Loans, Inc. Series 2005-QO3
Residential Accredit Loans, Inc. Series 2005-QO4
Residential Accredit Loans, Inc. Series 2006-QO1
Residential Accredit Loans, Inc. Series 2006-QO3
Residential Accredit Loans, Inc. Series 2006-QO4
Residential Accredit Loans, Inc. Series 2006-QO5
Residential Asset Mortgage Products Series 2006-RS4
Residential Accredit Loans, Inc. Series 2006-QO6
Residential Asset Securities Corp. Series 2006-EMX6 Class M9
Residential Accredit Loans, Inc. Series 2006-QA6
Residential Asset Mortgage Products Series 2006-RZ3
Residential Asset Mortgage Products Series 2006-RS6
Residential Asset Mortgage Products, Inc. Series 2006-EFC2
Residential Accredit Loans, Inc. Series 2006-QO9
Residential Asset Mortgage Products, Inc. Series 2007-RZ1
Residential Asset Securities Corp. Series 2007-KS3
Residential Accredit Loans, Inc. Series 2007-QH6

James Jones

215. As President and Chief Executive Officer of RALI, Jones was involved in the day-to-day affairs of a primary violator. Jones also had control over the securitizations at issue, as evidenced by his signature on the following registration statement:

Residential Accredit Loans, Inc. Series 2007-QH6

David Bricker

216. As Chief Financial Officer of RALI, Bricker was involved in the day-to-day financial affairs of a primary violator. Bricker also had control over the securitizations at issue, as evidenced by his signature on the following registration statement:

Residential Accredit Loans, Inc. Series 2007-QH6

FIRST CAUSE OF ACTION
(Primary Violations of the Massachusetts Uniform Securities Act)

217. MassMutual incorporates by reference and realleges each and every allegation as set forth above in paragraphs 1 through 216 as if fully set forth herein.

218. Under Massachusetts General Laws, Chapter 110A, Section 410(a)(2), any person who offers or sells a security by means of any untrue statement of a material fact or any omission to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they are made, not misleading, is liable to the purchaser of the security.

219. The Sponsor (Residential Funding), Depositors (RALI, RAMP, and RASC), and Underwriters (Residential Securities and UBS) qualify as sellers of the Certificates because they issued, marketed, and/or sold the Certificates to the public for their own financial benefit.

220. The Sponsor, Depositors, and Underwriters offered to sell and sold the Certificates in the State of Massachusetts.

221. The Sponsor, Depositors, and Underwriters offered and sold the Certificates to MassMutual by means of false and misleading statements of material fact and omissions of material facts necessary to make the statements made not misleading.

222. As set forth in more detail in paragraphs 43 to 203 above, the public statements of the Sponsor, Depositors, and Underwriters, including in the Offering Materials, were materially false and misleading because, among other things, they misrepresented the underwriting

standards applied to the mortgage loans backing the Certificates, misrepresented the LTV and appraisal information for the loans, and misrepresented the owner-occupancy information for the loans.

223. MassMutual did not know, and in the exercise of due diligence could not have known, of the untruths and omissions.

224. MassMutual will elect its remedy before the entry of judgment. For each Certificate, MassMutual will seek statutory damages, including interest, or will make or arrange a tender before entry of judgment.

SECOND CAUSE OF ACTION
(Joint and Several Liability Under the Massachusetts Uniform Securities Act)

225. MassMutual incorporates by reference and realleges each and every allegation as set forth above in paragraphs 1 through 224 as if fully set forth herein.

226. Under Massachusetts General Laws, Chapter 110A, Section 410(b), "[e]very person who directly or indirectly controls a seller liable under subsection (a), every partner, officer, or director of such a seller, [and] every person occupying a similar status or performing similar functions" is liable jointly and severally with and to the same extent as the seller.

227. As set forth above, the Sponsor (Residential Funding), the Depositors (RALI, RAMP, and RASC), and the Underwriters (Residential Securities and UBS) are liable as sellers under subsection (a).

228. Defendant Bruce Paradis is jointly and severally liable to the same extent as the primary violators because he was an officer of one or more primary violators and controlled their operations, including the securitizations at issue.

229. Defendant Davee Olson is jointly and severally liable to the same extent as the primary violators because he was an officer and/or director of one or more primary violators and controlled their operations, including the securitizations at issue.

230. Defendant David Walker is jointly and severally liable to the same extent as the primary violators because he was an inside director of one or more primary violators and controlled their operations, including the securitizations at issue.

231. Defendant Kenneth Duncan is jointly and severally liable to the same extent as the primary violators because he was an officer of one or more primary violators and controlled their operations, including the securitizations at issue.

232. Defendant Ralph Flees is jointly and severally liable to the same extent as the primary violators because he was an officer of one or more primary violators and controlled their operations, including the securitizations at issue.

233. Defendant James Jones is jointly and severally liable to the same extent as the primary violators because he was an officer of one or more primary violators and controlled their operations, including the securitizations at issue.

234. Defendant David Bricker is jointly and severally liable to the same extent as the primary violators because he was an officer of one or more primary violators and controlled their operations, including the securitizations at issue.

PRAYER FOR RELIEF

WHEREFORE MassMutual prays for relief as follows:

1. On the first cause of action, for primary violations of the Massachusetts Uniform Securities Act, relief in the form of damages and/or statutory recovery upon tender;

2. On the second cause of action, for joint and several liability under the Massachusetts Uniform Securities Act, relief in the form of damages and/or statutory recovery upon tender; and

3. Such other and further relief as the Court may deem just and proper.

JURY TRIAL DEMANDED

Pursuant to Federal Rule of Civil Procedure 38(b), MassMutual hereby demands a trial by jury on all issues triable by jury.

DATED: February 29, 2012 EGAN, FLANAGAN AND COHEN, P.C.

IX. PRAYER FOR RELIEF 100

Plaintiffs undertake this amendment to comply with this Court's Opinion and Order dated December 21, 2010 ("December 21 Order") granting the motions to intervene brought by (i) Court-Appointed Lead Plaintiff New Jersey Carpenters Health Fund ("Carpenters Health Fund" or "Lead Plaintiff"); (ii) Plaintiff New Jersey Carpenters Vacation Fund ("Carpenters Vacation Fund," with Carpenters Health Fund, the "Carpenters Funds"); (iii) Plaintiff Boilermaker Blacksmith National Pension Trust ("Boilermaker Pension Trust"); and Plaintiffs-in-Intervention (iv) Iowa Public Employees' Retirement System ("IPERS"); (v) Midwest Operating Engineers Pension Trust Fund ("Midwest OE"); (vi) Orange County Employees Retirement System ("OCERS"); and (vi) Police and Fire Retirement System of the City of Detroit ("Detroit PFRS") (collectively, "Plaintiffs"). In so doing, Plaintiffs do not waive and hereby preserve all previously asserted claims regarding all securities included in the Consolidated First Amended Securities Class Action Complaint ("First Amended Complaint" or "FAC") filed May 18, 2009 in this action including any previously dismissed claims or parties, as if fully set forth herein. Plaintiffs believe that substantial additional evidentiary support for the allegations set forth below will be developed after a reasonable opportunity for discovery.

I.

SUMMARY OF THE ACTION

1. This Consolidated Second Amended Securities Class Action Complaint (the "Complaint" or "SAC") is alleged upon personal knowledge with respect to Plaintiffs, and upon information and belief with respect to all other matters. This action is brought pursuant to Section 11, 12 and 15 of the Securities Act of 1933 (the "Securities Act"), 15 U.S.C. §§ 77k, 77l(a)(2) and 77o, by Plaintiffs on their own behalf and as a class action on behalf of all persons and entities who purchased or otherwise acquired interests in the Issuing Trusts (as set forth in ¶¶ 19-24, *infra*) (the "Issuing Trusts") pursuant or traceable to two (2) separate Registration Statements and accompanying Prospectuses filed with the Securities and Exchange Commission

(□SEC□) by Residential Accredited Loans, Inc. (□RALI□), a subsidiary of Residential Capital, LLC f/k/a Residential Capital Corporation (□RCC□),[1] on March 3, 2006 (No. 333-131213) (the □2006 Registration Statement□) and on April 3, 2007 (No. 333-140610) (the □2007 Registration Statement,□ with the 2006 Registration Statement, collectively referred to herein as the □Registration Statements□) (the □Class□).

2. Pursuant to the Registration Statements and Prospectus Supplements incorporated therein (collectively, the □Offering Documents□), $9.44 billion of RALI mortgage backed securities (□MBS□) designated Mortgage Pass Through Certificates (the □Certificates□) were sold to Plaintiffs and the Class in ten (10) Offerings within eleven months between June 28, 2006 and May 30, 2007 (collectively, the □Offerings□). Since RALI had limited investment bank capabilities, Residential Funding Securities Corporation d/b/a GMAC RFC Securities (another subsidiary of GMAC) underwrote two (2) Offerings either on its own or in conjunction with a second Underwriter. A total of eight (8) Offerings were underwritten by Defendants Goldman, Sachs & Co., Inc. (□GSC□), Deutsche Bank Securities, Inc. (□DBS□), Citigroup Global Markets, Inc. (□CITI□) and/or UBS Securities, LLC (□UBS□) (collectively, the □Underwriters□ or the □Underwriter Defendants□).[2] Each of the Underwriter Defendants was itself a major player in the rapid and massive securitization of sub-prime and Alt-A residential mortgage loans.

3. As set forth below, the Offering Documents contained material misstatements and omitted material information in violation of Sections 11, 12 and 15 of the Securities Act, 15 U.S.C. §§ 77k, 77l(a)(2) and 77o. Defendants are strictly or negligently liable for the material

---

[1] Defendant RCC is a wholly-owned subsidiary of General Motors Acceptance Corporation (□GMAC□). Although GMAC was a wholly owned subsidiary of General Motors Corporation (□GM□), it is now a GM subsidiary that is majority owned by a consortium of investors led by Cerebus Capital LLC (□□27, 132). For the purposes of the within Complaint, GMAC and GM are collectively referred to as □General Motors.□

[2] Lehman Brothers, Inc. (□LB□) served as the Underwriter on one of the RALI Certificate Offerings. However, as set forth in □□32 and 50 below, LB is not named as a Defendant herein.

misstatements and omissions under the Securities Act. The Complaint asserts no allegations or claims sounding in fraud.

4. Plaintiffs seek redress against Defendant RALI, the Issuer of the Registration Statements and Depositor of the underlying collateral; the individual signatories to the Registration Statements, Defendants Bruce J. Paradis ("Paradis"), Kenneth M. Duncan ("Duncan"), Davee L. Olson ("Olson"), Ralph T. Flees ("Flees"), Lisa R. Lundsten ("Lundsten"), James G. Jones ("Jones"), David M. Bricker ("Bricker") and James N. Young ("Young"); the Sponsor and Seller for each of the Offerings, Defendant Residential Funding Company, LLC ("RFC");[3] Defendant RCC, the parent Company of RALI and RFC; and the Underwriters of the RALI Offerings, Defendants RFSC, GSC, DBS, CITI and UBS. RCC, RALI, RFC and RFSC, along with their affiliates and subsidiaries are referred to collectively as "Residential Capital."

5. This action arises from the conversion by Residential Capital of largely sub-prime and Alt-A mortgage loans into $9.44 billion of purportedly "investment grade" residential MBS. The value of the Certificates was directly tied to repayment of the underlying mortgage loans since the principal and interest payments due to investors were secured and derived from cash flows from those loans.[4]

[3] Residential Funding Corporation, a Delaware Corporation formed in 1982, became Residential Funding Company, LLC, a limited liability company, in October 3, 2006. All references to Defendant RFC are inclusive of the current as well as the former entity.

[4] As the original borrowers on each of the underlying mortgage loans paid their mortgages, distributions were made to investors through the Issuing Trusts in accordance with the terms of the Offering Documents governing the issuance of the Certificates. If borrowers failed to pay back their mortgages, defaulted, or were forced into foreclosure, the resulting losses flowed to the Certificate investors. As set forth in the Prospectus Supplements, the Certificates were divided into a structure of classes, or "tranches," reflecting different priorities of seniority, payment, exposure to risk and default, and interest payments.

6. By the end of 2005, GMAC and its subsidiary, Residential Capital, had become one of the largest issuers of MBS, not just in the United States, but in the world. According to *Inside Mortgage Finance*, in 2005 alone, Residential Capital issued over $56.93 billion of MBS, making it the fifth largest issuer of such securities. Residential Capital was capable of securitizing such massive quantities of mortgage collateral because it created and operated what was essentially a high-speed assembly line for the securitization of mortgage loans. Residential Capital had sufficient "product" in the form of mortgage loans because it owned and operated Homecomings Financial LLC f/k/a Homecomings Financial Network, Inc. ("HFN") – a subsidiary principally engaged in the business of residential mortgage loan origination. HFN solely acquired and originated non-conforming (sub-prime and Alt-A) loans. The HFN-originated loans were immediately purchased by RFC, who acted as Sponsor and Seller of the Certificates, and securitized by RALI, the Depositor of the Certificates.[5] Because Residential Capital's investment banking operations were more limited, it underwrote only two of the 10 Certificate Offerings. The remaining four Underwriter Defendants were engaged on the balance of the Offerings.

7. The Certificates could not be sold at all – much less profitably – unless they had been assigned the highest investment grade rating from one or more Nationally Recognized Statistical Ratings Organizations ("NRSRO"), specifically, Moody's Investors Service, Inc. ("Moody's") and Standard & Poor's Ratings Services, a Division of the McGraw-Hill Companies ("S&P," with Moody's collectively referred to herein as the "Ratings Agencies"). The reason was simple. Without such ratings, they could not be purchased by the Underwriter

[5] RALI served as "Depositor" for the Offerings (¶¶29-33) acquiring the loans from RFC and "depositing" them to the Issuing Trusts where RALI securitized the cash-flows from the mortgage loans and formed the Certificates.

Defendants principal potential clientele institutional investors, namely pension funds and insurance companies.

8. Residential Capital and the Underwriter Defendants did not leave the assignment of these highest AAA ratings to chance. These Defendants ensured the award of such ratings by engaging Moody s and S&P not only to rate the Certificates prior to issue, but, more importantly, to directly participate in the securitization and structuring of the Offerings. (61-64). Also, using their economic weight as a source of substantial rating engagements as leverage, the Defendants had the Ratings Agencies submit their proposed ratings as part of their competitive bid for the ratings engagement. (64). Regardless of the creditworthiness of the borrower or the terms of the underlying mortgages,[6] the Certificates were substantially assigned the highest investment grade ratings by the Ratings Agencies. Moody s and S&P rated $9.14 billion and $9.26 billion, respectively, of the $9.44 billion Certificates issued pursuant to the Offerings complained of herein. (71). At the time the Certificates were issued, Moody s assigned its highest investment grade rating of Aaa to 95.11%, or $8.70 billion, of the Moody s rated Certificates, and S&P assigned its highest investment grade rating of AAA to 95%, or $8.80 billion, of the S&P rated Certificates.[7] (*Id.*). These ratings reflected the risk or probability of default by the borrower according to the Offering Documents. (71, 208). None of the Certificates were initially rated below investment grade, (Ba1 and below for Moody s and BB and below for S&P). (*Id.*).

9. Soon after issuance of the Certificates, the value of the Certificates collapsed. Further, the likelihood of these securities ever recovering its value is severely diminished by the

[6] The Certificate collateral included adjustable rate loans which posed a high degree of risk of payment shock since they required small fixed payments for an initial or limited period of time which would reset to much higher adjustable rate interest payments.

[7] AAA and Aaa are collectively referred to herein as AAA.

fact that approximately ***41%*** of the mortgage loans underlying the Certificates – the source of financial return for Certificate investors – as of the filing of the FAC, were in delinquency, default, foreclosure or repossession. (¶¶ 65-69). Moreover, approximately 100% of the Certificates had, by May 2009, been downgraded by Moody's to speculative and junk bond status. (¶71).

10. Since Certificate Investors were dependent on the quality of the underlying mortgage loan collateral for receipt of a return on their investment, the descriptions of the loan origination guidelines in the Offering Documents were highly material disclosures to Certificate purchasers. The descriptions of the underwriting guidelines included in the Offering Documents described the policies employed by RFC, by way of its wholly-owned subsidiary HFN, in examining borrower creditworthiness and verifying borrower information (¶¶ 168-195) and in conducting appraisals of the mortgaged properties. *Id*. These portions of the Offering Documents also contained misstatements and omissions since, as has emerged only well after issuance of the Certificates, HFN and its correspondent lenders systematically disregarded the stated underwriting guidelines set forth in the Offering Documents. *Id.* These misstatements and omissions as well as the defective nature of the Certificate collateral were further reflected in the fact that the Ratings Agencies themselves, in downgrading the Certificates from the highest investment grade to junk status, specifically attributed the downgrades to "aggressive underwriting" in the origination of the mortgage loans (¶ 90) the utter collapse of the AAA ratings originally assigned the Certificates (¶ 71); and the uniform pattern of exponential increases in delinquency, default and foreclosure rates almost immediately after the consummation of the various Offerings (regardless of when the Offering occurred) (¶¶65-68).

11. While compliance with those loan underwriting guidelines was highly material to Certificate investors, who were dependent on the creditworthiness of the borrowers for interest and principal payments, Residential Capital had no such similar financial interest. Residential Capital and the Underwriting Defendants conducted inadequate due diligence with respect to whether the loans were originated in conformity with the underwriting guidelines set forth in the Offering Documents. "Due diligence" principally occurred not during the underwriting phase of the Offering by the Underwriter Defendants, but while Residential Capital acquired the collateral from its subsidiary HFN. (¶63). At that stage, there was a disincentive for Residential Capital to reject loans as non-compliant with stated guidelines because the loans were the property of RCC regardless, since the loans were originated by its subsidiary. Residential Capital's and the Underwriter Defendants' "due diligence" was limited, inadequate and defective. (¶¶69, 80-86, 109, 135, 146, 152, 158, 167). Residential Capital and the Underwriter Defendants were forced to review loans on an expedited basis and therefore did not commit to a full review of the mortgage loans underlying the securitizations.

12. Residential Capital and the Underwriters contracted out the inspection of loans for compliance with the Originator's underwriting guidelines to outside firms – Clayton Holdings, Inc. ("Clayton") and The Bohan Group ("Bohan") – and then conducted limited oversight of these subcontractors' activities. As disclosed as part of an ongoing investigation of investment banking misconduct in underwriting MBS being conducted by the New York Attorney General (the "NYAG"), Clayton and Bohan routinely provided investment banks with detailed reports of loans non-compliant with underwriting guidelines, but the investment banks routinely overrode exclusion of those loans from purchase and securitization. (¶84). Further, Bohan's President

stated that, by the time the Offerings of the Certificates took place, investment banks were requiring a review of only 5% to 7% of the entire loan pools. (¶86).[8]

13. The Offering Documents failed to disclose that, given Residential Capital and HFN's systematic disregard for the underwriting guidelines, the amount of credit enhancement supporting the Certificates was insufficient to substantiate the assigned AAA and other investment grade ratings; and that the Ratings Agencies caused this understatement by failing to timely and adequately update the models employed to make those assessments. As was only disclosed well after the issuance of the Certificates, S&P's models had not been materially updated since 1999; and Moody's models had not been materially updated since 2002. Because these models employed statistical assumptions based on the performance of mortgage loans issued in or before 2002, they failed to accurately reflect the performance of the Certificate collateral which included substantial portions of the type of loans which only began to be originated en masse after 2002 – *i.e.,* sub-prime and Alt-A loans, non-traditional or hybrid adjustable rate mortgages; interest-only and negative amortization loans,[9] as well as loans issued with limited borrower documentation or employment verification. (¶¶168-195).

14. The Offering Documents also failed to disclose material financial conflicts of interest between the Ratings Agencies and Residential Capital, including Residential Capital's engagement of the Ratings Agencies through "ratings shopping." (¶¶ 64, 112-15). These conflicts of interest were detailed in a report released by the SEC in July 2008 (the "SEC Report"), after a year-long investigation into the Ratings Agencies' activities relating to the

[8] As former head of MBS at Moody's, Brian Clarkson stated in an October 17, 2008 article in the *Financial Times*, in structured finance, including mortgage backed securities "[y]ou start with a rating and build a deal around a rating." (¶118).

9 As discussed below, originations of non-traditional adjustable mortgages, interest only and negative amortization loans increased dramatically between 2004 and 2006. (¶60). These types of loans presented the greatest potential for **"payment shock"** to the borrower since they both provide small initial fixed rates for a limited period of time which then reset thereafter to much higher monthly payment amounts.

issuance of RMBS in the period spanning 2005 through 2007. The SEC Report disclosed that the Ratings Agencies typically were engaged by way of "ratings shopping" whereby the Ratings Agency that was ultimately engaged was the one which provided the most profitable rating to the investment bank in "bidding" for the engagement. The SEC Report also explained that the Ratings Agencies were incentivized, due to the highly profitable nature of these MBS engagements and the concentration of business in the hands of a relatively small group of investment banks, to not update their models lest they become unable to provide to the investment bank the most profitable credit enhancement and rating structure for the MBS transaction. (¶¶92-102).

15. As set forth herein, the Offering Documents contained material misstatements and omissions of material facts in violation of Sections 11 and 12 of the Securities Act, including the failure to disclose that: (i) the Certificate mortgage loan collateral was not originated in accordance with the loan underwriting guidelines set forth in the Registration Statements or the Prospectus Supplements, since Residential Capital and HFN failed to conduct meaningful assessment of the borrower's creditworthiness, employment verification and/or standard appraisals of the mortgaged properties sufficient to assess their fair value (¶¶ 168-195); (ii) Residential Capital and the Underwriter Defendants failed to conduct adequate due diligence with respect to HFN's compliance with the loan underwriting guidelines stated in the Offering Documents (¶¶ 79-86); (iii) the stated credit enhancement did not support the investment grade ratings assigned to the Certificates in light of the true undisclosed and impaired quality of the mortgage collateral. (¶¶ 92-115); (iv) there were material undisclosed conflicts of interest between Residential Capital and the Underwriter Defendants, and the Ratings Agencies, including as reflected in the undisclosed ratings shopping practices, which incentivized the

Ratings Agencies to understate the appropriate Certificate credit enhancement and inflate the Certificate ratings (¶¶ 121-26); and (v) the amount of credit enhancement provided to the Certificates was inadequate to support the AAA and investment grade ratings because those amounts were determined primarily by Ratings Agencies' models which had not been updated in a timely manner. (¶¶92-102).

16. As a result of these material misstatements and omissions of material fact Plaintiffs and the Class have suffered damages for which Defendants are liable pursuant to Sections 11, 12 and 15 of the Securities Act.

II.

JURISDICTION AND VENUE

17. The claims alleged herein arise under Sections 11, 12(a)(2) and 15 of the Securities Act, 15 U.S.C. §§ 77k, 77l(a)(2) and 77o. Jurisdiction is conferred by Section 22 of the Securities Act and venue is proper pursuant to Section 22 of the Securities Act.

18. The violations of law complained of herein occurred in this County, including the dissemination of materially false and misleading statements complained of herein into this County. RCC, RFC, RALI, RFSC, the Underwriter Defendants their affiliates, subsidiaries and/or successors-in-interest conduct or conducted business in this County.

III.

PARTIES AND RELEVANT NON-PARTIES

19. Court-Appointed Lead Plaintiff Carpenters Health Fund and Plaintiff Carpenters Vacation Fund are Taft-Hartley Pension Funds. As reflected in the Certification of Securities Class Action filed herein, the Carpenters Funds purchased the following classes of Certificates

pursuant and traceable to the Registration Statements and Prospectus Supplements and have been damaged thereby:

Certificates Purchased	Amount of Units Purchased	Price Paid (Per Unit)	Value as of the Date of Filing of Complaint (Per Unit)
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QO7, Class M1	180,000	$ 1.00625	$ 0.00984
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2007-QS1, Class 1A1	415,000	$ 1.00980	$ 1.0058[A]
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2007-QS1, Class 2A10	155,000	$ 1.00500	$ 1.0027[A]
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2007-QH4, Class A1	80,000	$ 0.99890	$ 0.3049

[[A] - per unit price of security as of January 31, 2008.]

20. Plaintiff Boilermaker Pension Trust is a Taft-Hartley Pension Fund. As reflected in the Certification of Securities Class Action filed herein, the Boilermaker Pension Trust purchased the following Certificates pursuant and traceable to the Registration Statements and Prospectus Supplements and has been damaged thereby:

Certificates Purchased	Amount of Units Purchased	Price Paid (Per Unit)	Value as of the Date of Filing of Complaint (Per Unit)
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2007-QO4, Class A1A	961,530.55	$ 095520	$ 0.3527

21. Plaintiff IPERS is a public pension fund. As reflected in the Certification of Securities Class Action filed with IPERS Motion to Intervene on July 30, 2010 (*see* Dkt. Nos.

98-100), IPERS purchased the following Certificates pursuant and traceable to the Registration Statements and Prospectus Supplements:

Certificates Purchased	Date of Purchase	Amount of Units Purchased	Price Paid (Per Unit)
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QO10, Class A1	5/1/2007	7,073,554.39	$0.9986
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2007-QS1, Class 2A2	5/29/2008	13,460,044.45	$0.7275
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2007-QO2, Class A1	3/27/2008	3,356,988.00	$0.7375

22. Plaintiff OCERS is public pension fund. As reflected in the Certification of Securities Class Action filed with OCERS Motion to Intervene on July 30, 2010 (*see* Dkt. Nos. 98-100), OCERS purchased the following Certificates pursuant and traceable to the Registration Statements and Prospectus Supplements:

Certificates Purchased	Date of Purchase	Amount of Units Purchased	Price Paid (Per Unit)
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QS18, Class 3A1	6/11/2007	1,376,865.76	$0.9859
RALI Mortgage Asset Backed Pass-Through Certificates, Series 2006-QO6, Class A1	3/5/2008	1,417,167.04	$0.8300

23. Plaintiff Midwest OE is a Taft-Hartley Pension Fund. As reflected in the Certification of Securities Class Action filed with Midwest OE s Motion to Intervene on July 13, 2010 (*see* Dkt. Nos. 91-93, 95), Midwest OE purchased the following Certificates pursuant and traceable to the Registration Statements and Prospectus Supplements:

Certificates Purchased	Date of Purchase	Amount of Units Purchased	Price Paid (Per Unit)

RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QO9, Class 1A1B	9/26/2007	2,293,260.45	$0.9874

24. Detroit PFRS is a pension plan and trust established by the Charter and Municipal Code of the City of Detroit, Michigan. Detroit PFRS has approximately $3.5 billion of net assets held in trust for the benefit of the active and retired police officers and firefighters of the City of Detroit, Michigan. As reflected in the certification filed with Detroit PFRS Motion to Intervene on July 2, 2010 (*see* Dkt. Nos. 84-86), Detroit PFRS purchased the following Certificates pursuant and traceable to the Registration Statements and Prospectus Supplements and has been damaged by the following amounts:

Certificates Purchased	Amount of Units Purchased	Price Paid (Per Unit)	Amount Received on Units Sold (Per Unit)
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QS8, Class A1	1,451,140.68	$0.84	$0.735

25. Upon filing of the initial complaint on September 22, 2008 (the Initial Complaint) the statute of limitations was tolled as to all claims asserted herein by Plaintiffs with respect to the RALI Series 2006-QO6, 2006-QO9, 2006-QO10, 2007-QO2 Offerings. *See* Dkt. No. 1. Thereafter, the filing of the FAC on May 18, 2009 tolled the statute of limitations as to all of the claims asserted herein by Plaintiffs with respect to the RALI Series 2006-QS8 and RALI Series 2006-QS18 Offerings. *See* Dkt. No. 27. The filing of the FAC also tolled the statute of limitations on Plaintiff IPERS claims with respect to the RALI Series 2007-QS1 Offering. *Id.* This Complaint asserts the same Securities Act claims, names the same defendants and contains identical allegations as to the same Registration Statements and Prospectus Supplements as the Initial Complaint and/or the FAC. The claims here arise out of the same conduct, transactions and occurrences set forth in the Initial Complaint and/or the FAC. As set forth in this Court's

Decision and Order on the Defendants' Motion to Dismiss the First Amended Complaint dated March 31, 2010, both the Initial Complaint and the FAC asserted timely claims on the RALI Offerings included therein. Therefore, under the tolling doctrine set forth in *American Pipe* and its progeny, as well as the relation-back doctrine of Fed. R. Civ. P. 15(c), the claims asserted herein on behalf of all Plaintiffs are timely.

26. General Motors Corporation (□GM□) GM is primarily engaged in automotive production and marketing, and financing and insurance operations. GM is a Delaware corporation with its principal offices located at 300 Renaissance Center, Detroit Michigan.

27. Defendant GMAC, LLC, f/k/a General Motors Acceptance Corporation (collectively referred to herein as □GMAC□), is principally located at 200 Renaissance Center, Detroit, Michigan 48265. GMAC was founded in 1919 as a wholly-owned subsidiary of General Motors Corporation, and was originally established to provide GM dealers with the automotive financing necessary to acquire and maintain vehicle inventories and to provide retail customers the means by which to finance vehicle purchases through GM dealers. On November 30, 2006, GM sold a 51% interest in GMAC for approximately $7.4 billion to FIM Holdings LLC, an investment consortium led by Cerberus FIM Investors, LLC, the sole managing member, and changed its name to GMAC, LLC. GMAC is a leading, independent, globally diversified, financial services firm with approximately $248 billion of assets and operations in approximately 40 countries. Since its inception, GMAC has greatly expanded its business and now includes the following primary lines of business □ Global Automotive Finance, Mortgage (Residential Capital, LLC) and Insurance. GMAC is the parent and sole owner of Defendant RCC, as well as Defendant Residential Funding Securities Corporation.

28. Defendant Residential Capital, LLC, f/k/a Residential Capital Corporation (collectively referred to herein as "RCC") is a wholly owned subsidiary of GMAC, LLC and is principally located at 8400 Normandale Lake Boulevard, Suite 600, Minneapolis, Minnesota 55437, has principal offices of operations in Minneapolis, Minnesota and Fort Washington, Pennsylvania and maintains significant presence in states throughout the U.S., including New Jersey, Texas and California. Defendant RCC is the parent company of Defendants RALI, RFC and the principal originator of the loan collateral, HFN. RCC and its subsidiaries originate, purchase, sell, and securitize residential mortgage loans primarily in the United States, as well as internationally; provide primary and master servicing to investors in residential mortgage loans and securitizations; provide collateralized lines of credit, which are referred to as warehouse lending facilities, to other originators of residential mortgage loans; and hold a portfolio of residential mortgage loans for investment or sale together with interests retained from our securitization activities.

29. Defendant Residential Funding Company LLC, f/k/a Residential Funding Corporation (collectively referred to herein as "RFC"), acted as the Sponsor for the Certificates issued pursuant to the Registration Statements. Residential Funding Corporation changed its status from a Delaware Corporation to a limited liability company in October 2006. Residential Capital originated or acquired all underlying mortgage collateral for the various Offerings via the Sponsor, RFC. (¶¶55-64). RFC made certain representations and warranties in connection with the loan pools collateralizing the Certificates. (*Id.*) As set forth in the Registration Statements, RFC then conveyed the mortgages to the Depositor, Defendant RALI, which was formed for the sole purpose of creating, and thereafter depositing the collateral into, the Issuing Trusts. The Issuing Trusts then issued the Certificates supported by the cash flows from the assets and were

secured by those assets. (□□34, 55-64). RFC□s principal office is located at 8400 Normandale Lake Boulevard, Suite 600, Minneapolis, Minnesota 55437.

30. Defendant RALI served as the Depositor for the Offerings and is principally located at 8400 Normandale Lake Boulevard, Suite 600, Minneapolis, Minnesota 55437. Defendant RALI is the wholly owned subsidiary of RCC. Defendant RALI filed Registration Statements and accompanying Prospectuses with the SEC in connection with the Offerings. The role of RALI as the Depositor was to purchase the mortgage loans from the seller and then assign the mortgage loans and all of its rights and interest under the mortgage loan purchase agreement to the trustee for the benefit of the Bondholders. RALI, as Depositor, was also responsible for preparing and filing any reports required under the Securities Exchange Act of 1934.

31. Defendant RALI filed the following Registration Statements and accompanying Prospectuses with the SEC on Form S-3, as subsequently amended on Form S-3/A, under Registration Nos. 333-131213 and 333-140610 as follows:

The 2006 Registration Statement:

Date Filed	Form Type	Amount Registered
January 23, 2006	S-3	$ 1,000,000
March 3, 2006	S-3/A	$ 34,723,478,970[10]

The 2007 Registration Statement:

Date Filed	Form Type	Amount Registered
February 12, 2007	S-3	$ 1,000,000
April 3, 2007	S-3/A	$ 80,000,000,000[11]

[10] The amount registered under the 2006 Registration Statement includes $24,723,478,970 previously registered under Registration No. 333-126732 on July 30, 2005 and which remained unissued as of March 3, 2006.

[11] The amount registered under the 2007 Registration Statement includes $27,349,759,494 previously registered under Registration No. 333-131213 (the 2006 Registration Statement) and which remained unissued as of April 3, 2007.

32. Defendants RFC and RALI, as Sponsor/Seller and Depositor, respectively, formed the following eight (8) Issuing Trusts, by which RFC and RALI issued, or caused to be issued, the RALI Certificates, pursuant to the 2006 Registration Statement:

Issuing Trust	Approximate Principal Amount	Approx. Offering Date	Underwriter(s)	Depositor/Issuer	Sponsor
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QO6	$ 1,290,297,000	June 28, 2006	Goldman, Sachs & Co., Inc.	Residential Accredited Loans, Inc.	Residential Funding Corporation
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QO7	$ 1,542,440,000	September 29, 2006	UBS Securities, LLC	Residential Accredited Loans, Inc.	Residential Funding Corporation
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QO9	$ 890,657,000	November 28, 2006	Lehman Brothers, Inc.	Residential Accredited Loans, Inc.	Residential Funding Company, LLC
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QO10	$ 889,857,000	December 27, 2006	Goldman, Sachs & Co., Inc.	Residential Accredited Loans, Inc.	Residential Funding Company, LLC
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QS8	$ 953,783,554	July 25, 2006	Citigroup Global Markets, Inc./ Residential Funding Securities Corporation	Residential Accredited Loans, Inc.	Residential Funding Corporation
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2006-QS18	$ 1,164,635,393	December 27, 2006	Deutsche Bank Securities, Inc.	Residential Accredited Loans, Inc.	Residential Funding Company, LLC
RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2007-QO2	$ 527,132,000	February 26, 2007	Deutsche Bank Securities, Inc.	Residential Accredited Loans, Inc.	Residential Funding Company, LLC

RALI Mortgage Asset-Backed Pass-Through Certificates, Series 2007-QS1	$ 1,280,501,451	January 26, 2007	Citigroup Global Markets, Inc.	Residential Accredited Loans, Inc.	Residential Funding Company, LLC

33. Defendants RFC and RALI, as Sponsor/Seller and Depositor, respectively, formed the following two (2) Issuing Trusts, by which RFC and RALI issued, or caused to be issued, the RALI Certificates, pursuant to the 2007 Registration Statement:

Certificate Trust Series	Approximate Principal Amount	Approx. Offering Date	Underwriter(s)	Depositor/Issuer	Sponsor
RALI Mortgage Asset-Backed Pass-Through Certificates, 2007-QH4	$ 397,963,000	April 26, 2007	Goldman, Sachs & Co., Inc. / Residential Funding Securities Corporation	Residential Accredited Loans, Inc.	Residential Funding Company, LLC
RALI Mortgage Asset-Backed Pass-Through Certificates, 2007-QO4	$ 502,837,000	May 30, 2007	Residential Funding Securities Corporation	Residential Accredited Loans, Inc.	Residential Funding Company, LLC

34. Each of the Issuing Trusts for the various Offerings set forth above was a common law trust formed for the sole purpose of holding and issuing the Certificates. Each of the Issuing Trusts issued hundreds of millions of dollars worth of Certificates pursuant to a Prospectus Supplement, incorporated by reference into the corresponding Registration Statement, which broke out and identified numerous classes of Certificates within each Offering.

35. Defendant Bruce J. Paradis ("Paradis") was, during the relevant time period, RALI's President and Chief Executive Officer. Paradis also served as the President of Defendant RFSC. Paradis signed the 2006 Registration Statement for the Offerings.

36. Defendant Kenneth M. Duncan (□Duncan□) was RALI□s Acting Chief Financial Officer (Principal Financial Officer). Duncan signed the 2006 Registration Statement for the Offerings.

37. Defendant Davee L. Olson (□Olson□) was a Director of RALI. Olson signed the 2006 Registration Statement for the Offerings.

38. Defendant Ralph T. Flees (□Flees□) was, at all relevant times, RALI□s Controller (Principal Accounting Officer). Defendant Flees signed the 2006 and 2007 Registration Statements for the Offerings.

39. Defendant Lisa R. Lundsten (□Lundsten□) signed the 2006 and 2007 Registration Statements as Attorney-in-Fact.

40. Defendant James G. Jones (□Jones□) was RALI□s President and Chief Financial Officer at the time the 2007 Registration Statement was issued and thereafter. Jones signed the 2007 Registration Statement for the Offerings.

41. Defendant David M. Bricker (□Bricker□) was a Director of RALI as well as its Chief Executive s President and Chief Financial Officer at the time the 2007 Registration Statement was issued and thereafter. Bricker signed the 2007 Registration Statement for the Offerings.

42. Defendant James N. Young (□Young□) was a Director of RALI at the time the 2007 Registration Statement was issued and thereafter. Young signed the 2007 Registration Statement for the Offerings.

43. The Defendants identified in □□ 35-42 are referred to herein as the □Individual Defendants.□ The Individual Defendants functioned as directors to the Issuing Trusts as they were officers and/or directors of RALI and signed either one or both of the Registration

Statements for the registration of the securities which were thereafter issued by the Issuing Trusts.

44. The Individual Defendants participated with and/or conspired with the remaining Defendants in the wrongful acts and course of conduct or otherwise caused the damages and injuries claimed herein and are responsible in some manner for the acts, occurrences and events alleged in this Complaint.

45. Defendant RFSC, d/b/a GMAC RFC Securities, served as the underwriter for two (2) of the RALI Certificate Offerings – specifically, the RALI Series 2007-QH4 and RALI Series 2007-QO4 Certificate Offerings (collectively the "RFSC Offerings"). RFSC is an SEC registered broker-dealer, principally located at 8400 Normandale Lake Boulevard, Suite 600, Minneapolis, Minnesota 55437 and is a wholly-owned subsidiary of Defendant RCC. RFSC's banking operations are limited to broker-dealer functions in the issuance and underwriting of residential and commercial mortgage-backed securities. Moreover, RFSC only conducts business with institutional clientele. RFSC was one of the leading MBS underwriters in the United States. RFSC, as an essential part of its investment banking business, has substantial contacts within this County and during the relevant time period transacted and continues to transact business in New York – specifically New York County (*i.e.*, Wall Street and the financial markets) including through the Offerings. RFSC actively served as the underwriter in the sale of the Certificates and assisted in drafting and disseminating the Offering Documents pursuant to which the Certificates were issued.

46. Defendant GSC served as the underwriter for three (3) of the RALI Certificate Offerings – specifically, the RALI Series 2006-QO6, RALI Series 2006-QO10 and RALI Series 2007-QH4 Certificate Offerings (collectively the "GSC Offerings"). GSC is an SEC registered

broker-dealer, principally located at 85 Broad Street, New York, New York 10004. GSC is one of the leading MBS underwriters in the United States. GSC, as an essential part of its investment banking business, maintains its principal place of business operations and has substantial contacts within this County and during the relevant time period transacted and continues to transact business in New York specifically New York County (*i.e.*, Wall Street and the financial markets) including through the Offerings. GSC actively served as the underwriter in the sale of the Certificates and assisted in drafting and disseminating the Offering Documents pursuant to which the Certificates were issued.

47. Defendant DBS served as the underwriter for two (2) of the RALI Certificate Offerings (collectively the DBS Offerings), including the RALI Series 2006-QS18 and RALI Series 2007-QO2 Certificate Offerings. DBS is an SEC registered broker-dealer, principally located at 60 Wall Street, New York, New York 10005. DBS is one of the leading MBS underwriters in the United States. DBS, as an essential part of its investment banking business, in addition to maintaining its principal offices, has substantial contacts within this County and during the relevant time period transacted and continues to transact business in New York specifically New York County (*i.e.*, Wall Street and the financial markets) including through the Offerings. DBS actively served as the underwriter in the sale of the Certificates and assisted in drafting and disseminating the Offering Documents pursuant to which the Certificates were issued.

48. Defendant CITI served as the underwriter for two (2) of the RALI Certificate Offerings, including the RALI Series 2006-QS8 and RALI Series 2007-QS1 (collectively the CITI Offerings). CITI is an SEC-registered broker-dealer, principally located at 399 Park Avenue, 7th Floor, New York, New York 10043. Defendant CITI was intimately involved in the

CITI Offerings. CITI is one of the leading MBS underwriters in the United States. CITI, as an essential part of its investment banking business, has substantial contacts, including its principal offices, within this County and regularly transacts business in New York – specifically New York County (*i.e.*, Wall Street and the financial markets) including through the Offerings. CITI actively served as the underwriter in the sale of the Certificates and assisted in drafting and disseminating the Offering Documents pursuant to which the Certificates were issued.

49. Defendant UBS served as the underwriter for the RALI Series 2006-QO7 Offering (the "UBS Offering"). UBS is an SEC registered broker-dealer, principally located at 1285 Avenue of the Americas, 19th Floor, New York, New York 10019. UBS is one of the leading MBS underwriters in the United States. UBS, as an essential part of its investment banking business, UBS maintains its principal offices and has substantial contacts within this County and during the relevant time period transacted business in New York – specifically New York County (*i.e.*, Wall Street and the financial markets) including through the Offerings. UBS actively served as the underwriter in the sale of the Certificates and assisted in drafting and disseminating the Offering Documents pursuant to which the Certificates were issued.

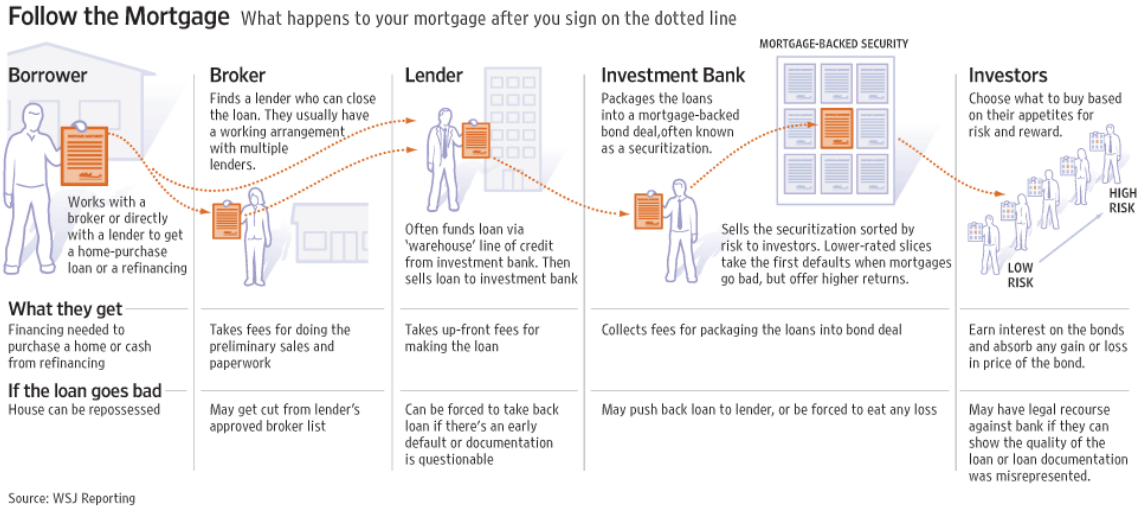
50. Lehman Brothers, Inc. ("LB"), the former investment banking arm of the now-defunct entity Lehman Brother Holding, Inc. ("LBHI") served as the underwriter for the RALI Series 2006-QO9 Certificate Offering (the "LB Offering"). LB was an SEC registered broker-dealer, and was principally located at 745 Seventh Avenue, New York, New York 10019. LB was one of the leading MBS underwriters in the United States. LB, as underwriter for the LB Offering, is liable under Sections 11 and 12 of the Securities Act, but is not named as a Defendant herein because on September 15, 2008, its parent company, LBHI, filed for bankruptcy protection under Chapter 11 of the U.S. Bankruptcy Code, and in conjunction

therewith, the Securities Investor Protection Corporation commenced proceedings to liquidate LB.

51. Defendants RFSC, GSC, DBS, CITI and UBS are collectively referred to herein and the "Underwriters" or "Underwriter Defendants."

52. McGraw-Hill is a New York corporation with its principal place of business located at 1221 Avenue of the Americas, New York, New York 10020. S&P, a division of McGraw-Hill, provides credit ratings, risk evaluation, investment research and data to investors. S&P participated in the drafting and dissemination of the Prospectus Supplements pursuant to which the Certificates were sold to Plaintiffs and other Class members. In addition, S&P worked with Residential Capital, the Underwriter Defendants, loan sellers and servicers in forming and structuring the securitization transactions related to the Certificates, and then provided pre-determined credit ratings for the Certificates, as set forth in the Prospectus Supplements.

53. Moody's Investors Service, Inc. (defined herein as "Moody's"), a division of Moody's Corp., is principally located at 250 Greenwich Street, New York, New York 10007, and provides credit ratings, risk evaluation, investment research and data to investors. Moody's participated in the drafting and dissemination of the Prospectus Supplements pursuant to which the Certificates were sold to Plaintiffs and other Class members. In addition, Moody's worked with Residential Capital, the Underwriter Defendants, loan sellers and loan servicers in forming and structuring the securitization transactions related to the Certificates, and then provided pre-determined credit ratings for the Certificates, as set forth in the Prospectus Supplements.



54. McGraw-Hill, inclusive of S&P, and Moody's are collectively referred to hereinafter as the "Ratings Agencies").

IV.

BACKGROUND

A. Residential Capital Emerges As a Major Issuer and Underwriter of Mortgage-Backed Securities

55. As illustrated below, a mortgage securitization is where mortgage loans are acquired, pooled together, and then sold to investors, who acquire rights in the income flowing from the mortgage pools.

56. When mortgage borrowers make interest and principal payments as required by the underlying mortgages, the cash flow is distributed to the holders of the MBS certificates in order of priority based on the specific tranche held by the MBS investors. The highest tranche (also referred to as the senior tranche) is first to receive its share of the mortgage proceeds and is also the last to absorb any losses should mortgage-borrowers become delinquent or default on their mortgage. Of course, because the investment quality and risk of the higher tranches is affected by the cushion afforded by the lower tranches, diminished cash flow to the lower tranches results in impaired value of the higher tranches.

57. The securitization of loans fundamentally shifts the risk of loss from the mortgage loan originator to the investor who purchased an interest in the securitized pool of loans. When the originator holds the mortgage through the term of the loan, it profits from the borrower's payment of interest and repayment of principal, but it also bears the risk of loss if the borrower defaults and the property value is not sufficient to repay the loan. As a result, traditionally, the originator was economically vested in establishing the creditworthiness of the borrower and the true value of the underlying property through appraisal before issuing the mortgage loans. In securitizations where the originator immediately sells the loan to an investment bank, it does not have the same economic interest in establishing borrower creditworthiness or a fair appraisal value of the property in the loan origination process.

58. In the 1980s and 1990s, securitizations were generally within the domain of Government Sponsored Enterprises ("GSE"), *i.e.,* the Federal National Mortgage Association ("Fannie Mae") and the Federal Home Loan Mortgage Corporation ("Freddie Mac"), which would purchase loans from originators. Investors in these early GSE securitizations were provided protections since the underlying loans were originated pursuant to strict underwriting guidelines.

59. Between 2001 and 2006, however, there was dramatic growth in both non-GSE loan originations and securitizations, for which there were no such underwriting limitations. That growth resulted in a commensurate increase in subprime securitizations. According to *Inside Mortgage Finance* (2007), in 2001, agency originations were $1.433 trillion and securitizations were $1.087 trillion – far outpacing non-agency originations of $680 billion and securitizations of $240 billion. In 2006, agency originations grew to $1.040 trillion while securitizations declined to $904 million. However, in that same period, non-agency originations

had grown by 100% to $1.480 trillion, and non-agency securitizations had grown by 330% to $1.033 trillion in 2006. Further, non-agency origination of subprime loans grew by 315% from $190 billion in 2001 to $600 billion in 2006; and non-agency Alt-A origination grew by 566% from $60 billion in 2001 to $400 billion in 2006. Non-agency securitizations of subprime loans had also grown exponentially by 415% from $87.1 billion in 2001 to $448 billion in 2006. Along with the growth of subprime securitizations the growth of subprime home equity securitizations also grew by 216% from approximately $150 billion in 2002 to $475 billion in 2006.

60. Residential Capital became a significant issuer in the MBS securitizations market. According to *Inside Mortgage Finance*, Residential Capital issued $42.336 billion and $56.93 billion of non-agency MBS in 2004 and 2005. (Moody's, *Bloomberg Asset Securitization*, January 2008.) In 2005, RFC was the fifth largest non-agency MBS issuer and ninth largest overall mortgage securities issuer. In 2006, Residential Capital increased their production to $66.2 billion, making it the fourth largest non-agency MBS issuer and eighth largest in total MBS issuance. In 2007, Residential Capital issued $6.6 billion of subprime MBS and an additional $22.2 billion of Alt-A MBS.

B. Residential Capital's Securitization Operations

61. In 2005 through 2007, Residential Capital's RMBS operations were run primarily out of its offices at 8400 Normandale Lake Boulevard, Suite 600, Minneapolis, Minnesota 55437.

62. Residential Capital derived its profit from the sale of the Certificates for a price in excess of the amount paid for the underlying mortgage loans. The goal for Residential Capital was to sell the Certificates for a price above par or $1.00 per unit. As noted, for securitized

Certificates to be marketable to begin with, approximately 80% of the securitization had to have the highest rating by the rating agencies. With that condition met, subprime securitizations and home equity securitizations posed the greater profit potential for Residential Capital.

63. Before securitization could begin, Residential Capital had to acquire the underlying mortgage loans directly from its loan origination affiliate, HFN. With the securitization structure in place, the Certificates were then issued through RALI Trusts designated with specific "Shelf" names. The different shelf names reflected the different types of mortgage collateral underlying each of the specific RALI Offerings. The underlying mortgages in the RALI "QH" Shelf Trusts were principally one- to four-family residential, payment-option, hybrid adjustable-rate first lien mortgage loans with a negative amortization feature; the underlying mortgages in the RALI "QO" Shelf Trusts were also principally one- to four-family residential, payment-option, adjustable-rate first lien mortgage loans with a negative amortization feature; and the underlying mortgages in the RALI "QS" Shelf Trusts were principally one- to four-family residential first lien mortgage loans. RALI completed one (1) QH Offering, six (6) QO Offerings and three (3) QS Offerings pursuant to the 2006 and 2007 Registration Statements, between June 28, 2006 and May 30, 2007, which are all the subject of the within Complaint.

64. Residential Capital and the Underwriter Defendants' ability to market the Certificates at all, much less at a profit - depended on ensuring that substantially all them were assigned the highest rating from the Ratings Agencies. In order to ensure this occurred Residential Capital and the Underwriter defendants made sure the Ratings Agencies participated in all aspects of the formation and structuring of the Certificates: from reviewing the loan tape before the loans were acquired to determining the loans to be included in the underlying

Certificate collateral pools. These Defendants also had the Ratings Agencies compete for the engagement by including their proposed ratings on the Certificates as part of their bid for the Certificate rating engagement. This ratings shopping resulted in 95% of the Certificates being assigned the highest AAA designation. The rating shopping practices was first disclosed in detail to investors in the July 2008 SEC Report (¶¶120-23) and in testimony by former Moody's and S&P managers in October 2008 (¶¶97-115). The practice was effectively ended by way of an agreement entered into between the Ratings Agencies and NYAG in 2008. (¶¶113, 124-25).

V.

DEFENDANTS' OMISSIONS OF MATERIAL FACT FROM THE OFFERING DOCUMENTS UNDER THE SECURITIES ACT

A. Exponential Increase in Borrower Delinquencies Shortly After Each Certificate Offering Reflects Defective Collateral and Faulty Origination

65. Regardless of when the Certificate Offering occurred, delinquency rates rose exponentially shortly after issuance reflecting the defective quality of the loan collateral.

66. At the time of issuance, the average delinquency and default rate of the outstanding loan balance was 0.00%. Within four months of the Offerings, delinquencies skyrocketed from 0.00% of the outstanding loan balance as of the cut-off dates to 3.2% of the balance. Broken down by Shelf, average delinquencies within four months of issue rose to over 3.7% for the RALI QO Offerings which are the subject of the within Complaint, to approximately 3.7% for the RALI QS Offerings and to 1.9% for the RALI QH Offering.

67. Within six months after issuance of the Certificates, delinquencies dramatically worsened, increasing by 48,000% from issuance, from the cut-off dates, to 4.9% of the outstanding collateral balance – in excess of 4.6% for the RALI QO Offerings, 5.6% for the RALI QS Offerings and 4.6% for the RALI QH Offering. As of the filing of the FAC in May

2009, the collateral had largely failed with a startling 41% of the total mortgage loans either delinquent, defaulted, in foreclosure or repossessed.

68. The meteoric increase in delinquencies rates so soon after issuance is reflective of substantial instances of "early payment default" ("EPD") by borrowers on the underlying mortgage loans. Such defaults are highly indicative of failed and deficient loan underwriting and origination practices. (¶¶ 127-167). As reported by the Federal Bureau of Investigation (the "FBI") in its 2006 and 2007 Mortgage Fraud Reports, a study of three million residential mortgage loans found that between 30% and 70% of early payment defaults were linked to significant misrepresentations in the original loan applications. The study cited by the FBI and conducted by Base Point Analytics, found that loans that contained egregious misrepresentations were five times more likely to default in the first six months than loans that did not. The misrepresentations included income inflated by as much as 500%, appraisals that overvalued the property by 50% or more, fictitious employers and falsified tax returns. The 2006 FBI report also cited studies by a leading provider of mortgage insurance, Radian Guaranty Inc., found the same top states for mortgage fraud – including the states where the underlying HFN mortgage collateral was principally originated – were also the same top states with the highest percentage of early payment defaults.

69. This pattern of borrower default shortly after the completion of the Offerings evidences substantial early payment default and borrower misrepresentations. The origination of such fundamentally impaired loan collateral could only have occurred as a result of systematic failures to abide by the underwriting guidelines in the Offering documents and as a result of inadequate due diligence by Residential Capital and the Underwriter Defendants in monitoring compliance with those guidelines.

B. The Collapse of the Certificates' Ratings Shortly After Each Offering Reflects Defective Collateral and Faulty Origination

70. The Ratings Agencies rated the Certificates pursuant to the following twenty three (23) level rating system:

		Definition	Moodys	S & P	Fitch
		Investment Grade			
	10.0	US Treasuries	***	***	***
	9.5	Prime, maximum safety	Aaa	AAA	AAA
	9.0	Very high grade/quality	Aa1	AA+	AA+
	8.5	"	Aa2	AA	AA
	8.0	"	Aa3	AA-	AA-
	7.5	Upper medium quality	A1	A+	A+
	7.0	"	A2	A	A
	6.5	"	A3	A-	A-
	6.0	Lower medium grade	Baa1	BBB+	BBB+
	5.5	"	Baa2	BBB	BBB
	5.0	"	Baa3	BBB-	BBB-
Color code	Number	Definition	Moodys	S & P	Fitch
		Speculative grade			
	4.5	Speculative	Ba1	BB+	BB+
	4.0	"	Ba2	BB	BB
	3.5	"	Ba3	BB-	BB-
	3.0	Highly speculative	B1	B+	B+
	2.5	"	B2	B	B
	2.0	"	B3	B-	B-
	1.5	Substantial risk	Caa1	CCC+	CCC+
	1.0	In poor standing	Caa2	CCC	CCC
	0.5	"	Caa3	CCC-	CCC-
	0.0	Extremely speculative	Ca	CC	CC
	0.0	Maybe in or extremely close to default	C	C+,C,C-	C+,C,C-
	0.0	Default		D	D

71. As noted above, Moody's and S&P rated $9.14 billion and $9.26 billion, respectively, of the $9.44 billion Certificates issued pursuant to the RALI Offerings at issue in this Complaint. At the time these Certificates were issued, Moody's assigned its highest investment grade rating of "Aaa" to 95.11%, or $8.7 billion, of the Moody's rated Certificates,

and S&P assigned its highest investment grade rating of "AAA" to 95%, or $8.8 billion, of the S&P rated Certificates. As a general matter, a rating downgrade of even one level – *e.g.,* from AAA to AA or from Aaa to Aa – is considered material to the financial condition of the rated entity or security. Here, the magnitude of the Certificate downgrades is unprecedented. The Certificates have been downgraded as many as the maximum 23 levels – with, for example, 100% of Certificates initially rated AAA having now been downgraded to "Ba1" or below, meaning these Certificates were not only designated "junk," but are considered in danger of "imminent default." The remaining Certificate tranches have fared no better since 100% of the $9.44 billion of Certificates at issue herein have been downgraded to speculative or "junk" status. Furthermore, Certificates rated in the Aa and A range by Moody's at issuance have been downgraded to CC and below – from "very high grade" and "upper medium" securities to "extremely speculative" junk bonds. This historic and dramatic reversal in the financial assessment of the Certificates by the Ratings Agencies underscores that these securities were defective from the outset.

C. Investigations and Disclosures Subsequent to Offerings Evidence That HFN Disregarded Stated Mortgage Loan Underwriting Guidelines

72. HFN was a principal originator for all 10 RALI Certificate Offerings subject to the within action. Homecomings Financial, LLC, formerly known as Homecomings Financial Network, Inc., ("HFN"), based in Minneapolis, Minnesota, is an indirect subsidiary of GMAC and a direct wholly-owned of RCC. HFN was founded in 1995 after RCC was purchased by GMAC, and has since served as RCC's primary wholesale lender.

73. Following issuance of the Certificates, disclosures began to emerge which further reflected HFN's systemic disregard for the underwriting guidelines set forth in the Offering Documents, its practices and policies of favoring riskier, fee-driven mortgage lending including

sub-prime, Alt-A and option-ARM (hybrid adjustable rate or negative amortization) mortgage loans and inflating revenue via hidden prepayment penalties and fees.

74. In mid-2008, the Federal Trade Commission (the "FTC") commenced an investigation into HFN's policies and practices after an FTC staff review of HFN's mortgage loan data report pursuant to the Home Mortgage Disclosure Act, 12 U.S.C. §§ 2801-2810, indicated that African American and Hispanic borrowers paid more for mortgage loans than non-Hispanic Whites. According to a letter from the FTC to HFN's counsel, the investigation focused on whether the underwriting risk and the credit characteristics of the borrowers justified the reported disparities in loan price.

> Homecomings originated the vast majority of its loans through independent brokers and Homecomings' policy and practice was to set the risk-based price and other terms of its brokered loans. In addition, Homecomings' policy and practice was to allow brokers to assess discretionary charges on these loans, within certain limits set by Homecomings. These discretionary charges took the form of (1) fees charged at the time of origination, including broker points and fees, and (2) higher interest rates, in return for which Homecomings paid brokers yield spread premiums.
>
> Based on an extensive investigation, which included obtaining and analyzing Homecomings' full and complete loan data, the staff's statistical analyses of the data show that, on average, Homecomings charged African-American and Hispanic borrowers substantially more for home purchase and refinance loans than similarly-situated non-Hispanic whites. ***The staff further determined that these disparities were caused by Homecomings' policy and practice of allowing its brokers broad discretion to determine the amount of discretionary fees charged to borrowers in addition to the risk-based price. The staff concluded that the disparities in these discretionary charges are substantial, statistically significant, and cannot be explained by any legitimate underwriting or credit characteristics in violation of the FCOA and the FTC Act.***

75. Before the FTC could complete their investigation, on September 3, 2009, RCC announced that it was shutting its wholesale mortgage origination operations, thereby closing down HFN, as well as its retail operations, GMAC Mortgage, LLC ("GMACM"). In a January 22, 2009 FTC letter closing the investigation, the FTC explained:

> During the course of this investigation, Homecomings ceased originating mortgage loans and stated it has no intention to resume mortgage lending in the future. In addition, Residential Capital, LLC ("ResCap"), an indirect parent company of Homecomings, filed a 10-Q Quarterly report for the third quarter of 2008 for ResCap and its direct and indirect subsidiaries, including Homecomings (collectively, the "Company"), which states that the ability of the Company to continue as a going concern is in substantial doubt. The 10-Q further notes that the Company is heavily dependent on its own indirect parent, GMAC, LLC, for funding and capital support and that there can be no assurance that such support will continue. Because of these developments and based on additional information provided by the Company regarding its financial status, the staff has closed the investigation. However, the staff will continue to monitor future developments concerning Homecomings, including whether GMAC's recent conversion to a bank holding company and its receipt of financial assistance from the U.S. Department of the Treasury, may affect Homecomings' operating and financial status. If warranted by materially changed circumstances, the staff will take appropriate action, including the reopening of this investigation.

76. In a March 5, 2009 article titled "Shaky Loans May Spur New Foreclosure Wave," the *Portland Tribune* recounted the events leading up to the massive failures throughout the U.S. mortgage lending industry - including the role of HFN:

> "In order to keep your market share, you had to be more aggressive," said Tim Boyd, who sold subprime loans in the Portland area for six years and then Alt A loans for seven years for Homecomings Financial.
>
> "The main focus was doing Alt A because that's where the money was," said Boyd, who left the industry. A loan officer arranging a $300,000 Option ARM loan could collect $10,500 in fees, he said.
>
> Lenders could unload shaky loans by selling them to investors, who often resold them in what amounted to a worldwide game of financial musical chairs. Wall Street's insatiable appetite for more loans kept the pipeline filled, even if the deals weren't always sound.
>
> "The V.P.s came down to the office beating the drums about Option ARMs," urging mortgage brokers to sell them to customers, Ridge said. "I had Wachovia march through there; I had GMAC."
>
> * * *
>
> He said he knows of loan officers who'd tell title agents to keep quiet about Option ARM loan provisions during document-signing time.

> They'd tell the title officer, 'Don't go over this; just glean through it quickly and get the thing signed.''

> Tim Boyd said he drew the line at selling Option ARMs because he saw how that could get people into trouble. 'It made me sick,' he said.

77. In late 2002, the West Virginia Attorney General's Office began an investigation into predatory lending practices of HFN and another subprime mortgage lender, Fairbanks Capital Corp ('Fairbanks'). The investigation led to a June 25, 2005 settlement between the WVAG, Fairbanks and HFN, pursuant to which Fairbanks and HFN agreed to pay $773,000 in restitution, account credits and refunds for approximately 2,300 West Virginia consumers who had been charged unlawful fees and who lost their homes through 'questionable foreclosures.'

78. In a September 11, 2006 article titled 'Nightmare Mortgages,' *BusinessWeek Magazine* described HFN's lending policies as using outrageous pre-payment penalties to keep borrowers stuck in pay-option ARM loans and their using 'fine-print' in contracts to hide disclosures:

> Gordon Burger is among the first wave of option ARM casualties. The 42-year-old police officer from a suburb of Sacramento, Calif., is stuck in a new mortgage that's making him poorer by the month. Burger, a solid earner with clean credit, has bought and sold several houses in the past. In February he got a flyer from a broker advertising an interest rate of 2.2%. It was an unbeatable opportunity, he thought. If he refinanced the mortgage on his $500,000 home into an option ARM, he could save $14,000 in interest payments over three years. Burger quickly pulled the trigger, switching out of his 5.1% fixed-rate loan. 'The payment schedule looked like what we talked about, so I just started signing away,' says Burger. He didn't read the fine print.
>
> After two months Burger noticed that the minimum payment of $1,697 was actually adding $1,000 to his balance every month. 'I'm not making any ground on this house; it's a loss every month,' he says. ***He says he was told by his lender, Minneapolis-based Homecoming Financial, a unit of Residential Capital, the nation's fifth-largest mortgage shop, that he'd have to pay more than $10,000 in prepayment penalties to refinance out of the loan. If he's unhappy, he should take it up with his broker, the bank said. "They know they're selling crap, and they're doing it in a way that's very deceiving," he says. "Unfortunately, I got sucked into it."*** In a written statement, Residential

> said it couldn't comment on Burger's loan but that "each mortgage is designed to meet the specific financial needs of a consumer."

(Emphasis added).

D. The Offering Documents Failed to Disclose the Underwriter Defendants' Inadequate Due Diligence with Respect to Compliance with Stated Mortgage Loan Underwriting Guidelines

79. The Registration Statement provided that the loan underwriting guidelines used to originate the loan collateral is as specifically set forth in each of the Prospectus Supplements. (¶¶ 168-217). The Prospectus Supplements provide that the mortgage loans underlying the Certificates were originated pursuant to RFC's stated underwriting guidelines adhered to by HFN in originating the mortgage loans. *Id.*

80. As Underwriters of the Certificates Offerings, the Underwriting Defendants conducted inadequate due diligence with respect to whether the Residential Capital and HFN complied with the loan underwriting guidelines described in the Prospectus Supplements.

81. Very little if any due diligence was actually conducted by the Underwriter Defendants themselves. The Underwriter Defendants contracted with external firms to review whether the loans included in MBS that they underwrote were in compliance with the loan originators' represented standards. Residential Capital was a noted client of Bohan and Clayton.

82. In June 2007, the NYAG subpoenaed documents from Bohan and Clayton related to their due diligence efforts on behalf of the investment banks, such as Residential Capital, that underwrote mortgage backed securities. The NYAG, along with Massachusetts, Connecticut and the SEC (all of which also subpoenaed documents) are investigating whether investment banks held back information they should have provided in the disclosure documents related to the sale of mortgage backed securities to investors.

83. In a January 12, 2008 article titled "Inquiry Focuses on Withholding of Data on Loans", *The New York Times* reported:

> An investigation into the mortgage crisis by New York State prosecutors is now focusing on whether Wall Street banks withheld crucial information about the risks posed by investments linked to subprime loans.
>
> Reports commissioned by the banks raised red flags about high-risk loans known as exceptions, which failed to meet even the lax credit standards of subprime mortgage companies and the Wall Street firms. But the banks did not disclose the details of these reports to credit-rating agencies or investors.
>
> The inquiry, which was opened last summer by New York's attorney general, Andrew M. Cuomo, centers on how the banks bundled billions of dollars of exception loans and other subprime debt into complex mortgage investments, according to people with knowledge of the matter. Charges could be filed in coming weeks.
>
> * * *
>
> The inquiries highlight Wall Street's leading role in igniting the mortgage boom that has imploded with a burst of defaults and foreclosures. The crisis is sending shock waves through the financial world, and several big banks are expected to disclose additional losses on mortgage-related investments when they report earnings next week.
>
> As plunging home prices prompt talk of a recession, state prosecutors have zeroed in on the way investment banks handled exception loans. In recent years, lenders, with Wall Street's blessing, routinely waived their own credit guidelines, and the exceptions often became the rule.
>
> It is unclear how much of the $1 trillion subprime mortgage market is composed of exception loans. Some industry officials say such loans made up a quarter to a half of the portfolios they saw. In some cases, the loans accounted for as much as 80 percent. While exception loans are more likely to default than ordinary subprime loans, it is difficult to know how many of these loans have soured because banks disclose little information about them, officials say.
>
> Wall Street banks bought many of the exception loans from subprime lenders, mixed them with other mortgages and pooled the resulting debt into securities for sale to investors around the world.
>
> * * *

> Mr. Cuomo, who declined to comment through a spokesman, subpoenaed several Wall Street banks last summer, including Lehman Brothers and Deutsche Bank, which are big underwriters of mortgage securities; the three major credit-rating companies: Moody's Investors Service, Standard & Poor's and Fitch Ratings; and a number of mortgage consultants, known as due diligence firms, which vetted the loans, among them Clayton Holdings in Connecticut and the Bohan Group, based in San Francisco. Mr. Blumenthal said his office issued up to 30 subpoenas in its investigation, which began in late August.
>
> * * *
>
> To vet mortgages, Wall Street underwriters hired outside due diligence firms to scrutinize loan documents for exceptions, errors and violations of lending laws. But Jay H. Meadows, the chief executive of Rapid Reporting, a firm based in Fort Worth that verifies borrowers' incomes for mortgage companies, said lenders and investment banks routinely ignored concerns raised by these consultants,
>
> "Common sense was sacrificed on the altar of materialism," Mr. Meadows said, "We stopped checking."

84. On January 27, 2008, Clayton revealed that it had entered into an agreement with the NYAG for immunity from civil and criminal prosecution in the State of New York in exchange for agreeing to provide additional documents and testimony regarding its due diligence reports, including copies of the actual reports provided to its clients. On the same day, both the *New York Times* (Anderson, J. and Bajaj, V., "Reviewer of Subprime Loans Agrees to Aid Inquiry of Banks," Jan. 27, 2008), and the *Wall Street Journal* ran articles describing the nature of the NYAG's investigation and Clayton's testimony. The *Wall Street Journal* reported that the NYAG's investigation is focused on "the broad language written in prospectuses about the risky nature of these securities changed little in recent years, even as due diligence reports noted that the number of exception loans backing the securities was rising." According to the *New York Times* article, Clayton told the NYAG "that starting in 2005, it saw a significant deterioration of lending standards and a parallel jump in lending expectations" and "some investment banks directed Clayton to halve the sample of loans it evaluated in each portfolio."

85. A March 23, 2008 *Los Angeles Times* article reported that Clayton and Bohan employees "raised plenty of red flags about flaws [in subprime home loans] so serious that mortgages should have been rejected outright – such as borrowers' incomes that seemed inflated or documents that looked fake – but the problems were glossed over, ignored or stricken from reports" as follows:

> The reviewers' role was just one of several safeguards – including home appraisals, lending standards and ratings on mortgage-backed bonds – that were built into the country's mortgage-financing system.
>
> But in the chain of brokers, lenders and investment banks that transformed mortgages into securities sold worldwide, no one seemed to care about loans that looked bad from the start. Yet profit abounded until defaults spawned hundreds of billions of dollars in losses on mortgage-backed securities.
>
> "The investors were paying us big money to filter this business," said loan checker Cesar Valenz. "It's like with water. If you don't filter it, it's dangerous. And it didn't get filtered."
>
> As foreclosures mount and home prices skid, the loan-review function, known as "due diligence," is gaining attention.
>
> The FBI is conducting more than a dozen investigations into whether companies along the financing chain concealed problems with mortgages. And a presidential working group has blamed the subprime debacle in part on a lack of due diligence by investment banks, rating outfits and mortgage-bond buyers.

The Los Angeles Times, "Subprime Watchdogs Ignored," March 23, 2008.

86. Moreover, while underwriters would have sought to have Clayton review 25% to 40% of loans in a pool that was going to be securitized earlier in the decade, by 2006 the typical percentage of loans reviewed for due diligence purposes was just 5-7%. Bohan's President, Mark Bohan, stated that "[b]y contrast [to investment banks in RMBS deals], buyers who kept the mortgages as an investment instead of packaging them into securities would have 50% to 100% of the loans examined."

E. Governmental Agency Investigations Subsequent to Offerings Evidence Faulty Loan Origination and Securitization Practices

87. In August 2007, following reports of defaults in mortgage loans underlying various MBS, downgrades of such MBS and potential downgrades of additional MBS in the future, and the resulting illiquidity in the credit markets, the President of the United States commissioned the Secretary of the Treasury, the SEC and the Commodities Futures Trading Commission ("CFTC") (hereinafter referred to as the "President's Working Group" or the "PWG") to investigate the causes of the market turmoil. After a seven-month investigation, the PWG issued its report on March 13, 2008. The PWG found as follows :

- A significant erosion of market discipline by those involved in the securitization process, including ***originators, underwriters, credit rating agencies, and global investors,*** related in part to failures to provide or obtain adequate risk disclosures;

- The turmoil in financial markets clearly was triggered by a ***dramatic weakening of underwriting standards for U.S. subprime mortgages***"

(Emphasis added).

88. Further, as noted, relatively soon after issuance, the delinquency and foreclosure rates of the Certificate collateral began to increase. (¶¶ 127-167). This performance was an indication to S&P of pervasive underwriting failures in the origination of the collateral which ultimately led to widespread and deep downgrades of most of the Certificate classes. On or about July 10, 2007, S&P publicly announced it was revising the methodologies used to rate numerous RMBS Certificates because the performance of the underlying collateral "called into question" the accuracy of the loan data. This announcement triggered several governmental investigations which only began reporting their findings in 2008.

89. S&P announced that it was revising its methodology assumption to require increased "credit protection" for rated transactions. S&P reiterated that it would also seek in the

future to review and minimize the incidence of potential underwriting abuse given the level of *loosened underwriting* at the time of loan origination, misrepresentation and speculative borrower behavior reported for the 2006 ratings.

90. One day later, on July 11, 2007, Moody's announced it was also revising its methodology used to rate the Certificates, and anticipated Certificate downgrades in the future. Moody's did in fact significantly downgrade most of the Certificate classes, noting "aggressive underwriting" used in the origination of the collateral.

91. Further, as set forth more fully below, disclosures emerged well after the issuance of the Certificates with respect to each of the Originators which further evidenced that they had engaged in loan underwriting practices which were wholly inconsistent with the guidelines set forth in the Registration Statement and Prospectus Supplements. (¶¶168-217).

F. The Offering Documents Failed to Disclose that Residential Capital and the Underwriter Defendants Relied on S&P and Moody's Outdated Models to Determine Levels of Credit Enhancement and Ratings

92. The Prospectus Supplements describe the varying forms of credit enhancement, including by way of subordination and over-collateralization. The Supplements contain material misstatements and omissions of fact, including the failure to disclose that the amounts and forms of credit enhancement were insufficient and understated because they were largely determined by Ratings Agencies' models that had not been materially updated since 1999 (for S&P) and 2002 (for Moody's). As a result, these outdated models were based primarily on the performance of fixed interest loans and not subprime, Alt-A, no or limited documentation loans – which were the kinds of loans substantially included in the Certificate collateralizations. The models failed both to provide sufficient, appropriate credit enhancement and to disclose the deficiencies in the manner in which credit enhancement was determined.

93. The Ratings Agencies determinations of the amount and kind of credit enhancement to be included in the Certificates were faulty. These same faulty determinations were then used by the same firms to assign inflated and faulty AAA ratings to a substantial portion of the total Certificate value of the Offerings (95.0% by S&P and 95.1% by Moody s). These ratings were unjustifiably high because they were determined pursuant to the same models used to determine credit enhancement models that had not adequately been updated at the time the Certificates were issued.

94. The truth about the Ratings Agencies undisclosed use of outdated models in rating RMBS deals only began to emerge in 2008. The inadequacy of the models used to rate (and determine the amount of credit enhancement needed to support the rating) was discussed in the April 2008 issue of *Mortgage Banking* which explained that the Ratings Agencies models used statistical assumptions that were too heavily based on the performance of 30-year fixed mortgages which were not the kinds of mortgages that had been securitized in the prior four years:

> S & P s Coughlin admits that assumptions that went into decision-making [on credit ratings] were informed by what had happened in the past, and yet in this instance previous loss data proved to be much less of a guide to future performance.
>
> But why? Drexel University s Mason believes it s because the CRAs relied on statistical models that were misleading, at best. I think their [credit-rating] methodologies were demonstrably insufficient, he says.
>
> Unlike the traditional rating processes for single-named issuers, which rely on empirical analysis at their core, structured-finance rating analysis is essentially driven by statistical models, write Mason and Rosner in their paper. And the data that the rating agencies used when evaluating mortgage-backed securities--including those backed by subprime mortgages--were heavily biased by over-reliance on traditional 30-year fixed prime mortgage loans. But it turns out that a subprime loan, as Mason explains during an interview, is a very different animal.
>
> This is not your historical mortgage loan, he says. This is more like a credit-

> card loan. Mason cites the increased popularity during the mortgage boom of so-called option ARMs, which are home loans that give the borrower a variety of monthly payment options and have variable cash-flow characteristics that are more like credit cards.

95. In an article appearing in *The New York Times* on April 8, 2008, entitled Triple A Failure, *The New York Times* took note of Moody s April 2007 disclosure that it was revising its model which had not been revised since 2002:

> In April 2007, Moody s announced it was revising the model it used to evaluate subprime mortgages. It noted that the model was first introduced in 2002. Since then, the mortgage market has evolved considerably. This was a rather stunning admission; its model had been based on a world that no longer existed.

96. The article explained that when Moody s had analyzed subprime delinquency data in 2007 it had found trends that its 2002 model never accounted for:

> Poring over the data, Moody s discovered that the size of people s first mortgages was no longer a good predictor of whether they would default; rather, it was the size of their first and second loans that is, their total debt combined. This was rather intuitive; Moody s simply hadn t reckoned on it. Similarly, credit scores, long a mainstay of its analyses, had not proved to be a strong predictor of defaults this time. Translation: even people with good credit scores were defaulting. Amy Tobey, leader of the team that monitored XYZ, told me, it seems there was a shift in mentality; people are treating homes as investment assets. Indeed. And homeowners without equity were making what economists call a rational choice; they were abandoning properties rather than make payments on them. Homeowners equity had never been as high as believed because appraisals had been inflated.

97. On October 22, 2008, the United States House of Representatives Committee on Oversight and Government Reform (defined herein as the House Oversight Committee) heard testimony from Frank Raiter (the Raiter Testimony), the former Managing Director and head of Residential Mortgage-Backed Securities at S&P from March 1995 through April 2005. Raiter testified that the Ratings on S&P deals turn in part on the credit rating of the individual mortgages. It was from this credit analysis that S&P determined ***(1) the expected default probability*** of a loan and ***(2) the loss that would occur in the event of a default*** which, in turn,

was used to establish the amount of AAA bonds that could be issued against the pool and amount of equity or "credit enhancement" needed to protect the AAA bonds from experiencing losses:

> A mortgages backed security consists of a pool of individual mortgage loans. Depending on the type of mortgage product (i.e., prime-jumbo, subprime, Alt-A or HEL) underlying a given security, the pool could consist of 1,000 to 25,000 loans. The ratings process consists of two distinct operations – the credit analysis of individual mortgages and a review of the documents governing the servicing of loans and the payments to investors in the securities.
>
> ***The credit analysis is focused on determining the expected default probabilities on each loan and the loss that would occur in the event of a default.*** These, in turn, establish the expected loss for the entire pool and determine the amount of AAA bonds that can be issued against the pool. It is analogous to your equity position in your home and the underlying mortgage.
>
> The loss estimate determines the equity needed to support the bond – it is intended to protect the AAA bonds from experiencing any losses, much the same as the homeowners' equity stake in a house protects the lender from loss in the mortgage loan.

Raiter Testimony, at 3 (emphasis added).

98. Raiter testified that in 1995, S&P developed a sophisticated model to estimate the default and loss of individual loans and pools – a model based on approximately 500,000 loans with performance data going back five or more years. This "LEVELS" Model was updated in early 1999 based on a database of 900,000 loans. Raiter testified further that ***"it was critical to maintain the best models as they were the linchpins of the rating process."*** Raiter Testimony, at 4 (emphasis added). After the housing boom took off in 2001, S&P developed a far better model in 2001, with updated data in 2003 and 2004, based on approximately 9.5 million loans ***"covering the full spectrum of new mortgage products, particularly in AAA and fixed/floating payment type categories."*** *Id*.

99. Nevertheless, S&P failed to implement this updated model, which, in Raiter's view, would have forewarned on the loan-losses from the new loan products, in particular:

> [T]he analysts at S&P had developed better methods for determining default which did capture some of the variations among products that were to become evident at the advent of the crisis. It is my opinion that had these models been implemented we would have had an earlier warning about the performance of many of the new products that subsequently lead to such substantial losses. That, in turn, should have caused the loss estimates mentioned above to increase and could have thus caused some of these products to be withdrawn from the market as they would have been too expensive to put into bonds.

Raiter Testimony, at 4.

100. As Raiter explained, the unfortunate consequences of continuing to use outdated versions of the rating model included "the failure to capture changes in performance of the new non-prime products" and "the unprecedented number of AAA downgrades and subsequent collapse of prices in the RMBS market." S&P's current President, Deven Sharma, agreed, noting: "It is by now clear that a number of the assumptions we used in preparing our ratings on mortgage-backed securities issued between the last quarter of 2005 and the middle of 2007 did not work . . . [E]vents have demonstrated that the historical data we used and the assumptions we made significantly underestimated the severity of what has actually occurred."

101. Executives at Moody's also acknowledged a lack of investment in Moody's ratings models and the failure of Moody's ratings models to capture the decrease in lending standards. In a confidential presentation to Moody's Board of Directors from October 2007, released by the House Oversight Committee on October 22, 2008 during the Committee's "Hearing on the Credit Agencies and the Financial Crisis" (the "House Oversight Committee Hearing"),[12] Raymond McDaniel, the current Chairman and CEO of Moody's, noted that underfunding can put ratings accuracy at risk and acknowledged that "Moody's Mortgage Model (M3) needs investment." McDaniel also acknowledged that Moody's models did not sufficiently capture the changed mortgage landscape. *Id.* Brian Clarkson – the former President and Chief

[12] All exhibits released by the House Oversight Committee from the Committee's "Hearing on Credit Agencies and the Financial Crisis" can be found on the Committee's website at www.oversight.house.gov.

Operating Officer of Moody's, also recognized during a Moody's Town Hall on September 10, 2007, the transcript of which was released during the House Oversight Committee Hearing on October 22, 2008, Moody's failure to incorporate decreased lending standards into their ratings, stating: "We should have done a better job monitoring that [decrease in underwriting standards]."

102. Not only were Moody's and S&P's models based on outmoded data but they were often constructed by people who were not familiar with the housing markets in the areas that they were rating. And, in some instances, real estate investments were graded by analysts who never actually reviewed the investment and who merely relied upon ratings assigned by a competitor ratings agency.

G. The Ratings Agencies Relaxed the Ratings Criteria Which Led to Artificially High Ratings Awarded to the Certificates

103. Moody's and S&P repeatedly eased their ratings standards in order to capture more market share of the ratings business. In a September 25, 2008 article published by *Bloomberg*, titled "Race to Bottom at Moody's, S&P Secured Subprime's Boom, Bust," a former S&P Managing Director Richard Gugliada explained the easing of standards as a "*market-share war where criteria were relaxed*" and admitted, "*I knew it was wrong at the time … [i]t was either that or skip the business.* That wasn't my mandate. My mandate was to find a way. Find the way." According to Gugliada, when the subject of tightening S&P's ratings criteria came up, the co-director of CDO ratings, David Tesher, said: "Don't kill the golden goose." *Id.*

104. The loosening of ratings standards is exemplified by the following "instant message" conversation between Rahul Shah ("Shah") and Shannon Mooney ("Mooney"), two S&P analysts, from April 5, 2007, that described S&P's rating of an investment similar to the Trusts and that was submitted during the House Oversight Committee Hearing:

Shah: btw "that deal is ridiculous

Mooney: i know right ... model def does not capture half of the rish [sic]

Mooney: *risk*

Shah: we should not be rating it

Mooney: we rate every deal

Mooney: it could be structured by cows and we would rate it

Shah: but there's a lot of risk associated with it – I personally don't feel comfy signing off as a committee member.

105. In an email sent on December 5, 2006, released during the House Oversight Committee Hearing, an S&P analytical manager in the same group as Shah and Mooney wrote to a senior analytical manager that the "[r]ating agencies continue to create and [sic] *even bigger monster – the CDO market. Let's hope we are all wealthy and retired by the time this house of cards falters.*"

106. On October 28, 2008, former Moody's Managing Director Jerome S. Fons ("Fons") testified before the House Oversight Committee (hereinafter "Fons Testimony"). Fons had been an Executive at Moody's for 17 years, in various positions including Managing Director of Credit Policy. Fons testified that due to profit concerns, a loosening of ratings standards took place at his company: "[T]he focus of Moody's shifted from protecting investors to being a marketing-driven [sic] organization" and "management's focus increasingly turned to maximizing revenues" at the expense of ratings quality.

107. Fons explained that the originators of structured securities were free to shop around for the rating agency that would give them the highest rating and "*typically chose the agency with the lowest standards, engendering a race to the bottom in terms of rating quality*." Fons Testimony, at 3. Fons noted that the rating agencies' "drive to maintain or expand market share made [them] willing participants in this [rating] shopping spree" and made it "relatively

easy for the major banks to play the agencies off one another." *Id.* Fons said it was this business model that "*prevented analysts from putting investor interests first*." *Id.*

108. Raymond McDaniel, the current CEO of Moody's, also acknowledged the degradation of ratings standards. In the same confidential presentation to Moody's Board of Directors in October 2007, cited *supra*, McDaniel told the Board: "The real problem is not that the market ... underweights ratings quality but rather that in some sectors, it actually penalizes quality ... It turns out that *ratings quality has surprisingly few friends*." He noted the pressure exerted on analysts to come up with high ratings, explaining "[a]nalysts and MDs [managing directors] are continually "pitched" by bankers, issuers, investors" and sometimes "we "drink the kool-aid." In fact, *The Wall Street Journal,* in an article published on April 24, 2007, found that in at least one instance, Moody's increased the proportion of AAA ratings within a mortgage after its client complained and said it might go with a different rating firm.

H. The Prospectus Supplements Did Not Reflect the True Risk of the Certificates

109. The Ratings Agencies rated the Certificates based in large part on data about each mortgage loan that Residential Capital provided to them – including appraisal values, LTV ratios, and borrower creditworthiness and the amount of documentation provided by borrowers to verify their assets and/or income levels. As discussed above, much of this data was inaccurate due to the inflated appraisal values, inaccurate LTV ratios, borrower income inflation, and the other facets of defective underwriting addressed in this Complaint. Neither Moody's nor S&P engaged in any due diligence or otherwise sought to verify the accuracy or quality of the loan data underlying the RMBS pools they rated (and specifically disclaimed any due diligence responsibilities). Nor did they seek representations from sponsors that due diligence had been performed. During Moody's September 2007 "Town Hall Meeting," hosted by Moody's

Managing Director, Raymond McDaniel, executives at Moody's acknowledged that the Ratings Agencies used inaccurate data to form their ratings:

> We're on notice that a lot of things that we relied on before just weren't true... [W]e relied on reps and warrantees that no loans were originated in violation of any state or federal law. We know that's a lie.
>
> * * *
>
> There's a lot of fraud that's involved there, things that we didn't see...We're sort of retooling those to make sure that we capture a lot of the things that we relied on in the past that we can't rely on, on a going forward basis.
>
> * * *
>
> [W]e're being asked to figure out how much everyone lied. ... [I]f all of the information was truthful and comprehensive and complete, we wouldn't have an issue here ...
>
> What we're really being asked to do is figure out how much lying is going on and bake that into a credit ... which is a pretty challenging thing to do. I'm not sure how you tackle that from a modeling standpoint.

Moody's Town Hall Meeting Transcript, at 16, 58.

110. In response to the Town Hall Meeting, a Moody's employee noted:

> [W]hat really went wrong with Moody's sub prime ratings leading to massive leading to massive downgrades and potential more downgrades to come? We heard 2 answers yesterday: 1. people lied, and 2. there was an unprecedented sequence of events in the mortgage markets. ***As for #1, it seems to me that we had blinders on and never questioned the information we were given.*** Specifically, why would a rational borrower with full information sign up for a floating rate loan that they couldn't possibly repay, and why would an ethical and responsible lender offer such a loan? ***As for #2, it is our job to think of the worst case scenarios and model them ... Combined, these errors make us look either incompetent at credit analysis, or like we sold our soul to the devil for revenue, or a little bit of both.***

Moody's Town Hall Meeting Transcript, at 79 (emphasis added).

111. Because Moody's and S&P were using flawed information and models to generate their ratings, the ratings assigned to the Certificates did not accurately reflect their risk,

and the Certificates were given investment grade ratings when in reality they were not of investment grade quality. These artificially high ratings, which were published in the Prospectus Supplements, were false and misleading in that they did not reflect the true risk of the Certificates.

I. The Offering Documents Failed to Disclose Residential Capital's Ratings Shopping Practices

112. The Registration Statement disclosed the engagement of Ratings Agencies but omitted disclosure of the manner in which the Ratings Agencies were engaged – so-called Ratings Shopping. As noted, the SEC Report set forth that S&P and Moody's engaged in the practice of "ratings shopping," as indicative of one of the practices which may have pressured Ratings Agencies to issue faulty ratings for MBS.

113. In June, 2008, the NYAG's Office announced that after an investigation of the Ratings Agencies in the context of mortgage-backed securities, it had reached an agreement with S&P, Moody's and Fitch which contemplated a complete overhaul of the then-current ratings procedures and guidelines and to put an end to what had been termed "ratings shopping." Instead of investment banks looking to issue mortgage-backed bonds going to all three agencies for a review, but only use, and pay for, the most optimistic rating, the agencies now will get paid up front regardless if they are hired to assign a rating, a move expected to remove any potential for conflicts of interest.

114. As set forth above, in Fons' Testimony before the House Oversight Committee, he explained that Moody's provided inadequate ratings on RMBS because of conflicts of interest and being forced to "bid" or "shop" its ratings to obtain engagements:

> Why did it take so long for the rating agencies to recognize the problem? Why were standards so low in the first place? And what should be done to see that this does not happen again?

> ***My view is that a large part of the blame can be placed on the inherent conflicts of interest found in the issuer-pays business model and rating shopping by issuers of structured securities.*** A drive to maintain or expand market share made the rating agencies willing participants in this shopping spree. It was also relatively easy for the major banks to play the agencies off one another because of the opacity of the structured transactions and the high potential fees earned by the winning agency. Originators of structured securities typically chose the agency with the lowest standards, engendering a race to the bottom in terms of rating quality. While the methods used to rate structured securities have rightly come under fire, in my opinion, the business model prevented analysts from putting investor interests first.

Fons Testimony, at 3 (emphasis added).

115. In further testimony at the October 22, 2008 House Oversight Committee Hearing, Managing Director of Egan-Jones Rating Co., Sean J. Egan ("Egan"), stated, in part:

> Assigning ratings on structured finance bonds differs from the process for corporate and municipal bonds. In the unsecured corporate and municipal markets, debt issuers are subject to being rated by all of the rating agencies because financial information is publicly available to all parties. The structured finance market has been a "rating by request" market where the debt issuers invite some or all of the major rating agencies to preview the collateral pools so the rating agencies can provide preliminary rating indications that can be used to size the bond classes and structure the bond transactions.
>
> ***Historically, all of the rating agencies have agreed to bow out of the rating process if they are not actually selected by the debt issuer to rate a securities transaction. This has encouraged the debt issuers to shop for the best ratings so they can optimize their securitization proceeds.***

Testimony of Sean J. Egan, House Oversight Committee Hearing, October 22, 2008, at 9 (emphasis added).

J. The Offering Documents Failed to Disclose the True Roles of Ratings Agencies in Forming and Structuring the Certificates for Sale as Primarily AAA Securities

116. In the April 2008 issue of *Mortgage Banking*, critics began to note the role of the Ratings Agencies in providing "structuring advice:"

> But serious concerns have also been voiced by members of Congress about whether the CRAs' business model - where the large investment banks that

> underwrite mortgage-backed securities (MBS) and collateralized debt offerings actually pay to have their deals rated by the agencies, and the agencies in turn provide feedback to the underwriters on how to boost their deals credit rating to the highly coveted triple-A status may have prejudiced their objectivity and integrity.
>
> It seems to me that the credit-rating agencies are playing both coach and referee, said Sen. Robert Menendez (D-New Jersey), during a September 2007 hearing by the Senate Banking Committee on the collapse of the subprime market.
>
> Critics also argue that the CRAs are actively involved in the structuring of RMBS and CDO deals, and thus can hardly claim that their ratings are merely opinions on the likelihood that a debt security might go into default or, as one agency official has called them, the world s shortest editorials.
>
> Joseph Mason, an associate professor of finance at Drexel University in Philadelphia and a former economist at the Office of the Comptroller of the Currency (OCC), says ***it is indisputable that the CRAs provide underwriters with "active structuring advice" on how to get a triple-A credit rating for their deals. While the CRAs insist they're merely providing information to the investment bankers during the underwriting process, Mason says they're trying to draw "an artificial line between advice and communication."***

(Emphasis added).

117. As reported in the *International Herald Tribune* on June 1, 2007, the Ratings Agencies did much more than evaluate [MBS instruments] and give them letter grades, they played an integral role in structuring the transactions and instructing the assemblers how to squeeze the most profit out of the MBS by maximizing the tranches with the highest ratings. Now, it is evident that these credit ratings agencies indirectly and directly participated in and took steps necessary to the distribution of mortgage pass-through certificates and other MBS.

118. An article appearing in *The Financial Times* on October 17, 2008 entitled When Junk Was Gold, addressed the unique role of the Ratings Agencies in structured finance deals such as mortgage backed securities:

> The first mortgage-backed bonds were created in the late 1980 s, well before Clarkson s time, by a trader called Lewie Ranieri. Ranieri, the head of the

> mortgage trading desk at the former investment bank Salomon Brothers, was famous for the huge sums of money he netted for his employer and for the quantity of cheeseburgers he ate. What he struck upon in structured finance was a process of pure alchemy: a way of turning myriad messy mortgage loans into standardized, regimented and easy-to-assess bonds.
>
> Ranieri knew that the magic of structuring was in the packaging. Packaged in the right way, mortgages could come to create a huge, new tradable bond market. And this is where the rating agencies came in. Structured bonds, like any other bond, needed ratings in order to be sold. ***But with a structured bond, the pools of debt could be built or modified in order to attain a particular rating. This wasn't a matter of disguising the risk, rather a way of reapportioning it and allowing investors with different risk appetites to buy the right product for them. "The rating is what gives birth to the structure in the first place," explains Sylvain Raynes, a financial modeling expert who was with Moody's in the 1990s, when Clarkson joined. In some cases, the ratings are known before the bonds have even been inked. "You start with a rating and build a deal around a rating," Clarkson told an investment magazine last year.***

(Emphasis added).

119. The actual role of the Ratings Agencies in structuring the securitizations first began to emerge in an article appearing on *Conde Naste's Portfolio.com* in September 2007. The article described a presentation that Moody's gave to a group of Russian investors in 2006 where Moody's explained the "interative" process of MBS securitization where Moody's gave "feedback" to underwriters before the bonds were issued as follows:

> Moody's revealed a significant, and ultimately more dangerous, role that the agencies play in financial markets. ***The slides detailed an "iterative process, giving feedback" to underwriters before bonds are even issued. They laid out how Moody's and its peer's help their clients put together complicated mortgage securities before they receive an official ratings stamp.*** But this give-and-take can go too far: Imagine if you wanted a B-plus on your term paper and your high-school teacher sat down with you and helped you write an essay to make that grade.
>
> ***The [investors] had just been let in on one of the dirtiest open secrets in the mortgage-ratings world, one that may have played a part in creating the housing bubble that's now popping: The ratings agencies have had a bigger role in the subprime-mortgage meltdown than most people know. So far, irate investors have focused on—and upcoming congressional hearings and investigations will probe – the agencies' overly optimistic ratings for packages***

> ***of subprime mortgages, many of which are now – blowing up. It's becoming clear that the ratings agencies were far from passive raters, particularly when it came to housing bonds. With these, the agencies were integral to the process, and that could give regulators and critics the ammunition they've been looking for to finally force the Big Three to change.*** The credit-ratings agencies "made the market. Nobody would have been able to sell these bonds without the ratings," says Ohio attorney general Marc Dann, who is investigating the agencies for possibly aiding and abetting mortgage fraud. "That relationship was never disclosed to anybody."

(Emphasis added).

120. The Ratings Agencies' unique role in influencing the structure of the securitization was more fully discussed in the July 2008 SEC Report. The SEC Report confirmed that S&P and Moody's provided "feed back" to the Sponsor of the Offerings as to the structure, which would result in the highest rating:

> The three examined rating agencies generally followed similar procedures to develop ratings for subprime RMBS and CDOs. ***The arranger of the RMBS initiates the ratings process by sending the credit rating agency a range of data on each of the subprime loans to be held by the trust (e.g., principal amount, geographic location of the property, credit history and FICO score of the borrower, ratio of the loan amount to the value of the property and type of loan: first lien, second lien, primary residence, secondary residence),*** the proposed capital structure of the trust and the proposed levels of credit enhancement to be provided to each RMBS trance issued by the trust. Typically, if the analyst concludes that the capital structure of the RMBS does not support the desired ratings, this preliminary conclusion would be conveyed to the arranger. ***The arranger could accept that determination and have the trust issue the securities with the proposed capital structure and the lower rating or adjust the structure to provide the requisite credit enhancement for the senior tranche to get the desired highest rating. Generally, arrangers aim for the largest possible senior tranche, i.e., to provide the least amount of credit enhancement possible, since the senior tranche – as the highest rated tranche – pays the lowest coupon rate of the RMBS' tranches and, therefore, costs the arranger the least to fund.***

(Emphasis added).

K. The Offering Documents Failed to Disclose Material Financial Conflicts of Interest Between Residential Capital and the Ratings Agencies

121. The Offering Documents make no mention of the material financial conflicts of interest between Residential Capital and the Ratings Agencies, including the fact that the analysts involved in rating were also involved in the rating fees or the Ratings Agencies business interests. The SEC Report confirmed significant undisclosed conflicts of interest which incented ratings agencies to issue inflated ratings. The SEC Report found, in violation of SEC Rules, key participants in the securitization process negotiated fees the rating agency would receive in exchange for their high ratings. SEC Report, at 23-24.

122. The SEC noted, *inter alia*, that analysts are aware of the rating firm s business interests when securing the rating of the deal as follows:

- ***While each rating agency has policies and procedures restricting analysts from participating in fee discussions with issuers,*** these policies still allowed key participants in the ratings process to participate in fee discussions.

- Analysts appeared to be aware, when rating an issuer, of the rating agency s business interest in securing the rating of the deal. The Staff notes multiple communications that indicated that some analysts were aware of the firm s fee schedules, and actual (negotiated) fees. There does not appear to be any internal effort to shield analysts from emails and other communications that discuss fees and revenue from individual issuers.

- ***"Rating agencies do not appear to take steps to prevent considerations of market share and other business interests from the possibility that they could influence ratings or ratings criteria."***

SEC Report, at 24-25 (emphasis added).

123. The July 2008 SEC Report found that a number of factors unique to the rating of RMBS may have exacerbated the effect of conflicts of interest inherent in the fact that the issuer or arranger pays for the ratings. These factors include that the arranger of the deal has:

- ***"More flexibility to adjust the deal to obtain a desired credit rating as compared to arrangers of non-structured asset classes."***

- Second, there is a high concentration in the firms conducting the

underwriting function. While 22 different arrangers underwrote subprime RMBS deals, 12 arrangers accounted for 80% of the deals, in both number and dollar volume.

- With a fast-changing market, rating processes are frequently and quickly changed. The high concentration of arrangers with the influence to determine the ***choice of rating agency heightened the inherent conflicts in the "issuer pays" compensation model.*** Compensation is calculated by volume of deals and total dollar volume, as a result arrangers prefer fast and predictable ratings processes.

- Ratings Agencies may be pressured by arrangers to produce a more ***favorable outcome or reduce credit enhancement levels,*** thus reducing ***the cost of the debt for a given level of cash inflows from the asset pool.*** When the arranger also sponsors the RMBS or CDO trust, pressure can influence an agency's decision to update a model when the update would lead to a less favorable outcome.

- ***High profit margins may have provided an incentive for rating agencies to encourage the arrangers to route future business its way.*** Unsolicited ratings were not available to provide independent checks on the rating agencies' ratings, nor was information regarding the structure of the security or portfolio of assets readily available to parties unrelated to the transaction, especially before issuance.

SEC Report, at 31-33 (emphasis added).

124. As reported in *The Washington Post* on June 6, 2008, the New York State Attorney General's Office announced that it had reached an agreement with the credit-rating companies, S&P, Moody's and Fitch to:

> change the way they evaluate mortgage securities that have roiled financial markets for the past year.
>
> The deal with Moody's Investors Service, Standard & Poor's and Fitch Ratings aims to restore confidence among investors -- who saw top-rated securities lose much of their worth in a matter of months -- by revising how the agencies are paid for issuing ratings. The agreement also requires credit-rating agencies to direct investment banks to provide them with more data on the pools of mortgages that make up the bonds.
>
> The agencies have been under fire for the role they played in the subprime mortgage crisis by awarding top ratings to securities that soured. Regulators and investors have alleged that the agencies have a conflict of interest because they

> are paid by the investment banks issuing the securities, thus encouraging the credit agencies to give high ratings to win business.
>
> The agreement seeks to end this practice by having the issuers pay the credit-rating agencies at four points during the rating process, not just at the end when the rating is given.
>
> Credit-rating agencies will also be required to disclose information about all securities submitted for review, allowing investors to determine whether issuers sought, but subsequently decided not to use, ratings from a specific agency. This will allow investors to see whether investment banks shopped around for the agency that would give their securities the best rating, said Andrew M. Cuomo, New York's attorney general.

125. The NYAG further stated that:

> "The mortgage crisis currently facing this nation was caused in part by misrepresentations and misunderstanding of the true value of mortgage securities," Cuomo said in a statement. "By increasing the independence of the rating agencies, ensuring they get adequate information to make their ratings, and increasing industry-wide transparency, these reforms will address one of the central causes of that collapse."

Id., at 2.

126. In or about July 2008, both Moody's and S&P sought to make internal changes to reform the conflicts of interest problems identified by the SEC. In a *Reuters* article, S&P Draws Criticism as Sets Ratings Reform, published on July 2, 2008, it was reported that S&P had "unveiled an overhaul of its ratings process on Thursday, responding to widespread criticism of the quality and accuracy of credit ratings" and had:

> " [a]nnounced 27 steps that its aid would boost confidence in credit ratings. It came on the heels of planned reforms announced this week by its major rivals, [Moody's and Fitch].
>
> Ratings agencies have come under fire from regulators and investors who say they helped precipitate the U.S. subprime mortgage crisis and credit tightening that began in 2007.
>
> "The supposed reforms announced today by Standard & Poor's and by Moody's on Tuesday are too little, too late," New York State Attorney General Andrew Cuomo said in a statement. "Both S&P and Moody's are attempting to make

> piecemeal change that seem more like public relations window-dressing than systematic reform. He pledged to continue investigating their roles in the mortgage crisis.
>
> Critics say the agencies at first assigned high ratings to hundreds of billions of dollars of securities linked to low-quality debt, only to exacerbate market turmoil by later rapidly downgrading many of those same securities.
>
> This has contributed to write-downs piling up in the financial industry, hurting stock prices and causing losses in a variety of pension and mutual funds.

L. Subsequent Disclosures Evidence Underwriter Defendants' Write-Downs and Near Collapse Due to Their Role in Securitizing and Underwriting Mortgage-Backed Securities

127. Each of the Underwriter Defendants maintained operations through which they conducted issuance and sale to investors of massive quantities MBS in 2005 and through 2007. These securities were collateralized with sub-prime and Alt-A mortgage loans originated under conditions which failed to comply with stated mortgage loan underwriting guidelines. As delinquencies, foreclosures and repossessions began to skyrocket as early as four months after the initial Offering dates, all of the Underwriter Defendants were forced to write-down a significant portion of the value of their mortgage-related securities holdings, have been and continue to be subject to Federal and State investigations and in some cases, have been forced into bankruptcy from the resultant mortgage-related losses.

1. Defendant RFSC

128. As set forth in detail above, RFSC d/b/a GMAC RFC Securities is a registered broker-dealer engaged in the business of underwriting and selling securitized MBS to institutional investors. RFSC is an affiliate of GMAC Bank, LLC. According to the RCC, referred to at times as ResCap, website, RFSC was one of the first mortgage conduits in the U.S. to focus on buying and securitizing single-family, jumbo mortgages, loans with balances above the purchasing authority of the government-sponsored enterprises.

129. In 2005, GMAC-RFC was ranked as the fifth largest non-agency MBS issuer with $56.93 billion in volume, a 4.8% increase over its 2004 level of $42.336 billion. In 2006, GMAC-RFC was rated by *IMF* as the eight largest mortgage securities producer, with $66.24 billion in mortgage securities volume and a 3.2% market share. Of that $66.24 billion, $64.229 billion was from non-agency MBS.

130. On July 30, 2007, GMAC and RCC both announced losses as a result of their residential mortgage business. GMAC's net income fell to $293 million from $787 million a year earlier. RCC had a loss of $254 million, compared with a profit of $548 million a year earlier, because of loans to buyers with poor credit ratings.

131. To make matters worse, as reported by *Reuters* on July 31, 2008, GMAC posted a $2.48 billion second quarter loss as a result of write-downs and mounting losses at its mortgage lending unit.

132. On February 22, 2008, as reported by *Forbes Magazine*, S&P announced that it would be downgrading RCC as a result of mounting mortgage losses.

> GMAC and its Residential Capital mortgage unit were cut several notches deeper into junk status by Standard & Poor's, which said mounting mortgage losses might require new capital injections from General Motors and Cerberus Capital Management.

133. On March 29, 2008, *Forbes* announced "GMAC had reported a heavy first-quarter loss, making for 6 consecutive losses of its kind."

> GMAC's loss increased to $589.0 million from $305.0 million a year earlier. The dent included an $859.0 million loss at its subsidiary Residential Capital. It was the mortgage unit's sixth consecutive quarterly loss, though the amount lost fell from $910.0 million last year.

134. On December 24, 2008, as reported by *Reuters*, GMAC was forced to seek federal approval to become a bank holding company, giving it access to government lending programs and helping it to stave off bankruptcy.

135. As alleged herein, RFSC failed to conduct proper due diligence and perform necessary oversight functions in the underwriting, securitization and preparation of the Offering Documents for the RALI Offerings complained of herein.

2. Defendant Goldman Sachs

136. Defendant GSC, or Goldman Sachs, is an investment banking firm that through its various subsidiaries, provides a range of investment banking, securities and investment management services. As an investment bank, GSC is an underwriter of a wide range of securities and other financial instruments, including mortgage related securities. According to its 2007 Annual Report, GSC's investment banking revenue skyrocketed from $3.67 billion in 2005, to $5.629 billion in 2006 and $3.671 billion in 2007. In fact, On March 5, 2005, *Bloomberg News* labeled Goldman Sachs Group, Inc. the world's most profitable securities firm. In that year, GSC was ranked first in U.S. IPO underwriting.

137. In 2005, *IMF* ranked Goldman Sachs as the ninth largest non-agency MBS issuer and the sixth largest non-agency MBS Underwriter with $38.772 billion and $69.432 billion in volume, respectively. A year later, GSC was ranked the twelfth largest mortgage securities producer with $47.5 billion in volume. In 2007, as reported by *IMF*, GSC issued $3.78 billion in subprime securities alone and ranked seventh among the largest prime and alt-A underwriters with $28.224 billion in volume.

138. GSC made most its record profits during this time by betting against the U.S. mortgage market. On December 15, 2007, the British newspaper, *The Times*, reported that while

key rivals were losing millions on investments, GSC had raked in over $4 billion by betting on the collapse of the U.S. subprime market.

> They believed that mortgage lending criteria had become so lax that a jump in defaults on high-risk home loans was inevitable and would drag down the value of the bonds that they backed.

139. However, GSC's underwriting practices were as suspect as the rest of the industry. On January 11, 2007, C*NN* reported that the City of Cleveland had filed suit against GSC and twenty other financial institutions alleging that the banks had caused the sub-prime crisis by creating a process of offering and securitizing loans given to borrowers who could not afford them.

140. On January 30, 2008, the FBI and SEC launched a joint investigation into 14 investment banks, loan providers and developers as part of a crackdown focusing on the subprime mortgage crisis. As reported that same day by the *Daily Telegraph*, GSC confirmed its involvement in the investigation.

> Goldman Sachs and Morgan Stanley, two of Wall Street's largest investment banks, have confirmed for the first time that they are embroiled in investigations into the US sub-prime mortgage collapse.
>
> In its annual report for the year to November 30, Goldman said it had "received requests for information from various governmental agencies and self-regulatory organizations relating to sub-prime mortgages, and securitizations, collateralized debt obligations and synthetic products related to sub-prime mortgages."

141. *BusinessWire* reported on March 18, 2008 that GSC's February 2008 quarterly report disclosed a 40% drop in underwriting revenues for the investment bank. GSC attributed this to the significantly lower net revenues in debt underwriting.

142. In December 2007, the Massachusetts Attorney General launched an investigation into the securitization of subprime loans. The investigation focused on the industry practices

involved with issuance and securitization of subprime loans to Massachusetts consumers. According to a Press Release issued by the Massachusetts Attorney General's Office,

> The Office is investigating whether securitizers may have:
>
> - facilitated the origination of "unfair" loans under Massachusetts law;
> - failed to ascertain whether loans purchased from originators complied with the originators' stated underwriting guidelines;
> - failed to take sufficient steps to avoid placing problem loans in securitization pools;
> - been aware of allegedly unfair or problem loans;
> - failed to make available to potential investors certain information concerning allegedly unfair or problem loans, including information obtained during loan diligence and the pre-securitization process, as well as information concerning their practices in making repurchase claims relating to loans both in and out of securitizations.

143. On May 11, 2009, it was reported by both the *New York Times* and *Wall Street Journal* that GSC had agreed to provide $50 million in relief to Massachusetts sub-prime mortgage holders and pay an additional $10 million to the state to end the investigation into the company. According to *The New York Times* article,

> At a news conference, [the Massachusetts AG] said that the problem was industry-wide and that the Goldman settlement would provide "much needed relief for many in Massachusetts." Even so, she also criticized what she called predatory lending that was encouraged by Wall Street firms that bought individual subprime mortgages and repackaged them into securitized loans for investors.

144. On December 16, 2008, as reported by *The New York Times*, GSC was forced to take its first quarterly loss, $2.12 billion, since going public in 1999.

145. A detailed complaint for violations of the federal securities laws was filed against GSC on February 6, 2009 in United States Federal District Court for the Southern District of New York. *Public Employee's Retirement Sys. Of Miss. v. Goldman Sachs Group, Inc.*, No. 09-1110. According to the GSC Class Action Complaint (the "GSC Complaint" or the "GSC Compl."):

> Wall Street aggressively pushed into the complex, high-margin business of packaging mortgages and selling them to investors as MBS, including mortgage pass through certificates. This aggressive push created a boom for the mortgage lending industry. By buying and packaging mortgages, Wall Street enabled the lenders to extend credit even as the dangers grew in the house market. At the center of the escalation was Wall Street□s partnership with subprime lenders. This relationship was a driving force behind the once soaring home prices and the spread of exotic loans that are now defaulting and foreclosing in record numbers. (GSC Compl., □86).
>
> Each of the Individual Defendants, Issuing Defendants and Underwriter Defendants failed to possess a reasonable basis for believing, and failed to make a reasonable investigation to ensure, that statements contained in the Offering Documents were true and/or that there was no omission of material facts necessary to make the statements contained therein not misleading. (GSC Compl., □124).

146. As alleged herein, GSC failed to conduct proper due diligence and perform necessary oversight functions in the underwriting, securitization and preparation of the Offering Documents for the RALI Offerings complained of herein.

3. Defendant Deutsche Bank

147. Deutsche Bank Securities, Inc. (□DBS□), or Deutsche Bank, serves as the U.S. investment banking and securities arm of German Deutsche Bank AG. DBS was founded in 1973 as a subsidiary of Deutsche Bank AG. DBS is an SEC registered broker-dealer registered and is a member of NASD and the New York Stock Exchange.

148. In 2005, DBS was ranked twenty-second in non-agency MBS issuers by *IMF*, issuing more than $17 billion. Moreover, in that same year, DBS was ranked eighth among non-agency MBS underwriters with $7.05 billion in volume. This was a drastic increase from its 2004 underwriting volume of $29.9 billion. In 2006, DBS climbed two spots among non-agency MBS underwriters with $72.765 billion. In that same year, *IMF* ranked DBS and its $25.328 billion in volume as the twenty-first largest mortgage securities producer and the sixth largest

home equity loan security underwriter with $29.46 billion in volume. In 2007, DBS underwrote $11.94 billion and ranked eighth among the top subprime MBS underwriters.

149. On October 3, 2007, *The New York Times* reported that DBS expected to write down $3.1 billion in loans and mortgage backed assets. On July 31, 2008, as reported by *Reuters*, Deutsche Bank AG announced another $3.6 billion in write-downs primarily due to DBS over exposure to U.S. in residential MBS. The July 2008 write-down brought DBS s total write downs to more than $11 billion.

150. On June 27, 2008 a lawsuit was filed in the Supreme Court of the State of New York alleging violations of federal securities law against DBS. *Massachusetts Bricklayers and Masons Trust Fund v. Deutsche Alt-A Securities, Inc.,* No. 08-CV-3178(LDW) (Removed to the Eastern District of New York on August 5, 2008) (the Bricklayers Complaint or Bricklayers Compl.). The Bricklayers Complaint alleges that DBS, as underwriter of the mortgage-backed certificates, failed to perform adequate due diligence on the mortgage loans DBS including in its MBS offerings.

151. On March 20, 2009, another lawsuit, this time against Deutsche Bank AG, was filed in the United States District Court for the Southern District of New York alleging that the Bank, its subsidiaries and its officers violated the Securities Act of 1933 by issuing false and misleading registration statements, prospectuses and other documents. *Kaess et al v. Deutsche Bank AG et al*, No. 09-CV-2556 Initial Complaint (the Kaess Complaint or Kaess Compl.). The Kaess Complaint alleged, *inter alia*, that Deutsche Bank AG, with respect to its mortgage-related securities:

- failed to properly record provisions for credit losses, residential mortgage-backed securities, commercial real estate loans
- The Company s internal controls were inadequate to prevent it from improperly recording provisions for credit losses, residential mortgage-

backed securities, commercial real estate loans

Kaess Compl., 47 (emphasis added).

152. As alleged herein, DBS failed to conduct proper due diligence and perform necessary oversight functions in the underwriting, securitization and preparation of the Offering Documents for the RALI Offerings complained of herein.

4. Defendant Citigroup

153. Defendant Citigroup Global Markets, Inc. (CITI) is the registered broker-dealer of the global banking giant Citigroup, Inc. (Citigroup). As one of the top underwriters of MBS in the last five-years, Citigroup has been one of the major contributors to the collapse of the U.S. sub-prime mortgage market and the current economic crisis. In 2005, CITI was ranked by *IMF* as the seventh largest MBS Issuer having issued $68.305 billion in MBS. In that same year, CITI issued 17.9 billion of non-agency MBS alone. In 2006, CITI issued $20 billion of non-agency MBS, and was ranked as the sixth largest producer of MBS with a volume of $71.782 billion.

154. On January 15, 2008 Citigroup reported its greatest loss in its 196-year history as it wrote off $18.1 billion and announced $9.8 billion in sub-prime related losses for the fourth quarter. On April 18, 2008 Citigroup declared another write-down of an additional $15.2 billion.

155. On March 7, 2008 the House Oversight and Government Reform Committee subpoenaed CITIs former CEO, Charles Prince, seeking information regarding CITIs role in the MBS financial meltdown. According to a March 7, 2009 article in the *The New York Times:*

> Under Mr. Prince, Citigroup charged aggressively into the trading of mortgage-backed securities that were the hot product on Wall Street at the time. As late as the summer of 2007, as evidence mounted of a collapse in the housing market, Mr. Prince declared that the bank was still dancing.

> Not much later, the music ended, and Mr. Prince was out in November of that year as the bank posted a $5.9 billion loss.
>
> That turned out to be the first of many. On Jan. 16, 2009, Citigroup announced an $8.29 billion fourth-quarter loss, bringing its total losses for 2008 to $27.7 billion, among the largest in corporate history.

156. On November 5, 2008, a class action complaint for violations of the Federal Securities Laws was filed against CITI in Federal District Court, Southern District of New York, alleging that, *inter alia*, in certain Public Offering documents, CITI materially understated loss reserves for the Company's $213 billion portfolio of residential mortgage loans. *In re Citigroup Bond Litigation,* No. 08-CV-9522. Consolidated Amended Class Action Complaint ("CITI Complaint" or "CITI Compl."). The CITI Complaint states in part:

> Many of these mortgages carried a high risk of default because they were made to borrowers who did not document their income or who possessed especially low credit scores, or because the loans were drawn against the equity value of a property at a time when housing prices were declining precipitously. While accounting rules required Citigroup to take reserves based on losses that were "likely" to occur, the Company allowed its reserves to track "and at times to be less than "the amount of loans that had already defaulted. Further, despite the Company's rapidly expanding portfolio of particularly risky loans, coupled with the collapse of the housing market, Citigroup reduced its allowance for loan losses as a percentage of total loans in 2006 and 2007.

CITI Compl., at "8.

157. In latter part of 2008, in order to remain viable, CITI received $52 billion in cash from the Government's Troubled Asset Relief Program ("TARP") and handed over 36% of ownership to the federal government.

158. As alleged herein, CITI failed to conduct proper due diligence and perform necessary oversight functions in the underwriting, securitization and preparation of the Offering Documents for the RALI Offerings complained of herein.

5. Defendant UBS

159. Defendant UBS, a wholly-owned subsidiary of UBS AG, is an SEC registered broker-dealer which engages in investment banking activities around the world, including underwriting, financing and asset management. In 2005, as reported by IMF, UBS issued $12.75 billion of MBS and was the seventh largest underwriter of non-agency MBS ($58.536 billion). The following year, UBS broke into the top 25 of non-agency issuers, issuing $12.752 billion of MBS, and was the thirty-fifth largest MBS producers, producing $12.847 billion of MBS. In 2007, UBS issued $3.05 billion of subprime MBS.

160. In 2005, according to its Annual Audit Report filed with the SEC, UBS ended the year with $127 billion in total assets - $26 billion of which were mortgage-backed obligations. Furthermore, in 2006, according to its Annual Audit Report, UBS assets at year-end totaled $153 billion, of which over $36 billion were in the form of mortgage-backed obligations. And in 2007, the investment bank s assets totaled $156 billion with $33.5 billion in the form of mortgage-backed obligations.

161. By 2008, however, the one-time massive global investment bank now valued its mortgage-backed obligations at only $8 billion and reported total assets of only $54 billion - a 76% decline in total mortgage-backed obligations and a 65% decline in total assets as compared to 2007.

162. In December, 2007, UBS issued a profit warning, expecting write downs related to sub-prime mortgage losses - estimating the figure to reach upwards of $10 billion.

163. In January 2008, *The Wall Street Journal* reported that due to massive exposure to the U.S. housing and mortgage markets, UBS was forced to take substantial write-downs resulting from sub-prime mortgage related losses.

> UBS, the world's largest wealth manager, announced the need to write down another $4 in subprime-related losses. This new write-down brings the total for UBS subprime losses over $18.4 billion. Subprime related losses pushed the company its worst year of performance in its institutional history.

164. UBS has written off nearly $38 billion since the subprime crisis began, over $18 billion of which came in the first quarter of 2008.

165. In April 2008, a *New York Times* article reported that the "UBS, which has written off more debt from the sub-prime crisis than any other bank, conceded in a report on Monday that a blind drive for revenue led it to take more risks than it should have."

166. *The Wall Street Journal* reported on February 2, 2008 that a federal criminal investigation of UBS had been commenced, focusing on practices of misleading investors about the value of its mortgage-related holdings. This report include:

> A U.S. attorney's office investigation as to whether UBS AG criminally misled investors by posting inflated prices of its mortgage bond holdings, despite knowing that the valuations had dropped.
>
> An SEC probe into similar "mismarking" issues surrounding the bank's massive holdings of mortgage securities. The SEC case has recently been upgraded to a formal investigation.

167. As alleged herein, UBS failed to conduct proper due diligence and perform necessary oversight functions in the underwriting, securitization and preparation of the Offering Documents for the RALI Offerings complained of herein.

VI.

MATERIAL MISSTATEMENTS AND OMISSIONS IN THE OFFERING DOCUMENTS

A. Defendants' Material Misstatements and Omitted Information Regarding Stated Mortgage Loan Underwriting Guidelines

1. The Registration Statements

168. The Registration Statements set forth the underwriters expectations that each originator will have applied strict procedures to evaluate the loans it had originated.

> The depositor expects that the originator of each of the mortgage loans will have applied, consistent with applicable federal and state laws and regulations, underwriting procedures intended to evaluate the borrower's credit standing and repayment ability and/or the value and adequacy of the related property as collateral.

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 12; *cf.,* Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at 18.

169. ***Omitted Information***: This statement failed to disclose that the originators made little or no attempt to evaluate the borrowers credit standing and repayment ability. As has emerged, all of the originators loosened or totally disregarded their stated underwriting guidelines in an effort to increase origination volume.

170. The Registration Statements each set forth the underwriting guidelines applied in the origination of the mortgage loan collateral underlying the Certificates.[13] In terms of the General Standards applicable to the origination process, the Registration Statements state, in part:

> In most cases, under a traditional full documentation program, each mortgagor will have been required to complete an application designed to provide to the original lender pertinent credit information concerning the mortgagor. As part of the description of the mortgagor's financial condition, the mortgagor will have

[13] Both Registration Statements and the Prospectus Supplements for those Offerings in which the underlying collateral was originated by Residential Capital's own Homecomings Financial include the identical language describing the Originator's Underwriting Guidelines and refer specifically to The Program. (219-232).

> furnished information, which may be supplied solely in the application, with respect to its assets, liabilities, income (except as described below), credit history, employment history and personal information, and furnished an authorization to apply for a credit report that summarizes the borrower's credit history with local merchants and lenders and any record of bankruptcy.
>
> ***If specified in the accompanying prospectus supplement, a mortgage pool may include mortgage loans that have been underwritten pursuant to a streamlined documentation refinancing program. Such program permits some mortgage loans to be refinanced with only limited verification or updating of the underwriting information that was obtained at the time that the original mortgage loan was originated.***
>
> ***If specified in the accompanying prospectus supplement, some mortgage loans may have been originated under "limited documentation," "stated documentation" or "no documentation" programs that require less documentation and verification than do traditional "full documentation" programs. Under a limited documentation, stated documentation or no documentation program, minimal investigation into the mortgagor's credit history and income profile is undertaken by the originator and the underwriting may be based primarily or entirely on an appraisal of the mortgaged property and the LTV ratio at origination.***

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 12-13; *cf.*, Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at 18.

171. ***Omitted Information:*** In the industry, mortgage loans originated under streamlined or other "less than full-documentation" programs were referred to as "liar loans" which were much riskier than suggested by the Prospectus Supplements. Specifically, Residential Capital took the information on the borrower application as true, performing little if any review of the underlying documentation, if any such documentation was required. The computerized underwriting system employed by Residential Capital (and explained further below) did not have the ability to verify information entered into it by Residential Capital or directly by correspondent lenders, and only reviewed the information it was programmed to review. Because little if any verification was required, borrower and mortgage broker fraud "or "lies" were common in these types of applications and ignored by Residential Capital.

172. Furthermore, the Registration Statements included explanations of the appraisals of the underlying mortgaged property and the methodologies used in obtaining proper valuation of the properties:

> The adequacy of a mortgaged property as security for repayment of the related mortgage loan will typically have been determined by an appraisal or an automated valuation, as described above under Loan-to-Value Ratio. Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with pre-established guidelines established by or acceptable to the originator. The appraisal procedure guidelines will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property was in good condition and that construction, if new, had been substantially completed

> The underwriting standards applied by an originator typically require that the underwriting officers of the originator be satisfied that the value of the property being financed, as indicated by an appraisal or other acceptable valuation method as described below, currently supports and is anticipated to support in the future the outstanding loan balance

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 13; *cf.,* Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at 18-19.

173. ***Omitted Information:*** In fact, Residential Capital was not nearly as thorough in getting documentation from or about borrowers as these statements imply. As set forth herein in detail, the Originators and underwriting officers placed the emphasis not on adherence to underwriting guidelines, but rather, on getting loans done, severely hindering the quality of the mortgage loans and resulting in flawed and in many cases fraudulent loan applications which, among other things, included over-valued property appraisals, and making no attempt to confirm the standards actually used by mortgage brokers, correspondents and other third-parties from which they acquired mortgages. Higher deal fees and more profitable market conditions were motivation for Residential Capital not to spend the time and money to investigate the validity of appraisal values on the underlying mortgaged properties prior to securitization. Specifically,

only a small sampling of the mortgage loan pool, no more than 5% to 7%, was reviewed before Residential Capital securitized the loans, leaving a substantial amount of bad loans to escape inspection. Further, with Residential Capital's use of the computerized underwriting software (¶¶168-195) the loan characteristics became numbers blindly plugged into a computer with little or no attention paid to the underlying collateral, as long as the averages of the loan pool fit within a certain loosely defined parameter. These statements were materially false and misleading since appraisal standards were largely disregarded and the values of the underlying mortgage properties were, in many instances, inflated in the loan origination process.

174. The Registration Statements then set forth the process of review by the Sponsor/Seller, Defendant RFC, in determining whether or not the mortgage was originated in-line with its stated underwriting standards:

> The level of review by Residential Funding Corporation, if any, will vary depending on several factors. Residential Funding Corporation, on behalf of the depositor, typically will review a sample of the mortgage loans purchased by Residential Funding Corporation for conformity with the applicable underwriting standards and to assess the likelihood of repayment of the mortgage loan from the various sources for such repayment, including the mortgagor, the mortgaged property, and primary mortgage insurance, if any. Such underwriting reviews will generally not be conducted with respect to any individual mortgage pool related to a series of certificates.
>
> * * *
>
> In addition, Residential Funding Corporation may conduct additional procedures to assess the current value of the mortgaged properties. Those procedures may consist of drive-by appraisals, automated valuations or real estate broker's price opinions. The depositor may also consider a specific area's housing value trends. These alternative valuation methods may not be as reliable as the type of mortgagor financial information or appraisals that are typically obtained at origination. In its underwriting analysis, Residential Funding Corporation may also consider the applicable Credit Score of the related mortgagor used in connection with the origination of the mortgage loan, as determined based on a credit scoring model acceptable to the depositor.
>
> * * *

> A portion of the mortgage loans typically will be reviewed by Residential Funding Corporation or by a designated third party for compliance with applicable underwriting criteria. Any determination of underwriting eligibility using an automated system will only be based on the information entered into the system and the information that the system is programmed to review.

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 14--16; *cf.*, Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at 19-22.

175. ***Omitted Information:*** The above statement was misleading and omitted information regarding the level of scrutiny with which RFC and HFN examined the collateral and conducted due diligence. As set forth above, Residential Capital, and RFC and HFN specifically, were more concerned with pushing loans through and increasing fees and profits from MBS securitizations than kicking-back loans to correspondent lenders. Moreover, the sample size of the loans that Residential Capital did review was just a small percentage of the loans it acquired from HFN and correspondent lenders, from which only extreme outliers which fell outside acceptable parameters were dropped out. Regardless, Residential Capital farmed out most of the review of the mortgage loan collateral to third-party firms, including Bohan and Clayton, which have publicly disclosed the severe deficiencies in the standards applied in underwriting and securitizing mortgage loan collateral throughout the relevant time period.

176. Furthermore, the Registration Statements set forth borrower documentation and verification requirements for more risky loans such as ARMs or Buy-Down Mortgages:

> Once all applicable employment, credit and property information is received, a determination is made as to whether the prospective borrower has sufficient monthly income available to meet the borrower's monthly obligations on the proposed mortgage loan and other expenses related to the home, including property taxes and hazard insurance, and other financial obligations and monthly living expenses. ***ARM loans, Buy-Down Mortgage Loans, graduated payment mortgage loans and any other mortgage loans will generally be underwritten on the basis of the borrower's ability to make monthly payments as determined by reference to the mortgage rates in effect at origination or the reduced initial***

> ***monthly payments, as the case may be, and on the basis of an assumption that the borrowers will likely be able to pay the higher monthly payments that may result from later increases in the mortgage rates or from later increases in the monthly payments, as the case may be, at the time of the increase even though the borrowers may not be able to make the higher payments at the time of origination.*** The mortgage rate in effect from the origination date of an ARM loan or other types of loans to the first adjustment date are likely to be lower, and may be significantly lower, than the sum of the then applicable index and Note Margin

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 15-16; *cf.,* Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at 21.

177. ***Omitted Information:*** In fact, Residential Capital instructed correspondent lenders to push certain types of mortgage loans, such as hybrid option-ARM loans, also referred to as Negative Amortization loans (*see, supra*), historically reserved for only those borrowers with outstanding credit history and sufficient income. These hybrid loan products allowed borrowers to pick-a-payment for an initial period of one to five years, with the difference between what was owed and what was paid then added on to the outstanding loan amount. In an attempt to increase the amount of loans originated, the Originators failed to disclose to borrowers that once the outstanding loan amount reached a certain level, i.e., 110% of original balance, the pick-a-payment period ended, and borrowers would be required to make monthly payments of an even larger outstanding amount at an adjusted, and significantly higher, interest rate. As such, HFN buried or completely omitted information regarding the option-ARM caps, rate adjustments when originating these types of loans for sub-prime or otherwise unqualified borrowers in order to increase the volume of origination of these types of loans.

178. Residential Capital, according to the Registration Statements, also originated or purchased loans which were underwritten pursuant to certain Expanded Criteria:

> ***Residential Funding Corporation's Expanded Criteria Program is designed for borrowers with good credit who may have difficulty obtaining traditional***

> ***financing due to loan characteristics, such as a LTV ratios higher than 80%, occupancy of the mortgaged property or type of mortgaged property, or borrower characteristics such as self-employment.***

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 16; *cf.,* Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at 21.

179. ***Omitted Information:*** As set forth herein in detail, Residential Capital failed to adhere to these criteria because loans were continuously approved for borrowers with bad credit, high LTV or no verifiable employment whatsoever. The public disclosures of late have revealed that mortgage lenders throughout the country engaged in fraudulent activities in order to obtain mortgages for borrowers and the fees obtained as payment □HFN being no exception.

180. The Registration Statements also explained that Residential Capital, in reviewing the loans originated by correspondent lenders, employs the use of an automated underwriting system which reviews □most□ of the information contained in borrower applications for determinations of whether or not to purchase individual mortgages loans for securitization:

> In recent years, the use of automated underwriting systems has become commonplace in the residential mortgage market. Residential Funding Corporation evaluates many of the mortgage loans that it purchases through the use of one or more automated underwriting systems. In general, these systems are programmed to review most of the information set forth in Residential Funding Corporation□s Seller Guide as the underwriting criteria necessary to satisfy each underwriting program. In the case of the Expanded Criteria Program, the system may make adjustments for some compensating factors, which could result in a mortgage loan being approved even if all of the specified underwriting criteria in the Seller Guide for that underwriting program are not satisfied.
>
> ***In some cases, Residential Funding Corporation enters information into the automated underwriting system using documentation delivered to Residential Funding Corporation by the mortgage collateral seller.*** In this situation, each automated review will either generate an approval or a recommendation for further review. Most approved mortgage loans will not receive any additional review of their credit components. In the case of a recommendation for further review, underwriting personnel may perform a manual review of the mortgage loan documentation before Residential Funding Corporation will accept or reject the mortgage loan. For most mortgage collateral sellers, Residential Funding

> Corporation will conduct a limited review of the mortgage loan documentation. If that limited review does not detect any material deviations from the applicable underwriting criteria, Residential Funding Corporation will approve that mortgage loan for purchase.
>
> ***In other cases, the mortgage collateral seller enters the information directly into the automated underwriting system. Mortgage loans that have been approved by the automated underwriting system, and submitted to Residential Funding Corporation for purchase may be reviewed to verify that the information entered by the mortgage collateral seller accurately reflects information contained in the underwriting documentation.*** For most mortgage collateral sellers, Residential Funding Corporation will verify the accuracy of the information with respect to a sample of that mortgage collateral seller's mortgage loans.
>
> Because an automated underwriting system will only consider the information that it is programmed to review, which may be more limited than the information that could be considered in the course of a manual review, the results of an automated underwriting review may not be consistent with the results of a manual review.

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 17; *cf.,* Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at 22-23.

181. ***Omitted Information:*** The above statements were misleading and omitted information relating to Residential Capital's lack of incentive to perform any review or verification on the information in the mortgage application. Residential Capital's need for non-conforming mortgage loans in a competitive market caused it to forego any substantial review the validity of mortgage loan applications and borrower information.

2. <u>The Prospectus Supplements</u>

182. The underlying loan collateral for all of the Issuing Trusts (¶¶ 32-33) was principally originated by HFN. As set forth above, HFN is a Delaware corporation and wholly-owned subsidiary of RFC, which in turn, in a wholly-owned subsidiary of Defendant RCC. As set forth in the Prospectus Supplement for the RALI Series 2006-QO7 Certificates, "all of the

HFN collateral was originated in accordance with RFC's underwriting standards." RALI Series 2006-QO7 Prospectus Supplement, Form 424B5, filed September 29, 2006, at S-58.

183. Moreover, the underwriting guidelines, or "The Program" according to the Prospectus Supplements, was "administered by Residential Funding on behalf of" RALI, the Depositor. *Id*., at S-56.

184. The Prospectus Supplements described the RFC underwriting guidelines, supposedly adhered to by HFN in originating the underlying mortgage loan collateral. For example, the Prospectus Supplement for the RALI 2006-QO7 Certificate Offering stated:

> *Program Underwriting Standards*. In accordance with the Seller Guide, the Expanded Criteria Program Seller is required to review an application designed to provide to the original lender pertinent credit information concerning the mortgagor. As part of the description of the mortgagor's financial condition, each mortgagor is required to furnish information, which may have been supplied solely in the application, regarding its assets, liabilities, income (except as described below), credit history and employment history, and to furnish an authorization to apply for a credit report which summarizes the borrower's credit history with local merchants and lenders and any record of bankruptcy.

Id., at S-56.

185. ***Omitted Information***: These statements failed to disclose that the issues of borrower creditworthiness were largely disregarded. Beginning in 2006, RCC, specifically RFC and HFN began abandoning prudent lending standards in order to "push more loans through the system." The company's approach was to originate enough loans so that they could outrun their own delinquency rates and raise capital after GMAC's credit rating was revised to the lowest possible grade in late 2005, hindering GMAC and RCC's access to credit markets and long-term capital. The lax controls led to the substantial increase of low-quality mortgage loans as more stress was placed on quantity at the expense of loan quality.

186. The RALI 2006-QO7 Prospectus Supplement also stated:

> Based on the data provided in the application and certain verifications, if required, a determination is made by the original lender that the mortgagor's monthly income, if required to be stated, will be sufficient to enable the mortgagor to meet its monthly obligations on the mortgage loan and other expenses related to the property, including property taxes, utility costs, standard hazard insurance and other fixed obligations.

Id., at S-57.

187. ***Omitted Information:*** In fact, HFN did not verify the income of borrowers as represented, and was extremely liberal with terms even to borrowers with low credit scores. Over time, HFN became heavily focused on pushing Option-ARM and hybrid products to borrowers who could otherwise not qualify for a mortgage loan. Moreover, HFN's correspondent loans routinely included hidden fees and charges to borrowers who were never informed of them in the application process.

188. The RALI 2006-QO7 Prospectus Supplement also stated:

> Certain of the mortgage loans have been originated under "reduced documentation" or "no stated income" programs, which require less documentation and verification than do traditional "full documentation" programs. Generally, under a "reduced documentation" program, no verification of a mortgagor's stated income is undertaken by the originator. Under a "no stated income" program, certain borrowers with acceptable payment histories will not be required to provide any information regarding income and no other investigation regarding the borrower's income will be undertaken. Under a "no income/no asset" program, no verification of a mortgagor's income or assets is undertaken by the originator. The underwriting for those mortgage loans may be based primarily or entirely on an appraisal of the mortgaged property and the LTV ratio at origination.

Id.

189. ***Omitted Information***: These deficiencies in income documentation made accurate and reliable appraisals essential since so much emphasis was placed on the value of the mortgaged property. However, appraisers were in fact pressured to appraise to certain levels. Appraisers knew if they appraised under certain levels they would not be hired again. Thus, the

appraisals were inherently unreliable and there was little to support the value and adequacy of the mortgaged property.

190. The RALI 2006-QO7 Prospectus Supplement also stated:

> The adequacy of the mortgaged property as security for repayment of the related mortgage loan generally is determined by an appraisal in accordance with appraisal procedure guidelines described in the Seller Guide. Appraisers may be staff appraisers employed by the originator. The appraisal procedure guidelines generally require the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property is in good condition and that construction, if new, has been substantially completed. The appraiser is required to consider a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property, or replacement cost analysis based on the current cost of constructing or purchasing a similar property. In certain instances, the LTV ratio is based on the appraised value as indicated on a review appraisal conducted by the mortgage collateral seller or originator.

Id.

191. ***Omitted Information:*** Appraisals of the underlying properties were not nearly as meticulous as suggested by the Prospectus Supplement. They were much more perfunctory, and appraisers were motivated to reach a certain conclusion □ much more so than to use their professional judgment. Given the credit problems of many of these borrowers, the lack of valid appraisals was a significant adverse fact and indication of future problems. In fact, HFN□s home loan appraisals were not obtained from independent appraisers or appraisal services, but rather from appraisers who understood that their appraisals must conform to predetermined levels at which a loan could be approved, or risk their association and employment with HFN or brokers working with HFN and its correspondent lenders. The result was that purportedly independent appraisals were not prepared in conformance with these stated appraisal standards. HFN and RFC failed to confirm that appraisers were following the guidelines described, and this, combined with the implied or express pressures placed on appraisers to appraise to the desired

value, created enormous upward pressure on appraisal values, distorting loan-to-value ratios and making the mortgage loans in the pool much riskier than suggested by the Offering Documents. This was particularly true in 2006 and 2007 when real estate values in many of the areas where the mortgage pools were located had stopped increasing at the rapid pace of 2004 to 2005. Thus, the aggressive lending practices introduced during those years where, for example, borrowers with mortgages in excess of their ability to pay were assured that by the promise of refinancing to a lower rate, were unavailable.

192. The RALI 2006-QO7 Prospectus Supplement also stated:

> Prior to assigning the mortgage loans to the depositor, Residential Funding will have reviewed the underwriting information provided by the mortgage collateral sellers for the mortgage loans and, in those cases, determined that the mortgage loans were generally originated in accordance with or in a manner generally consistent with the underwriting standards described in the Seller Guide. With regard to a material portion of these mortgage loans, this review of underwriting information by Residential Funding was performed using an automated underwriting system. Any determination described above using an automated underwriting system will only be based on the information entered into the system and the information the system is programmed to review.

Id.

193. ***Omitted Information***: As set forth herein, the above statements were misleading and omitted information relating to Residential Capital's lack of incentive to perform any review or verification on the information in the mortgage application. Residential Capital's need for non-conforming mortgage loans in a competitive market caused it to forego any substantial review the validity of mortgage loan applications and borrower information.

194. The RALI 2006-QO7 Prospectus Supplement also stated:

> The applicable underwriting standards include a set of specific criteria by which the underwriting evaluation is made. However, the application of the underwriting standards does not imply that each specific criterion was satisfied individually. Rather, a mortgage loan will be considered to be originated in accordance with the underwriting standards described above if, based on an overall qualitative

evaluation, the loan is in substantial compliance with the underwriting standards.

Id., at S-58.

195. ***Omitted Information***: Exceptions to guidelines were granted in many circumstances not just where compensating factors existed or substantial compliance was satisfied. The exceptions were granted when the borrower could not qualify for a mortgage loan. A substantial portion of the loans originated pursuant to the HFN/RFC Program underwriting guidelines were approved and submitted by mortgage brokers and correspondent lenders throughout the country. Thereafter, as set forth above, the loans would be evaluated using a computerized system which could not exercise any degree of realistic control over the truthfulness of the borrower information contained in mortgage applications.

B. The Offering Documents Omitted Information Regarding Delinquencies as of the Cut-Off Dates

196. The Registration Statements contained general descriptions of the information that would be contained in each of the Prospectus Supplements. With regards to delinquencies of the underlying collateral as of the cut-off date, the 2006 Registration Statement stated as follows:

> As of the cut-off date, none of the mortgage loans will be 30 or more days delinquent in payment of principal and interest.

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at S-37; *cf.*, Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at S-39.

197. Each of the Prospectus Supplements contained the same or similar language as set forth above, indicating that as of the cut-off date (defined differently in each Prospectus Supplement) none of the mortgage loans were 30 days or more delinquent as of that date. In

addition, the Prospectus Supplements contained additional information regarding delinquencies of the underlying collateral as follows:

> ***As of the cut-off date, none of the mortgage loans are currently 30 to 59 days delinquent in payment of principal and interest.*** As of the cut-off date, one of the mortgage loans representing 0.1% of the mortgage loans has been 30 to 59 days delinquent in payment of principal and interest in the past 24 months. As of the cut-off date, none of the mortgage loans are currently 60 to 89 days delinquent in the payment of principal and interest. As of the cut-off date, none of the mortgage loans have been 60 to 89 days delinquent in the payment of principal and interest in the past 24 months. As of the cut-off date, none of the mortgage loans are currently 90 or more days delinquent in the payment of principal and interest. As of the cut-off date, none of the mortgage loans have been 90 or more days delinquent in the payment of principal and interest in the past 24 months.

RALI Series 2006-QA4 Prospectus Supplement, Form 424B5, filed May 26, 2006, at S-43 (emphasis added); *see also* RALI Series 2006-QO7 Prospectus Supplement, Form 424B5, filed September 29, 2006, at S-54 (emphasis added).

198. ***Omitted Information:*** These statements masked the true impaired nature of the collateral since the delinquency rates for these loan pools followed the same pattern of skyrocketing delinquencies immediately following the Offerings. Specifically, within four months after the respective cut-off dates, borrower delinquency rates increased by an average of 47,000%, from 0.00% to almost 4.78% of the outstanding collateral balance, and within six months that figure further rose to over 6.39%, another 28% increase within just two months and a combined increase of over 63,000% from the cut-off dates. As of the date of the filing of the within Complaint, borrower delinquency and defaults have increased to over 36.9% of the outstanding collateral balance.

C. The Offering Documents Included Material Misstatements and Omitted Information Regarding Credit Support

199. Credit enhancement refers to excess mortgage loan collateral which provides support to the mortgage collateral underlying the Offered Certificates and generates additional

interest to protect security holders in the event of borrower default or other event which may impair the collateral underlying the certificates.

200. The Registration Statements stated, in regards to credit enhancement, that:

> Each series may include multiple classes of certificates with differing payment terms and priorities. ***Credit enhancement will be provided for all offered certificates.***

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 2; *cf.,* Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at A-7.

201. Further, with respect to credit enhancement, the Registration Statements provided explanations of the losses that credit enhancement is in place should such losses occur:

DESCRIPTION OF CREDIT ENHANCEMENT

General

Credit support for each series of certificates may be comprised of one or more of the following components. Each component will have a dollar limit and will provide coverage with respect to Realized Losses that are:

- Defaulted Mortgage Losses;
- Special Hazard Losses;
- Bankruptcy Losses; and
- Fraud Losses.

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 52; *cf.,* Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at 62.

202. The Registration Statements also set forth the nature of the credit enhancements and the degree of loss that it would cover:

> Most forms of credit support will not provide protection against all risks of loss and will not guarantee repayment of the entire outstanding principal balance of the certificates and interest. If losses occur that exceed the amount covered by credit support or are of a type that is not covered by the credit support, certificate-holders will bear their allocable share of deficiencies. In particular, Defaulted Mortgage Losses, Special Hazard Losses, Bankruptcy Losses and Fraud Losses in excess of the amount of coverage provided therefor and Extraordinary Losses will

> not be covered. To the extent that the credit enhancement for any series of certificates is exhausted, the certificate-holders will bear all further risks of loss not otherwise insured against.

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 51; *cf.,* Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at 62.

203. The Registration Statements also set forth the obligations of the parties to maintain the stated credit enhancements.

> **Maintenance of Credit Enhancement**
> If credit enhancement has been obtained for a series of certificates, the master servicer, the servicer or the Certificate Administrator will be obligated to exercise its best reasonable efforts to keep or cause to be kept the credit enhancement in full force and effect throughout the term of the applicable pooling and servicing agreement, unless coverage thereunder has been exhausted through payment of claims or otherwise, or substitution therefor is made as described below under "-Reduction or Substitution of Credit Enhancement."

Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed March 3, 2006, at 59; *cf.,* Residential Accredit Loans, Inc., Form S-3/A Registration Statement, filed April 3, 2007, at 72.

204. Furthermore, the Prospectus Supplements each set forth the types of credit enhancement applicable to each specific offering:

> **Credit Enhancement**
>
> Credit enhancement for the offered certificates consists of:
> - excess cash flow;
> - overcollateralization;
> - a swap agreement; and
> - subordination provided to the Class A Certificates by the Class M Certificates, and subordination provided to the Class M Certificates by each class of Class M Certificates with a lower payment priority.

RALI Series 2006-QA4 Prospectus Supplement, Form 424B5, filed May 26, 2006, at cover; *see also* RALI Series 2006-QO7 Prospectus Supplement, Form 424B5, filed September 29, 2006, at cover.

205. In addition, the Prospectus Supplements contained explanations of the credit enhancement specific to each of the Offerings. For example, the Prospectus Supplement for the RALI Series 2006-QA4 Offering provided that credit enhancement would include:

> **Credit Enhancement**
>
> The credit enhancement for the benefit of the offered certificates consists of:
> Excess Cash Flow. Because more interest with respect to the mortgage loans is payable by the mortgagors than is expected to be necessary to pay the interest on the offered certificates each month and related expenses, there may be excess cash flow. Some of this excess cash flow may be used to protect the offered certificates against some realized losses by making an additional payment of principal up to the amount of the realized losses.
>
> *Overcollateralization*. On the closing date, the trust will issue an aggregate principal amount of offered certificates which is approximately equal to 99.35% of the aggregate principal balance of the mortgage loans as of the cut-off date. On each distribution date, to the extent not used to cover realized losses, excess cash flow, if necessary, will be used to pay principal to the offered certificates, reducing the aggregate certificate principal balance of those certificates below the aggregate principal balance of the mortgage loans to the extent necessary to maintain the required overcollateralization amount. The excess amount of the balance of the mortgage loans represents overcollateralization, which may absorb some losses on the mortgage loans to the extent not covered by excess cash flow.
>
> *Subordination*. So long as the Class M Certificates remain outstanding, losses on the mortgage loans which are not covered by excess cash flow or overcollateralization will be allocated to the Class M Certificates that remain outstanding with the lowest payment priority, and the other classes of certificates will not bear any portion of such losses. If none of the Class M Certificates are outstanding, all such losses will be allocated to the related Class A Certificates as described in this prospectus supplement.
>
> *Swap Agreement.* The holders of the Class A Certificates and Class M Certificates will benefit from a swap agreement. On each distribution date, the trust will be obligated to make fixed payments, and HSBC Bank USA, N.A., the swap counterparty, will be obligated to make floating payments, in each case as set forth in the swap agreement and as described in this prospectus supplement. To the extent that the fixed payment exceeds the floating payment on any distribution date, amounts otherwise available to certificate-holders will be applied to make a net swap payment to the swap counterparty. To the extent that the floating payment exceeds the fixed payment on any distribution date, the swap counterparty will make a net swap payment to the trust which may be used to

> cover certain interest shortfalls, basis risk shortfalls and losses on the mortgage loans as described in this prospectus supplement.
>
> Upon early termination of the swap agreement, the trust or the swap counterparty may be liable to make a swap termination payment to the other party (regardless of which party has caused the termination). The swap termination payment will be computed in accordance with the procedures set forth in the swap agreement. In the event that the trust is required to make a swap termination payment to the swap counterparty, that amount will be paid by the trust on the related distribution date and on any subsequent distribution dates until paid in full, prior to any distribution to the Class A Certificates and Class M Certificates, except for certain swap termination payments resulting from an event of default by or certain termination events with respect to the swap counterparty as described in this prospectus supplement, for which payments by the trust to the swap counterparty will be subordinated to all distributions to the Class A Certificates and Class M Certificates. The swap agreement will terminate after the distribution date in May 2011.
>
> Except as described in the second preceding sentence, amounts payable by the trust to the swap counterparty will be deducted from available funds before distribution to certificate-holders.

RALI Series 2006-QA4 Prospectus Supplement, Form 424B5, filed May 26, 2006, at S-13; *see also* RALI Series 2006-QO7 Prospectus Supplement, Form 424B5, filed September 29, 2006, at S-18.

206. ***Omitted Information:*** The above statements failed to disclose that the Ratings Agencies largely determined the amount and kind of credit support or credit enhancement to be provided for each class of Certificates, before and after the Ratings Agencies were formally "engaged" by Residential Capital, in order for the Certificates to be assigned predetermined desired ratings of the Underwriter. The above statements also failed to disclose that the amounts and kind of credit support the Ratings Agencies determined was appropriate for the Certificates, as specifically set forth in each Prospectus Supplement, were faulty, erroneous and inaccurate since the Ratings Agency models had not been updated and failed to accurately or adequately reflect the performance of the Certificate mortgage loans. Regardless of that fact, Residential Capital and the Underwriters continued to consummate Offerings of MBS throughout 2006 and

2007. Furthermore, as the statements purport to convey to the investor that credit support levels are determined by the exposure to risk of default or delinquency by the underlying borrowers, this was far from the truth. In fact, credit enhancement levels were set at the absolute minimum level that was required not to protect investors, but rather to achieve and be awarded the highest possible credit rating in order to maximize fees and profit from selling the Certificates at inflated prices.

D. The Prospectus Supplements Misstated the True Loan-to-Value Ratios Associated with the Underlying Mortgages

207. Each of the Prospectus Supplements contained detailed information about the LTV ratios of the loans underlying the trusts. In a series of charts, investors were provided with LTV ratio data, including information about the number of loans containing LTV ratios within a given range. The following chart, taken from the Prospectus Supplement for RALI Series 2006-QA4, stated:

Original Loan-to-Value Ratios of the Mortgage Loans

Original Loan-to-Value Ratio (%)	Number of Mortgage Loans	Principal Balance	Percentage of Mortgage Loans	Average Principal Balance	Weighted Average Credit Score
00.01 - 50.00	31	$6,356,761	2.07%	$205,057	719
50.01 - 55.00	13	3,988,603	1.30	306,816	705
55.01 - 60.00	27	11,836,249	3.86	438,380	718
60.01 - 65.00	50	20,397,677	6.66	407,954	708
65.01 - 70.00	63	22,896,056	7.47	363,429	718
70.01 - 75.00	106	31,808,740	10.38	300,082	713
75.01 - 80.00	685	201,960,535	65.91	294,833	711
80.01 - 85.00	3	818,341	0.27	272,780	703
85.01 - 90.00	22	3,961,049	1.29	180,048	718
90.01 – 95.00	10	2,080,593	0.68	208,059	722
95.01 – 100.00	2	334,900	0.11	167,450	745
Total, Average or Weighted Average	1,012	$306,439,505	100.00%	$302,806	712

The weighted average Loan-to-Value ratio at origination of the mortgage loans will be approximately 75.68%.

RALI Series 2006-QA4 Prospectus Supplement, Form 424B5, filed May 26, 2006, at I-3; *see also* RALI Series 2006-QO7 Prospectus Supplement, Form 424B5, filed September 29, 2006, at I-3.

208. ***Omitted Information*:** As explained above, the appraisal value of the properties underlying the mortgage loans and borrower incomes and credit were grossly inaccurate and significantly inflated. Furthermore, due to hidden incentives, the stated sales price of properties underlying the mortgage loans did not accurately reflect the true value of the properties. These inflated appraisals and misleading sales price figures were used to form the LTV ratios set forth in the prospectus supplements. Incorporating an inflated appraisal into the LTV calculation will result in a lower LTV ratio for a given loan. For instance, as described above, if a borrower seeks to borrow $90,000 to purchase a house worth $100,000, the LTV ratio is $90,000/$100,000 or 90%. If, however, the appraised value of the house is artificially increased to $120,000, the LTV ratio drops to just 75% ($90,000/$120,000).

209. Due to the inflated appraisals, the LTV ratios listed in the prospectus supplements were artificially low, making it appear that the loans underlying the trusts were less risky than they really were. Due to the fact that such a large percentage of each Offering contained mortgage loan collateral which had the option or negative amortization feature, understated and misleading LTV ratios had a direct correlation to the skyrocketing delinquency and default rates within the first six months of the Offerings. Incorporating the example above, if a borrower's $90,000 loan application on a home appraised by an originator at $100,000, the LTV ratio is 90%. In a negative amortization scenario, if the true appraisal value of the underlying property for the borrower's mortgage is actually $80,000, the LTV ratio increases to 112.5%, triggering the automatic adjustment in rate and loss of the negative amortization feature. Since many of the negative amortization loans underlying the Certificates were made to subprime and Alt-A borrowers, the resulting payments would be considerably more than what they could have been able to afford.

210. Furthermore, also due to the artificially inflated appraisals (as detailed above) mortgages were extended to borrowers whose true LTV ratio did not support the amount of the mortgage loan. Moreover, contrary to the statement that these many of the mortgages were in fact "limited documentation," or not "full documentation" loans, they were not extended to borrowers who have a credit history that demonstrates an established ability to repay indebtedness in a timely fashion. In fact, the originators implemented policies designed to extend mortgages to borrowers regardless of whether they were able to meet their obligations under the mortgage such as:

- Coaching borrowers to misstate their income on loan applications to qualify for mortgage loans under the originators' underwriting standards, including directing applicants to no-documentation loan programs when their income was insufficient to qualify for full documentation loan programs.

- Steering borrowers to more expensive loans that exceeded their borrowing capacity.

- Encouraging borrowers to borrow more than they could afford by suggesting NINA and SISA loans when they could not qualify for full documentation loans based on their actual incomes.

- Approving borrowers based on "teaser rates" for loans despite knowing that the borrower would not be able to afford the "fully indexed rate" when the adjustable rate adjusted.

- Allowing non-qualifying borrowers to be approved for loans under exceptions to the originators' underwriting standards based on so-called "compensating factors" without requiring documentation for such compensating factors.

- Incentivizing their employees to approve borrowers under exceptions to the originators' underwriting policies.

- Failing to determine whether stated income or stated assets were reasonable.

E. The Prospectus Supplements Misstated the the Certificates' True Investment Rating

211. The Registration Statements and Prospectus Supplements contained statements regarding the ratings of the Certificates that were supported by the mortgage loans. The Registration Statements referred the investor to the Prospectus Supplements for specific information as to the ratings for each of the Certificates.

212. Each of the Prospectus Supplements provided: (1) both S&P's and/or Moody's actual rating for each class of Offered Certificate within each Offering; or (2) stated that the Certificates in each class would not be offered unless they received ratings from both Moody's and/or S&P that were at least as high as those set forth in the Prospectus Supplement. All of the ratings set forth in all of the Prospectus Supplements were within the "Investment Grade" range of Moody's (Aaa through Baa3) and S&P (AAA through BBB) and the majority of Offered Certificates, over 95% of the total Offering values for each Moody's and S&P, received the highest rating of AAA.

213. The following chart, taken from the Prospectus Supplement for RALI Series 2006-QA4 is an example of this representation:

Offered Certificates

Class	Pass-Through Rate	Initial Certificate Principal Balance	Initial Rating (S&P/ Moody's)[1]	Designations
Class A Certificates:				
A	Adjustable Rate	$286,520,000	AAA / Aaa	Senior /Adjustable Rate
Class M Certificates:				
M-1	Adjustable Rate	$5,056,000	AA+ / Aa1	Mezzanine/Adjustable Rate
M-2	Adjustable Rate	$2,604,000	AA+ / Aa2	Mezzanine/Adjustable Rate
M-3	Adjustable Rate	$1,991,000	AA+ / Aa3	Mezzanine/Adjustable Rate
M-4	Adjustable Rate	$1,072,000	AA / A1	Mezzanine/Adjustable Rate
M-5	Adjustable Rate	$1,072,000	AA / A2	Mezzanine/Adjustable Rate
M-6	Adjustable Rate	$1,072,000	AA / A3	Mezzanine/Adjustable Rate
M-7	Adjustable Rate	$1,072,000	AA- / Baa1	Mezzanine/Adjustable Rate
M-8	Adjustable Rate	$1,072,000	A / Baa2	Mezzanine/Adjustable Rate
M-9	Adjustable Rate	$1,378,000	A- / Baa3	Mezzanine/Adjustable Rate
M-10	Adjustable Rate	$1,533,000	BBB / Ba2	Mezzanine/Adjustable Rate
Total Class M Certificates:		$17,922,000		
Total Offered Certificates:		$304,442,000		

Non-Offered Certificates[2]

SB	N/A	$1,997,504	N/A	Subordinate
R-I	N/A	N/A	N/A	Residual
R-II	N/A	N/A	N/A	Residual
R-III	N/A	N/A	N/A	Residual
Total non-offered certificates:		$1,997,504		
Total offered and non-offered certificates:		$306,439,504		

(1) See "Ratings" in this prospectus supplement.
(2) The information presented for non-offered certificates is provided solely to assist your understanding of the offered certificates.

RALI Series 2006-QA4 Prospectus Supplement, Form 424B5, filed May 26, 2006, at S-6; *see also* RALI Series 2006-QO7 Prospectus Supplement, Form 424B5, filed September 29, 2006, at S-6.

214. ***Omitted Information*:** The ratings stated in the Prospectus Supplements were based on outdated models, lowered ratings criteria, and inaccurate loan information as set forth

in great detail above. These flaws produced artificially high credit ratings for the Certificates, making them appear less risky than they really were.

215. Furthermore, the Prospectus Supplements contained the following language or slight variation thereof pertaining to the Certificates' ratings:

> It is a condition to the issuance of the offered certificates that they be rated as indicated on page S-6 of this prospectus supplement.

RALI Series 2006-QA4 Prospectus Supplement, Form 424B5, filed May 26, 2006, at S-109; *see also* RALI Series 2006-QO7 Prospectus Supplement, Form 424B5, filed September 29, 2006, at S-126.

216. Furthermore, in each Prospectus Supplement appears the following language or variation thereof:

> Standard & Poor's ratings on mortgage pass-through certificates address the likelihood of the receipt by certificate-holders of payments required under the pooling and servicing agreement. Standard & Poor's ratings take into consideration the credit quality of the mortgage pool, structural and legal aspects associated with the certificates, and the extent to which the payment stream in the mortgage pool is adequate to make payments required under the certificates. Standard & Poor's rating on the certificates does not, however, constitute a statement regarding frequency of prepayments on the mortgages.
>
> * * *
>
> The rating assigned by Moody's to the offered certificates address the likelihood of the receipt by the offered certificate-holders of all distributions to which they are entitled under the pooling and servicing agreement. Moody's ratings reflect its analysis of the riskiness of the mortgage loans and the structure of the transaction as described in the pooling and servicing agreement.

Id.

217. ***Omitted Information:*** The ratings stated in the Prospectus Supplements were based on outdated models, lowered ratings criteria, and inaccurate loan information as set forth in great detail above. These flaws produced artificially high credit ratings for the Certificates, making them appear less risky than they really were. As such, the ratings set forth in the

Prospectus Supplements issued in connection with the Offerings did not accurately address the likelihood of receipt of any distributions, let alone all distributions, as is apparent from the staggering percentage initially AAA rated Certificates which have since been downgraded to speculative or junk grades.

VII.

CLASS ACTION ALLEGATIONS

218. Plaintiffs bring this action as a class action pursuant to Rule 23 of the Federal Rules of Civil Procedure behalf of a class consisting of all persons or entities who acquired the Certificates issued by the Issuing Trusts, as set forth in 32-33 above, pursuant and/or traceable to the false and misleading Registration Statements and who were damaged thereby (the Class).

219. Excluded from the Class are Defendants, the officers and directors of the Defendants, at all relevant times, members of their immediate families and their legal representatives, heirs, successors or assigns and any entity in which Defendants have or had a controlling interest.

220. The members of the Class are so numerous that joinder of all members is impracticable. While the exact number of Class members is unknown to Plaintiffs at this time and can only be ascertained through appropriate discovery, Plaintiffs believe that there are hundreds of members in the proposed Class. Record owners and other members of the Class may be identified from records maintained by RCC, RFC, RALI or their transfer agents and maybe notified of the pendency of this action by mail, using the form of notice similar to that customarily used in securities class actions. Billions of dollars worth of Certificates were issued pursuant to the Registration Statements.

221. Plaintiffs claims are typical of the claims of the members of the Class as all members of the Class are similarly affected by Defendants wrongful conduct in violation of federal law that is complained of herein.

222. Plaintiffs will fairly and adequately protect the interests of the members of the Class and have retained counsel competent and experienced in class and securities litigation.

223. Common questions of law and fact exist as to all members of the Class and predominate over any questions solely affecting individual members of the Class. Among the questions of law and fact common to the Class are: whether Defendants violated the Securities Act; whether the Registration Statements issued by Defendants to the investing public negligently omitted and/or misrepresented material facts about the underlying mortgage loans comprising the pools; and to what extent the members of the Class have sustained damages and the proper measure of damages.

224. A class action is superior to all other available methods for the fair and efficient adjudication of this controversy since joinder of all members is impracticable. Furthermore, as the damages suffered by individual Class members may be relatively small, the expense and burden of individual litigation make it impossible for members of the Class to individually redress the wrongs done to them. There will be no difficulty in the management of this action as a class action.

VIII.

CAUSES OF ACTION

FIRST CAUSE OF ACTION

For Violation of § 11 of the Securities Act
(Against RALI, the Individual Defendants and the Underwriter Defendants)

225. Plaintiffs repeat and reallege each and every allegation above as if set forth in full herein, to the extent that such allegations do not sound in fraud.

226. This Cause of Action is brought pursuant to § 11 of the Securities Act, on behalf of Plaintiffs and the Class, against the Issuers of the Registration Statements, the Individual Defendants and the Underwriter of the Offerings. This Cause of Action is predicated upon Defendants strict liability for making material misleading statements and omitting material information from and in the Offering Documents.

227. The Offering Documents were materially misleading, contained untrue statements of material fact, omitted to state other facts necessary to make the statements not misleading, and omitted to state material facts required to be stated therein.

228. Defendant RALI, the Individual Defendants and the Underwriter Defendants are strictly liable to Plaintiffs and the Class for making the misstatements and omissions in issuing the Certificates.

229. The Individual Defendants each signed one or both of the Registration Statements.

230. The Underwriter Defendants acted as underwriter in the sale of Certificates issued by the Issuing Trusts, directly and indirectly participated in the distribution of the Certificates, directly and indirectly solicited offers to purchase the Certificates, and directly and indirectly participated in drafting and disseminating the Offering Documents for the Certificates.

231. Defendant RALI, the Individual Defendants and the Underwriter Defendants owed to the Plaintiffs and other Class members the duty to make a reasonable and diligent investigation of the statements contained in the Offering Documents at the time they became effective to ensure that such statements were true and correct and that there was no omission of material facts required to be stated in order to make the statements contained therein not misleading.

232. Defendant RALI, the Individual Defendants and the Underwriter Defendants knew, or in the exercise of reasonable care should have known, of the material misstatements and omissions contained in or omitted from the Offering Documents as set forth herein.

233. Defendant RALI, the Individual Defendants and the Underwriter Defendants failed to possess a reasonable basis for believing, and failed to make a reasonable investigation to ensure, that statements contained in the Offering Documents were true and/or that there was no omission of material facts necessary to make the statements contained therein not misleading.

234. Defendant RALI, the Individual Defendants and the Underwriter Defendants issued and disseminated, caused to be issued or disseminated, and participated in the issuance and dissemination of material statements to the investing public which were contained in the Offering Documents, which made false and misleading statements and/or misrepresented or failed to disclose material facts, as set forth above.

235. By reason of the conduct alleged herein, Defendant RALI, the Individual Defendants and the Underwriter Defendants each violated § 11 of the Securities Act, and are liable to Plaintiffs and the Class.

236. Plaintiffs and other Class members acquired the Certificates pursuant and/or traceable to the Registration Statements. At the time Plaintiffs and Class members obtained their

Certificates they did so without knowledge of the facts concerning the misstatements and omissions alleged herein.

237. Plaintiffs and other Class members have sustained damages as a result of the wrongful conduct alleged and the violations of Defendant RALI, the Individual Defendants and the Underwriter Defendants.

238. By virtue of the foregoing, Plaintiffs and other Class members are entitled to damages, jointly and severally from Defendant RALI, the Individual Defendants and the Underwriter Defendants, as set forth in § 11 of the Securities Act.

239. This action is brought within one year after the discovery of the untrue statements and omissions contained in the Offering Documents and within three years of the Certificates being offered to the public. Despite the exercise of reasonable diligence, Plaintiffs could not have reasonably discovered the untrue statements and omissions in the Offering Documents at an earlier time.

SECOND CAUSE OF ACTION

For Violation of § 12(a)(2) of the Securities Act (Against the Underwriter Defendants)

240. Plaintiffs repeat and reallege each and every allegation above as if set forth in full herein, to the extent that such allegations do not sound in fraud.

241. This Cause of Action is brought pursuant to § 12(a)(2) of the Securities Act, on behalf of Plaintiffs and the Class, against the Underwriters of the Offerings.

242. The Underwriter Defendants promoted and sold the Certificates pursuant to the defective Prospectus Supplements for their own financial gain. The Prospectus Supplements contained untrue statements of material fact, omitted to state facts necessary to make statements not misleading, and concealed and failed to disclose material facts.

243. The Underwriter Defendants owed to Plaintiffs and the other Class members who purchased Certificates pursuant to the Offering Documents, a duty to make a reasonable and diligent investigation of the statements contained in the Offering Documents, to ensure that such statements were true and that there was no omission of material fact necessary to make the statements contained therein not misleading.

244. The Underwriter Defendants knew of, or in the exercise of reasonable care should have known of, the misstatements and omissions contained in the Offering Documents, as set forth herein.

245. Plaintiffs and other Class members purchased or otherwise acquired Certificates pursuant to and/or traceable to the defective Offering Documents. Plaintiffs did not know, and in the exercise of reasonable diligence could not have known, of the misrepresentations and omissions contained in the Offering Documents.

246. By reason of the conduct alleged herein, The Underwriter Defendants violated § 12(a)(2) of the Securities Act, and are liable to Plaintiffs and other Class members who purchased Certificates pursuant to and/or traceable to the Offering Documents.

247. Plaintiffs and other Class members were damaged by The Underwriter Defendants wrongful conduct. Those Class members who have retained their Certificates have the right to rescind and recover the consideration paid for their Certificates, as set forth in § 12(a)(2) of the Securities Act. Those Class members who have sold their Certificates are entitled to rescissory damages, as set forth in § 12(a)(2) of the Securities Act.

248. This action is brought within one year after the discovery of the untrue statements and omissions contained in the Offering Documents, within one year after reasonable discovery of the untrue statements and material omissions and within three years of when the Certificates

were sold to the public. Despite the exercise of reasonable diligence, Plaintiffs could not have reasonably discovered the untrue statements and omissions in the Offering Documents at an earlier time.

THIRD CAUSE OF ACTION

Violations of § 15 of the Securities Act
(Against the Individual Defendants and the Underwriter Defendants)

249. Plaintiffs repeat and reallege each and every allegation above as if set forth in full herein, to the extent that such allegations do not sound in fraud.

250. This Cause of Action is brought pursuant to § 15 of the Securities Act against the Individual Defendants and the Underwriter Defendants.

251. Each of the Individual Defendants, by virtue of his or her control, ownership, offices, directorship, and specific acts set forth above was, at the time of the wrongs alleged herein, a controlling person of RCC, RFC, RALI and the Issuing Trusts within the meaning of Section 15 of the Securities Act. Each of the Individual Defendants had the power to influence, and exercised that power and influence, to cause RCC, RFC, RALI and the Issuing Trusts to engage in violations of the Securities Act, as described above.

252. The Underwriter Defendants, by virtue of their control, influence, participation and solicitation of offers to purchase the Certificates and specific acts set forth above were, at the time of the wrongs alleged herein, controlling persons of RCC, RFC, RALI and the Issuing Trusts within the meaning of Section 15 of the Securities Act. The Underwriter Defendants had the power to influence, and exercised that power and influence, to cause RCC, RFC, RALI and the Issuing Trusts to engage in violations of the Securities Act, as described above.

253. The Individual Defendants and the Underwriter Defendants control, position and influence made them privy to, and provided them with actual knowledge of, the material facts and omissions concealed from Plaintiffs and the other Class members.

254. Each of the Individual Defendants were each a participant in the violations alleged herein, based on their having prepared, signed or authorized the signing of the Registration Statements and having otherwise participated in the consummation of the Offerings detailed herein. The Defendants named herein were responsible for overseeing the formation and operation of the Issuing Trusts, including routing payments from the borrowers to investors.

255. Individual Defendants prepared, reviewed and/or caused the Registration Statements and Prospectus Supplements to be filed and disseminated.

256. Since the Defendants named herein controlled the ultimate decision of which mortgage loans would be included and excluded from the securitized pools of loans as well as the ultimate amount of credit enhancement required in order for the Certificates to be sold to investors, they controlled all material aspects relating to the acquisition, structure and sale of the Certificates and thus, the activities of the Issuing Trusts and Individual Defendants within the meaning Section 15 of the Securities Act.

257. By virtue of the wrongful conduct alleged herein, the Individual Defendants and the Underwriter Defendants are liable to Plaintiffs and the other Class members for the damages sustained.

IX.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray for relief and judgment, as follows:

A. Determining that this action is a proper class action and certifying Plaintiffs as Class representatives;

B. Awarding compensatory damages in favor of Plaintiffs and the other Class members against all Defendants, jointly and severally, for all damages sustained as a result of Defendants wrongdoing, in an amount to be proven at trial, including interest thereon;

C. Awarding Plaintiffs and the Class their reasonable costs and expenses incurred in this action, including counsel fees and expert fees;

D. Awarding rescission or a rescissory measure of damages; and

E. Awarding such additional equitable, injunctive or other relief as deemed appropriate by the Court.

JURY DEMAND

MORGAN SECURITIES LLC (f/k/a/ JP MORGAN SECURITIES INC.); AND BEAR STEARNS & CO., INC.

Defendants.

TO THE ABOVE NAMED DEFENDANTS:

PLEASE TAKE NOTICE THAT YOU ARE HEREBY SUMMONED and required to serve upon Plaintiff's attorneys a notice of appearance or demand for a complaint within twenty (20) days after service of this Summons, exclusive of the day of service, or within thirty (30) days after service is complete if this Summons is not personally delivered to you within the State of New York. In case of your failure to appear or answer, judgment will be taken against you on default for the relief demanded herein.

Plaintiff designates New York County as the place of trial. Venue is proper because Defendants are principally located in this County, and many of the wrongful acts alleged herein occurred in this County.

NOTICE

This is an action for damages, or alternatively, a declaratory judgment arising from the investment in residential mortgage-backed securities ("RMBS" or the "Securities") which were securitized and/or sold by Defendants. Plaintiff Sealink Funding Limited ("Sealink") is a company incorporated under the laws of Ireland that was established to receive, hold and manage RMBS purchased by certain special purpose vehicles (the "Sealink SPVs"), and the claims

asserted herein arise from the purchase of those RMBS by the Sealink SPVs. The Sealink SPVs assigned the claims asserted herein to Sealink through a series of agreements, including but not limited to a Master Framework and Definitions Schedule and a series of Sales and Purchase Agreements, that transferred the RMBS -- including present and future properties, revenues and rights of every description -- to Sealink. The Sealink SPVs purchased $948,815,000 in Securities in the offerings listed on Exhibit A attached hereto (the "Offerings"). The Securities are either currently held by the Plaintiff or were held and sold previously at a loss.

Defendants were actively involved in each step of the securitization and sale of the Securities. Defendants acted as depositor, underwriter, seller, sponsor, and/or broker-dealer for the Offerings.

The offering materials issued by Defendants for the Offerings (the "Offering Materials") contained material misrepresentations and omissions regarding the underwriting standards used to issue the mortgage loans that were pooled together into the Offerings, the legal validity of assignments of those mortgage loans to trusts formed to hold the pooled loans and to collect interest and principal payments due on the loans, and the legal validity of the trusts and their legal entitlement to receive interest and principal payments on the loans.

The Offering Materials also contained material misrepresentations and omissions regarding key statistical characteristics of the mortgage loans underlying the Securities, including loan-to-value ratios and the percentage of owner-occupied properties. The Offering Materials also contained material misrepresentations about the Securities' credit ratings, which understated the Securities' risk profile.

Each of the Defendants knew, or at a minimum was negligent in not knowing, that its representations and omissions were false and/or misleading at the time they were made. Each

Defendant made the false and/or misleading statements with the intent for Plaintiff to rely upon those statements.

Defendants obtained mortgage loans from the originators and created securities from them. The underwriters underwrote the Offerings and sold the Securities by means of Offering Materials which contained knowing material misrepresentations and omissions. Alternatively, if the underwriters did not know of material misrepresentation and omissions, then contracts of sale from the underwriters are void or voidable as a result of mutual mistake.

Plaintiff and the Sealink SPVs did not know the true facts regarding Defendants' misrepresentations and omissions in the Offering Materials, and justifiably relied on those misrepresentations and omissions. Defendants' wrongdoing has led directly to the damages at issue in this Action, which include loss of market value on the Securities.

The causes of action against The Royal Bank of Scotland Group PLC, RBS Holdings USA, Inc., Citigroup, Inc., Deutsche Bank AG, H&R Block, Inc., Bank of America Corporation, and Countrywide Financial Corporation are at law and at equity for claims including common-law fraud, fraudulent inducement, negligent misrepresentation, aiding and abetting fraud, declaratory judgment, and contract claims, including rescission, restitution and mutual mistake. The depositors identified in Exhibit A, as well as Ally Financial, Inc., GMAC Mortgage Group, Inc., Residential Capital LLC, GMAC-RFC Holding Company, Fortress Investment Group LLC, and Nomura Holdings, Inc. are liable for claims including common law fraud, fraudulent inducement, and negligent misrepresentation. The sponsors identified in Exhibit A, as well as Ally Financial, Inc., GMAC Mortgage Group, Inc., Residential Capital LLC, GMAC-RFC Holding Company, Fortress Investment Group LLC, and Nomura Holdings, Inc. are liable for claims including common law fraud, fraudulent inducement, and negligent misrepresentation.

The underwriters identified in Exhibit A, as well as Credit Suisse (USA) LLC, Merrill Lynch, Pierce, Fenner & Smith, Inc., HSBC North America Holdings Inc., HSBC (USA) Inc., HSBC Markets (USA) Inc.; Wells Fargo & Company, JPMorgan Chase & Co., and Countrywide Capital Markets, LLC, are liable for claims including aiding and abetting fraud, negligent misrepresentation, and contract claims, including rescission, restitution and mutual mistake.

Upon your failure to appear, judgment will be taken against you by default for money damages in an amount of at least $948,815,000, and interest thereon, together with punitive damages of $948,815,000, rescission, rescissory damages, legal fees, and the costs of this action.

JURY DEMAND 110

Plaintiff Stichting Pensioenfonds ABP ("ABP" or "Plaintiff") makes the allegations in this Complaint based upon personal knowledge as to matters concerning Plaintiff and its own acts, and upon information and belief as to all other matters. This information is derived from the investigation by Plaintiff's counsel, which has included a review and analysis of annual reports and publicly filed documents, reports of governmental investigations by the United States Securities and Exchange Commission (the "SEC"), the Financial Crisis Inquiry Commission (the "FCIC"), the United States Department of Justice (the "DOJ"), the United States Senate Permanent Subcommittee on Investigations, and numerous investigations by other federal and state governmental units, as well as press releases, news articles, analysts' statements, conference call transcripts and presentations, and transcripts from speeches and remarks given by Defendants. In addition, Plaintiff's counsel conferred with counsel for other plaintiffs who have filed other complaints against these Defendants based on the same or similar activities. Based on the foregoing, Plaintiff believes that substantial additional evidentiary support exists for the allegations herein, which Plaintiff will find after a reasonable opportunity for discovery.

NATURE OF ACTION

1. This is an action by Plaintiff ABP against Defendants for fraud, aiding and abetting fraud, negligent misrepresentation, and violation of the Minnesota Securities Act.

2. This action arises out of Plaintiff's purchases of certain residential mortgage-backed securities ("RMBS"), as evidenced in the form of "Certificates," in reliance on the false and misleading statements that were made by Defendants. Based on these material misrepresentations and omissions, Plaintiff purchased securities that were far riskier than had been represented, and were backed by mortgage loans that were worth significantly less than had been represented and had been made to borrowers who were much less creditworthy than had been represented.

3. The securities purchased by Plaintiff were collateralized against mortgages originated and/or acquired by GMAC (as defined in ¶ 17, *infra*). GMAC did not, however, hold the mortgage loans it originated and/or acquired. Rather, taking advantage of an unprecedented boom in the securitization industry, it deposited the loans into special purpose entities or "trusts" and then repackaged the loans for sale to investors in the form of RMBS. Defendants Ally Securities, LLC, Banc of America Securities LLC, Barclays Capital, Deutsche Bank Securities, Inc., J.P. Morgan Securities, LLC, and Merrill Lynch, Pierce, Fenner & Smith, Inc., as underwriters, then sold the RMBS to investors such as Plaintiff.

4. The Certificates entitled investors to receive monthly distributions of interest and principal on cash flows from the mortgages held by the trusts. The Certificates issued by each trust were divided into several classes (or "tranches") that had different seniority, priorities of payment, exposure to default, and interest payment provisions. Rating agencies, such as Moody's Investors Service, Inc. ("Moody's"), Standard & Poor's Corporation ("S&P"), DBRS, Inc. ("DBRS"), and/or Fitch, Inc. ("Fitch"),[1] rated the investment quality of all tranches of Certificates based upon information provided by the Defendants about the quality of the mortgages in each mortgage pool and the seniority of the Certificate among the various Certificates issued by each trust. These ratings, in significant part, determined the price at which these Certificates were offered to investors.

5. In selling the Certificates, the Defendants prepared and filed with the Securities and Exchange Commission ("SEC") certain registration statements (the "Registration Statements"), prospectuses (the "Prospectuses"), and prospectus supplements (the "Prospectus

[1] Moody's, Fitch, DBRS and S&P are approved by the Securities and Exchange Commission as "Nationally Recognized Statistical Rating Organizations" and provide credit ratings that are used to distinguish among grades of creditworthiness of various securities under the federal securities laws.

Supplements", and together with the Registration Statements and Prospectuses, the "Offering Documents"). In these Offering Documents, Defendants repeatedly touted the strength of their underwriting guidelines and standards and those of the relevant third party originators, claimed that the underwriting guidelines and standards were designed to ensure the ability of the borrowers to repay the principal and interest on the underlying loans and the adequacy of the collateral, and represented that the mortgages underlying the Certificates were originated in accordance with those stated underwriting guidelines and standards. Where Defendants had not originated the mortgage loans underlying the Certificates, they emphasized their quality control procedures, such as reviewing underwriting information provided by the originators.

6. In addition, in the Offering Documents Defendants repeatedly assured investors as to the soundness of the appraisals used to arrive at the value of the underlying properties and, specifically, that the real estate collateralizing the loans had been subjected to objective real estate appraisals performed in accordance with stated guidelines. Defendants made numerous other representations regarding the quality of the loan pools, including clean transfer of title, high owner-occupancy rates, loan-to-value and combined loan-to-value ratios, debt-to-income ratios, credit ratings, and credit enhancements.

7. Plaintiff and other investors did not have access to the underlying mortgage loan files. Instead, the Defendants were responsible for gathering and verifying information about the credit quality and characteristics of the loans that were deposited into each trust and presenting this information in the Registration Statements, Prospectuses, and Prospectus Supplements prepared for potential investors. This due diligence process is a critical safeguard for investors who rely on this information in making their investment decisions, and is a fundamental legal obligation of the Defendants.

8. As set forth below, the Offering Documents contained material misstatements and omitted material information. Contrary to Defendants' assurances, the originators of the underlying loans had not followed their touted underwriting guidelines and standards when originating and/or acquiring the mortgage loans, and Defendants had neither maintained nor conducted quality control procedures.

9. Specifically, as set forth below, Defendants knew of the wholesale and systematic abandonment of underwriting guidelines by both GMAC's own affiliated originators as well as various third party originators. Because GMAC's affiliated lenders, Defendants GMAC Mortgage Group, Inc. and Homecomings Financial, operated primarily to generate loans for GMAC's RMBS operations, they intentionally granted mortgage loans to borrowers whom they knew did not satisfy the eligibility criteria as described in the Offering Documents. Face with GMAC's demands for as many loans as possible, the third party originators did likewise, knowing that GMAC would purchase and securitize even risky, low-quality loans. In many cases, GMAC purchased and securitized loans on a wholesale basis without reviewing their loan files or having any reason to believe that they complied with its purported underwriting standards. Furthermore, when deciding whether to originate or purchase loans, GMAC and its affiliated lenders made use of proprietary underwriting software that did not apply GMAC's purported underwriting standards or require basic documentation.

10. In addition, Defendants knew that the mortgages underlying the Certificates had been extended based on collateral appraisals that were not performed in accordance with the stated guidelines, such that the value of the underlying properties and the amount of credit enhancements built into the Certificates were overstated, thereby exposing investors such as Plaintiff to additional losses in the event of foreclosure. In many cases, Defendants also failed to

deliver good title to the Issuing Trusts in a timely manner, severely undermining the Issuing Trusts' capacity to manage the assets that were supposed to be underlying the Certificates and contributing to massive foreclosure backlogs and moratoriums. Defendants did not apply the rigorous quality control procedures they touted in the Offering Documents to uncover lapses, and where Defendants did discover problems in the loan pools, they deliberately overlooked them.

11. Examination of the individual mortgage files underlying GMAC's RMBS has revealed just how thoroughly and blatantly GMAC misrepresented the trust assets to investors. A review of the loans underlying several GMAC RMBS comparable to those purchased by Plaintiff revealed that at least ***89%*** of the delinquent and charged-off loans breached one or more of GMAC's representations and warranties. Common defects included unacceptably high loan-to-value and debt-to-income ratios, implausible and unverified borrower incomes, missing documentation, and violation of predatory lending laws, all basic matters readily ascertainable in the exercise of rudimentary due diligence. The sheer volume of the violations, the fact that they went to the most basic characteristics of the pooled loans, and the ease with which Defendants could have discovered the truth all foreclose the possibility that the misrepresentations in the Offering Documents were the product of anything other than intentional wrongdoing.

12. The practices of financial institutions such as GMAC and their role in inflating the housing bubble have been and continue to be the subject of intense regulatory scrutiny. In June 2011, GMAC acknowledged receipt of subpoenas from both the U.S. Department of Justice and the SEC. The subpoena received from the SEC requests documentation relating to mortgage loans placed in securitization trusts, and the subpoena received from the Department of Justice requests documentation and information in connection with the investigation of potential fraud related to the origination and/or underwriting of mortgage loans. GMAC has also been forced to

reimburse the government-sponsored entities Fannie Mae and Freddie Mac hundreds of millions of dollars for mortgages that were not underwritten as represented, and is currently being sued for securities fraud in connection with its RMBS sales by the Federal Housing Finance Agency ("FHFA").

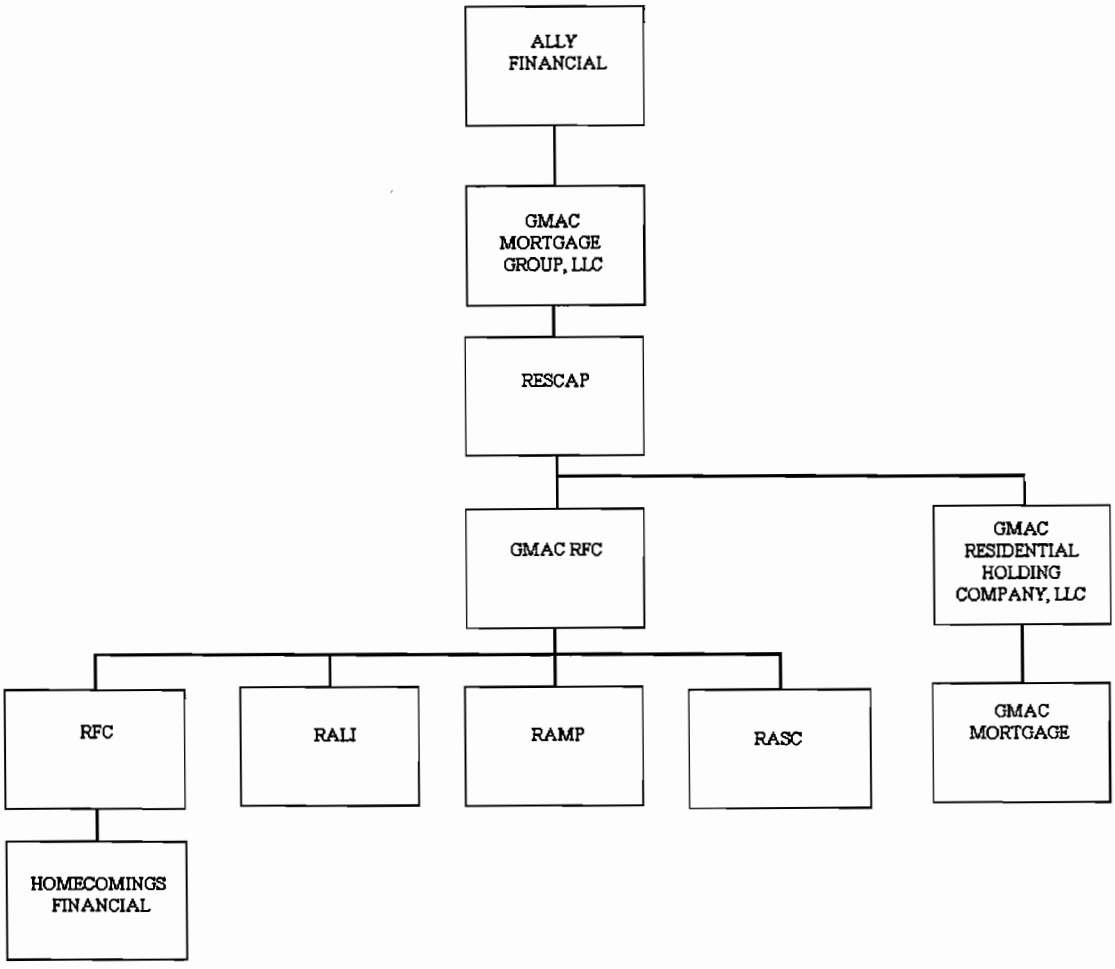
13. As a result of the untrue statements and omissions in the Offering Documents, Plaintiff purchased Certificates that were far riskier than represented and that were not equivalent to other investments with the same credit ratings. The rating agencies have now significantly downgraded the Certificates purchased by Plaintiff, all of which were represented in the Offering Documents to be AAA instruments at the time of purchase The Certificates, therefore, are no longer marketable at anywhere near the purchase prices paid by Plaintiff. As a consequence, Plaintiff has suffered losses on its purchases of the Certificates.

JURISDICTION AND VENUE

14. This Court has personal jurisdiction over each of the non-domiciliary Defendants pursuant to MINN. STAT. § 543.19, subdiv. (1)(2) because each of them has transacted business within the state of Minnesota, and pursuant to MINN. STAT. § 543.19, subdiv. (1)(3) because each of them has committed tortious acts within the state of Minnesota causing property damage. Many of the acts and transactions alleged herein, including the negotiation, preparation and dissemination of many of the material misstatements and omissions contained in the Registration Statements, Prospectuses and Prospectus Supplements, occurred in substantial part in this state. Additionally, the Certificates were actively marketed and sold in this state.

15. Venue is proper in this Court pursuant to MINN. STAT. § 542.09, because Defendants Residential Capital Corporation and GMAC Residential Funding Corporation both maintain offices in Hennepin County.

PARTIES



A. PLAINTIFF

16. Plaintiff ABP is an independent administrative pension fund established under the laws of the Kingdom of the Netherlands. ABP serves as the pension fund for public employees in the governmental and education sectors in the Netherlands. With assets under management of approximately € 250 billion, ABP is one of the three largest pension funds in the world.

B. GMAC DEFENDANTS

17. Defendant Ally Financial Inc. ("Ally Financial") is a bank holding company headquartered in Detroit, Michigan. Until May 2010, Ally Financial was known as GMAC Financial Services. Ally Financial was founded to provide financing to automobile purchasers, but expanded over time into areas including mortgage securitization, commercial finance and online banking. Ally Financial is the direct or indirect owner of Defendants Residential Capital LLC; GMAC Mortgage, LLC; GMAC Residential Funding Corporation; Homecomings Financial, LLC; Residential Accredit Loans, Inc.; Residential Asset Securities Corporation; Residential Asset Mortgage Products, Inc.; Residential Funding Company, LLC; and Ally Securities, LLC (together with Ally Financial, collectively referred to hereinafter as "GMAC."). The diagram on the next page depicts the relationships of the GMAC corporate entities.

[BOTTOM OF THIS PAGE INTENTIONALLY LEFT BLANK]

18. Defendant Residential Capital LLC, f/k/a Residential Capital Corporation ("ResCap") is a wholly-owned subsidiary of GMAC Mortgage Group LLC and an indirectly owned subsidiary of Ally Financial, with its principal place of business in Minneapolis, Minnesota. ResCap originates, securitizes, and services mortgage loans through its subsidiaries.

19. Defendant GMAC Mortgage, LLC, a/k/a GMAC Mortgage Corporation ("GMAC Mortgage") is an indirectly-owned subsidiary of ResCap and therefore an indirectly-owned subsidiary of Ally Financial, with its principal place of business in Fort Washington, Pennsylvania. GMAC Mortgage originates residential mortgage loans through a network of

retail offices and Internet sites. GMAC Mortgage originated mortgage loans that were pooled in securitizations and purchased by Plaintiff.

20. Defendant GMAC Residential Funding Corporation, a/k/a GMAC-RFC Holding Company, LLC ("GMAC RFC") is a wholly-owned subsidiary of ResCap and therefore an indirectly-owned subsidiary of Ally Financial, with its principal place of business in Minneapolis, Minnesota. GMAC RFC operates as a private issuer of mortgage-backed securities.

21. Defendant Homecomings Financial, LLC, f/k/a Homecomings Financial Network, Inc. ("Homecomings Financial") is an indirectly-owned subsidiary of ResCap and therefore an indirect subsidiary of Ally Financial. Homecomings Financial is a mortgage servicing and origination company. Homecomings Financial originated loans that were pooled in securitizations and purchased by Plaintiff, including: (1) RALI Series 2007-QS7 Trust; (2) RASC Series 2006-KS9 Trust; (3) RASC Series 2007-KS2 Trust; and (4) RASC Series 2007-KS3 Trust.

22. Residential Accredit Loans, Inc. ("RALI") is a wholly-owned, limited-purpose subsidiary of GMAC RFC, with its principal office in Minneapolis, Minnesota. Like all the other depositors, RALI was created specifically as a conduit for the securitization and sale of loans. RALI was the depositor for RALI Series 2007-QS7 Trust.

23. Residential Asset Securities Corporation ("RASC") is a wholly-owned, limited-purpose subsidiary of GMAC RFC, with its principal office in Minneapolis, Minnesota. Like all the other depositors, RASC was created specifically as a conduit for the securitization and sale of loans. RASC was the depositor for (1) RASC Series 2006-EMX9 Trust; (2) RASC Series 2006-KS9 Trust; (3) RASC Series 2007-KS2 Trust; and (4) RASC Series 2007-KS3 Trust.

24. Residential Asset Mortgage Products, Inc. ("RAMP") is a wholly-owned, limited-purpose subsidiary of GMAC RFC, with its principal place of business in Minneapolis, Minnesota. Like all the other depositors, RAMP was created specifically as a conduit for the securitization and sale of loans. RAMP was the depositor for RAAC Series 2005-SP2 Trust.

25. Defendants RALI, RASC, and RAMP are referred to collectively hereinafter as the "Depositor Defendants."

26. Residential Funding Company, LLC ("RFC") is a Delaware corporation and a wholly-owned subsidiary of GMAC RFC. Until October 2006, RFC LLC was known as "Residential Funding Corporation." RFC was created by GMAC RFC specifically as a conduit for the securitization and sale of loans. RFC was the sponsor for all of the securitizations at issue in this litigation. RFC is also the parent company of Homecomings Financial, an originator of mortgage loans underlying the RMBS purchased by Plaintiff.

27. Defendant RFC is referred to hereinafter as the "Sponsor Defendant."

28. Ally Securities, LLC, f/k/a Residential Funding Securities, LLC, d/b/a GMAC RFC Securities, f/k/a Residential Funding Securities Corporation ("Residential Funding"), is an SEC registered broker-dealer with its principal place of business in Minneapolis, Minnesota. Residential Funding was an underwriter of Certificates purchased by Plaintiff.

C. NON-GMAC DEFENDANTS

29. Banc of America Securities LLC ("BoA") is an SEC registered broker-dealer with its principal place of business in New York, New York. BoA was an underwriter of Certificates purchased by Plaintiff.

30. Barclays Capital Inc. ("Barclays") is an SEC registered broker-dealer with its principal place of business in New York, New York. Barclays was an underwriter of Certificates purchased by Plaintiff.

31. Deutsche Bank Securities, Inc. ("Deutsche Bank") is an SEC registered broker-dealer with its principal place of business in New York, New York. Deutsche Bank was an underwriter of Certificates purchased by Plaintiff.

32. J.P. Morgan Securities, LLC f/k/a J.P. Morgan Securities, Inc. ("JPMorgan") is an SEC registered broker-dealer with its principal place of business in New York, New York. JPMorgan was an underwriter of Certificates purchased by Plaintiff.

33. Merrill Lynch, Pierce, Fenner & Smith, Incorporated ("Merrill Lynch") is an SEC registered broker-dealer with its principal place of business in New York, New York. Merrill Lynch was an underwriter of Certificates purchased by Plaintiff.

34. Defendants BoA, Barclays, Deutsche Bank, JPMorgan, Merrill Lynch, and Residential Funding are referred to collectively hereinafter as the "Underwriter Defendants."

35. All Defendants identified in ¶¶ 17-24, 26, and 28-33 are hereinafter collectively referred to as the "Corporate Defendants."

D. INDIVIDUAL DEFENDANTS

36. David M. Bricker ("Bricker") was, at relevant times, a Director and Chief Financial Officer of Defendant RALI. Bricker was also the Chief Financial Officer of GMAC Mortgage and GMAC RFC.

37. Kenneth M. Duncan ("Duncan") was, at relevant times, the Acting Chief Financial Officer of Defendants RALI, RAMP and RASC. Duncan was also the Acting Chief Financial Officer of RFC, GMAC RFC and Homecomings.

38. Ralph T. Flees ("Flees") was, at relevant times, the Controller of Defendants RALI, RAMP, and RASC. Flees was also the Principal Accounting Officer of RFC, GMAC RFC and Homecomings.

39. James G. Jones ("Jones") was the Chief Executive Officer of ResCap from 2007 to 2008, and was also, at relevant times, the President, Chief Executive Officer and a Director of Defendant RALI. Jones had previously been ResCap's Chief Operating Officer and President of its U.S. Residential Finance Group. Prior to joining GMAC, Jones had been the Chief Executive Officer of Aegis Mortgage Corporation.

40. Lisa R. Lundsten ("Lundsten") was an Attorney-in-Fact of Defendants RALI and RASC. Lundsten also became the Senior Vice President of Securitization Management at GMAC RFC in September 2005.

41. Davee L. Olson ("Olson") was, at relevant times, a Director of Defendants RALI and RASC. Olson was also the Chief Financial Officer of ResCap, and a Director of GMAC RFC, RFC, and Homecomings.

42. Bruce J. Paradis ("Paradis") was the President and Chief Executive Officer of GMAC RFC from 1994 to 2005, and was the Chief Executive Officer of ResCap from 2005 to 2007. Paradis was also, at relevant times, the President, Chief Executive Officer, and a Director of the Depositor Defendants RALI, RAMP, and RASC.

43. David C. Walker ("Walker") was, at relevant times, a Director of Defendant RAMP. Walker was also a Director of ResCap, GMAC RFC, GMAC Mortgage, RFC, and Homecomings.

44. Diane S. Wold ("Wold") was, at relevant times, an Attorney-in-Fact of Defendant RAMP. Wold was also GMAC RFC's Senior Vice President of Securitization Management until September 2005, when she moved to ResCap as head of investor relations and corporate finance.

45. James N. Young ("Young") was, at relevant times, a Director of Defendant RALI. Young was also the Chief Accounting Officer and Controller of ResCap.

46. Defendants Bricker, Duncan, Flees, Jones, Lundsten, Olson, Paradis, Walker, Wold, and Young are referred to collectively hereinafter as the "Individual Defendants." The Individual Defendants signed the Registration Statements listed in the table below.

E. RELEVANT NON-PARTIES

47. Non-parties, the "Issuing Trusts", are common law trusts. The Issuing Trusts were created and structured by Defendants and their affiliated entities to issue billions of dollars worth of RMBS. The Issuing Trusts issued the Certificates purchased by Plaintiff. The non-party Issuing Trusts are:

(i) RAAC Series 2005-SP2 Trust

(ii) RALI Series 2007-QS7 Trust

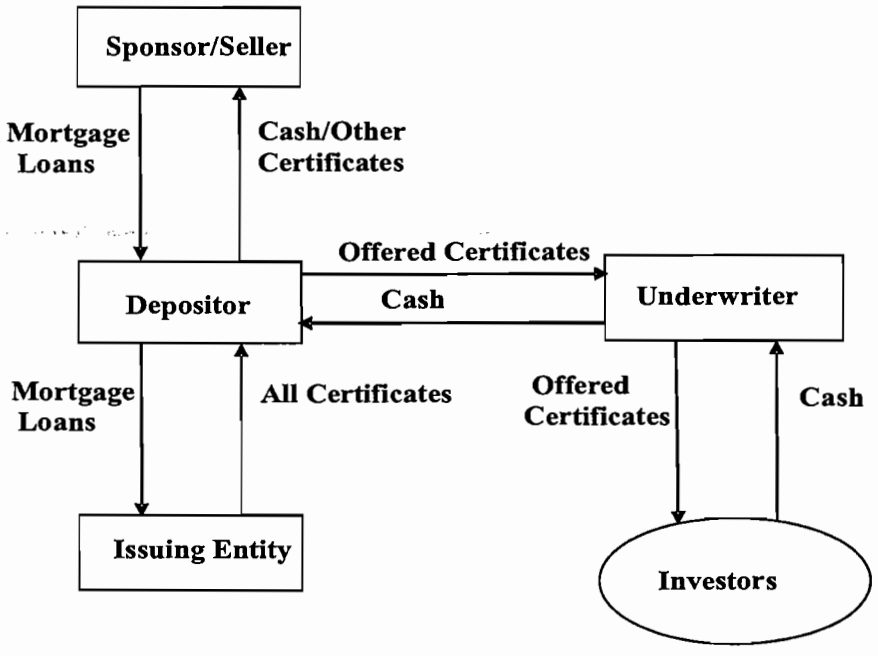
(iii) RASC Series 2006-EMX9 Trust

(iv) RASC Series 2006-KS9 Trust

(v) RASC Series 2007-KS2 Trust

(vi) RASC Series 2007-KS3 Trust

SUBSTANTIVE ALLEGATIONS



I. THE SECURITIZATION PROCESS GENERALLY

48. Traditionally, the process for extending mortgage loans to borrowers involved a lending institution (the loan originator) making a loan to a home buyer in exchange for a promise by the home buyer, documented in the form of a promissory note, to repay the principal and interest on the loan. The loan originator obtained a lien against the home as collateral in the event the home buyer defaulted on its obligation. Under this simple model, the loan originator held the promissory note until it matured, and was exposed to the risk that the borrower might fail to repay the loan. As such, the loan originator had a financial incentive to ensure that the borrower had the financial wherewithal to repay the loan and that the underlying property had sufficient value to enable the originator to recover its principal and interest in the event that the borrower defaulted.

49. Beginning in the 1990s, however, banks and other mortgage lending institutions increasingly used securitizations to finance the extension of mortgage loans to borrowers. Under the securitization process, after a loan originator issues a mortgage to a borrower, the loan originator sells the mortgage to a third-party financial institution. By selling the mortgage, the loan originator not only obtains fees, but receives the proceeds from the sale of the mortgage up-front, and thereby has new capital to issue more mortgages. The financial institutions which purchase the mortgages then pool the mortgages together and securitize the mortgages into what are commonly referred to as residential mortgage-backed securities or RMBS. In this manner, unlike the traditional process for extending mortgage loans, the loan originator is no longer subject to the risk that the borrower may default; that risk is transferred with the mortgages to investors who purchase the RMBS.

50. The securitization of residential mortgage loans, and the creation of RMBS collateralized against these loans, typically follows the same structure and pattern in each transaction. First, a loan originator, such as a mortgage lender or bank, originates the underlying residential mortgage loans. After a loan has been made, a "sponsor" or "seller" (who either originated the loans itself or acquired the loans from other loan originators) sells the mortgage loans to a "depositor." The depositor pools these loans and deposits them into a special purpose entity or trust created by the depositor. One trust is established to hold the pool of mortgages for each proposed offering. In order to facilitate multiple offerings of RMBS, a depositor sets up multiple trusts to hold the different pools of mortgages that are to be securitized. With respect to each offering, in return for the pool of mortgages acquired from the depositor, the trust issues and distributes RMBS certificates to the depositor. The depositor then works with an underwriter to price and sell the certificates to investors. Thereafter, a servicer is appointed to service the mortgage loans held by the trust, *i.e.*, to collect the mortgage payments from the borrower in the form of principal and interest, and to remit them to the trust for administration and distribution to the RMBS investors. A trustee then determines whether the mortgage loan documents were properly documented and valid. The diagram on the next page illustrates the typical structure of a securitization:

[BOTTOM OF THIS PAGE INTENTIONALLY LEFT BLANK]

51. In selling the certificates to investors, the depositor and underwriters disseminate to investors various disclosure or offering documents describing the certificates being sold. The offering documents are comprised of: (1) a "shelf" registration statement (under SEC Rule 415, an issuer may file one registration statement covering several offerings of securities made during a period of up to three years after the filing of the registration statement); (2) a "base" prospectus; and (3) a "prospectus supplement." Because a depositor will create a different trust for each offering of RMBS (as described above), the depositor files one shelf registration statement and one base prospectus that apply to multiple trusts that the depositor proposes to establish. With respect to each specific trust, however, the depositor also files a prospectus supplement that applies only to that particular trust. Thus, for any given offering of securities, the relevant offering documents will typically be a shared registration statement and shared base prospectus, as well as an individual, trust-specific prospectus supplement.

52. Each investor who purchases an RMBS certificate is entitled to receive monthly payments of principal and interest from the trust. The order of priority of payment to each

investor, the interest rate to be paid to each investor, and other payment rights accorded to each investor depend on which class or tranche of certificates the investor purchases.

53. The highest or senior tranche is the first to receive its share of the mortgage payments and is also the last to absorb any losses should mortgage borrowers become delinquent or default on their mortgages. Accordingly, these senior tranches receive the highest investment rating by the rating agencies, usually AAA. After the senior tranche, the middle tranches (referred to as mezzanine tranches) next receive their share of the proceeds. These mezzanine tranches are generally rated from AA to BB by the rating agencies. The process of distributing the mortgage proceeds continues down the tranches through to the bottom tranches, referred to as equity tranches. This process is repeated each month and all investors receive the payments owed to them so long as the mortgage borrowers are current on their mortgages.

II. THE SECURITIZATIONS ASSOCIATED WITH PLAINTIFF'S CERTIFICATES AND ITS INVESTMENTS IN THE CERTIFICATES

54. In this case, the six Issuing Trusts and the seven Certificates purchased by Plaintiff were structured and sold by GMAC and its affiliated entities. As such, the transactions between the sponsor/sellers, depositors, underwriters, and the Issuing Trusts were not arm's length transactions, as GMAC controlled nearly all the entities.

55. Depositor Defendant RAMP, a GMAC entity, created the Issuing Trust RAAC Series 2005-SP2 Trust. RAMP then purchased mortgage loans from another GMAC entity, the Sponsor Defendant RFC, to place into the trusts. In addition, the Certificates issued by the RAAC Series 2005-SP2 Trust were underwritten by another GMAC entity: Defendant Residential Funding.

56. Depositor Defendant RALI, a GMAC entity, created the Issuing Trust RALI Series 2007-QS7 Trust. RALI then purchased mortgage loans from another GMAC entity, the

Sponsor Defendant RFC, to place into the trusts. In addition, the Certificates issued by the RALI Series 2007-QS7 Trust were underwritten by another GMAC entity: Defendant Residential Funding.

57. Depositor Defendant RASC, a GMAC entity, created the Issuing Trusts RASC Series 2006-EMX9 Trust, RASC Series 2006-KS9 Trust, RASC Series 2007-KS2 Trust, and RASC Series 2007-KS3 Trust. RASC then purchased mortgage loans from another GMAC entity, the Sponsor Defendant RFC, to place into the trusts. In addition, the Certificates issued by the RASC Series 2006-EMX9 Trust and RASC Series 2007-KS3 Trust were underwritten by another GMAC entity: Defendant Residential Funding.

58. In connection with their role as the depositors for the Issuing Trusts that are the subject of this action, Defendants RALI, RAMP, and RASC prepared and filed with the SEC the following shelf registration statements, to which the Certificates purchased by Plaintiff are traceable:

Registration Statement	Date Filed	Registrant	Amount Registered
333-125485	July 7, 2005	RAMP	$35,350,152,366
333-131209	March 30, 2006	RASC	$32,785,190,000
333-140610	April 3, 2007	RALI	$80,000,000,000

59. At the time of filing, each Registration Statement contained an illustrative form of a prospectus supplement that would be used in the various offerings of Certificates. At the effective date of a particular offering of Certificates, one or more Underwriter Defendants prepared and filed a final Prospectus Supplement with the SEC, which contained a description of the mortgage pool for that particular offering of Certificates and a description of the underwriting standards by which the mortgages were originated. The Underwriter Defendant or Defendants then marketed and sold the Certificates pursuant to these Prospectus Supplements.

60. The following chart summarizes and identifies (1) each Issuing Trust that issued and sold the Certificates purchased by Plaintiff; (2) the dates of the Registration Statements and Prospectus Supplements pursuant to which the Certificates were issued and sold; and (3) the identities of the depositor, the issuer, underwriters, and the sponsor/seller for each offering.

Amended Registration File No. and	Issuing Trust	Prospectus Supplement Date	Depositor	Underwriter(s)	Sponsor/ Seller
333-125485 (7/7/2005)	RAAC Series 2005-SP2 Trust	10/11/2005	RAMP	Merrill Lynch Residential Funding	RFC
333-131209 (3/30/2006)	RASC Series 2006-EMX9 Trust	10/24/2006	RASC	Residential Funding Barclays	RFC
	RASC Series 2006-KS9 Trust	10/24/2006	RASC	Barclays	RFC
	RASC Series 2007-KS2 Trust	2/20/2007	RASC	JPMorgan	RFC
	RASC Series 2007-KS3 Trust	3/26/2007	RASC	BoA JPMorgan Residential Funding	RFC
333-14061 (4/3/2007)	RALI Series 2007-QS7 Trust	5/31/2007	RALI	Deutsche Bank Residential Funding	RFC

III. IMPORTANT FACTORS IN THE DECISION OF INVESTORS, SUCH AS PLAINTIFF, TO INVEST IN THE CERTIFICATES

61. In purchasing the Certificates, Plaintiff, like other investors, attached critical importance to: (a) the underwriting standards used to originate the loans underlying the Certificates; (b) the value of the properties securing the underlying mortgage loans and the appraisal methods used to determine this; (c) the ratings assigned to the Certificates; (d) the level of credit enhancement applicable to the Certificates; and (e) the ability of the Issuing Trusts to establish legal title to the underlying loans.

62. Sound underwriting was critically important to Plaintiff because the ability of borrowers to repay principal and interest was the fundamental basis upon which the investments in the Certificates were valued. Reflecting the importance of the underwriting standards, the Offering Documents contained representations concerning the standards purportedly used to originate the mortgages held by the Issuing Trusts.

63. For example, the Registration Statement filed by RAMP, dated July 7, 2005, stated that:

> The depositor expects that the originator of each of the loans will have applied, consistent with applicable federal and state laws and regulations, underwriting procedures intended to evaluate the borrower's credit standing and repayment ability and/or the value and adequacy of the related property as collateral.... The accompanying prospectus supplement will describe most aspects of the underwriting criteria, to the extent known by the depositor, that were applied by the originators of the loans.

64. Similarly, the Prospectus Supplements indicated that the underwriting guidelines were primarily intended to assess the ability and willingness of the borrower to repay the debt and to evaluate the adequacy of the mortgaged property as collateral for the mortgage loan.

65. With respect to loans acquired from third-party originators, the Prospectus Supplements represented that stated underwriting guidelines required them to consider, among other things, the mortgagor's credit history, repayment ability, and debt-to-income ratio, as well as the type and use of the mortgaged property. In addition, the Prospectus Supplements represented that in order to submit loan packages, the loans must have been made in compliance with the terms of a signed mortgage loan purchase agreement.

66. Independent and accurate real estate appraisals were also critically important to investors such as Plaintiff because they ensured that the mortgage loans underlying the Certificates were not under-collateralized, thereby protecting RMBS investors in the event a

borrower defaulted on a loan. As such, by allowing RMBS investors to assess the degree to which a mortgage loan was adequately collateralized, accurate appraisals provided investors such as Plaintiff with a basis for assessing the price and risk of the Certificates.

67. One measure that uses the appraisal value to assess whether mortgage loans are under-collateralized is the loan-to-value ("LTV") ratio. The LTV ratio is a mathematical calculation that expresses the amount of a mortgage as a percentage of the total value of the property, as obtained from the appraisal. For example, if a borrower seeks to borrow $900,000 to purchase a house worth $1,000,000, the LTV ratio is $900,000/$1,000,000, or 90%. If, however, the appraised value of the house is artificially increased to $1,200,000, the LTV ratio drops to just 75% ($900,000/$1,200,000).

68. From the perspective of lenders, and investors such as ABP, the higher the LTV ratio, the riskier the loan because it indicates the borrower has a lower equity stake, and a borrower with a lower equity position has less to lose if s/he defaults on the loan. The LTV ratio is a significant measure of credit risk because both the likelihood of default and the severity of loss are higher when borrowers have less equity to protect in the event of foreclosure. Worse, particularly in an era of falling housing prices, a high LTV ratio creates the heightened risk that, should the borrower default, the amount of the outstanding loan may ***exceed*** the value of the property.

69. As stated above, the Offering Documents represented that the adequacy of the mortgaged properties as collateral had generally been determined by appraisals in accordance with appraisal procedure guidelines set forth in a Seller's Guide drafted by RFC. These guidelines purportedly mandated measures to ensure the accuracy of the appraisals, including that:

- The appraiser or an agent on its behalf was generally required to personally inspect the properties to verify that they were in good condition, and to ensure that construction of new properties had been substantially completed.

- The appraiser was required to consider market data analyses of recent sales of comparable properties and, if applicable, analyses of income generated from the properties or replacement cost analyses.

70. Reflecting the importance of independent and accurate real estate appraisals to investors such as Plaintiff, the Offering Documents contained extensive disclosures concerning the value of the collateral underlying the mortgages pooled in the Issuing Trusts and the appraisal methods by which such values were obtained.

71. The rating assigned to each of the Certificates was another important factor in Plaintiff's decisions to purchase the Certificates. Plaintiff and other investors relied on the ratings as an indicator of the safety and likelihood of default of the mortgage loans underlying a particular Certificate. Consistent with its conservative corporate investment guidelines, Plaintiff purchased the Certificates because they all were rated AAA.

72. In purchasing the Certificates, Plaintiff relied on the ability of each of the Issuing Trusts to be able to show that it in fact had legal title to the underlying mortgage loans. Plaintiff would never have purchased any of the Certificates from Defendants if there was any doubt as to whether the Issuing Trusts had legal title to any of the mortgage loans that were pooled for each offering.

73. Finally, the Prospectus Supplements represented the level of credit enhancement, or loss protection, associated with the Certificates. Credit enhancements impact the overall credit rating that a Certificate receives. The amount of credit enhancements built into the Certificates was overstated, which exposed Plaintiff to additional losses. These levels of credit enhancement were material to Plaintiff.

IV. DEFENDANTS KNEW THAT A LARGE PERCENTAGE OF THE MORTGAGE LOANS UNDERLYING PLAINTIFF'S CERTIFICATES WERE MADE AS A RESULT OF THE SYSTEMATIC ABANDONMENT OF PRUDENT UNDERWRITING GUIDELINES AND APPRAISAL STANDARDS

74. Prior to underwriting and selling the Certificates to investors like Plaintiff, Defendants had identified but failed to disclose the widespread underwriting and appraisal deficiencies by the mortgage originators described below. This was in direct contrast to the representations in the Offering Documents accompanying the Certificates sold to Plaintiff.

75. As has now come to light, contrary to the representations in the Offering Documents, Defendants GMAC Mortgage and Homecomings Financial and the third-party originators that originated the mortgages underlying the Certificates, knowingly departed from the underwriting and appraisal standards that were represented in the Offering Documents.

76. In the early 2000s an unprecedented boom in the housing market began to unfold. Between 1994 and 2004, the housing market experienced a dramatic rise in home ownership, as 12 million more Americans became homeowners. Likewise, the subprime market grew dramatically, enabling more and more borrowers to obtain credit who traditionally would have been unable to access it. According to INSIDE MORTGAGE FINANCE, from 1994 to 2006, subprime lending increased from an estimated $35 billion, or 4.5% of all one-to-four family mortgage originations, to $600 billion, or 20% of originations.

77. To ride this housing boom, financial firms aggressively pushed into the complex, high-margin business of securitization, *i.e.*, packaging mortgages and selling them to investors as RMBS. This aggressive push created a boom for the mortgage lending industry. Mortgage originators generated profits primarily through the sale of their loans to financial firms like GMAC, and the originators were therefore driven to originate and sell as many loans as possible. This high-volume business model, and the awareness of originators and RMBS issuers that

RMBS investors such as Plaintiff would ultimately take the losses from defaulting loans, led to an overall decline in lending standards and tolerance of mortgage fraud. Indeed, according to the FBI, a fraud analytics company analyzed more than 3 million loans and found that between 30 and 70 percent of early payment defaults were linked to significant misrepresentations in the original loan applications.

78. In addition, some appraisers were openly instructed to alter their valuations for the benefit of the mortgage lenders. According to the June 26, 2007 testimony of Alan Hummel, the chair of the Appraisal Institute's Government Relations Committee, before the House Committee on Financial Services on 'Legislative Proposals on Reforming Mortgage Practices,' "Unfortunately, these parties with a vested interest in the transaction are often the same people managing the appraisal process within many financial institutions, and therein is a terrible conflict of interest. . . . [I]t is common for a client to ask an appraiser to remove details about the material condition of the property to avoid problems in the underwriting process." A 2007 study conducted by the October Research Corporation reported that 90% of appraisers had been pressured to raise property valuations so that deals could go through, and that 75% of appraisers reported "negative ramifications" if they did not alter their appraisals accordingly.

79. Even absent explicit coercion or collusion, mortgage originators could inflate apparent home values simply by offering work to only complaint appraisers. According to the April 7, 2010 testimony of Richard Bitner ("Bitner"), a former executive of a subprime mortgage originator, before the FCIC, "[B]rokers didn't need to exert direct influence. Instead they picked another appraiser until someone consistently delivered the results they needed."

80. Widespread and systematic overvaluations by mortgage originators set into motion a snowball effect that inflated housing prices all across the country and further distorted

the RMBS market. As Bitner testified, "If multiple properties in an area are overvalued by 10%, they become comparable sales for future appraisals. The process then repeats itself. We saw it on several occasions. We'd close a loan in January and see the subject property show up as a comparable sale in the same neighborhood six months later. Except this time, the new subject property, which was nearly identical in size and style to the home we financed in January, was being appraised for 10% more. . . . In the end, the subprime industry's willingness to consistently accept overvalued appraisals significantly contributed to the run-up in property values experienced throughout the country."

81. In the instant action, the players that structured the Certificates purchased by Plaintiff were GMAC and its affiliated entities. GMAC embarked on a scheme to profit from the housing boom by acquiring or partnering with subprime lenders, such as the third-party originators described in ¶¶ 97-165 below, and then directing or encouraging these lenders to originate and purchase large numbers of mortgage loans, regardless of the borrower's ability to pay, so that the loans could then be quickly flipped at a profit on to an unsuspecting secondary market (that is, RMBS investors such as Plaintiff).

82. GMAC reaped billions of dollars in profits from its activities in the RMBS space during the U.S. housing boom. GMAC's ResCap operation was a vertically integrated business with a hand in nearly every stage of the mortgage securitization business, including originating, purchasing and selling residential mortgage loans, bundling mortgages into RMBS and selling them to investors, and servicing the loans it had securitized. At nearly every stage in the mortgage securitization process, GMAC garnered enormous profits. GMAC pocketed the difference between what it paid to originate or purchase a pool of mortgage loans and what it received from selling those loans into a securitization. GMAC obtained underwriting fees and

commissions from selling the RMBS it had securitized to investors. GMAC also collected fees for servicing pooled mortgages. According to *Inside Mortgage Finance,* from 2004 to 2007 GMAC issued a total of approximately $197.85 billion in non-agency RMBS (which is to say, RMBS not associated with a government agency or government-sponsored enterprise such as Fannie Mae or Freddie Mac). According to Ally Financial's Form 10-K filings, GMAC's ResCap operations produced approximately ***$12.76 billion*** in net revenue over that same time period.

83. GMAC was totally dependent upon a steady supply of mortgage loans – the raw materials of securitization – to keep its lucrative RMBS business in operation. Without such loans, GMAC would not have been able to issue and sell new RMBS. Thus, GMAC was far more interested in originating and purchasing a high volume of loans than it was in ensuring that those loans were of high quality. As a former RFC trader quoted in a separate complaint against GMAC stated, GMAC "needed to continue to purchase more loans for the securitizations, or they would have been out of business." According to this employee, who worked at RFC from 1998 to March 2007, beginning in 2005 RFC began to purchase higher risk loans and allow more frequent exceptions to underwriting guidelines, especially if the third party originators selling the loans were good clients. At about that time, the third party originators that RFC dealt with began restricting RFC's reviews of the loans it acquired in bulk. This employee also stated that RFC's sales force was paid commissions based on the volume of the loans acquired and not the creditworthiness of those loans.

84. According to another former RFC analyst quoted in the *West Virginia Investment* complaint, Defendant Paradis, the President and CEO of RFC, would directly intervene with traders who balked at buying low-quality mortgages, especially when the sellers were favored

vendors. The analyst stated that "it was not uncommon for Paradis to go down to the desk, put his arm around the trader, and say, 'come on, why not.'"

85. As represented in the Offering Documents, the originators made loans pursuant to underwriting guidelines primarily intended to assess the ability and willingness of the borrower to repay the mortgage loan, apart from the adequacy of the mortgaged property as collateral for the loan. Accordingly, the underwriting guidelines required the consideration of, among other things, the borrower's assets, liabilities, income, employment history and credit history.

86. Notwithstanding these explicit requirements in their underwriting guidelines, the originators extended numerous loans even though the borrower's financial and employment information was not provided, or even if it was, that information was patently false and the originators knew that the borrower was misrepresenting her or his income, occupation and other information, and was engaged in outright mortgage fraud.

87. In their respective capacities as sponsor/sellers, depositors, and underwriters of the Certificates purchased by Plaintiff, Defendants had an obligation to conduct due diligence regarding the accuracy and completeness of the Offering Documents prior to their dissemination to investors such as Plaintiff. In connection with that due diligence process, Defendants had access to information which should have alerted them to the various originators' systematic and widespread abandonment of stated underwriting guidelines and appraisal methods. Defendants were supposed to play a "gatekeeper" role for public investors like Plaintiff, who did not have access to non-public information through which to test the assertions in the Offering Documents.

88. Defendants did not fulfill their obligation to ensure that investors, like Plaintiff, were provided with Offering Documents containing accurate and complete information. In connection with a lawsuit, another company, MBIA Insurance Corporation ("MBIA") has

conducted loan-level analyses of three GMAC RMBS with a total original principal balance of more than $4 billion. The RMBS were underwritten by Defendant Residential Funding, the depositor for each offering was Defendant RAMP, and GMAC Bank was the originator of the underlying mortgage loans.

89. MBIA agreed to insure the payments of these RMBS in the event that the cash flows to the trusts were impaired. When the loans underlying the RMBS began to default at a much higher rate than had been expected, MBIA investigated the individual loan files and documentation to determine the reasons for its losses. This forensic analysis covered 4,104 delinquent and charged-off mortgage loans underlying the GMAC RMBS.

90. MBIA discovered that GMAC had flagrantly disregarded its lending and underwriting standards. At least ***89%*** of the delinquent and charged-off loans it reviewed were in breach of one or more of GMAC's representations and warranties, with most containing multiple breaches. A significant number of mortgage loans were made on the basis of stated incomes that were "grossly unreasonable" or were approved despite debt-to-income or loan-to-value ratios in excess of those stated in GMAC's mortgage underwriting guidelines or the prospectus supplements. Furthermore, the vast majority of the loan files MBIA examined were missing basic and necessary documentation, such as disclosures establishing the chain of title.

91. On information and belief, the mortgage loans underlying the Certificates purchased by Plaintiff suffer from similar deficiencies as the mortgage loans underlying the Certificates insured by MBIA. From the sheer volume of nonconforming loans, it is apparent that Defendants either knew or acted with reckless disregard with respect to the risk that a substantial number of the loans that were included in the securitizations purchased by Plaintiff were not underwritten in compliance with the stated underwriting guidelines.

92. GMAC's fraudulent origination and purchasing practices are further evidenced by information obtained from the government sponsored entities Fannie Mae and Freddie Mac (the "GSEs"). Both of the GSEs purchase mortgage loans from financial institutions including GMAC. The mortgages that GMAC sold to the GSEs were originated through substantially the same channels and methods as the mortgages underlying Plaintiff's Certificates, but unlike the loans underlying the Certificates, not all of the mortgages sold to the GSEs were securitized. Because the GSEs purchased individual mortgages directly, rather than receiving Certificates from an Issuing Trust, the GSEs were in a better position than Plaintiff to determine whether the mortgages GMAC sold them had been originated in conformance with GMAC's stated underwriting and documentation standards. If any purchased loans did not comply with GMAC's representations, the GSEs possessed the right to demand that GMAC repurchase them.

93. According to documents provided to the Financial Crisis Inquiry Commission, as of September 10, 2010, Fannie Mae has required GMAC to repurchase 3,457 loans originated by Ally Bank, GMAC Mortgage, and Residential Funding, with an unpaid principal balance of $679 million, and had requested that GMAC also repurchase an additional 776 loans with an outstanding principal balance of $159 million. In December 2010, ResCap agreed to pay Fannie Mae approximately $462 million to settle claims regarding ResCap's obligations to repurchase defective loans.

94. Freddie Mac also purchased RMBS from GMAC. On September 2, 2011, the FHFA, acting as conservator for Freddie Mac, sued GMAC in New York state court, alleging, as Plaintiff does, that the offering documents "falsely represented that the mortgage loans underlying the RMBS complied with certain underwriting guidelines and standards, and presented a false picture of the characteristics and riskiness of those loans." Four of the RMBS

that are the subject of the Freddie Mac lawsuit were also purchased by Plaintiff; namely, (1) RASC Series 2006-EMX9 Trust; (2) RASC Series 2006-KS9 Trust; (3) RASC 2007-KS2 Trust; and (4) RASC 2007-KS3 Trust.

95. For each of the RMBS named in its lawsuit, Freddie Mac reviewed either a random sample of 1,000 of the underlying loans, or all of the underlying loans if there were less than 1,000 in the pool. This review confirmed, on a statistically significant basis, that GMAC's representations regarding owner-occupancy rates, LTV ratios, and underwriting standards had all been materially false. Likewise, in 2008, 2009, and 2010, Freddie Mac required GMAC Mortgage to repurchase 2,375 defective loans with an unpaid principal balance of $509 million.

96. GMAC had direct insight into the true quality of the loans underlying the Certificates it issued to Plaintiff. This is evidenced by GMAC's extensive relationships with the third-party originators, as well as by the origination of equally defective loans through its own mortgage origination affiliates, Defendants GMAC Mortgage and Homecomings Financial. Additionally, when originating and purchasing loans, GMAC made widespread use of proprietary underwriting software despite its awareness that the software did not apply its stated underwriting standards and would approve non-compliant loans.

A. DEFENDANTS GMAC MORTGAGE AND HOMECOMINGS FINANCIAL ABANDONED THEIR UNDERWRITING GUIDELINES AND APPRAISAL STANDARDS

1. GMAC Mortgage

97. GMAC Mortgage originated mortgage loans that were pooled in the RALI Series 2007-QS7 Trust and purchased by Plaintiff. Interviews with former GMAC Mortgage employees conducted in connection with a separate lawsuit have confirmed that GMAC Mortgage abandoned its stated underwriting and appraisal standards so as to generate increased volume. One confidential witness, a senior mortgage underwriter for GMAC Mortgage between

2003 and 2005, said that GMAC Mortgage's underwriting procedures were "pretty loose" and were referred to as "creative underwriting." Because corporate personnel wanted more loans approved, the witness said that approving loans was a way of "scratching peoples' backs."

98. Another confidential witness, a senior wholesale writer for GMAC between 1997 and 2007, said that her supervisors overrode her underwriting decisions to approve "loans they knew were bad," so as to increase their bonuses. "A lot of times the sales director would raise holy commotion with the supervisor and directors, and under pressure, they'd approve bad loans." She said that GMAC Mortgage approved many loans without verifying the borrowers' income or assets, which were called "liar loans, because we knew damn well they were lying. You can't tell me a manicurist in L.A. was making $12,000 a month." The witness also said that fraudulent appraisals that "you knew damn well did not support the value" were accepted by management. She said that she did not even trust the loan documentation, because she had heard of underwriters placing false information in loan files at management's behest.

99. This witness traced GMAC's underwriting practices to the "originate-to-securitize" model, noting that the underwriters would receive emails from the trading department instructing them that they needed additional loans to fill pools. She knew of one person who worked as a liaison between trading and underwriting, who was permitted to approve loans despite no underwriting experience. Another employee in charge of bulk loan files would approve multiple loans at once without taking into account whether they had been approved, declined or pended by the underwriters. When the witness complained to management, she was told that "everybody knew" about this conduct and that there was no problem with it.

100. In addition to adopting skewed incentive structures and tolerating mortgage fraud, GMAC Mortgage also weakened its underwriting standards by utilizing badly flawed

underwriting software. In late 2004, GMAC introduced an automated loan decisionmaking engine called Assetwise to streamline loan acquisition and origination. Loan personnel could enter data regarding a proposed loan into Assetwise and receive immediate guidance as to whether that loan would be eligible for purchase by GMAC. GMAC Mortgage made extensive use of this software, and also provided it to select third party originators to facilitate sales. As General Motors Acceptance Corporation stated in an 8-K filing, filed on June 24, 2005,

> To help ensure consistency and efficiency in its production of residential mortgage loans, much of the Residential Capital Group's underwriting analysis is conducted through the use of its proprietary underwriting technology, Assetwise Direct. This proprietary technology implements automated decision, pricing and integration tools that extend mortgage products and risk management and pricing strategies to points of origination, and facilitates secondary market acquisition of mortgage loans.

101. However, according to a lawsuit filed by MBIA, Assetwise was programmed with looser standards than GMAC's stated underwriting guidelines. As a result, Assetwise approved loans that should never have been made, which were consequently bundled into RMBS and sold to investors such as Plaintiff. Rather than ensuring "consistency and efficiency," Assetwise created inconsistency, masked the true underwriting standards that were being applied, and permitted loan personnel to easily circumvent prudent and necessary safeguards.

102. GMAC Mortgage also made use of another underwriting program, Desktop Underwriter, which similarly failed to apply GMAC's stated underwriting standards. Former GMAC employees quoted in the complaint brought by Thrivent Financial for Lutherans, et al., have discussed the failings of Desktop Underwriter. One witness, a senior underwriter at GMAC Mortgage from 1986 to 2008, said that GMAC Mortgage used human underwriters only to approve loans that could not be processed through its software, and that the software did not require verification of income or assets. Thus, GMAC effectively abdicated its responsibility to

substantiate borrower claims for any loans that its software would accept. The witness further said, "If the application indicates it and the borrower says it, [Desktop Underwriter treated it as] truth. And we as underwriters rarely saw them." This witness also referred to GMAC Mortgage's no-documentation loans as liar loans and said that any GMAC Mortgage borrower "could say they made $8,000 a month [when] they really didn't."

103. Another witness, who was a GMAC underwriter from 1997 to 2008, stated that the Desktop Underwriter did not require documentation, had "very loose guidelines," and "rarely turned down a loan." According to this witness, when processing no-documentation loans, GMAC only verified credit scores and LTV ratios. Requiring borrowers to verify their information "was just unheard of."

104. A witness who worked at GMAC as a securities trading analyst from 2006 to 2007 said that GMAC could have detected fraudulent loans had it chosen to look beyond the basic information in the computer files. However, because the underwriting was automated, mortgage brokers could submit information based on the criteria needed to close a loan rather than the borrower's actual circumstances.

2. Homecomings Financial, LLC

105. Homecomings Financial, LLC, f/k/a Homecomings Financial Network, Inc. ("Homecomings") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RALI Series 2007-QS7 Trust, RASC Series 2007-KS2 Trust, RASC Series 2007-KS3 Trust, RASC Series 2006-KS9 Trust, and RASC Series 2007 KS2 Trust. Homecomings Financial, LLC ("Homecomings"). Homecomings was founded in 1995, and was a leading originator and provider of mortgage loans.

106. Homecomings was ResCap's primary wholesale lender from 1995 until its closure in 2008. A former RFC mortgage trader quoted in the *West Virginia Investment Management*

Board complaint said that RFC traders made exceptions for Homecomings loans that were higher risk and did not fit standard underwriting guidelines.

107. Homecomings has been targeted by lawsuits and come under regulatory scrutiny for offering excessively risky loans and engaging in abusive servicing practices. Tim Boyd, a former Homecomings loan officer, was quoted as saying that Homecomings' "main focus was doing Alt-A [a category of loans supposedly riskier than prime but less risky than subprime] because that's where the money was," in a March 5, 2009 PORTLAND TRIBUNE article, "Shaky Loans May Spur New Foreclosure Wave."

108. Option ARMs are an especially risky form of loan because borrowers may wind up adding to their total indebtedness by making interest-only payments. Bill Ridge, a mortgage broker quoted in the PORTLAND TRIBUNE article, noted that GMAC management was especially keen on pushing such loans, stating, "The V.P.s came down to the office beating the drums about Option ARMs. I had Wachovia march through there; I had GMAC." He also said that he knew of loan officers who would instruct title agents not to inform borrowers about the problematic aspects of these loans. Boyd said that while a loan officer arranging a $300,000 Option ARM loan could collect as much as $10,500 in fees, he personally did not sell such loans because it made him "sick" to see how they could get borrowers into trouble.

109. The West Virginia Attorney General's office has investigated Homecomings for predatory lending and mortgage servicing practices, including charging a wide range of excess and unlawful fees and engaging in servicing practices that made foreclosure more likely to occur. On June 9, 2005, the West Virginia Attorney General's office announced that it had reached a settlement with Homecomings and another mortgage servicing company, whereby they agreed to

pay $773,000 in restitution to approximately 2,300 West Virginia consumers and cancel nearly $11 million in debt.

110. The Federal Trade Commission ("FTC") investigated Homecomings for possible violations of the Equal Credit Opportunity Act after reviewing Homecomings' mortgage loan data and discovering that African-American and Hispanic borrowers paid more for Homecomings mortgage loans than non-Hispanic whites. The FTC's investigation focused on whether the underwriting risk and credit characteristics of the borrowers justified the reported disparities in loan price. The investigation revealed that, rather than applying uniform, risk-based underwriting standards to ensure that its borrowers were receiving loans that they could afford, Homecomings permitted independent brokers to tack on fees and hike interest rates on a discretionary basis, increasing the risk of default.

111. On February 7, 2008, Homecomings borrowers filed a Truth-In-Lending-Act ("TILA") class action complaint against the company, alleging that it had engaged in a "nationwide scheme of illegal, unfair, unlawful and deceptive business practices that violate both state and federal law," including structuring account statements, "in a way that makes it extremely difficult or impossible for borrowers to determine how much they owe, or how any mortgage payment will be allocated." The complaint further alleged that Homecomings' improper fees and collection practices increased the likelihood that borrowers would default, a matter of great concern to RMBS investors such as Plaintiff. The lawsuit settled in November 2009.

112. As discussed in ¶¶ 88-91, *supra,* the insurer MBIA has conducted loan-level analyses of several GMAC RMBS and discovered that the vast majority of the underlying mortgages in default were in violation of the representations and warranties made in the offering

documents. Homecomings was one of the major originators for a number of the RMBS analyzed by MBIA.

113. On September 3, 2008, ResCap announced that it would stop offering home loans through Homecomings. According to a January 22, 2009 letter from the FTC, Homecomings has stated that it has no intention of resuming mortgage lending in the future.

B. THE THIRD PARTY ORIGINATORS OF THE MORTGAGE LOANS UNDERLYING PLAINTIFF'S CERTIFICATES ABANDONED THEIR UNDERWRITING GUIDELINES AND APPRAISAL STANDARDS

114. As discussed above, many of the underlying mortgage loans that the Defendants packaged into securities and sold to Plaintiff were originated by third-party originators and then sold *en masse* to Defendant RFC. The Offering Documents associated with each of Plaintiff's Certificates purported to describe each of the specific originators' underwriting guidelines, and represented that the underlying mortgage loans were originated in compliance with the underwriting and appraisal standards of the originators.

115. Several of the relevant originators involved in these transactions are now known to have, among other things, ignored their own underwriting guidelines and used inflated appraisals during loan generation. The questionable practices that were employed by many of these originators have led to numerous allegations and investigations into their operations. In fact, as noted below, faulty underwriting has led to the downfall of several of the originators whose loans Defendants bundled in these offerings.

116. The Offering Documents contain material representations, relied upon by Plaintiff, that Defendants performed due diligence on the mortgage loans they acquired from third parties and undertook certain quality control measures to ensure that faulty mortgages were ***not*** included in the Certificates they underwrote and sold. *See, e.g.*, Prospectus Supplement for RASC 2007-KS2 (Form 424B5) (Feb. 20, 2007), at S-58:

> Prior to assignment to the depositor, Residential Funding Company, LLC reviewed the underwriting standards for the mortgage loans and all of the mortgage loans were in substantial conformity with the standards set forth in Residential Funding Company, LLC's AlterNet Program or are otherwise in conformity with the standards set forth in the description of credit grades set forth in this prospectus supplement.

117. Furthermore, a number of Defendants had ownership interests and/or close business relationships with the third-party originators, providing a direct window into how the third-party originators did business and the degree to which they had abandoned prudent lending standards to profit from the securitization machine. Despite their direct knowledge that the third-party originators did not follow their stated underwriting guidelines and lent money recklessly, Defendants permitted the Issuing Trusts to purchase loans originated by them without fair disclosure. In particular:

- Defendant Jones was a former Chief Executive Officer of Aegis Mortgage Corporation before joining GMAC. Thus, Jones was or should have been intimately aware of the company's underwriting standards or lack thereof. Aegis Mortgage Corporation originated some of the mortgages underlying the Certificates issued by RASC Series 2006-KS9 Trust, which Plaintiff purchased.

- Defendant Merrill Lynch was a major creditor of Mortgage Lenders Network USA, Inc., providing it with a warehouse line of credit and purchasing many of the loans that it originated. Merrill Lynch was well aware of the low quality of the loans originated by this lender because, as described *infra,* it required Mortgage Lenders Network USA, Inc. to repurchase tens of millions of dollars of defective mortgages.

- Defendant Merrill Lynch purchased a 20% ownership interest in OwnIT Mortgage Solutions, Inc. in September 2005, and extended the lender a $3.5 billion credit line. As described *infra*, Merrill Lynch both pressured the lender to loosen its lending standards and aggressively asserted repurchase claims against it for defective loans.

118. The table on the next page lists the major third-party originators responsible for originating the mortgages underlying Plaintiff's Certificates.

Issuing Trust	Originators
RAAC Series 2005-SP2 Trust	Ameriquest
	MSMC
RASC Series 2006-EMX9 Trust	MLN
RASC Series 2006-KS9 Trust	Ownit
	People's Choice
	Homecomings Financial
	Aegis
RASC Series 2007-KS2 Trust	New Century
	Homecomings Financial
RASC Series 2007-KS3 Trust	People's Choice
	Homecomings
RALI Series 2007-QS7 Trust	Homecomings Financial
	People's Choice

1. Aegis Mortgage Corporation

119. Aegis Mortgage Corporation ("Aegis") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RASC Series 2006-KS9 Trust. Aegis began life as a privately-held mortgage banking company owned by three individuals. By 1998, the company was generating $1 billion in annual loan volume. In 1998 and 1999, Cerberus Capital Management, LP made a $45 million investment in Aegis. With this cash, Aegis acquired two extremely distressed mortgage production operations, UC Lending and New America. These and subsequent acquisitions enabled Aegis to grow from 150 employees in nine locations in 1999 to 3,800 employees in over 100 locations in 2005. By 2006, Aegis was ranked as the 13th largest subprime lender in the country, generating close to $20 billion in annual originations. In eight years, the company's subprime originations grew by an incredible 1,750%.

120. Aegis's astronomic growth was fueled by an insatiable appetite for high fee, high-risk mortgages. To satisfy its enormous appetite, Aegis loosened its loan underwriting standards

to the point of near abandonment by 2006. A large portion of the loans Aegis originated during this time were in fact purchased from unlicensed mortgage brokers. Because Aegis was selling all the loans it originated to major financial firms like GMAC, underwriting standards were consistently ignored and more and more loans were approved.

121. Eventually, the bad loans caught up with Aegis. A news report issued on August 6, 2007, announced that Aegis could not meet all of its existing funding obligations. The next day, the company had suspended all loan originations. On August 13, 2007, the company was forced to file for bankruptcy protection, listing more than $100 million each in assets and liabilities.

122. Despite filing for bankruptcy, Aegis was still subject to scrutiny for its aggressive loan origination practices. In August 2010, the U.S. Attorney for the United States District Court for the Northern District of Ohio brought a 49-count indictment against several attorneys, appraisers, and loan officers alleging that, from July 2003 through January 2006, a mortgage fraud scheme was devised involving the preparation and submission of fraudulent mortgage loan applications to various lenders, including Aegis, knowing that they contained false information, including the applicants' "assets, whether the property would be used as their primary residence and the source of the down payment funds...." The applications also contained phony appraisal values that far exceeded the true value of the underlying properties.

2. Ameriquest Mortgage Company

123. Ameriquest Mortgage Company ("Ameriquest") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RAAC-2005-SP2 Trust. Ameriquest was a wholly-owned retail lending subsidiary of ACC Capital Holdings, the nation's largest subprime lender.

124. Ameriquest's apparent success in the subprime lending market was characterized by the company's complete abandonment of prudent underwriting guidelines. As revealed by a multi-state investigation, Ameriquest made stated-income or low-documentation loans where Ameriquest employees fabricated or inflated the borrowers' income and/or assets in order to qualify the borrowers for the loans.

125. Former Ameriquest employees have spoken out regarding Ameriquest's business practices. A National Public Radio newscast from May 14, 2007, described how employees were encouraged to conceal rate terms and to make fake fixed-loan documents pushing customers into loans that they could not afford. One former Ameriquest employee, Tyson Russum, stated that the "impression [he] got was that ... it's basically make the sale at any cost." Russum, a loan officer who worked in Tampa, Florida, recalled observing some co-workers applying white-out to income numbers on W-2s and bank statements and filling in "bigger amounts basically to qualify people for loans that they couldn't afford," a practice that was referred to as "taking the loan to the art department." Such practices were not isolated incidents but rather occurred at Ameriquest branches across the country.

126. An August 20, 2007, BUSINESSWEEK article entitled "Did Big Lenders Cross the Line?" reported the emergence of a growing number of lawsuits pertaining to subprime mortgage lending, suggesting that some big lenders, like Ameriquest, had been colluding to "falsify loan documents by beefing up income and lowballing outstanding debts" in an effort to "keep up loan volume and generate sales."

127. The article described one such lawsuit filed by Mary Overton. Overton's complaint alleged that loan officers at a Brooklyn, New York, branch of Ameriquest "coerced [her] into signing a loan," but "[u]nbeknownst to Ms. Overton, Ameriquest created fake tax

returns, employment records, and a 401(k)—to make it appear that the loan was affordable." The article reported that at least 40 other borrowers alleged that Ameriquest doctored loan documents or increased borrowers' income in an effort to boost loan generation and sales.

128. According to written testimony provided in March 2009 by Illinois Attorney General Lisa Madigan to the House Committee on Financial Services:

> Ameriquest [] received its funding line from Wall Street firms. These same firms bought and securitized the subprime loans Ameriquest sold. For those of us on the state level, the Ameriquest investigation marks the moment when we began to see the underwriting practices of mortgage lenders erode at a disturbingly accelerated pace. In 2002, Ameriquest was originating loans with an average loan-to-value ratio of 74 percent. Two years later, the ratio had risen to 81 percent. Ameriquest had also ramped up its originations of stated income loans, that is, loans that permit the borrower merely to state his or her income without further review. By 2003, Ameriquest was originating almost 30 percent of its loans – which were all subprime – as stated-income or limited-documentation loans.
>
> Our multistate investigation of the nation's largest subprime mortgage lender revealed that Ameriquest engaged in the kinds of fraudulent practices that other predatory lenders subsequently emulated on a wide scale. These practices included: inflating home appraisals...Ameriquest also locked borrowers into costly loans by including three-year prepayment penalties on loans with a two-year introductory rate that reset to a higher rate at the end of two years. These penalties were added because Wall Street investors preferred and paid more for loans with prepayment penalties.

129. Ameriquest entered into a nationwide settlement in 2006 under which it agreed to injunctive relief and monetary payments totaling $325 million. Among other things, Ameriquest agreed to use independent loan closers for all subprime loans, to ensure that each loan provided an actual benefit to the borrower, and not to fabricate or inflate income or assets or sign any documents on behalf of a borrower.

130. In October 2007, Wachovia Bank N.A. ("Wachovia") filed a lawsuit against Ameriquest for failure to comply with repurchase requests on loans with fraudulent files. Wachovia paid Ameriquest almost $129 million for loans purchased on December 29, 2005, but later identified at least 135 loans that Ameriquest misrepresented, including loans with documentation containing "incorrect credit scores, false employment records and misstatements of the kind of homes that were being financed."

131. A class action complaint was also filed in the United States District Court for the Northern District of Illinois in December 2005 against Ameriquest, its sister company Argent, and parent ACC Holdings, which was later consolidated along with 14 other class action cases before the Judicial Panel on Multidistrict Litigation. The complaint alleged that Ameriquest violated numerous federal and state laws, including the Truth in Lending Act ("TILA"), breach of contract, unjust enrichment, and state Consumer Protection and Deceptive Trade Practices Acts, by engaging in:

> [A] uniform common plan and scheme to prey upon unsuspecting consumers by routinely causing borrowers to enter into residential loans with unfavorable terms, misleading and inappropriate "discount" fees, high and adjustable interest rates, prepayment penalties, and excessive loan principal compared to equity and ability to pay.

132. In January 2010, Ameriquest and its affiliate defendants participated in a $22 million settlement of these claims.

3. Morgan Stanley Mortgage Capital, Inc.

133. Morgan Stanley Mortgage Capital Holdings LLC, d/b/a Morgan Stanley Mortgage Capital, Inc. ("MSMC"), originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RAAC Series 2005-SP2 Trust.

134. MSMC is engaged primarily in the business of originating mortgages, and acquiring residential mortgage loans through bulk purchases and then selling these loans as mortgage-backed securities through securitization programs. From 2006 through the first half of 2007, MSMC securitized and sold $49 billion worth of subprime mortgages. To achieve such high volume, MSMC often ignored or completely abandoned the underwriting guidelines it had established for the mortgage pools that it purchased for securitization.

135. In December 2010, MBIA initiated a lawsuit in New York State Court against Morgan Stanley and MSMC, alleging, *inter alia*, that Morgan Stanley made material false and misleading representations and warranties which induced MBIA to issue insurance on over $223 million worth of Alt-A RMBS securitized by Morgan Stanley. According to the complaint, Morgan Stanley stated that it conducted extensive due diligence in reviewing mortgages to ensure that they met Morgan Stanley's underwriting guidelines and presented financial analyses purporting to describe the securities. In reality, the vast majority of mortgage loans did not comply with the stated underwriting guidelines and the financial analyses were based on faulty data and misleading. In May 2011, the trial court denied Morgan Stanley's motion to dismiss except as to one cause of action relating to an unjust enrichment claim by MBIA against Saxon Mortgage Services, Inc., a mortgage servicing unit of Morgan Stanley.

136. On September 27, 2011, the Nevada Attorney General announced a settlement with Morgan Stanley relating to an investigation into Morgan Stanley's role, through MSMC, in buying and securitizing 3,000 subprime mortgages in Nevada. According to a September 27, 2011, article in BUSINESSWEEK, entitled *Nev. AG Announces Settlement with Morgan Stanley*, the investigation centered around Morgan Stanley's knowledge that subprime mortgage originators such as New Century, from whom Morgan Stanley purchased mortgages for

securitization, engaged in deceptive loan practices, and that Morgan Stanley substantially assisted these originators by financing and purchasing those loans. The Nevada Attorney General alleged that borrowers were deceived with low "teaser" mortgage rates, without proper disclosure that the rates would eventually adjust upwards. Under the terms of the settlement as reported by BUSINESSWEEK, Morgan Stanley will be required to provide refunds to between 600 and 700 consumers, as well as cap the interest rates charged to these consumers at a fixed level not to exceed the initial teaser rate. Morgan Stanley will also be required to contribute $7.2 million to a fund used to prevent mortgage and foreclosure fraud.

137. In September 2011, the FHFA, as conservator for Fannie Mae and Freddie Mac, initiated an action against Morgan Stanley and MSMC in New York State Court relating to MSMC's origination of subprime mortgages during the financial crisis. The FHFA lawsuit alleges that MSMC routinely and egregiously departed from its stated underwriting guidelines when originating subprime mortgages. This resulted in, the suit alleges, material false and misleading statements regarding compliance with underwriting guidelines in the Prospectus Supplements for several securities purchased by Fannie Mae and Freddie Mac.

4. Mortgage Lenders Network USA, Inc.

138. Mortgage Lenders Network USA, Inc. ("MLN") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RASC Series 2006-EMX9 Trust. Founded in 1996, MLN was a closely-held company that specialized in providing mortgages and home equity financing to borrowers with low income and impaired credit. According to NATIONAL MORTGAGE NEWS, MLN was the 15th largest issuer of subprime mortgages, originating $3.3 billion in subprime loans in the third quarter of 2006 alone.

139. MLN was another subprime player that benefited immensely from employing lax underwriting practices in order to ramp up loan originations. The company offered low- and no-

documentation loans to borrowers, originated loans without regard to the borrowers' ability to repay the loans, and shopped for appraisals that supported the numbers that MLN needed in order to get loans approved. However, when the subprime market began to collapse, MLN experienced significant financial hardships which eventually led to the company's demise. On January 2, 2007, MLN announced that it had stopped funding loans and would not be accepting any new loan applications. In February 2007, MLN filed for Chapter 11 bankruptcy.

140. MLN relied heavily on warehouse lines of credit provided by other financial institutions in order to conduct its business. In fact, Merrill Lynch Bank USA and Merrill Lynch Mortgage Capital, Inc. (both wholly-owned subsidiaries of Merrill Lynch) were among MLN's four largest warehouse lenders, providing MLN with substantial lines of credit to originate subprime loans that would eventually be sold back to Merrill Lynch for collateralization into RMBS.

141. As a result, Merrill Lynch was particularly aware of MLN's poor financial condition and substandard lending practices. Because many of MLN's loans were defaulting at an alarming rate, Merrill Lynch was contractually able to "put" a significant number of the bad loans back to MLN for repurchase. These "put backs" played a huge role in MLN's eventual collapse, making Merrill Lynch one of MLN's largest creditors after the bankruptcy with roughly $81.3 million in outstanding debt.

142. MLN was also targeted by state regulatory agencies as a result of its subpar lending practices. On January 19, 2007, the Connecticut Department of Banking ("DOB") issued a Temporary Order to Cease and Desist and Notice of Intent to Impose Civil Penalty to MLN as a result of various violations of Connecticut statutes, such as failing to timely disperse loan proceeds, failing to provide complete and accurate loan portfolio information, and failing to

show compliance with mortgage lending license requirements. The DOB ordered MLN to suspend all lending activities and threatened to fine the company with up to $7.6 million in civil penalties for its violations. State regulators from Massachusetts, Rhode Island, Michigan, Maine, Vermont, New Hampshire, New York and Pennsylvania have all charged MLN with similar violations.

143. Consumer lawsuits also followed, many alleging violations of the TILA as a result of MLN's dismal underwriting practices. On May 12, 2009, a lawsuit was filed against MLN in the Superior Court of Georgia, Gwinnett County, claiming that MLN intentionally relaxed its underwriting standards and sold risky loan products to borrowers in order to increase its loan origination volume. Specifically, the complaint alleged that employees were encouraged to steer borrowers into larger mortgages than they could afford in order to maximize MLN's profits. Plaintiffs also stated that MLN took no meaningful steps to determine whether borrowers could actually afford to repay the loans and used fraudulently inflated appraisals in order to get larger loans approved.

144. A similar action was filed in July 2010 against MLN in the U.S. District Court for the Northern District of Georgia, alleging that MLN departed from sound underwriting practices by ignoring borrowers' ability to repay the loans and by failing to verify borrowers' income, employment and assets. The plaintiffs were saddled with a loan that they could not afford and ultimately defaulted. As a result, the plaintiffs filed for bankruptcy and the action was later terminated.

5. New Century Mortgage Corporation

145. New Century Mortgage Corporation ("New Century") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RASC 2007-KS2 Trust.

Formed in 1996, New Century was a leader in the mortgage lending boom, growing rapidly from only $357 million in loan originations in 1996 to over $56 billion in 2005.

146. In order to effectuate such a drastic increase in loan originations, the company began taking on riskier loans, relaxed its underwriting standards, and granted numerous exceptions, accepting loans for 100% of the value of the property and utilizing flawed or fraudulent appraisals. Maggie Hardiman, a former appraiser for New Century, described the demands she faced when reviewing loan applications in a May 7, 2007, WASHINGTON POST article. She recalled how "all hell would break loose" if she turned away a loan, and that when she did reject an application, "her bosses often overruled her and found another appraiser to sign off on it."

147. On February 7, 2007, New Century announced that it would be restating its 2006 financials due to material weaknesses in internal controls. On March 2, 2007, the company revealed that it was the subject of two criminal probes and later announced that it would no longer be accepting applications for subprime mortgages. By March 12, most of its creditors had cut off financing or planned to do so. On April 2, 2007, New Century collapsed and filed for bankruptcy.

148. Following the bankruptcy, Michael J. Missal, the Bankruptcy Court Examiner for New Century, issued a 581-page report on February 9, 2008, detailing the various deficiencies at New Century, including lax mortgage origination standards. "The theme of the report is how easily the loans were originated, how exceptions were made, how they used bad appraisals" and how "[t]here were no appropriate internal controls...." Missal also described how New Century "engaged in a number of significant[ly] improper and imprudent practices related to its loan originations, operations, accounting and financial reporting processes." According to a March

26, 2008, BLOOMBERG article by Tiffany Kary, "New Century Bankruptcy Examiner Says KPMG Aided Fraud," New Century's loan originations increased dramatically, primarily as a result of the increased exceptions made to its underwriting guidelines and the practice of lending money to homeowners who could not afford the initial "teaser rates." Missal explained that these practices eventually created "a ticking time bomb that detonated in 2007."

149. During the course of his investigation, the Examiner conducted 110 interviews of 85 witnesses and reviewed documents from New Century, its outside auditors, and others. In his Final Report, the Examiner concluded that:

- "New Century had a brazen obsession with increasing loan originations, without due regard to the risks associated with that business strategy. Loan originations rose dramatically in recent years, from approximately $14 billion in 2002 to approximately $60 billion in 2006. The Loan Production Department was the dominant force within the Company and trained mortgage brokers to originate New Century loans in the aptly named 'CloseMore University.' Although a primary goal of any mortgage banking company is to make more loans, New Century did so in an aggressive manner that elevated the risks to dangerous and ultimately fatal levels." (Examiner's Report at 3).

- "The increasingly risky nature of New Century's loan originations created a ticking time bomb that detonated in 2007. Subprime loans can be appropriate for a large number of borrowers. New Century, however, layered the risks of loan products upon the risks of loose underwriting standards in its loan originations to high risk borrowers." *Id.*

- "New Century also made frequent exceptions to its underwriting guidelines for borrowers who might not otherwise qualify for a particular loan. A Senior Officer of New Century warned in 2004 that the 'number one issue is exceptions to guidelines.' Moreover, many of the appraisals used to value the homes that secured the mortgages had deficiencies. Of the New Century loans rejected by investors, issues with appraisals were the cause of more than 25% of these 'kick-outs.'" *Id.* at 3-4.

- "Senior Management turned a blind eye to the increasing risks of New Century's loan originations and did not take appropriate steps to manage those risks...." *Id.* at 4.

- "Senior Management was aware of an alarming and steady increase in early payment defaults ('EPD') on loans originated by New Century, beginning no later than mid-2004. The surge in real estate prices slowed and then began to decrease,

> and interest rates started to rise. The changing market conditions exacerbated the risks embedded in New Century's products, yet Senior Management continued to feed eagerly the wave of investor demands without anticipating the inevitable requirement to repurchase an increasing number of bad loans. Unfortunately, this wave turned into a tsunami of impaired and defaulted mortgages." *Id.* at 4.

150. The restatement of New Century's financials also prompted the filing of securities class action lawsuits beginning in February 2007. One complaint filed in the Central District of California alleged that New Century's officers and directors issued materially false and misleading statements regarding the company's business and financial results. On December 3, 2008, the district court denied the defendants' motion to dismiss, finding actionable certain statements regarding the credit quality of New Century's loans. The court wrote:

> The allegations suggest New Century's repeated assurances of strong credit quality and strict underwriting practices. Even in the sub-prime world, there must be a basis for distinction between loans to at-risk borrowers that met basic standards of good lending practice and loans that plainly do not. Those standards may provide the measure for evaluating Defendants' statements. Here, Plaintiffs offer New Century's statement that it observed standards of high-quality credit and underwriting, and set those statements against detailed allegations of practices that utterly failed to meet those standards.

The court also noted that

> [t]he Examiner's Report found knowledge within high-levels of the company of its declining loan quality and underwriting as early as 2004. The Report mentions the internal reports by New Century's Senior Management and negative internal audits that acknowledged serious problems with loan quality and underwriting, as well as the poor performance of the company's high-risk products, and concludes that [ ] New Century failed to respond to "red flags.

New Century agreed to pay more than $90 million to settle these claims in July 2010.

151. The SEC also charged three former top officers of New Century with securities fraud for misleading investors as New Century's subprime mortgage business was collapsing in 2006. December 7, 2009 complaint alleged that defendants Brad A. Morrice (former CEO),

Patti M. Dodge (former CFO), and David N. Kenneally (former Controller), failed to disclose dramatic increases in loan defaults, loan repurchases and pending loan repurchase requests and described the company's business as "anything but 'good' and it soon became evident that its lending practices, far from being 'responsible,' were the recipe for financial disaster." The SEC accepted settlement offers from all three defendants in August 2010.

6. Ownit Mortgage Solutions, Inc.

152. Ownit Mortgage Solutions, Inc. ("Ownit") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RASC Series 2006-KS9 Trust. Ownit, formerly known as Oakmont Mortgage Company, Inc., was a wholesale mortgage lender founded in 1989. Ownit was well-known in the industry for its practices of originating 100%-financed subprime loans and providing loans to borrowers with poor credit and limited income. NONPRIME NEWS ranked Ownit as the 11th-largest issuer of subprime mortgages in the United States, originating $5.46 billion in loans in the first half of 2006 alone.

153. In September 2005, Ownit sold a 20% share in the company to Defendant Merrill Lynch for $100 million. According to Ownit founder and CEO William Dallas ("Dallas"), Merrill Lynch used its ownership stake and its $3.5 billion credit line to Ownit as leverage, instructing Ownit to lower its underwriting standards and to originate more higher-yield, riskier loans. Ownit complied with Merrill Lynch's directive, originating $6 billion in loans from September 2005 to December 2006, including "crazy" 45-year adjustable rate mortgages and no-income-verification loans. Dallas stated, "The market [was] paying me to do a no-income-verification loan more than it [was] paying me to do the full documentation loans."

154. A May 8, 2007 article from the NEW YORK TIMES entitled *East Coast Money Lent Out West* reported how Ownit increased loan volume by weakening underwriting standards and originating more "liar" loans for which no documentation was requested or required to

substantiate the borrowers' oral representations of their annual earnings. Moreover, prior to Merrill Lynch's investment in Ownit in 2005, approximately 90% of Ownit's loans were fully documented. After Merrill Lynch asked for more stated-income loans, the number of stated-income loans climbed from almost zero to over 30%.

155. Ownit also lowered the credit scores it required of its borrowers. The most widely accepted measure of creditworthiness in the credit industry is the "FICO" score, developed by the Fair Isaac Corporation.[2] The Federal Deposit Insurance Corporation defines a "subprime" loan as one for which the borrower has a FICO score of 660 or below. At Merrill Lynch's request, Ownit's average new borrower FICO score dropped from 690 to approximately 630.

156. The intentional weakening of underwriting standards had an immediate and direct impact upon the performance of Ownit's loans. From December 2005 through May 2006, Ownit began to experience first payment defaults and "early payment defaults" (*i.e.*, defaults on any one of the first three mortgage repayments). According to Dallas, prior to Merrill Lynch's involvement with Ownit, it had never experienced such defaults.

157. Unsurprisingly, Ownit imploded in December 2006. According to a December 8, 2006 article in WORKOUT WIRE entitled *BuyBacks Appear to Shutter Two Firms*, Ownit filed for bankruptcy in December 2006 "amid reports that the subprime lender had been hit by huge loan buyback requests from an investor." That investor turned out to be none other than Merrill Lynch. In connection with Ownit's bankruptcy, Merrill Lynch JP Holdings, Inc. filed an

[2] Under the FICO scoring system, borrowers are assigned a credit score (the FICO score) ranging from 300 to 850, with 850 being the most creditworthy. In determining the borrower's overall creditworthiness, the FICO score primarily takes into account the borrower's payment history, current indebtedness, length of credit history, recently established credit and types of credit used. According to Fitch Ratings, FICO scores are the "best single indicator" of mortgage default risk. Thus, the lower the FICO score, the greater risk of borrower default.

unsecured repurchase claim for $92,965,222. That is, Merrill Lynch JP Holdings itself had requested Ownit to buy back nearly $93 million of mortgages that had been sold to Merrill Lynch and that Merrill Lynch claimed to be defective for one or more reasons.

158. Despite its own repurchase claim, Merrill Lynch continued to sell securities based on Ownit's loans well into 2007. According to FOX BUSINESS NEWS, in early 2007, Merrill Lynch created a package of security deals backed by loans issued by Ownit. Around 70% of the borrowers on these Ownit loans had not provided full documentation of either their income or assets. Moreover, most of the loans were for the full appraised value of homes, meaning they were no-down-payment loans, given at a time when home prices were already starting to crumble.

159. Several consumer lawsuits followed soon thereafter. On May 5, 2009, a TILA lawsuit was filed against Ownit alleging that the company had made misrepresentations to the borrower regarding the terms of a loan, including the interest rate, payment amount, and the borrower's ability to refinance if the loan became unaffordable. The complaint stated that Ownit "regularly approved loans to unqualified borrowers, and implemented practices ... ranging from questionable to criminal." Moreover, Ownit "employed brokers and loan officers [who] worked on commissions, meaning the more loans they sold, the more bonus money they received," and these brokers and loan officers steered borrowers "into loans with less favorable terms" or into loans the borrowers were not qualified for in order to make more money.

160. In October 2009, a lawsuit was filed against Ownit in the District of Nevada alleging that the company lured unqualified borrowers into subprime mortgages "while knowing many of the loans would result in foreclosure." The complaint stated that Ownit and its brokers and agents issued mortgages to borrowers "who were incapable of paying the mortgages

throughout the life of the loan," such as those with poor credit scores and inadequate income to afford the loan, and utilized "numerous fees and penalties" that increased the risk of default and foreclosure. The lawsuit included claims for unfair lending practices and fraud.

7. People's Choice Home Loan, Inc.

161. People's Choice Home Loan, Inc. ("People's Choice") originated mortgage loans that were pooled in securitizations and purchased by Plaintiff, including RASC Series 2006-KS9 Trust and RASC Series 2007-KS3 Trust. People's Choice, founded in 1999, operated as a subsidiary of People's Choice Financial Corporation and marketed itself as a subprime lender of wholesale and retail mortgages through the Internet, issuing over $4.5 billion in mortgage-backed securities in 2005.

162. People's Choice garnered most of its financial success by targeting and extending subprime loans to borrowers with poor credit histories and by using unscrupulously loose underwriting and lending guidelines in its business practice. People's Choice also came to possess a reputation in the industry for being a "fraud factory," requiring little or no supporting financial documentation for loans, using inaccurate appraisal values and doctoring loan documents to get borrowers approved.

163. James LaLiberte, former Chief Operating Officer at People's Choice, stated in a March 22, 2009, interview with DATELINE NBC that the company "got where they are" in the business because "[f]raud is what we do." LaLiberte described how it was his job to set underwriting guidelines but that he was met with "resistance" in his attempts to improve the company's internal procedures. LaLiberte emphasized how borrowers were not required to document their financial capacity to repay in order to receive a loan and recounted how People's Choice once issued two loans, totaling $640,000, to a massage therapist whose loan

documentation claimed that she made $15,000 per month. A similar loan was made to a house cleaner whose documentation claimed she made $11,500 per month.

164. In 2004, a mortgage broker named Heidi Weppelman assisted the FBI in a mortgage fraud investigation in northeast Florida. Weppelman recorded a telephone conversation with People's Choice employee Jennifer Grosslight that was later used as evidence at the trial of a man, who sold rental homes and referred customers to Weppelman for mortgages. During that conversation, the two women discussed how People's Choice employees would falsify loan documentation, including appraisal values, signatures on contracts and leases and bank account information, in order to process more loans. Grosslight described these practices as being "totally fine" and that they were "the furthest from any issue."

165. In September 2005, a class action lawsuit was filed against People's Choice in the United States District Court for the Northern District of Illinois, alleging that People's Choice used "prescreening" mailers in order to identify "persons who [had] poor credit or [had] recently obtained bankruptcy discharges, for the purpose of targeting them for subprime credit." On February 5, 2008, the court granted plaintiffs' motion for a default judgment against defendants for $2 million.

V. A SIGNIFICANT NUMBER OF THE MORTGAGE LOANS WERE MADE TO BORROWERS WHO DID NOT OCCUPY THE PROPERTIES IN QUESTION

166. The Offering Documents contained information regarding the purported occupancy status of the mortgaged properties, including whether they were primary homes, investment properties, or second homes. These representations were material to investors such as Plaintiff because high owner-occupancy rates would have made the Certificates safer investments than Certificates backed by second homes or properties purchased for real estate speculation. Thus, Defendants had an incentive to overstate the owner-occupancy rates of the

underlying mortgages to make them appear more secure. As noted in a January 2011 article in BUSINESSWEEK, borrowers either never moved into or later vacated homes for at least ***25%*** of U.S. mortgages that were described as being for "owner occupied" properties when bundled into securities.

167. In connection with a separate lawsuit against the Sponsor Defendant RFC, the insurer Massachusetts Mutual Life Insurance Company ("Mass Mutual") conducted a forensic review of the mortgage loans underlying 18 RMBS sponsored by RFC. Part of this analysis included testing to determine if the owner-occupancy ratios given in the Offering Documents were accurate. Mass Mutual investigated whether borrowers were having tax statements and bills sent to the address of the mortgaged properties, whether the borrowers had taken tax exemptions available for owner-occupied properties, and whether property records showed that the borrowers owned multiple houses. Mass Mutual discovered that the offering documents overstated the owner-occupancy ratio by between 5.71% and 15.23% for ***each*** of the 18 RMBS that it analyzed.

168. Freddie Mac performed a similar analysis of individual loan files in connection with its lawsuit against GMAC. Its analysis covered 21 RMBS and revealed that in each case, the offering materials had overstated the owner-occupancy rates by between 8.48% and 13.10%. Four of the RMBS that Freddie Mac investigated were also purchased by Plaintiff.

- RASC Series 2006-EMX9 Trust: The Offering Documents overstated the owner-occupancy rate by 12.52%. Notably, the Offering Documents represented that all of the loans in the mortgage pool were for owner-occupied properties.
- RASC Series 2006-KS9 Trust: The Offering Documents overstated the owner-occupancy rate by 8.68%.
- RASC Series 2007-KS2 Trust: The Offering Documents overstated the owner-occupancy rate by 9.79%.

- RASC Series 2007-KS3 Trust: The Offering Documents overstated the owner-occupancy rate by 10.6%.

169. On information and belief, the mortgage loans underlying all of the Certificates purchased by Plaintiff suffer from similar deficiencies as the mortgage loans underlying the Certificates purchased by Mass Mutual and Freddie Mac. Two separate analyses covering a total of 34 GMAC RMBS offerings[3] have uncovered material overstatements of the owner-occupancy ratio in every single offering. There is no reason to believe that the systematic and pervasive misrepresentation of owner-occupancy rates identified by Mass Mutual and Freddie Mac were confined to the RMBS they examined.

VI. DEFENDANTS MISREPRESENTED THE LTV RATIOS OF THE MORTGAGE LOANS AND THE NUMBER OF PROPERTIES WORTH LESS THAN THE OUTSTANDING LOANS

170. As discussed in Section III, *supra*, the LTV ratio is one of the most important measures of the riskiness of a loan. In the Offering Documents, Defendants acknowledge that loans with high LTV ratios are more likely to default. For example, the 424B5 Prospectus Supplement for RASC Series 2007-KS3 Trust, filed on March 26, 2007, states: "The rate of default on mortgage loans that are refinances by the borrower, were originated with limited documentation, or are mortgage loans with high LTV ratios, may be higher than for other types of mortgage loans." Furthermore, if a borrower does default and the property enters foreclosure, the Issuing Trust is much more likely to recover the outstanding balance on the loan through a foreclosure sale if the LTV ratio is low.

171. Mortgage loans that are "underwater" – that is to say, those where the LTV ratio is greater than 100% because the value of the outstanding loan exceeds the value of the collateral

[3] The Freddie Mac analysis involved 21 RMBS, and the Mass Mutual analysis involved 18 RMBS. There was some overlap between the two analyses, as five RMBS were analyzed by both Freddie Mac and Mass Mutual.

– are extremely risky investments. In these cases, the borrower has a strong incentive to default, the possibility that the borrower will be capable of refinancing are virtually nil, and if the mortgage enters foreclosure the Issuing Trust will definitely incur a loss.

172. Appraisals that are generated without guidelines can artificially lower LTV ratios by overstating the value of the mortgaged properties. In instances where LTV values have been distorted by faulty appraisals, RMBS investors may be unaware of the true value of their collateral until default and foreclosure occur. The Final Report of the National Commission on the Causes of the Financial and Economic Crisis in the United States discussed this problem.

> As the housing market expanded, another problem emerged, in subprime and prime mortgages alike: inflated appraisals. For the lender, inflated appraisals meant greater losses if a borrower defaulted. But for the borrower or for the broker or loan officer who hired the appraiser, an inflated value could make the difference between closing and losing the deal. Imagine a home selling for $200,000 that an appraiser says is actually worth only $175,000. In this case, a bank won't lend a borrower, say, $180,000 to buy the home. The deal dies. Sure enough, appraisers began feeling pressure. One 2003 survey found that 55% of appraisers had felt pressed to inflate the value of homes; by 2006, this had climbed to 90%.

173. Defendants had a responsibility to ensure that the LTV figures they presented in the Offering Documents were not the product of fraudulent appraisals. As the U.S. Senate Permanent Subcommittee on Investigations stated in its staff report, *Wall Street and the Financial Crisis: Anatomy of a Financial Collapse*, "Whether appraisals are conducted internally by the bank or through a vendor, the bank must take responsibility for establishing a standard process to ensure accurate, unbiased home appraisal values."

174. Mass Mutual and Freddie Mac's reviews of the loans underlying 34 GMAC RMBS revealed that, in addition to consistently misrepresenting owner-occupancy rates, GMAC also consistently misrepresented the LTV ratios of the underlying mortgages and the number of

properties with high LTV ratios. For each loan they examined, Mass Mutual and Freddie Mac used an industry standard automated valuation model ("AVM") to calculate the value of the mortgaged property at the time of origination. AVMs are commonly used in the real estate industry and rely upon similar data as appraisers, including county records, tax records, and data on comparable properties.

175. Freddie Mac's review of 21 GMAC RMBS revealed that in each case, the offering documents overstated the percentage of loans with low LTV ratios (defined as LTV ratios less than 80%) by between 12.24% and 49.08%. The offering documents understated the percentage of underwater loans (loans with LTV ratios greater than 100%) by between 8.18% and 33.81%. With respect to the four RMBS also purchased by Plaintiff:

- RASC Series 2006-EMX9 Trust: The Offering Documents overstated the number of loans with low LTV ratios by 23.03%, and understated the number of underwater loans by a shocking ***33.81%***. The Offering Documents represented that only .03% of the underlying loans had LTV ratios in excess of 100%, when in fact more than a third of them did.

- RASC Series 2006-KS9 Trust: The Offering Documents overstated the number of loans with low LTV ratios by 17.34%, and understated the number of underwater loans by 26.92%. The Offering Documents represented that none of the underlying loans had LTV ratios in excess of 100%.

- RASC Series 2007-KS2 Trust: The Offering Documents overstated the number of loans with low LTV ratios by 16.28%, and understated the number of underwater loans by 28.4%. The Offering Documents represented that none of the underlying loans had LTV ratios in excess of 100%.

- RASC Series 2007-KS3 Trust The Offering Documents number of loans with low LTV ratios by 15.96%, and understated the number of underwater loans by 29.22%. The Offering Documents represented that none of the underlying loans had LTV ratios in excess of 100%.

176. Although Mass Mutual presented its data differently than Freddie Mac did, its review also revealed significant misrepresentations of LTV data. Mass Mutual found that for 17 of the 18 GMAC RMBS it analyzed, the offering documents had understated the weighted

average LTV ratio by between 4.23% and 16.77% and understated the percentage of loans with high LTV ratios (defined as LTV ratios greater than 90% or 100%) by between 4.54% and 39.08%. Only one of the RMBS examined did not misrepresent the percentage of loans with high LTV ratios.

177. On information and belief, the mortgage loans underlying all of the Certificates purchased by Plaintiff suffer from similar deficiencies as the mortgage loans underlying the Certificates purchased by Mass Mutual and Freddie Mac. The loan-level analyses demonstrate that Defendants have engaged in a systematic practice of understating LTV ratios and the number of underwater properties.

VII. THE CREDIT RATINGS ASSIGNED TO THE CERTIFICATES MATERIALLY MISREPRESENTED THE CREDIT RISK OF THE CERTIFICATES

178. The AAA credit ratings of the Certificates were an important factor in Plaintiff's decision to purchase the Certificates. Because Plaintiff is a conservative institutional investor, it purchased only investment grade Certificates, all of which were rated AAA.

179. Investment grade securities are understood by investors to be stable, secure, and safe. A rating of AAA denotes high credit quality and is the same rating as those typically assigned to bonds backed by the full faith and credit of the United States Government, such as treasury bills. Historically, before 2007, investments with AAA ratings had an expected cumulative loss rate of less than 0.5 percent, with an annual loss rate of close to zero. According to Standard and Poor's, the default rate on all investment grade corporate bonds (including AA, A and BBB) from 1981 to 2007, for example, averaged about 0.094% per year and was not higher than 0.41% in any year.

180. The Defendants understood (and banked on) the importance that purchasers of mortgage-backed securities attached to credit ratings. In most cases, the purchasers were

institutional investors, such as Plaintiff, who did not have the knowledge or ability to independently analyze the mortgage pools underlying any particular offering to verify for themselves that the ratings were accurately determined.

181. Accordingly, Defendants featured the ratings prominently in the Offering Documents and discussed at length the ratings assigned to the Certificates and the bases for the ratings. Each Prospectus Supplement stated that the issuance of each of the Certificates was conditioned on the assignment of particular, investment-grade ratings and listed the ratings in a chart. All of the Certificates purchased by Plaintiff were AAA-rated securities, and the remainder were also investment grade.

182. Unbeknownst to Plaintiff and other investors, at all relevant times, Defendants knew that the ratings were not reliable because those ratings were bought and paid for, and were supported by, flawed information provided by Defendants to the rating agencies. In fact, Defendants manipulated the rating agencies to obtain the desired ratings for the Certificates.

183. Specifically, the ratings of the Certificates were significantly compromised by the misinformation provided by Defendants to the rating agencies. Among other matters, Defendants did not disclose to the rating agencies that the originators, including GMAC-affiliated entities, had abandoned their underwriting standards by, among other things, manipulating the assets, liabilities, income and other important information concerning borrowers; using false metrics to qualify borrowers; and aggressively using exceptions to qualify borrowers. Defendants did not disclose their knowledge that, in obtaining appraisals to value the underlying collateral, the originators used inflated appraisals that departed from industry-approved standards. Defendants did not otherwise disclose their knowledge of the pervasive fraud that affected the mortgages underlying the Certificates.

184. Apart from supplying incomplete and false information to the rating agencies, Defendants also manipulated their relationship with the rating agencies in order to achieve the desired ratings. The rating agencies received enormous revenues from the issuers who paid them for rating their securities. Because the desired rating of a securitized product was the starting point for any securities offering, the rating agencies were actively involved in helping issuers structure their products to achieve the requested rating. As a result, the rating agencies essentially worked backwards, starting with the issuer's target rating and then working toward a structure that would yield the desired rating. Among other things, the rating agencies instructed issuers on how much "credit enhancement" to provide to each tranche of the Certificates in order to secure the desired ratings.

185. In this manner, Defendants were able to manipulate the rating agencies to achieve the inflated ratings they desired. Through repeated communications and collaboration with the rating agencies, Defendants were effectively able to reverse engineer aspects of the ratings models and then modify the structure of an offering to improve the ratings without actually improving the underlying credit quality.

186. In a 2008 report entitled "Summary Report of Issues Identified in the Commission Staff's Examinations of Select Credit Rating Agencies," the SEC confirmed that the issuers and the rating agencies worked together so that securities would receive the highest ratings:

> Typically, if the analyst concludes that the capital structure of the RMBS does not support the desired ratings, this preliminary conclusion would be conveyed to the arranger [sponsor/issuer]. The arranger could accept that determination and have the trust issue the securities with the proposed capital structure and the lower rating or adjust the structure to provide the requisite credit enhancement for the senior tranche to get the desired highest rating. Generally, arrangers aim for the largest possible senior tranche, i.e., to provide the least amount of credit enhancement possible, since the senior tranche -- as the highest rated tranche --

pays the lowest coupon rate of the RMBS' tranches and, therefore, costs the arranger the least to fund.

187. As a result, the Certificates were not worthy of the investment-grade ratings given to them, as evidenced most clearly by the fact that many of the Certificates – all initially awarded investment grade ratings (all AAA/Aaa) – have now been downgraded to junk, a vast number of the underlying loans have been foreclosed upon, and the remaining underlying loans are suffering from crippling deficiencies and face serious risks of default. The collective steep downgrade of AAA/Aaa-rated Certificates indicates that the ratings set forth in the Offering Documents were false, unreliable, and inflated.

188. According to the report, "Wall Street and the Financial Crisis," issued by the U.S. Senate Permanent Subcommittee on Investigations, former ratings agency analysts and managers said that investment banks pressured them to get their deals done quickly, to increase the size of the tranches that received AAA ratings, and to reduce the credit enhancements protecting the AAA tranches from loss.

189. On May 13, 2010, THE NEW YORK TIMES reported that the New York Attorney General had launched a probe involving eight Wall Street banks, including Underwriter Defendants Deutsche Bank and Merrill Lynch, over whether these firms misled rating companies in order to achieve higher ratings and "whether they provided misleading information to rating agencies in order to inflate the grades of certain mortgage securities."

190. By including and endorsing the AAA ratings contained in the Offering Documents, Defendants falsely represented that they actually believed that the ratings were an accurate reflection of the credit quality of the Certificates.

VIII. DEFENDANTS MISREPRESENTED THE EXTENT OF CREDIT ENHANCEMENT INCLUDED IN THE CERTIFICATES

191. Defendants used a variety of credit enhancements to make the Certificates seem like more attractive and less risky investments. Credit enhancement represents the amount of "cushion" or protection from loss exhibited by a given security. This cushion is intended to improve the likelihood that holders of highly rated certificates receive the interest and principal they expect based on the Offering Documents. The level of credit enhancement offered is based on the makeup of the loans in the underlying collateral pool. Riskier pools necessarily need higher levels of credit enhancement to ensure payment to senior certificate holders. Credit enhancements for a given trust also impact the overall credit rating that a given tranche of certificates receives. The level of credit enhancement for the Certificates was material to Plaintiff because it represented the protection purportedly afforded from loss.

192. The most common form of credit enhancement in the Offering Documents was "subordination" in which the Defendants created a hierarchy of loss absorption among the tranche securities. To create that hierarchy, Defendants placed the pool's tranches in an order, with the lowest tranche required to absorb any losses first, before the next highest tranche. Losses might occur, for example, if borrowers defaulted on their mortgages and stopped making mortgage payments into the pool. Lower level tranches most at risk of having to absorb losses typically received non-investment grade ratings from the credit rating agencies, while the higher level tranches that were protected from loss typically received investment grade ratings. One key task for both Defendants and the credit rating agencies was to calculate the amount of "subordination" required to ensure that the higher tranches in a pool were protected from loss and could be given AAA or other investment grade ratings.

193. A second common form of credit enhancement was "over-collateralization." In this credit enhancement, the Defendants ensured that the revenues expected to be produced by the assets in a pool exceeded the revenues designated to be paid out to each of the tranches. That excess amount provided a financial cushion for the pool and was used to create an "equity" tranche, which was the first tranche in the pool to absorb losses if the expected payments into the pool were reduced. This equity tranche was subordinate to all the other tranches in the pool and did not receive any credit rating. The larger the excess, the larger the equity tranche, and the larger the cushion created to absorb losses and protect the more senior tranches in the pool. In some pools, the equity tranche was also designed to pay a relatively higher rate of return to the party or parties who held that tranche due to its higher risk.

194. Still another common form of credit enhancement was the creation of "excess spread" or "excess cash flow", which involved designating an amount of revenue to pay the pool's monthly expenses and other liabilities but ensuring that the amount was slightly more than what was likely needed for that purpose. Any funds not actually spent on expenses would provide an additional financial cushion to absorb losses, if necessary.

195. As set forth below, representations regarding the inclusion and scope of these credit enhancements were made in all of the Offering Documents. These representations were false and misleading because all of the purported "enhancements" depended on or derived from inflated appraisals of the mortgaged properties, which caused the listed LTV ratios and levels of credit enhancement to be untrue.

IX. DEFENDANTS FAILED TO ENSURE THAT TITLE TO THE UNDERLYING MORTGAGE LOANS WAS EFFECTIVELY TRANSFERRED

196. A fundamental aspect of the mortgage securitization process is that the issuing trust for each offering must obtain good title to the mortgage loans comprising the pool for that

offering. This is necessary in order for the holders of the RMBS, such as Plaintiff, to be legally entitled to enforce the mortgage loans in the event of default. Two documents relating to each mortgage loan must be validly transferred to the trust as part of the securitization process – a promissory note and a security instrument (either a mortgage or a deed of trust).

197. The rules for these transfers are governed by the law of the state where the property is located, by the terms of the pooling and servicing agreement ("PSA") for each securitization, and by the law governing the issuing trust (with respect to matters of trust law). In general, state laws and the PSAs require the promissory note and security instrument to be transferred by endorsement, in the same way that a check can be transferred by endorsement, or by sale. In addition, state laws generally require that the trustee of the issuing trust have physical possession of the original, manually-signed promissory note in order for the loan to be enforceable by the trustee against the borrower in the event of the borrower's default.

198. In order to preserve the bankruptcy-remote status of the issuing trusts in RMBS transactions, the notes and security instruments are generally not directly transferred from the mortgage loan originator to the trust. Rather, the notes and security instruments are initially transferred from the originator to the depositor, either directly or via one or more special-purpose entities. After this initial transfer to the depositor, the depositor transfers the notes and security interests to the issuing trust for the particular securitization. Each of these transfers must be valid under applicable state law in order for the trust to have good title to the mortgage loans.

199. To ensure that the trust qualifies as a tax-free real estate mortgage investment conduit, the PSA generally requires the transfers to the trust to be completed within a strict time limit after formation of the trust. Furthermore, the applicable trust law in each state generally requires strict compliance with the trust documents, including the PSA, so that failure to comply

strictly with the timeliness, endorsement, physical delivery, and other requirements of the PSA with respect to the transfers of the notes and security instruments means that the transfers would be void and the trust would not have good title to the mortgage loans.

200. The Offering Documents for the Certificates represented in substance that the Issuing Trust for the respective offering had obtained good title to the mortgage loans comprising the pool underlying the offering. In fact, however, Defendants routinely and systematically failed to comply with the requirements of applicable state laws and the PSAs for valid transfers of the notes and security instruments. In an October 20, 2010 NEW YORK TIMES article on the failure of large banks to maintain full documentation, "Battle Lines Forming In Clash Over Foreclosures," Rebel A. Cole, a professor of finance and real estate at DePaul University, was quoted as saying that banks "have essentially sidestepped 400 years of property law in the United States. There are so many questionable aspects to this thing it's scary."

201. On October 27, 2010, Katherine Porter, then a visiting a professor at Harvard Law School specializing in consumer credit, consumer protection regulation, and mortgage servicing, testified before the Congressional Oversight Panel:

> The implications of problems with transfer are serious. If the [securitization] trust does not have the loan, homeowners may have been making payments to the wrong party. If the trust does not have the note or mortgage, it may not have standing to foreclose or legal authority to negotiate a loan modification. To the extent that these transfers are being completed retroactively, it raises issues about honesty in creating and dating the assignments/transfers and about what parties can do, if anything, if an entity in the securitization chain, such as Lehman Brothers or New Century, is no longer in existence. Moreover, retroactive transfers may violate the terms of the trust, which often prohibit the addition of new assets, or may cause the trust to lose its REMIC status, a favorable treatment under the Internal Revenue Code. Chain of title problems have the potential to expose the banks to investor lawsuits and to hinder their legal authority to foreclose or even to do loss mitigation.

* * * * *

> I want to share with the Panel that the lawyers that I have met over years of my research on mortgage servicing both creditor lawyers and debtor lawyers have nearly universally expressed that they believe a very large number (perhaps virtually all) securitized loans made in the boom period in the mid-2000s contain serious paperwork flaws, did not meet underwriting or other requirements of the trust, and have not been serviced properly as to default and foreclosure.

202. On November 18, 2010, Adam Levitin, a professor at Georgetown University Law Center, provided similar testimony about the importance of the chain of title to investors and the consequences of faulty transfers before a hearing of the House Financial Services Committee:

> Concerns about securitization chain of title also go to the standing question; if the mortgages were not properly transferred in the securitization process (including through the use of MERS to record the mortgages), then the party bringing the foreclosure does not in fact own the mortgage and therefore lacks standing to foreclose. If the mortgage was not properly transferred, there are profound implications too for investors, as the mortgage-backed securities they believed they had purchased would, in fact be non-mortgage-backed securities, which would almost assuredly lead investors to demand that their investment contracts be rescinded[.]

****

> Securitization is the legal apotheosis of form over substance, and if securitization is to work it must adhere to its proper, prescribed form punctiliously. The rules of the game with securitization, as with real property law and secured credit are, and always have been, that dotting "i's" and crossing "t's" matter, in part to ensure the fairness of the system and avoid confusions about conflicting claims to property. Close enough doesn't do it in securitization; if you don't do it right, you cannot ensure that securitized assets are bankruptcy remote and thus you cannot get the ratings and opinion letters necessary for securitization to work. Thus, it is important not to dismiss securitization problems as merely "technical;" these issues are no more technicalities than the borrower's signature on a mortgage. Cutting corners may improve securitization's economic efficiency, but it undermines its legal viability.

203. It is now clear that GMAC did not transfer securitized loans to the Issuing Trusts in a timely fashion, if it did so at all. For example, a September 5, 2011 NATIONAL MORTGAGE NEWS article, "Servicers Are Now Rewriting Their History," discusses GMAC's transfer of a mortgage to a Deutsche Bank trust on May 18, 2011, for a bond deal ***that closed in 2005***. This failure to ensure proper transfer of mortgage documents or maintain the chain of title – tasks which GMAC received servicing fees for supposedly fulfilling – represents a flagrant breach of the representations contained in the Offering Documents.

204. GMAC's failure to maintain the chain of title for securitized mortgages as it represented it would do in the Offering Documents has led it to take unlawful shortcuts, resulting in a costly foreclosure moratorium and multiple investigations. GMAC's former foreclosure counsel, The Law Offices of David J. Stern, P.A., has acknowledged that when engaged in foreclosure proceedings, GMAC did not confirm whether loan and mortgage documents were properly endorsed, assigned, or in the possession in the appropriate party.

205. Around September 20, 2010, GMAC was forced to temporarily halt evictions and foreclosure sales in 23 states after a GMAC employee, Jeffrey Stephan, admitted in a deposition that he routinely submitted false affidavits in foreclosure cases and that he did not review the exhibits whose accuracy he attested to. According to a September 30, 2010 article in the NEW YORK TIMES, "Foreclosures Slow As Document Flaws Emerge," shortly after the moratorium's announcement Old Republic National Title, one of the largest title insurers in the country, sent a bulletin to agents saying that "until further notice" it would not insure title to properties foreclosed upon by GMAC Mortgage.

206. GMAC resumed foreclosures in October, but the moratorium alerted regulators to GMAC's unlawful servicing practices and the need to take action. All fifty state attorneys-

general have launched a coordinated investigation into the foreclosure practices of banks including GMAC. The Board of Governors of the Federal Reserve System ("Federal Reserve") also launched its own investigation. On April 13, 2011, GMAC entered into a consent decree with the Federal Reserve and the Federal Deposit Insurance Corporation requiring it to bring its loan servicing and foreclosure processes into compliance with the law. According to the Federal Reserve's accompanying press release, GMAC and other banking organizations engaged in "a pattern of misconduct and negligence related to deficient practices in residential mortgage loan servicing and foreclosure processing. These deficiencies represent significant and pervasive compliance failures and unsafe and unsound practices at these institutions."

X. DEFENDANTS' SPECIFIC MATERIAL MISSTATEMENTS AND OMISSIONS IN THE OFFERING DOCUMENTS

207. Defendants' representations regarding the mortgage loans underlying the Offerings were highly material to investors such as Plaintiff. Because the revenue paid to investors is derived from the stream of payments received from the mortgage loan borrowers, the value of an investment is necessarily tied to the perceived risk of default in the Mortgage Loan pool. In other words, the market value of a Certificate decreases as the perceived risk of the underlying pool increases. Plaintiff, therefore, closely examined the representations made by the Defendants regarding the mortgage loans underlying each of the Offerings at issue here.

208. In light of the numerous departures from underwriting guidelines and appraisal standards by the Originators described above, the Offering Documents (Registration Statements and Prospectus Supplements) disseminated by Defendants in the course of selling the Certificates contained numerous misstatements and omissions.

A. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING UNDERWRITING STANDARDS AND PRACTICES

209. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospectus Supplements formed a part, contained the following misleading statements, among others, in identical or substantially similar language, regarding the underwriting standards and practices that the Originators applied in originating the mortgage loans underlying the Certificates.

> ***The depositor expects that the originator of each of the mortgage loans will have applied, consistent with applicable federal and state laws and regulations, underwriting procedures intended to evaluate the borrower's credit standing and repayment ability and/or the value and adequacy of the related property as collateral.*** All of the mortgage loans constituting the mortgage pool for a series of certificates will have been acquired either directly or indirectly by the depositor through the Expanded Criteria Program, which is described below under "--The Expanded Criteria Mortgage Program."[4]

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at 17 (May 31, 2007); Prospectus Supplement for RASC Series 2006-EMX9 Trust (Form 424B5), at 10 (Oct. 27, 2006); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at 10 (Feb. 23, 2007); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at 10 (Mar. 26, 2007); Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at 10 (Oct. 30, 2006); Prospectus Supplement for RAAC Series 2005-SP2 Trust (Form 424B5), at 19 (Oct. 11, 2005); Registration Statement (333-140610) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 17 (Apr. 3, 2007); Registration Statement (333-131209) filed by Residential Asset Securities Corp. (Form S-3/A, Am. 3), at 13 (Mar. 30, 2006); Registration Statement (333-

[4] Unless otherwise noted, all emphases are added and internal citations are omitted.

125485) filed by Residential Asset Mortgage Products, Inc. (Form S-3/A, Am. 1), at 22 (Jul. 7, 2005).

> ***Prior to assigning the mortgage loans to the depositor, Residential Funding will have reviewed the underwriting information provided by the mortgage collateral sellers for the mortgage loans and, in those cases, determined that the mortgage loans were generally originated in accordance with or in a manner generally consistent with the underwriting standards described in the [Residential Funding's Expanded Criteria Seller Guide].***
>
> * * * * *
>
> In accordance with the Seller Guide, the Expanded Criteria Program Seller is required to review an application designed to provide to the original lender pertinent credit information concerning the mortgagor. As part of the description of the mortgagor's financial condition, each mortgagor is required to furnish information, which may have been supplied solely in the application, regarding its assets, liabilities, income (except as described below), credit history and employment history, and to furnish an authorization to apply for a credit report which summarizes the borrower's credit history with local merchants and lenders and any record of bankruptcy.
>
> The mortgagor may also be required to authorize verifications of deposits at financial institutions where the mortgagor had demand or savings accounts. In the case of non-owner occupied properties, income derived from the mortgaged property may be considered for underwriting purposes. For mortgaged property consisting of a vacation or second home, generally no income derived from the property is considered for underwriting purposes.
>
> Based on the data provided in the application and certain verifications, if required, a determination is made by the original lender that the mortgagor's monthly income, if required to be stated, ***will be sufficient to enable the mortgagor to meet its monthly obligations on the mortgage loan and other expenses related to the property, including property taxes, utility costs, standard hazard insurance and other fixed obligations.*** Generally, scheduled payments on a mortgage loan during the first year of its term plus taxes and insurance and all scheduled payments on obligations that extend beyond ten months, including those mentioned above and other fixed obligations, must equal no

more than specified percentages of the prospective mortgagor's gross income.

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at S-50-53 (May 31, 2007); Prospectus Supplement for RASC Series 2006-EMX9 Trust (Form 424B5), at S-10-11, S-55 (Oct. 27, 2006); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at S-10-12, S-58 (Feb. 23, 2007); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at S-11-12, S-59 (Mar. 26, 2007); Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at S-11-12, S-46-48 (Oct. 30, 2006); Prospectus Supplement for RAAC Series 2005-SP2 Trust (Form 424B5), at 23, S-21 (Oct. 11, 2005); Registration Statement (333-140610) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 19 (Apr. 3, 2007); Registration Statement (333-131209) filed by Residential Asset Securities Corp. (Form S-3/A, Am. 3), at 15 (Mar. 30, 2006); Registration Statement (333-125485) filed by Residential Asset Mortgage Products, Inc. (Form S-3/A, Am. 1), at 27 (Jul. 7, 2005).

210. The statements quoted above were false because they represented that the Originators applied underwriting guidelines and quality control measures to assess the value of the mortgaged properties, evaluate the adequacy of such properties as collateral for the mortgage loans, and assess the applicants' abilities to repay their mortgage loans, when in fact the Originators had actually abandoned these standards so that they could increase the volume of loan origination and the resulting fees that they earned. The statements also represent that Residential Funding put quality control measures into place in order to assure that the underwriting guidelines were followed. Instead, Residential Funding ignored the underwriting tactics of the Originators. For further discussion of Originators' disregard of their stated underwriting guidelines, *see* Section IV.C., *supra*.

B. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING QUALITY CONTROL PROCEDURES

211. The Offering Documents represented that numerous quality control procedures were conducted with respect to the loans underlying the Certificates. For example, the Offering Documents contained, in sum or substance, the following representation:

> All of the mortgage loans in the mortgage pool were originated in accordance with the underwriting criteria of Residential Funding described under "--The Program" in this prospectus supplement. ***Residential Funding will review each mortgage loan for compliance with its underwriting standards prior to purchase.***

The above misstatement was contained in the following Offering Documents: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at S-50 (May 31, 2007).

212. The above statements of material facts were untrue when made because they failed to disclose that the Sponsors and Originators did not, in fact, review each loan for compliance with its underwriting standards prior to purchase.

C. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING UNDERWRITING EXCEPTIONS

213. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, using identical or substantially similar language, regarding the circumstances under which Defendants granted underwriting exceptions for loans underlying the Certificates:

> In certain instances, the LTV ratio may have been based on the appraised value as indicated on a review appraisal conducted by the mortgage collateral seller or originator. In most cases, the mortgage loans were either originated and underwritten in accordance with Residential Funding Company, LLC's AlterNet Program, as discussed below, or otherwise acquired from a mortgage collateral seller based on standards consistent with the following discussion on credit grades classification or substantially similar standards acceptable to Residential Funding Company,

> LLC. ***Exceptions to these standards are made, however, on a case by case basis if it is determined, generally based on compensating factors, that an underwriting exception is warranted. Compensating factors may include, but are not limited to, a low LTV ratio, stable employment, a relatively long period of time in the same residence, a mortgagor's cash reserves and savings and monthly residual income.*** (emphasis added)

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RASC Series 2006-EMX9 Trust (Form 424B5), at S-56-57 (Oct. 27, 2006); Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at S-53-54 (May 31, 2007); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at 12 (Feb. 23, 2007); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at S-61 (Mar. 26, 2007); Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at S-58 (Oct. 30, 2006); Prospectus Supplement for RAAC Series 2005-SP2 Trust (Form 424B5), at 19 (Oct. 11, 2005); Registration Statement (333-140610) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 20 (Apr. 3, 2007); Registration Statement (333-131209) filed by Residential Asset Securities Corp. (Form S-3/A, Am. 3), at S-50 (Mar. 30, 2006); Registration Statement (333-125485) filed by Residential Asset Mortgage Products, Inc. (Form S-3/A, Am. 1), at S-25 (July 7, 2005).

214. The statements quoted above were false because they represented that Residential Funding Company and the Originators only permitted exceptions to their underwriting guidelines on a case-by-case basis and when the borrowers could show some compensating factors as justification, when in fact the Originators systematically granted exceptions to virtually every borrower who did not qualify for a mortgage loan. For further discussion of Originators' wholesale and systematic abuse of exceptions, *see* Section IV.C., *supra*.

D. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS AND OMISSIONS REGARDING LOAN-TO-VALUE RATIOS AND APPRAISALS

215. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, regarding loan-to-value ratios and appraisals of the properties securing the mortgage loans underlying the Certificates:

> The adequacy of the mortgaged property as security for repayment of the related mortgage loan generally is determined by an appraisal in accordance with appraisal procedure guidelines described in the [Residential Funding's Expanded Criteria] Seller Guide. Appraisers may be staff appraisers employed by the originator. The appraisal procedure guidelines generally require the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property is in good condition and that construction, if new, has been substantially completed. The appraiser is required to consider a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property, or replacement cost analysis based on the current cost of constructing or purchasing a similar property. In certain instances, the LTV ratio is based on the appraised value as indicated on a review appraisal conducted by the mortgage collateral seller or originator.

The above misstatement in identical or substantially similar language was contained in the following Offering Documents: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at S-53 (May 31, 2007); Registration Statement (333-140610) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at S-43 (Apr. 3, 2007).

> The adequacy at origination of a mortgaged property as security for repayment of the related loan will typically have been determined by an appraisal. Appraisers may be either staff appraisers employed by the originator or independent appraisers selected in accordance with guidelines established by or acceptable to the originator. The appraisal procedure guidelines in most cases will have required the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property

> was in good condition and that construction, if new, had been substantially completed. The appraisal will have considered a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property or replacement cost analysis based on the current cost of constructing or purchasing a similar property. In certain instances, the LTV ratio or combined LTV ratio may have been based on the appraised value as indicated on a review appraisal conducted by the seller or originator.

The above misstatement in identical or substantially similar language was found in the following Offering Documents: Prospectus Supplement for RAAC Series 2005-SP2 Trust (Form 424B5), at 20 (Oct. 11, 2005); Prospectus Supplement for RASC Series 2006-EMX9 Trust (Form 424B5), at S-56 (Oct. 27, 2006); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at S-60 (Feb. 23, 2007); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at S-60 (Mar. 26, 2007); Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at S-58 (Oct. 30, 2006); Registration Statement (333-131209) filed by Residential Asset Securities Corp. (Form S-3/A, Am. 3), at 14 (Mar. 30, 2006); Registration Statement (333-125485) filed by Residential Asset Mortgage Products, Inc. (Form S-3/A, Am. 1), at 24 (July 7, 2005).

216. The statements quoted above were false because they represented that the properties securing the loans underlying the Certificates had been independently appraised based on the market values of comparable properties and replacement cost analyses, when in fact the Originators systematically pressured appraisers to overvalue properties and falsify appraisal reports. For further discussion of the corruption of the appraisal system, *see* Section III, *supra*.

217. Furthermore, each Prospectus contained tables substantially similar to that below, purporting to provide data on the LTV ratios of the mortgage loans underlying the Certificates so that investors could reach their own conclusions about whether or not those loans were backed by sufficient collateral. Not only did the tables indicate that no original loan-to-value ratio was

greater than 100% (or in some instances 95%), but also that less than ten percent of the loans had an original loan-to-value ratio greater than 80%. The statements were materially untrue and misleading, however, because the value data underlying the LTV calculations had been systematically skewed by fraudulent appraisals. Thus, these statements understated the true LTV ratios of the loans and the true risk inherent in the Certificates.

Original LTV Ratios of the Mortgage Loans

<TABLE>
<CAPTION>

Original Loan-to-Value Ratio (%)	Number of Mortgage Loans	Principal Balance	Percentage of Mortgage Loans	Average Principal Balance	Weighted Average LTV Ratio
<S>	<C>	<C>	<C>	<C>	<C>
00.01 - 50.00	212	$ 42,984,743	5.35%	$ 202,758	702
50.01 - 55.00	101	23,283,288	2.90	230,528	696
55.01 - 60.00	136	35,595,681	4.43	261,733	704
60.01 - 65.00	218	54,755,955	6.82	251,174	703
65.01 - 70.00	220	59,723,656	7.43	271,471	700
70.01 - 75.00	420	102,117,920	12.71	243,138	700
75.01 - 80.00	1,693	413,487,156	51.47	244,233	707
80.01 - 85.00	64	14,492,399	1.80	226,444	678
85.01 - 90.00	193	36,232,960	4.51	187,736	690
90.01 - 95.00	92	17,114,533	2.13	186,028	693
95.01 - 100.00	26	3,503,916	0.44	134,766	716
Total, Average or Weighted Average ...	3,375	$803,292,207	100.00%	$ 238,013	703

</TABLE>

The weighted average loan-to-value ratio at origination of the mortgage loans will be approximately 74.40%.

The above misstatement in identical or substantially similar language was found in the following Offering Documents: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at I-19 (May 31, 2007); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at II-26 (Feb. 23, 2007); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at II-27 (Mar. 26, 2007); Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at II-26 (Oct. 30, 2006).

E. DEFENDANTS MATERIALLY MISREPRESENTED THE ACCURACY OF THE CREDIT RATINGS ASSIGNED TO THE CERTIFICATES

218. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements using identical or

substantially similar language, among others, touting the credit ratings assigned to the Certificates:

> ***Each class of certificates offered hereby and by the accompanying prospectus supplement will be rated at the date of issuance in one of the four highest rating categories by at least one rating agency.*** (emphasis added)

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at 152 (May 31, 2007); Prospectus Supplement for RASC Series 2006-EMX9 Trust (Form 424B5), at 112 (Oct. 27, 2006); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at 112 (Feb. 23, 2007); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at 112 (Mar. 26, 2007); Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at 112 (Oct. 30, 2006); Prospectus Supplement for RAAC Series 2005-SP2 Trust (Form 424B5), at 124 (Oct. 11, 2005); Registration Statement (333-140610) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 152 (Apr. 3, 2007); Registration Statement (333-131209) filed by Residential Asset Securities Corp. (Form S-3/A, Am. 3), at 134 (Mar. 30, 2006); Registration Statement (333-125485) filed by Residential Asset Mortgage Products, Inc. (Form S-3/A, Am. 1), at 144 (Jul. 7, 2005).

> The ratings assigned by Fitch to mortgage pass-through certificates address the likelihood of the receipt by certificateholders of all distributions to which they are entitled under the transaction structure. Fitch's ratings reflect its analysis of the riskiness of the underlying mortgage loans and the structure of the transaction as described in the operative documents. Fitch's ratings do not address the effect on the certificates' yield attributable to prepayments or recoveries on the underlying mortgage loans. Further, the rating on the Interest Only Certificates does not address whether investors therein will recoup their initial investments. The rating on the Principal Only Certificates only addresses the return of their respective Certificate Principal Balances. The rating on the Residual Certificates only addresses

> the return of its Certificate Principal Balance and interest on the Residual Certificates at the related pass-through rate.
>
> The ratings assigned by Standard & Poor's to mortgage pass-through certificates address the likelihood of the receipt by certificateholders of payments required under the pooling and servicing agreement. Standard & Poor's ratings take into consideration the credit quality of the mortgage pool, structural and legal aspects associated with the certificates, and the extent to which the payment stream in the mortgage pool is adequate to make payments required under the certificates. The rating on the Principal Only Certificates only addresses the return of their respective Certificate Principal Balances. The rating on the Residual Certificates only addresses the return of its Certificate Principal Balance and interest on the Residual Certificates at the related pass-through rate. Standard & Poor's rating on the certificates does not, however, constitute a statement regarding frequency of prepayments on the mortgages. See "Certain Yield and Prepayment Considerations" herein.
>
> The ratings assigned by Moody's to the Senior Certificates, other than the Class II-A-2 Certificates, address the likelihood of the receipt by the Senior Certificateholders of all distributions to which they are entitled under the pooling and servicing agreement. Moody's ratings reflect its analysis of the riskiness of the mortgage loans and the structure of the transaction as described in the pooling and servicing agreement. Moody's ratings do not address the effect on the certificates' yield attributable to prepayments or recoveries on the mortgage loans.

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at 152 (May 31, 2007); Registration Statement (333-140610) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 152 (Apr. 3, 2007); Registration Statement (333-125485) filed by Residential Asset Mortgage Products, Inc. (Form S-3/A, Am. 1), at 144 (Jul. 7, 2005).

219. The statements quoted above were false because they represented that the investment-grade credit ratings of the Certificates were the product of rigorous independent analysis of the nature of the underlying assets and the credit quality of the guarantor, when in fact the Underwriter Defendants had colluded with the rating agencies and/or withheld

information from them to obtain higher credit ratings than the Certificates truly deserved. This made the Certificates appear to be safe, investment-grade securities when they were actually risky and speculative. For further discussion of the corruption of the rating system, *see* Section VII, *supra*.

F. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING THE SUFFICIENCY OF THE BORROWERS' INCOMES

220. Each of the Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, in identical or substantially similar language regarding the sufficiency of the borrowers' incomes to repay the loans underlying the Certificates:

> Once all applicable employment, credit and property information is received, a determination is made as to whether the prospective borrower has sufficient monthly income available to meet the borrower's monthly obligations on the proposed mortgage loan and other expenses related to the home (such as property taxes and hazard insurance) and other financial obligations and monthly living expenses.

The above misstatement in identical or substantially similar language was found in the following Offering Documents: Registration Statement (333-125485) filed by Residential Asset Mortgage Products, Inc. (Form S-3/A, Am. 1), at S-33 (Jul. 7, 2005); Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at 21 (May 31, 2007); Prospectus Supplement for RASC Series 2006-EMX9 Trust (Form 424B5), at 13 (Oct. 27, 2006); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at 13 (Feb. 23, 2007); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at 13 (Mar. 26, 2007); Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at 13 (Oct. 30, 2006); Registration Statement (333-140610) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 21 (Apr. 3, 2007);

Registration Statement (333-131209) filed by Residential Asset Securities Corp. (Form S-3/A, Am. 3), at 16 (Mar. 30, 2006).

221. The statements quoted above were false because in fact, the Originators had willfully turned a blind eye to the creditworthiness of their borrowers, lending money without making even cursory attempts to ensure that the loans would be repaid. Indeed, the Originators extended numerous loans even though the borrower's information was not provided, or even if it was, where that information was patently false and the Originators knew that the borrower was misrepresenting her or his income, occupation and other information, and was engaged in outright mortgage fraud. For further discussion of the Originators' purposeful disregard for income verification, *see* Section IV, *supra*.

G. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING OWNER OCCUPANCY RATES

222. Each of the Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained tables substantially similar to that below, purporting to provide data on the owner occupancy rates of mortgage loans underlying the Certificates. The figures contained in these tables were materially false and misleading, however, because Defendants systematically overstated the owner occupancy rates.

OCCUPANCY TYPES OF THE MORTGAGE LOANS

OCCUPANCY	NUMBER OF MORTGAGE LOANS	PRINCIPAL BALANCE	PERCENTAGE OF MORTGAGE LOANS	AVERAGE PRINCIPAL BALANCE	WEIGHTED AVERAGE CREDIT SCORE	WEIGHTED AVERAGE LOAN-TO-VALUE RATIO
Primary Residence.....	6,774	$1,192,830,252	96.65%	$176,089	626	82.40%
Second/Vacation.....	83	14,903,729	1.21	179,563	648	84.83
Non-Owner Occupied.....	190	26,409,995	2.14	139,000	648	77.16
TOTAL.....	7,047	$1,234,143,976	100.00%	$175,130	627	82.32%

o With respect to the junior mortgage loans, this table was calculated using the combined loan-to-value ratio for such mortgage loans.

The above misstatements in identical or substantially similar language were found in the following Offering Documents: Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at II-28 (Oct. 30, 2006); Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at S-14 (May 31, 2007); Prospectus Supplement for RASC Series 2006-EMX9 Trust (Form 424B5), at II-28 (Oct. 27, 2006); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at II-28 (Feb. 23, 2007); Prospectus Supplement for RAAC Series 2005-SP2 Trust (Form 424B5), at S-56 (Oct. 11, 2005); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at II-29 (Mar. 26, 2007);.

223. An analysis by Mass Mutual found that only 6,785 of the loans included in this particular mortgage pool were truly primary residences of the mortgagors, not 7,615, as represented above, and that the true owner occupancy rate was only 83.04%, not 93.94%. *See* Section V, *supra.*

224. Contrary to Defendants' representations, far fewer borrowers actually occupied the mortgaged properties than was represented to investors such as Plaintiff in the Offering Documents.

H. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING THE TRANSFER OF TITLE TO THE ISSUING TRUSTS

225. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, regarding the transfer of title to the Issuing Trusts.

> At the time of issuance of a series of certificates, the depositor will cause the mortgage loans or mortgage securities and any other assets being included in the related trust to be assigned to the trustee or its nominee, which may be the custodian, together with, if specified in the accompanying prospectus supplement, all principal and interest received on the mortgage loans or mortgage

> securities after the cut-off date, other than principal and interest due on or before the cut-off date and any Spread. The trustee will, concurrently with that assignment, deliver a series of certificates to the depositor in exchange for the mortgage loans or mortgage securities. Each mortgage loan or mortgage security will be identified in a schedule appearing as an exhibit to the related pooling and servicing agreement. Each schedule of mortgage loans will include, among other things, information as to the principal balance of each mortgage loan as of the cut-off date, as well as information respecting the mortgage rate, the currently scheduled monthly payment of principal and interest, the maturity of the mortgage note and the LTV ratio, at origination or modification, without regard to any secondary financing.

The above misstatement, in identical or substantially similar language, was found in the following Offering Documents: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at 41 (May 31, 2007); Prospectus Supplement for RASC Series 2006-EMX9 Trust (Form 424B5), at 27 (Oct. 27, 2006); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at 27 (Feb. 23, 2007); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at 27 (Mar. 26, 2007); Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at 27 (Oct. 30, 2006); Prospectus Supplement for RAAC Series 2005-SP2 Trust (Form 424B5), at 28-29 (Oct. 11, 2005); Registration Statement (333-140610) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at 41 (Apr. 3, 2007); Registration Statement (333-131209) filed by Residential Asset Securities Corp. (Form S-3/A, Am. 3), at 32 (Mar. 30, 2006); Registration Statement (333-125485) filed by Residential Asset Mortgage Products, Inc. (Form S-3/A, Am. 1), at 33 (Jul. 7, 2005).

226. These representations were false because Defendants routinely failed to physically deliver the original promissory notes and security instruments for the mortgage loans to the issuing trusts, as required by applicable state laws and the PSAs. These representations were also false because Defendants routinely failed to execute valid endorsements of the documents at the time of the purported transfer, as also required by applicable state laws and the

PSAs. The Issuing Trusts therefore did not possess good title to many of the mortgage loans and lacked legal authority to enforce many of the mortgage loans against the borrowers in the event of default.

I. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING THE CREDIT ENHANCEMENTS APPLICABLE TO THE CERTIFICATES

227. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, in identical or substantially similar language, regarding credit enhancements.

> ***The credit enhancement for the benefit of the Class A-I, Class M-I and Class B-I-1 Certificates consists of:***
>
> ***Excess Cash Flow.*** Because more interest with respect to the mortgage loans in loan group I is payable by the mortgagors than is expected to be necessary to pay the interest on the Class A-I, Class M-I and Class B-I-1 Certificates each month, there may be excess cash flow with respect to that loan group. Some of this excess cash flow may be used to protect the Class A-I, Class M-I and Class B-I-1 Certificates against some realized losses by making an additional payment of principal up to the amount of the realized losses or by reimbursing the principal portion of any realized losses previously allocated to the related certificates that remain unreimbursed if the required amount of overcollateralization for loan group I is reached.
>
> ***Overcollateralization.*** On the closing date, the trust will issue an aggregate certificate principal balance of offered certificates and the Class B-I-1 Certificates related to loan group I which is less than the aggregate principal balance of the mortgage loans in loan group I as of the cut-off date. In addition, on each distribution date, to the extent not used to cover certain losses, excess cash flow with respect to loan group I will be used to pay principal to the Class A-I, Class M-I and Class B-I-1 Certificates to the extent required to maintain the required level of overcollateralization, further reducing the aggregate certificate principal balance of the Class A-I, Class M-I and Class B-I-1 Certificates below the aggregate principal balance of the mortgage loans in loan group I. The excess amount of the aggregate principal balance of the mortgage loans represents overcollateralization, which may absorb

> some losses on the mortgage loans, if not covered by excess cash flow. If the level of overcollateralization falls below what is required, the excess cash flow with respect to loan group I will be paid to the related offered certificates as principal to the extent described in this prospectus supplement. This will reduce the principal balance of the offered certificates faster than the principal balance of the related mortgage loans, until the required level of overcollateralization is reached.
>
> ***Subordination.*** Except as described below, with respect to loan group I, if the Class B-I-1 Certificates remain outstanding, losses on the mortgage loans which are not covered by the yield maintenance agreement, excess cash flow or overcollateralization will be allocated to the Class B-I-1 Certificates, and the other classes of certificates will not bear any portion of such losses. If none of the Class B-I-1 Certificates are outstanding and the Class M-I Certificates remain outstanding, all such losses will be allocated to the Class M-I Certificates with the lowest payment priority, and the other classes of certificates will not bear any portion of such losses. If none of the Class B-I-1 Certificates or M-I Certificates are outstanding, all such losses will be allocated to the Class A-I Certificates on a pro rata basis. (emphasis added)

The above misstatements were contained in the following Offering Documents: Prospectus Supplement for RAAC Series 2005-SP2 Trust (Form 424B5), at S-13 (Oct. 11, 2005); Prospectus Supplement for RASC Series 2006-EMX9 Trust (Form 424B5), at S-14-15 (Oct. 27, 2006); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at S-16-17 (Feb. 23, 2007); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at S-16-17 (Mar. 26, 2007); Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at S-16 (Oct. 30, 2006).

> ***Credit enhancement*** for all of these certificates will be provided by additional classes of subordinated certificates which are not offered hereby.
>
> ...
>
> ***Allocation of Losses; Subordination***
>
> The subordination provided to the Senior Certificates by the Class B Certificates and Class M Certificates and the subordination

> provided to each class of Class M Certificates by the Class B Certificates and by any class of Class M Certificates subordinate thereto will cover Realized Losses on the mortgage loans that are Defaulted Mortgage Losses, Fraud Losses, Bankruptcy Losses and Special Hazard Losses. Any Realized Losses which are not Excess Special Hazard Losses, Excess Fraud Losses, Excess Bankruptcy Losses or Extraordinary Losses will be allocated as follows:
>
> o first, to the Class B Certificates;
>
> o second, to the Class M-3 Certificates;
>
> o third, to the Class M-2 Certificates; and
>
> o fourth, to the Class M-1 Certificates....
>
> (emphasis added)

The above misstatements were contained in the following Offering Document: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at S-1, S-87-88 (May 31, 2007).

228. These representations were false because all of the purported "enhancements" depended on or derived from the false representations regarding the quality of the mortgage loans underlying the Certificates. Piling additional high risk loans on top of other high risk loans does not "enhance" the nature of the RMBS.

J. DEFENDANTS MADE FALSE AND MISLEADING STATEMENTS REGARDING THE CHARACTERISTICS OF THE MORTGAGE POOLS

229. The Prospectus Supplements disseminated by Defendants in the course of selling the Certificates, and therefore the Registration Statements of which those Prospective Supplements formed a part, contained the following misleading statements, among others, in identical or substantially similar language, regarding the mortgage pool characteristics.

> The description in this prospectus supplement of the mortgage pool and the mortgaged properties is based upon the mortgage pool as constituted at the close of business on the cut-off date, as adjusted for the scheduled principal payments due during the month of the cut-off date. Prior to the issuance of the offered certificates, Residential Funding Company, LLC may remove mortgage loans

from the mortgage pool as a result of incomplete or defective documentation, or if it determines that the mortgage loan does not satisfy the characteristics described in this prospectus supplement. Residential Funding Company, LLC may also add a limited number of other mortgage loans to the mortgage pool prior to the issuance of the offered certificates in substitution for removed loans. ***The information in this prospectus supplement will be substantially representative of the characteristics of the mortgage pool as it will be constituted at the time the offered certificates are issued***, although the range of mortgage rates and maturities and some other characteristics of the mortgage loans in the mortgage pool may vary. ***In the event mortgage loans are removed from or added to the mortgage pool after the date hereof prior to the closing and any material pool characteristics of the actual mortgage pool differ by 5% or more from the description of the mortgage pool in this prospectus supplement, a current report on Form 8-K describing the final mortgage pool will be filed with the Securities and Exchange Commission within four business days of the related closing.***

The above misstatement was contained in the following Offering Documents: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at S-54-55 (May 31, 2007); Prospectus Supplement for RASC Series 2006-EMX9 Trust (Form 424B5), at S-63 (Oct. 27, 2006); Prospectus Supplement for RASC Series 2007-KS2 Trust (Form 424B5), at S-64 (Feb. 23, 2007); Prospectus Supplement for RASC Series 2007-KS3 Trust (Form 424B5), at S-64-65 (Mar. 26, 2007); Prospectus Supplement for RASC Series 2006-KS9 Trust (Form 424B5), at S-62 (Oct. 30, 2006); Prospectus Supplement for RAAC Series 2005-SP2 Trust (Form 424B5), at S-64, 5 (Oct. 11, 2005); Registration Statement (333-140610) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at S-44 (Apr. 3, 2007); Registration Statement (333-131209) filed by Residential Asset Securities Corp. (Form S-3/A, Am. 3), at S-54 (Mar. 30, 2006); Registration Statement (333-125485) filed by Residential Asset Mortgage Products, Inc. (Form S-3/A, Am. 1), at S-25-26, 6 (Jul. 7, 2005).

The mortgage loans were selected for inclusion in the mortgage pool from among mortgage loans purchased in connection with the Expanded Criteria Program described below ***based on the***

Sponsor's assessment of investor preferences and rating agency criteria.

The above misstatement was contained in the following Offering Documents: Prospectus Supplement for RALI Series 2007-QS7 Trust (Form 424B5), at S-54-55 (May 31, 2007); Registration Statement (333-140610) filed by Residential Accredit Loans, Inc. (Form S-3/A, Am. 1), at S-39 (Apr. 3, 2007); Registration Statement (333-131209) filed by Residential Asset Securities Corp. (Form S-3/A, Am. 3), at S-32 (Mar. 30, 2006).

230. These representations were false because Defendants were not concerned with investor preferences and instead included mortgage loans in the mortgage pools that were in fact the kinds of risky loans that conservative investors such as Plaintiff avoided.

XI. DEFENDANTS KNEW THAT THE OFFERING DOCUMENTS CONTAINED MATERIAL MISSTATEMENTS AND OMISSIONS

231. The allegations below are made in support of Plaintiff's common-law fraud, aiding and abetting claims and Minnesota Securities Act claims, and not in support of its negligent misrepresentation claim, which is based solely on negligence.

232. As set forth above, at all relevant times, Defendants knew or were reckless in not knowing that the Offering Documents contained material misstatements and omissions. Defendants' knowledge or recklessness is evidenced by, among other things, the following:

- Defendants knew or should have known, from the due diligence reports they received on the mortgage loans being pooled for securitization, their relationships with the third party originators, and their oversight of their affiliated originators GMAC Mortgage and Homecomings Financial, that there were significant and extensive defects in the mortgage loans underlying the Certificates. Defendants were aware that a significant proportion of the loans they originated or purchased had defects, including breaches of their and the third party originators' underwriting guidelines, improper appraisals and lack of documentation, or were reckless in not discovering this information. GMAC was aware that its underwriting software, including Assetwise and Desktop Underwriter, did not apply its stated underwriting standards and would not screen out non-conforming loans. Defendants nonetheless allowed large numbers of defective mortgages to

be included in the mortgage pools used to collateralize the Certificates sold to Plaintiff and other investors. *See supra* ¶¶ 74-113.

- The Defendants also knew or were reckless in not knowing that those mortgages were being issued to borrowers that were likely to default, as evidenced by the high percentage of loans underlying the Certificates that are currently in foreclosure, as well as the percentage of loans underlying the Certificates that are currently delinquent by more than 90 days. *See infra* ¶ 276.

- Defendants knew or were reckless in not knowing that the appraisal and owner-occupancy data presented in the Offering Documents was false, as evidenced by the degree to which the Offering Documents consistently overstated owner-occupancy rates and understated LTV ratios. Defendants knew or should have known that their underwriting procedures were inadequate to verify that the mortgaged properties had been independently appraised and that the statistical data presented in the Offering Documents was accurate. *See supra* ¶¶ 167-169; 173-177.

- Defendants knew or were reckless in not knowing that the mortgages they were acquiring from the various originators as quickly as possible and packaging into the Certificates sold to investors such as Plaintiff were not worthy of their high credit ratings. The ratings of the Certificates, which were in all cases rated AAA/Aaa at the time they were sold to Plaintiff, have declined substantially to their current non-investment grade and/or junk ratings. *See supra* ¶ 182-185; 187; 190; and *infra* 270-275.

- Defendants did not disclose the extent to which they abandoned their underwriting guidelines or used improper appraisals to solicit more favorable ratings from the rating agencies. Defendants collaborated with the rating agencies to obtain sufficient "credit enhancement" to obtain the highest ratings possible. *See supra* ¶¶ 191-195.

- Defendants had control over the loan files, promissory notes and security instruments of the underlying mortgages, and were responsible for ensuring that the documents were properly indorsed and transferred so as to accord with state law and the terms of the applicable PSAs. Defendants were aware that they routinely failed to transfer title to the Issuing Trusts, and attempted to conceal this fact through fraudulent filings when foreclosing on securitized mortgages. *See supra* ¶¶ 200; 203-206.

XII. PLAINTIFF JUSTIFIABLY RELIED ON DEFENDANTS' MISREPRESENTATIONS TO ITS DETRIMENT

233. Plaintiff, through its agents, purchased senior classes of mortgage-backed securities (*i.e.*, those rated AAA/Aaa by the rating agencies Standard & Poor's and Moody's

Investors Service). The Certificates were purchased to generate income and total return through safe investments. The securities were purchased with the expectation that the investments could be—and indeed some would be and were—purchased and sold on the secondary market.

234. In making the investments, Plaintiff and/or its agents relied upon Defendants' representations and assurances regarding the quality of the mortgage collateral underlying the Certificates, including the quality of the underwriting processes related to the underlying mortgage loans. Plaintiff and/or its agents received, reviewed, and relied upon the Offering Documents, which described in detail the mortgage loans underlying each offering. Offering Documents containing the representations outlined above (or nearly identical, materially similar counterparts thereto) were obtained, reviewed, and relied upon before any purchase was made.

235. In purchasing the Certificates, Plaintiff and/or its agents justifiably relied on Defendants' false representations and omissions of material fact detailed above, including the misstatements and omissions in the Offering Documents. These representations materially altered the total mix of information upon which Plaintiff and/or its agents made their purchasing decisions.

236. But for the misrepresentations and omissions in the Offering Documents, Plaintiff and its agents would not have purchased or acquired the Certificates as they ultimately did, because those representations and omissions were material to their decisions to acquire the Certificates, as described above.

237. As discussed *supra*, Plaintiff is a conservative institutional investor that relied on Defendants' representations in the Offering Documents that the Certificates purchased by Plaintiff were safe, AAA-rated securities. Because Plaintiff did not have access to the loan files, appraisals, or other supporting documentation for the loans underlying the Certificates, Plaintiff

had no reasonable means or ability to conduct its own due diligence regarding the quality of the mortgage pool. As such, Plaintiff and its agents were forced to and did rely on the representations made by Defendants in the Offering Documents, and it was because of those representations that Plaintiff purchased the Certificates at issue in this Complaint.

XIII. THE LIABILITY OF THE CONTROL PERSON DEFENDANTS

A. DEFENDANT ALLY FINANCIAL

238. Defendant Ally Financial was in a position to and in fact controlled each of Defendants ResCap, GMAC Mortgage, GMAC-RFC, Homecomings, RALI, RASC, RAMP, RFC, and Residential Funding. Defendant Ally Financial operated its consolidated subsidiaries as a collective enterprise, making significant strategic decisions for its subsidiaries, monitoring enterprise-wide risk, and maximizing profit for Ally Financial's executives and corporate parent.

239. Unlike arm's-length securitizations where the loan originator, depositor, underwriters, and issuers are unrelated third parties, here the transactions among the sponsor (RFC); the depositor (RALI, RAMP or RASC), and the Issuing Trust were not arm's-length transactions at all, as Ally Financial controlled every aspect of the securitization processes. Furthermore, the Ally-controlled entity Residential Funding was an underwriter for several of the Certificates purchased by Plaintiff.

240. The mortgage loans underlying the Certificates were originated by the Ally Financial-controlled entity Homecomings or third-party originators and acquired by the sponsor, RFC. Ally Financial created RALI, RAMP and RASC, corporations structured as limited purpose subsidiaries, to acquire mortgage loans from RFC and to transfer the loans to the Issuing Trusts for sale to investors as RMBS. As the depositors, RALI, RAMP and RASC were shell corporations with no assets of their own, and had the same directors and officers (Paradis, Duncan and Flees among others) as other GMAC entities. Through these executives, Ally

Financial exercised actual day-to-day control over RALI, RAMP and RASC. Revenues flowing from the issuance and sale of the Certificates were passed through to Ally Financial.

241. RALI, RAMP and RASC in turn created the Issuing Trusts. Like the Depositor Defendants, the Issuing Trusts were shell entities that were established for the sole purpose of holding the pools of mortgage loans assembled by the Depositor Defendants, and issuing Certificates collateralized against these mortgage pools to underwriters for sale to the public. Through the Depositor Defendants, Ally Financial also exercised actual control over the Issuing Trusts.

242. Once the Issuing Trusts issued the Certificates, the Certificates were purchased by one or more underwriters. In several cases, Residential Funding, which was similarly controlled by Ally Financial, was one of the underwriters.

243. Ally Financial also participated in creating the Offering Documents. In sum, Ally Financial maintained a high level of day-to-day scrutiny and control over its subsidiaries, and controlled the entire process leading to the sale of the Certificates to ABP.

244. In its SEC filings, Ally Financial discussed its practice of securitizing loans by acting through its subsidiaries. For example, Ally Financial's 10-K Annual Report, filed on February 28, 2006 for the period ending December 31, 2005, states that:

- "We operate directly and through our subsidiaries and affiliates in which we or GM have equity investments. . . . We originate, purchase, service, sell and securitize residential and commercial mortgage loans and mortgage related products."

- "[W]e utilize asset and mortgage securitizations and sales as a critical component of our diversified funding strategy."

- "We are a leading real estate finance company with two of our mortgage segments, GMAC Residential and GMAC-RFC, providing residential real estate products and services. Net income from the operations of GMAC Residential and GMAC-RFC together totaled $1,021 million, which accounted for approximately 43% of our net income in 2005."

245. Ally Financial also touted its purported underwriting standards in its SEC filings, asserting that it followed established policies and procedures to ensure asset quality. Ally Financial's 10-K Annual Report, filed on February 28, 2006 for the period ending December 31, 2005, states that:

> All mortgage loans that we originate and most of the mortgage loans we purchase are subject to our underwriting guidelines and loan origination standards. When originating mortgage loans directly through our retail branches, or by internet or telephone, or indirectly through mortgage brokers, we follow established lending policies and procedures that require consideration of a variety of factors, including:
>
> - The borrower's capacity to repay the loan;
> - The borrower's credit history;
> - The relative size and characteristics of the proposed loan; and
> - The amount of equity in the borrower's property (as measured by the borrower's loan-to-value ratio.
>
> Our underwriting standards have been designed to produce loans that meet the credit needs and profiles of our borrowers, thereby creating more consistent performance characteristics for investors in our loans. When purchasing mortgage loans from correspondent lenders, we either re-underwrite the loan prior to purchase or delegate underwriting responsibility to the correspondent lender originating the mortgage loan.

246. Thus, according to Ally Financial's own SEC filings, it controlled the underwriting standards for its subsidiaries' RMBS offerings.

247. Ally Financial culpably participated in the violations of its subsidiaries discussed above. Ally Financial approved the manner in which it sold the loans it elected to securitize and controlled the disclosures made in connection with those securitizations. Among other misconduct, Ally Financial oversaw the actions of its subsidiaries and allowed them, including

Defendants RALI, RAMP, RASC, and Residential Funding, to misrepresent the mortgage loans' characteristics in the Offering Documents.

B. THE INDIVIDUAL DEFENDANTS

1. Bricker

248. As Chief Financial Officer and a Director of Defendant RALI, Bricker had the power to direct RALI's policies relating to securitization. Bricker aided and abetted the fraud by permitting RALI to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Bricker personally participated in the fraud by, *inter alia*, signing the RALI Registration Statement dated April 3, 2007.

249. In addition to serving as an officer of RALI, according to SEC filings, Bricker was also the Chief Financial Officer of GMAC Mortgage and GMAC RFC, the indirect parent corporation of Homecomings. As such, Bricker either knew of GMAC Mortgage and Homecomings' abandonment of their underwriting standards, as discussed in ¶¶ 97-112, or was reckless for not knowing of these critical matters. Furthermore, Bricker was familiar with and participated in GMAC's RMBS operations through his high-ranking position at GMAC RFC, the parent corporation of the Depositor Defendants and Sponsor Defendant.

2. Duncan

250. As Acting Chief Financial Officer of Defendants RAMP and RASC, Duncan had the power to direct RAMP and RASC policies relating to securitization. Duncan aided and abetted the fraud by permitting RAMP and RASC to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Duncan personally participated in the fraud by, *inter alia*, signing the RAMP Registration Statement dated July 7, 2005 and the RASC Registration Statement dated March 30, 2006.

251. In addition to serving as an officer of RAMP and RASC, according to SEC filings, Duncan was also the Acting Chief Financial Officer of Defendants RFC, GMAC RFC and Homecomings. As Homecomings' Acting Chief Financial Officer, Duncan either knew of Homecomings' abandonment of its underwriting standards, as discussed in ¶¶ 105-112, or was reckless for not knowing of these critical matters. Furthermore, Duncan was familiar with and participated in GMAC's RMBS operations through his high-ranking positions with GMAC RFC, the parent corporation of the Depositor Defendants, and RFC, the Sponsor Defendant.

3. Flees

252. As Principal Accounting Officer of Defendants RAMP and RASC, Flees had the power to direct RAMP and RASC policies relating to securitization. Flees aided and abetted the fraud by permitting RAMP and RASC to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Flees personally participated in the fraud by, *inter alia*, signing the RAMP Registration Statement dated July 7, 2005 and the RASC Registration Statement dated March 30, 2006.

253. In addition to serving as an officer of RAMP and RASC, according to SEC filings, Flees was also the Principal Accounting Officer of Defendants RFC, GMAC RFC and Homecomings. As such, Flees either knew of Homecomings' abandonment of its underwriting standards, as discussed in ¶¶ 105-112, or was reckless for not knowing of these critical matters. Furthermore, Flees was familiar with and participated in GMAC's RMBS operations through his high-ranking position with GMAC RFC, the parent corporation of the Depositor Defendants and Sponsor Defendant.

4. Jones

254. As President and Chief Executive Officer of Defendant RALI, Jones had the power to direct RALI policies relating to securitization. Jones aided and abetted the fraud by

permitting RALI to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Jones personally participated in the fraud by, *inter alia*, signing the RALI Registration Statement dated April 3, 2007.

255. In addition to serving as an officer of RALI, according to a March 23, 2007 press release, Jones was named Chief Executive Officer of ResCap in June 2007. Jones had previously been ResCap's Chief Operating Officer and President of its U.S. Residential Finance Group. Jones was familiar with and participated in GMAC's RMBS operations through his high-ranking positions with ResCap, the indirect parent corporation of the Sponsor Defendant, Depositor Defendants, GMAC Mortgage, and Homecomings. Before coming to GMAC, Jones had been Chief Executive Officer of Aegis Mortgage Corporation.

5. Lundsten

256. As Attorney-in-Fact of Defendant RASC, Lundsten had the power to direct RASC's policies relating to securitization. Lundsten aided and abetted the fraud by permitting RASC to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Lundsten personally participated in the fraud by, *inter alia*, signing the RASC Registration Statement dated March 30, 2006.

257. Lundsten was familiar with and participated in GMAC's RMBS operations. According to a September 19, 2005 article in the Asset Securitization Report, Lundsten became the Senior Vice President of Securitization Management at GMAC RFC in September 2005.

6. Olson

258. As a Director of Defendant RASC, Olson had the power to direct RASC's policies relating to securitization. Olson aided and abetted the fraud by permitting RASC to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party

originators for securitization. Olson personally participated in the fraud by, *inter alia*, signing the RASC Registration Statement dated March 30, 2006.

259. In addition to serving as an officer of RASC, according to SEC filings, Olson was also the Chief Financial Officer of ResCap, the indirect parent company of GMAC Mortgage, and a Director of GMAC RFC, RFC, and Homecomings. As such, Olson either knew of GMAC Mortgage and Homecomings' abandonment of their underwriting standards, as discussed in ¶¶ 97-112, or was reckless for not knowing of these critical matters. According to a September 18, 2006 article in the NATIONAL MORTGAGE NEWS, Olsen was appointed the Senior Managing Director of ResCap's warehouse lending business in May 2006, a position believed to involve significant contact with and analysis of third-party mortgage originators. Furthermore, Olson was familiar with and participated in GMAC's RMBS operations through his positions with ResCap and GMAC RFC, the indirect and direct parent corporations of the Sponsor Defendant and Depositor Defendants.

7. Paradis

260. As President and Chief Executive Officer of Defendants RAMP and RASC, Paradis had the power to direct RAMP and RASC policies relating to securitization. Paradis aided and abetted the fraud by permitting RAMP and RASC to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Paradis personally participated in the fraud by, *inter alia*, signing the RAMP Registration Statement dated July 7, 2005 and the RASC Registration Statement dated March 30, 2006.

261. In addition to serving as an officer of RAMP and RASC, according to SEC filings, Paradis was also the co-Chief Executive Officer of ResCap, the indirect corporate parent of GMAC Mortgage and Homecomings Financial, and the Chief Executive Officer of GMAC RFC and RFC. As such, Paradis either knew of GMAC Mortgage and Homecomings'

abandonment of their underwriting standards, as discussed in ¶¶ 97-112, or was reckless for not knowing of these critical matters. Furthermore, Paradis was familiar with and participated in GMAC's RMBS operations through his top-ranking positions with ResCap and GMAC RFC, the indirect and direct parents of the Sponsor Defendant and Depositor Defendants. As discussed in ¶ 84, a former GMAC employee has said that Paradis personally exhorted GMAC personnel to buy even defective loans from favored vendors so as to maintain good business relationships.

8. Walker

262. As a Director of Defendant RAMP, Walker had the power to direct RAMP's policies relating to securitization. Walker aided and abetted the fraud by permitting RAMP to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Walker personally participated in the fraud by, *inter alia*, signing the RAMP Registration Statement dated July 7, 2005.

263. In addition to serving as an officer of RAMP, according to SEC filings, Walker was also a Director of ResCap, GMAC RFC, GMAC Mortgage, RFC, and Homecomings. As such, Walker either knew of GMAC Mortgage and Homecomings' abandonment of their underwriting standards, as discussed in ¶¶ 97-112, or was reckless for not knowing of these critical matters. Furthermore, Walker was familiar with and participated in GMAC's RMBS operations through his positions with ResCap and GMAC RFC, the indirect and direct parents of the Sponsor Defendant and Depositor Defendants.

9. Wold

264. As Attorney-in-Fact of Defendant RAMP, Wold had the power to direct RAMP's policies relating to securitization. Wold aided and abetted the fraud by permitting RAMP to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party

originators for securitization. Wold personally participated in the fraud by, *inter alia*, signing the RAMP Registration Statement dated July 7, 2005.

265. Wold was familiar with and participated in GMAC's RMBS operations. According to a September 19, 2005 article in the Asset Securitization Report, Wold was GMAC RFC's Senior Vice President of Securitization Management until September 2005, when she moved to ResCap as head of investor relations and corporate finance. A June 7, 2011 article in the Asset Securitization Report characterized Wold as having led ResCap's private label mortgage securitization program.

10. Young

266. As a Director of Defendant RALI, Young had the power to direct RALI policies relating to securitization. Young aided and abetted the fraud by permitting RALI to purchase low-quality, poorly-underwritten loans from GMAC entities and/or third-party originators for securitization. Young personally participated in the fraud by, *inter alia*, signing the RALI Registration Statement dated April 3, 2007.

267. In addition to serving as an officer of RALI, according to SEC filings, Young was also the Chief Accounting Officer and Controller of ResCap. Ally's website states that Young "was responsible for financial oversight, analysis, controls and reporting, accounting and business planning for the company's mortgage-related operations." As such, Young either knew of GMAC Mortgage and Homecomings' abandonment of their underwriting standards, as discussed in ¶¶ 97-112, or was reckless for not knowing of these critical matters. Furthermore, Young was familiar with and participated in GMAC's RMBS operations through his top-ranking position with ResCap, the indirect parent of the Sponsor Defendants and Depositor Defendants.

XIV. PLAINTIFF HAS SUFFERED LOSSES AS A RESULT OF ITS PURCHASES OF THE CERTIFICATES

268. The false and misleading statements of material facts and omissions of material facts in the Offering Documents directly caused Plaintiff damage, because the Certificates were in fact far riskier than Defendants had described them to be. As set forth below, the loans underlying the Certificates experienced default and delinquency at very high rates due to Defendants' abandonment of their purported underwriting guidelines. The resulting downgrades to the Certificates ratings have made them unmarketable at anywhere near the prices Plaintiff paid, thus confirming that Plaintiff paid far more for the Certificates than the value they actually received.

269. As set forth below, Plaintiff has incurred substantial losses in market value, due to the poor quality of the collateral underlying the Certificates. The income and principal payments Plaintiff received have been lower than Plaintiff expected. Because of the declining collateral base, it is increasingly likely that Plaintiff will not obtain the full payments expected under the "waterfall" provisions of the securitizations. This is reflected in the far diminished market value for these securities, which, again, is a strong indicator that the true value of the Certificates was far less than what Plaintiff paid.

270. Plaintiff purchased Certificates issued by RAAC Series 2005-SP2 Trust, when they were rated Aaa by Moody's, but the Certificates have since been downgraded twice and are currently rated B3. At the time of filing of this complaint, the Certificates were trading at just approximately 67% of par.

271. Plaintiff purchased Certificates issued by RALI Series 2007-QS7 Trust, when they were rated Aaa by Moody's, but the Certificates have since been downgraded three times

and are currently rated Caa3. At the time of filing of this complaint, the Certificates were trading at just approximately 46% of par.

272. Plaintiff purchased Certificates issued by RASC Series 2006-EMX9 Trust, when they were rated Aaa by Moody's, but the Certificates have since been downgraded twice and are currently rated B2. At the time of filing of this complaint, the Certificates were trading at just approximately 88% of par.

273. Plaintiff purchased Certificates issued by RASC Series 2006-KS9 Trust, when they were rated Aaa by Moody's, but the Certificates have since been downgraded three times and are currently rated Caa1. At the time of filing of this complaint, the Certificates were trading at just approximately 90% of par.

274. Plaintiff purchased Certificates issued by RASC Series 2007-KS2 Trust, when they were rated Aaa by Moody's, but the Certificates have since been downgraded four times and are currently rated Caa1. At the time of filing of this complaint, the Certificates were trading at just approximately 82% of par.

275. Plaintiff purchased Certificates issued by RASC Series 2007-KS3 Trust, when they were rated Aaa by Moody's, but the Certificates have since been downgraded and are currently rated Ba2. At the time of filing of this complaint, the Certificates were trading at approximately 99% of par.

276. As a result of the multiple and material misrepresentations contained in the Offering Documents, Plaintiff has suffered losses on its purchases of Certificates. As of the filing of this Complaint, the mortgage loans in the pools held by the Issuing Trusts and underlying Plaintiff's Certificates have suffered escalating default rates and mounting

foreclosures, resulting in across-the-board ratings downgrades and other negative actions by the rating agencies, as shown in the table below.

Certificates	90 Day Delinquency Rate (%)	Foreclosure Rate (%)	Current Moody's Rating
RAAC 2005-SP2	15.14	10.38	B3
RALI 2007-QS7	17.08	11.38	Caa3
RASC 2006-EMX9	57.21	48.67	B2
RASC 2006-KS9	30.21	21.72	Caa1
RASC 2007-KS2	29.03	20.30	Caa1
RASC 2007-KS3 AI1	28.32	20.98	Ba2

CAUSES OF ACTION

FIRST CAUSE OF ACTION
Common-Law Fraud
(Against the Corporate Defendants)

277. Plaintiff repeats and realleges each and every allegation contained above as if fully set forth herein.

278. This claim is brought against the Corporate Defendants.

279. As alleged in detail above, the Offering Documents contained untrue statements of material fact regarding the present creditworthiness of the Certificates and the quality of the underlying assets, omitted to state material facts necessary to make the untrue statements not misleading, and concealed and failed to disclose material facts. The Common-Law Fraud Defendants promoted and sold the Certificates purchased by Plaintiff pursuant to the defective Offering Documents. The Common-Law Defendants possessed accurate information regarding the present creditworthiness of the Certificates and the quality of the underlying assets, which was never disclosed to Plaintiff or other investors.

280. Each of the Common-Law Fraud Defendants either knew their representations and omissions were false and/or misleading at the time they were made, or made their representations with reckless disregard for their truth or falsity.

281. Each of the Common-Law Fraud Defendants made the representations and omissions in the Prospectuses and Prospectus Supplements with the intention to induce Plaintiff and other investors to act in reliance thereon.

282. At the time of the Common-Law Fraud Defendants' false statements, misrepresentations and omissions, Plaintiff was ignorant of their falsity and believed them to be true. Plaintiff justifiably relied on the Common-Law Fraud Defendants' false and misleading representations and omissions in purchasing the Certificates. The true facts regarding the creditworthiness of the Certificates and the quality of the underlying assets, including the Originators' abandonment of their underwriting practices, the use of improper appraisal methods to value collateral, the inaccuracy of the ratings assigned by the rating agencies, and the failure to convey to the Issuing Trusts legal title to the underlying mortgages, were peculiarly within the Common-Law Fraud Defendants' knowledge and not ascertainable by Plaintiff or other investors through ordinary channels. Had Plaintiff known about these matters, Plaintiff would not have purchased the Certificates.

283. As a direct and proximate result of Plaintiff's reliance on the Corporate Defendants' false and misleading statements and omissions, Plaintiff has suffered pecuniary damages in connection with its purchase of the Certificates.

SECOND CAUSE OF ACTION
Aiding & Abetting Fraud
(Against All Defendants)

284. Plaintiff repeats and realleges each and every allegation contained above as if fully set forth herein.

285. This claim is brought against all Defendants (the "Aiding and Abetting Defendants") for aiding and abetting the fraudulent and reckless misrepresentations by all

Defendants. Each of these Defendants aided and abetted the fraud committed by all of the other Defendants

286. As alleged in detail above, the Corporate Defendants knowingly promoted and sold Certificates to ABP pursuant to materially misleading Offering Documents, thereby damaging ABP. The Aiding and Abetting Defendants knew of the fraud perpetrated on ABP by the Corporate Defendants. The Aiding and Abetting Defendants directed, supervised and otherwise knew of the abandonment of underwriting practices and the utilization of improper appraisal methods; the inaccuracy of the ratings assigned by the rating agencies; and the failure to convey to the Issuing Trusts legal title to the underlying mortgages.

287. The Aiding and Abetting Defendants provided the Corporate Defendants with substantial assistance in perpetrating the fraud. The Aiding and Abetting Defendants participated in the violation of mortgage loan underwriting and appraisal standards; made false public statements about mortgage loan underwriting and appraisal standards; provided false information about the mortgage loans underlying the Certificates to the rating agencies; provided false information for use in the Offering Documents; and/or participated in the failure to properly endorse and deliver the mortgage notes and security documents to the Issuing Trusts.

288. It was foreseeable to the Aiding and Abetting Defendants at the time they actively assisted in the commission of the fraud that Plaintiff would be harmed as a result of their assistance.

289. As a direct and natural result of the fraud committed by the Corporate Defendants, and the knowing and active participation by the Aiding and Abetting Defendants, Plaintiff has suffered substantial damages.

THIRD CAUSE OF ACTION
Negligent Misrepresentation
(Against All Defendants)

290. Plaintiff repeats and realleges each and every allegation contained above as if fully set forth herein.

291. This claim is brought against all Defendants.

292. Defendants were in the business of underwriting home mortgage loans, pooling the mortgage assets for securitization, issuing RMBS, and marketing RMBS to investors. Defendants received pecuniary compensation from the sale of the Certificates.

293. Because the Negligent Misrepresentation Defendants arranged the Securitizations, and originated or acquired, and underwrote all of the underlying mortgage loans, they had unique and special knowledge about the loans in the Offerings. In particular, the Negligent Misrepresentation Defendants had unique and special knowledge and expertise regarding the quality of the underwriting of those loans as well as the servicing practices employed as to such loans.

294. In the course of selling the Certificates, Defendants drafted and distributed the Offering Documents for the guidance of investors such as Plaintiff. The Offering Documents purported to contain material information regarding the creditworthiness of the Certificates and the quality of the underlying assets, and the Negligent Misrepresentation Defendants anticipated that investors would rely on this information in deciding whether or not to purchase Certificates.

295. As an investor in the Certificates, Plaintiff is one of a limited group of persons whom the Defendants intended would rely on the information in the Offering Documents.

296. Because Plaintiff could not evaluate the loan files for the mortgage loans underlying the Certificates, and because Plaintiff could not examine the underwriting quality or servicing practices for the mortgage loans in the securitizations on a loan-by-loan basis, it was

heavily reliant on Defendants' unique and special knowledge regarding the underlying mortgage loans when determining whether to make each investment of Certificates. Plaintiff was entirely reliant on Defendants to provide accurate information regarding the loans in engaging in that analysis. Accordingly, Defendants were uniquely situated to evaluate the economics of each Certificate.

297. The true facts regarding the creditworthiness of the Certificates and the quality of their underlying assets, including the Originators' abandonment of their underwriting practices, the use of improper appraisal methods to value collateral, the inaccuracy of the ratings assigned by the rating agencies, and the failure to convey to the Issuing Trusts legal title to the underlying mortgages, were peculiarly within Defendants' knowledge and not ascertainable by Plaintiff or other investors through ordinary channels.

298. Defendants owed Plaintiff a duty to use reasonable care to ensure that their statements on these matters were not untrue or misleading.

299. Defendants negligently breached and violated this duty to use reasonable care. As alleged above, the Offering Documents contained untrue statements of material fact regarding the present creditworthiness of the Certificates and the quality of the underlying assets, omitted to state material facts necessary to make the untrue statements not misleading, and concealed and failed to disclose material facts. At the time Defendants provided the Offering Documents to Plaintiff, Defendants had no reasonable grounds to believe that the information contained therein regarding the creditworthiness of the Certificates and the quality of the underlying assets was true.

300. At the time of Defendants' false statements, misrepresentations and omissions, Plaintiff was ignorant of their falsity and believed them to be true. Defendants were aware that

Plaintiff relied on their unique and special expertise and experience and depended upon them for accurate and truthful information. Plaintiff justifiably relied on Defendants' false and misleading representations and omissions in purchasing the Certificates. Had Plaintiff known the truth about the creditworthiness of the Certificates and the quality of the underlying assets, Plaintiff would not have purchased the Certificates.

301. Based on their expertise, superior knowledge, and relationship with Plaintiff, Defendants owed a duty to Plaintiff to use reasonable care in providing complete, accurate, and timely information regarding the mortgage loans and the Certificates. Defendants breached their duty to provide such reasonable care and competence to Plaintiff.

302. Defendants likewise made misrepresentations which they knew, or were negligent in not knowing at the time to be false, in order to induce Plaintiff's investment in the Certificates. Defendants provided the Offering Documents to Plaintiff in connection with the Certificates, for the purpose of informing Plaintiff of material facts necessary to make an informed judgment about whether to purchase the Certificates in the Offerings. In providing these documents, Defendants knew that the information contained and incorporated therein would be used for a serious purpose, and that Plaintiff, like other reasonably prudent investors, intended to rely on the information.

303. As a direct and proximate result of Plaintiff's reliance on Defendants to provide accurate information regarding the Certificates and their underlying assets, and Defendants' negligent breach of that duty of care, Plaintiff has suffered pecuniary damages in connection with its purchase of the Certificates.

FOURTH CAUSE OF ACTION
Violation of Minnesota Securities Act

304. Plaintiff repeats and realleges each and every allegation contained above as if fully set forth herein.

305. This claim is brought under the Minnesota Securities Act against the Corporate Defendants. The Corporate Defendants (a) employed devices, schemes, and artifices to defraud; (b) made untrue statements of material fact and/or omitted material facts necessary to make the statements not misleading; and (c) engaged in acts, practices and a course of business which operated as a fraud and deceit upon Plaintiff, in violation of Minn. Stat §§ 80A.68 and 80A.76(b).

306. As alleged in detail above, the Offering Documents contained untrue statements of material fact regarding the present creditworthiness of the Certificates and the quality of the underlying assets, omitted to state material facts necessary to make the untrue statements not misleading, and concealed and failed to disclose material facts. The Corporate Defendants promoted and sold the Certificates purchased by Plaintiff pursuant to the defective Offering Documents.

307. Each of the Corporate Defendants either knew their representations and omissions were false and/or misleading at the time they were made, or made their representations with reckless disregard for their truth or falsity.

308. Each of the Corporate Defendants made the representations and omissions in the Prospectuses and Prospectus Supplements with the intention to induce Plaintiff and other investors to act in reliance thereon.

309. At the time of the Corporate Defendants' false statements, misrepresentations and omissions, Plaintiff was ignorant of their falsity and believed them to be true. Plaintiff

justifiably relied on the Corporate Defendants' false and misleading representations and omissions in purchasing the Certificates. The true facts regarding the creditworthiness of the Certificates and the quality of the underlying assets, including the Originators' abandonment of their underwriting practices, the use of improper appraisal methods to value collateral, the inaccuracy of the ratings assigned by the rating agencies, and the failure to convey to the Issuing Trusts legal title to the underlying mortgages, were peculiarly within the Corporate Defendants' knowledge and not ascertainable by Plaintiff or other investors through ordinary channels. Had Plaintiff known about these matters, Plaintiff would not have purchased the Certificates.

310. As a direct and proximate result of Plaintiff's reliance on the Corporate Defendants' false and misleading statements and omissions, Plaintiff has suffered pecuniary damages in connection with its purchase of the Certificates.

311. By virtue of the foregoing, Defendants have violated Minn. Stat § 80A.68 and are liable to Plaintiff pursuant to MINN. STAT. § 80A.76(b).

PRAYER FOR RELIEF

WHEREFORE, Plaintiff prays for relief and judgment, as follows:

An award in favor of Plaintiff against Defendants, jointly and severally, for all damages sustained as a result of Defendants' wrongdoing, in an amount to be proven at trial, but including at a minimum:

(i) Plaintiff's monetary losses, including loss of market value and loss of principal and interest payments;

(ii) Rescission and recovery of the consideration paid for the Certificates, with interest thereon;

(iii) Plaintiff's costs and disbursements in this suit, including reasonable attorneys' fees and expert fees;

(iv) Prejudgment interest at the maximum legal rate; and

(v) Such other and further relief as the Court deems just and proper.

JURY DEMAND

Plaintiff hereby demand a trial by jury.

Plaintiffs Thrivent Financial for Lutherans, Thrivent Mutual Funds (defined below), Thrivent Variable Annuity Portfolio Funds (defined below), and Thrivent Defined Benefits Plan Trust (collectively, "Thrivent" or "Plaintiffs"), by their attorneys for their Complaint herein against Residential Funding Company, LLC, GMAC Mortgage, LLC, Residential Accredit Loans, Inc. ("RALI"), Residential Asset Mortgage Products, Inc. ("RAMP"), Ally Securities, LLC (f/k/a Residential Funding Securities, LLC), Homecomings Financial, LLC, and Ally Bank (collectively, "GMAC" or the "GMAC Defendants"), allege as follows:

I. SUMMARY OF THE ACTION

1. This action concerns a massive fraud perpetrated by GMAC against the Plaintiffs, which invested in mortgage-backed securities ("MBS") issued by subsidiaries of GMAC. Thrivent is an institutional investor that wanted conservative, low-risk investments and thus bought GMAC-issued MBS (the "Certificates") that were represented to be backed by mortgages issued pursuant to specific underwriting guidelines and awarded the highest AAA investment-grade rating. In purchasing the Certificates, the Plaintiffs relied on term sheets, prospectuses and other materials prepared by and provided (directly or indirectly by way of other underwriters) to them by the Defendants, which made representations about GMAC's purportedly conservative mortgage underwriting standards, the appraisals of the mortgaged properties, the mortgages' loan-to-value ("LTV") ratios, and other facts that were material to Plaintiffs' investment decisions. These representations by Defendants were recklessly or knowingly false when made.

2. In reality, GMAC was driven by only one purpose – to originate or purchase and securitize as many mortgage loans as possible into MBS to generate profits for the Defendants, without regard to the investors that relied on the critical, false information provided to them with respect to the related Certificates. GMAC was at the forefront of the securitization of

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

subprime mortgage loans, issuing nearly $28 billion in subprime residential MBS ("RMBS") in 2005 alone.

3. The GMAC Defendants' fraud has been revealed through numerous private lawsuits and government investigations, including an investigation by all 50 state attorneys general into fraudulent mortgage assignment and foreclosure documents filed by GMAC in foreclosure proceedings. Plaintiffs' counsel's investigation has also obtained evidence of the Defendants' fraud in the form of statements by former employees of the GMAC Defendants. These confidential witnesses confirmed that GMAC engaged in "creative underwriting" in order to approve loans and that supervisors at GMAC routinely overrode recommendations to reject loan applications and accepted faulty appraisals in order to approve loans.

4. Between 2005 and 2007, Plaintiffs purchased millions of dollars in GMAC MBS in seven offerings, which were issued pursuant or traceable to various Registration Statements, Prospectuses and Prospectus Supplements (the "Offering Documents"). All of the Offering Documents contained materially untrue statements and omissions. Plaintiffs' purchases of GMAC Certificates are set forth in Exhibit 1.

5. The Offering Documents for the Certificates at issue, which were relied upon by Plaintiffs, represented, among other things, that (i) the loans packaged into the Certificates were underwritten in accordance with the GMAC Defendants' stated loan origination guidelines; (ii) GMAC evaluated the prospective borrowers' credit standing and repayment ability before approving any loan; (iii) when the Defendants made an exception to the stated underwriting guidelines, they did so on a case-by-case basis and only if compensating factors justifying the exception were present or the loan substantially complied with the underwriting standards; (iv) almost every mortgaged property received an appraisal which conformed to stated standards and formed the basis of its loan-to-value ("LTV") ratio, an important metric to MBS investors; (v)

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

the "AAA" ratings assigned to the Certificates were accurate reflections of the Certificates' credit quality; and (vi) the Certificates' issuing trusts possessed good title to the underlying mortgage loans. Each of these material representations was false when made, and Defendants knew or recklessly disregarded the falsity of these representations. Plaintiffs relied on the misrepresentations and suffered losses as a result.

6. Courts in similar actions have already sustained claims of fraudulent and negligent misrepresentations against the GMAC Defendants for their issuance of MBS. The New York State Supreme Court has sustained fraudulent inducement claims brought by MBIA Insurance Corp. ("MBIA"), a guarantor of GMAC's MBS, against GMAC Defendants based on their misrepresentations in MBS offering documents. *MBIA Insurance Co. v. Residential Funding Co., LLC*, Index No. 603552/08 (N.Y. Sup. Dec. 22, 2009); *MBIA Insurance Co. v. GMAC Mortgage LLC*, Index No. 600837/10 (N.Y. Sup. Dec. 14, 2010). Similarly, a New York federal district court has sustained negligence-based claims against the GMAC Defendants based on similar misrepresentations and omissions relating to loans originated in large part by Defendant Homecomings Financial, LLC and securitized by Residential Funding Company, LLC. *New Jersey Carpenters Health Fund v. Residential Capital LLC*, 2010 WL 1257528 (S.D.N.Y. Mar. 31, 2010).

7. After completing an over 18-month investigation into the causes of the financial and economic crisis precipitated by the fraud and downfall of various banks involved in the origination and securitization of mortgage loans, the Financial Crisis Inquiry Commission, established by an act of Congress, published an extensive Final Report of the National Commission on the Causes of the Financial and Economic Crisis in the United States (the "FCIC Report") in January 2011. In the FCIC Report, the Commission concluded that:

Filed in Fourth Judicial District Court

Hennepin County Civil, MN

> [F]irms securitizing mortgages failed to perform adequate due diligence on the mortgages they purchased and at times knowingly waived compliance with underwriting standards. Potential investors were not fully informed or were misled about the poor quality of the mortgages contained in some mortgage-related securities. These problems appear to be significant.

8. As a result of the Defendants' failure to follow their underwriting standards and guidelines set forth in the Certificates' Offering Documents, delinquencies and defaults in the loan pools underlying the Certificates have skyrocketed. As of February 2011, approximately 23% of the mortgage loans currently underlying the GMAC Certificates are over 30 days delinquent or are in foreclosure, bankruptcy, or repossession. These figures do not include the substantial losses suffered by Plaintiffs since the Certificates' issuance due to foreclosures and the removal of those mortgage loans from the current loan pools and current delinquency figures. Indeed, since issuance, on average, 53% of the underlying loans have been removed from the loan pools. A significant portion of those loans has caused significant collateral loss to the Certificates. For example, for RALI 2007-QS9, 42% of the initial 2,605 underlying loans have been either removed from the pool or modified at a loss, causing a net loss of over $95 million, or 13.5% net loss to the collateral supporting the Certificates. The underlying loan performance and significant foreclosures have caused Plaintiffs' Certificates to have their credit ratings downgraded. At the time they were issued, all of the Certificates were given the highest credit rating – "AAA". Today, all of the GMAC Certificates' ratings, respectively, have been slashed to below investment-grade, or junk. Accordingly, the Certificates are no longer marketable at or near the prices Plaintiffs paid for them, and Plaintiffs have suffered significant losses.

9. Plaintiffs seek compensatory and/or rescissionary damages against Defendants for fraud and negligent misrepresentation.

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

II. JURISDICTION AND VENUE

10. Jurisdiction is proper because Plaintiffs' principal places of business are located in Minneapolis, Minnesota and the Defendants' principal places of business are located in Minneapolis, Minnesota and because they committed acts in Minnesota causing injury to the Plaintiffs. This Court has jurisdiction over each of the non-domiciliary Defendants because each of them transacts business within the State of Minnesota within the meaning of M.S.A. § 543.19, Subd. 1(2) and each of them committed a tortious act inside the State of Minnesota or outside the State of Minnesota causing injury within the State of Minnesota within the meaning of M.S.A. § 543.19, Subd. 1(3) and 1(4).

11. Venue is proper in this Court because Plaintiffs maintain their principal places of business in Hennepin County, specifically, Minneapolis, Minnesota.

III. THE PARTIES

A. Plaintiffs

12. Thrivent Financial for Lutherans ("Thrivent Financial") is a Wisconsin fraternal benefit society with its principal corporate headquarters located in Minneapolis, Minnesota. Non-party Thrivent Asset Management, LLC ("TAM") is a Delaware limited liability company with its principal place of business located in Minneapolis, Minnesota. TAM purchased Certificates on behalf of four mutual funds in its capacity as investment adviser to such funds: Thrivent Balanced Fund, Thrivent Core Bond Fund, Thrivent Income Fund, and Thrivent Limited Maturity Bond Fund (the "Thrivent Mutual Funds"), each a series of Thrivent Mutual Funds, a Massachusetts business trust. Thrivent Financial purchased Certificates on behalf of three Plaintiffs in its capacity as investment adviser to such Plaintiffs: Thrivent Balanced Portfolio, Thrivent Bond Index Portfolio, and Thrivent Limited Maturity Bond Portfolio (the "Thrivent Variable Annuity Portfolios"). The Thrivent Variable Annuity Portfolios are each a

series of Thrivent Series Fund, Inc., a Minnesota corporation. Thrivent Financial Defined Benefits Plan Trust is an individual pension account plan maintained by Thrivent Financial. These plaintiffs are collectively referred to as "Thrivent" or "Plaintiffs."

B. GMAC Defendants

13. Defendant Residential Funding Company, LLC is a Delaware limited liability company with its principal place of business in Minneapolis, Minnesota. Prior to approximately October 2006, Residential Funding Company, LLC operated as Residential Funding Corporation, a Delaware corporation with its principal place of business in Minneapolis, Minnesota. Residential Funding Company, LLC and its predecessor, Residential Funding Corporation, are referred to herein as "Residential Funding." Residential Funding is a wholly owned subsidiary of Residential Capital, LLC ("ResCap"), which in turn is a wholly owned subsidiary of GMAC LLC, which is a finance subsidiary of General Motors. Residential Funding is an indirect subsidiary of Ally Financial Inc., formerly known as GMAC Inc. Residential Funding was the Sponsor and Master Servicer for four of the seven GMAC securitizations at issue in this action: RALI 2004-QS16, RALI 2005-QA10, RALI 2005-QA7 and RALI 2007-QS9 (the "RALI Certificates").

14. Defendant GMAC Mortgage, LLC, formerly known as GMAC Mortgage Corporation, is a Delaware limited liability company with its principal place of business in Fort Washington, Pennsylvania. GMAC Mortgage LLC and its predecessor, GMAC Mortgage Corporation, are referred to herein as "GMAC Mortgage." GMAC Mortgage is a wholly owned subsidiary of ResCap, which in turn is a wholly owned subsidiary of GMAC LLC. GMAC Mortgage is an indirect subsidiary of Ally Financial Inc., formerly known as GMAC Inc. GMAC Mortgage was the Sponsor and Master Servicer for three of the seven GMAC securitizations at issue in this action: GMACM 2006-HE2, GMACM 2006-HE3 and GMACM

2006-HE4 (the "RAMP Certificates" and, together with the RALI Certificates, the "GMAC Certificates"). GMAC Mortgage originated a percentage of the mortgage loans underlying the following RAMP Certificates: GMACM 2006-HE2, GMACM 2006-HE3, GMACM 2006-HE4, with the remaining loans in those Certificates originated through its affiliate Ally Bank (formerly known as GMAC Bank).

15. Defendant Residential Accredit Loans, Inc. ("RALI") is a Delaware corporation with its principal place of business in Minneapolis, Minnesota. RALI was the Depositor for the RALI Certificates. RALI is an indirect subsidiary of Ally Financial Inc., formerly known as GMAC Inc.

16. Defendant Residential Asset Mortgage Products, Inc. ("RAMP") is a Delaware corporation with its principal place of business in Minneapolis, Minnesota. RAMP is an indirect subsidiary of Ally Financial Inc., formerly known as GMAC Inc. RAMP was the Depositor for the RAMP Certificates.

17. RAMP and RALI are collectively referred to as the "Depositor Defendants."

18. Defendant Ally Securities LLC is an SEC-registered broker-dealer with its principal place of business in Minneapolis, Minnesota. Prior to August 1, 2011, Ally Securities LLC was formerly known as Residential Funding Securities, LLC, which was doing business as GMAC RFC Securities. Prior to 2007, Residential Funding Securities, LLC operated as Residential Funding Securities Corporation, a Delaware corporation with its principal place of business in Minneapolis, Minnesota. Ally Securities LLC, Residential Funding Securities, LLC (d/b/a GMAC RFC Securities) and Residential Funding Securities Corporation are referred to herein as "Residential Securities." Residential Securities is an indirect subsidiary of Ally Financial Inc., formerly known as GMAC Inc. Residential Securities was an underwriter for the RAMP Certificates and one of the RALI Certificates.

19. Defendant Homecomings Financial, LLC ("Homecomings") is a Delaware limited liability company and is a wholly owned subsidiary of Residential Funding and an indirect subsidiary of Ally Financial Inc., formerly known as GMAC Inc. Homecomings was a leading originator and provider of mortgage loans. Homecomings originated a significant percentage of the mortgage loans underlying the following RALI Certificates: RALI 2004-QS16, RALI 2005-QA10, RALI 2005-QA7, RALI 2007-QS9.

20. Defendant Ally Bank, formerly known as GMAC Bank, is a bank chartered under Utah law. Ally Bank is a wholly owned indirect subsidiary of Ally Financial Inc., formerly known as GMAC Inc., and is engaged in mortgage lending, automotive lending, and online banking. Ally Bank originated a significant percentage of the mortgage loans underlying the RAMP Certificates.

21. All of the GMAC Defendants are part of the same corporate family, and acted together in all steps of the creation of the Certificates, from the origination of the underlying loans, to the pooling of the mortgage loans, to the underwriting of the Certificates and sale to Plaintiffs.

IV. THE DEFENDANTS' FRAUD

A. The Securitization Process

22. The vast majority of the loans underwritten and originated by GMAC were resold to investors in the secondary market, through either whole loan sales or MBS securitizations.

23. Mortgage loan securitizations were vital to GMAC's financial success. Unlike major banking institutions that could hold significant assets on their balance sheets long term, GMAC needed to engage in mortgage loan securitizations so that they could remove the mortgage loan assets and potential liabilities from their balance sheets. Not only did GMAC's

securitizations and whole loan sales generate enormous income, but the sale of these loans transferred the risk of the borrowers' default from GMAC's balance sheet to investors, including Plaintiffs.

24. Mortgage securitization involves the conversion of illiquid whole loans into bond-like instruments that trade in capital markets. Mortgage loan "pass-through" securities entitle the investor to payments from pools of mortgage loans. Although the structure and underlying collateral of each offering varies, the basic principle remains the same: When borrowers make payments on the underlying mortgages, the cash flow is pooled and "passed through" to investors. Accordingly, the value of an MBS depends primarily on the underlying mortgage borrowers' ability to make principal and interest payments and, secondarily, on the adequacy of the collateral in the event of default. If the loans underlying a Certificate suffer defaults and delinquencies in excess of the assumptions built into the payment structure, or the underlying properties cannot be sold at sufficient value following default, investors suffer greater than expected losses.

25. The first step in creating each of the Certificates was the acquisition by one of the Depositor Defendants of an inventory of loans from the seller, such as Defendants GMAC Mortgage (on its own and through Defendant Ally Bank) and Homecomings, which either originated the underlying loans or acquired the loans from other mortgage originators, in exchange for cash. The Depositor Defendants then transferred, or deposited, the acquired pool of loans to an "issuing trust."

26. The Depositor Defendants securitized the pool of loans in the issuing trust so that the rights to the cash flows from the loans could be sold to investors. The securitization transactions are structured such that the risk of loss is divided among different levels of investment, or "tranches." Tranches consist of multiple series of related MBS offered as part of

the same offering, each with a different level of risk and reward, including different levels of credit enhancement. One form of credit enhancement is overcollateralization, which means that the total principal balance of the mortgage loans in the pool for a securitization (and therefore presumably the total value of the underlying properties) exceeds the aggregate amount of securities issued and sold in the securitization. Another example of credit enhancement is excess interest, which means that the amount of interest collected on the mortgage loans underlying a securitization for each payment period is expected to be greater than the interest distributable on the securities and fees and expenses payable by the trust for that period; excess interest may be applied both to absorb any interest shortfalls and to pay principal on the securities to the extent needed to maintain the required level of overcollateralization. Both of these credit enhancements serve to protect the investor against loss to varying degrees. Any losses on the underlying loans – whether due to default, delinquency, or otherwise – are generally applied in reverse order of seniority.

27. Because these tranches have different claims on the cash flow generated by the pool of mortgages, credit rating agencies assign different ratings to them and issuers can price them differently. The most senior tranches of the Certificates received "AAA" credit ratings or their equivalent from the three leading rating agencies, which indicated the lowest risk and highest quality. Junior tranches – which were not purchased by Plaintiffs – usually obtained lower ratings and were less insulated from risk, but offered greater potential returns.[1] For

[1] Moody's highest investment rating is "Aaa." S&P's highest rating is "AAA." Fitch's highest rating is "AAA." These ratings signify the highest investment-grade, and are considered to be of the "best quality," and carry the smallest degree of investment risk. Ratings of "AA," "A," and "BBB" are also investment-grade and represent high credit quality, upper-medium credit quality, and medium credit quality, respectively. Any instrument rated lower than BBB is considered below investment-grade. All of the Certificates purchased by Plaintiffs were rated AAA at issuance.

example, a pool of loans with an overall weighted-average coupon of 7% might be divided into multiple tranches where the lower-risk, higher-quality senior certificates are expected to yield less than 7% and are rated investment grade ("AAA," "AA," "A" or "BBB"), while the higher-risk, lower-quality subordinate certificates bear coupons that are higher than 7%. Only if credit losses exceed the amount of the subordinate tranche balances will the senior certificate tranches face credit losses, as the subordinate tranches will absorb initial losses.

28. The credit rating agencies received the information about the mortgage loan pools for each securitization and about the structure of the securitization from the sponsor, e.g., Residential Funding and GMAC Mortgage. GMAC worked closely with the rating agencies to structure the securitizations to ensure that each tranche of MBS received the desired rating. GMAC knew or recklessly disregarded that the information they provided to the rating agencies materially misrepresented and omitted the true facts about the credit quality of the mortgage pools and that the ratings therefore did not accurately reflect the credit risk of the MBS.

29. Plaintiffs purchased only AAA investment-grade tranches of the Certificates. A purchaser of AAA-rated residential MBS should have virtually no risk of incurring loss.

30. Credit ratings are intended to be comparable across different types of fixed income instruments. In 1994, a Moody's executive stated that "no matter what types of instruments the ratings apply to, no matter where the issuer resides, and no matter what currency or market in which the security is issued, Moody's ratings are intended to have the same relative meanings in terms of expected credit loss." Similarly, in a May 29, 2007 publication, S&P stated: "Our ratings represent a uniform measure of credit quality globally and across all types of debt instruments. In other words, an 'AAA' rated corporate bond should exhibit the same degree of credit quality as an 'AAA' rated securitized issue."

31. Once the tranches were established, the issuing trusts passed the securities back to the Depositor Defendants, who became the issuers of the Certificates. The Depositor Defendants then passed the Certificates to one or more underwriters, *e.g.*, Residential Funding Securities, who in turn offered the Certificates to Plaintiffs and other investors in exchange for cash that was then passed back to the Depositor Defendants, minus any fees owed to the underwriters. Following the sale of the Certificates, Residential Funding, or GMAC Mortgage, respectively, was responsible for the collection of borrower payments, and the trustee participated in the subsequent distribution of those payments to investors at regular intervals in accordance with the offering's structure.

32. In contrast, in the traditional mortgage model, a mortgage originator originated loans to borrowers, held the loans to maturity, and therefore retained the credit default risk. As such, under the traditional model, the mortgage originator had a financial incentive to ensure that (i) the borrowers had the financial ability to repay the loans, and (ii) the underlying properties had sufficient value to enable the mortgage originator to recover its principal and interest if the borrowers defaulted on the loans.

33. Traditionally, mortgage lenders financed their mortgage business primarily using funds from depositors, retained ownership of the mortgage loans they originated, and received a direct benefit from the income flowing from the mortgages. When a lender held a mortgage through the term of the loan, it received revenue from the borrower's payment of interest and fees, and also bore the risk of loss if the borrower defaulted and the value of the collateral was not sufficient to repay the loan. As a result of this "originate to hold" model, the lender had an economic incentive to verify the borrower's creditworthiness through prudent underwriting and to obtain an accurate appraisal of the value of the underlying property before issuing the mortgage loan.

Hennepin County Civil, MN

34. With the advent of securitization, the traditional "originate to hold" model gave way to the "originate to distribute" model, in which mortgage originators sold the mortgages and transferred credit risk to investors through the issuance and sale of MBS. Securitization concurrently provided lenders like GMAC with an incentive to increase the number of mortgages they issued and reduced their incentive to ensure the mortgages' credit quality. However, the contractual terms of the securitization transactions and adherence to good business practices obligate mortgage originators to underwrite loans in accordance with their stated underwriting and origination policies and to obtain accurate appraisals of the mortgaged properties.

35. During the 1980s and 1990s, the mortgage securitization business grew rapidly, making it possible for mortgage originators to make more loans than would have been possible using only the traditional primary source of funds from deposits. During that period, GMAC generally made loans in accordance with their stated underwriting and appraisal standards. In the early 2000s, however, GMAC began to systematically disregard its stated underwriting standards in an effort to originate an unprecedented number of loans for securitization.

B. In Response To The Rising Demand For Securitized Loans, GMAC Violated Its Stated Underwriting and Appraisal Standards

36. GMAC Mortgage came into existence in 1985 when GMAC Inc., then the finance subsidiary of General Motors, acquired a mortgage loan business. In 1990, GMAC Mortgage acquired Residential Funding Corp. GMAC further increased its mortgage business in 2000 by forming Ally Bank (then known as GMAC Bank). GMAC has been one of the largest MBS issuers in the country since the 1980s, and GMAC grew to be the fourth largest U.S. mortgage loan originator by 2010, issuing tens of billions of dollars of mortgages annually. By 2002, GMAC was the top issuer of subprime RMBS in the amount of $11.5 billion for that year. In

2005, Residential Funding issued $28.7 billion in subprime RMBS, making it the fifth largest issuer of subprime RMBS topped only by Countrywide, New Century, Ameriquest and Lehman Brothers. In 2006, Residential Funding issued $25.9 billion in subprime RMBS.

37. During the relevant period, GMAC secretly abandoned its stated mortgage underwriting and appraisal standards in a drive to originate or acquire as many mortgages as possible to be securitized and sold to unsuspecting investors as MBS.

38. The securitization of mortgage loans fundamentally shifts the risk of loss from the mortgage originator to the investors who purchase MBS. As discussed above, traditionally, mortgage originators had an economic incentive to verify mortgage borrowers' creditworthiness and obtain accurate appraisals of the value of the underlying properties before issuing mortgage loans because the mortgage originator held the loans to maturity. In securitizations where the mortgage originator – here GMAC Mortgage, on its own and through Ally Bank, and Homecomings – instead sold the loans to investors through securitizations (the "originate-to-distribute" model), the mortgage originator does not have the same economic interest in verifying borrowers' creditworthiness or obtaining accurate appraisals in the loan origination process. Nevertheless, the mortgage securitization process worked well during the 1980s and 1990s because GMAC played by the rules and complied with their obligations to underwrite loans responsibly and provide accurate information to investors in RMBS.

39. The process had broken down by 2005. As the FCIC concluded in the FCIC Report: "The originate-to-distribute model undermined responsibility and accountability for the long-term viability of the mortgages and mortgage-related securities and contributed to the poor quality of mortgage loans." The FCIC Report continued:

> [W]e follow the profound changes in the mortgage industry, from the sleepy days when local lenders took full responsibility for making and servicing 30-year loans to a new era in which the idea

> was to sell the loans off as soon as possible, so that they could be packages and sold to investors around the world. New mortgage products proliferated, and so did new borrowers. ***Inevitably, this became a market in which the participants – mortgage brokers, lenders, and Wall Street firms – had a greater stake in the quantity of mortgages signed up and sold than in their quality.***

40. By 2005, GMAC began systematically to violate its stated underwriting and appraisal standards, made loans with little or no documentation, and accepted untrue information from loan applicants. GMAC also began to provide untrue information about its underwriting practices and about the borrowers, loans, appraisals, and mortgaged properties in connection with the securitization of the loans. As a result of this pervasive breakdown of compliance with proper practices among the mortgage originators, GMAC provided Plaintiff with untrue information about its own and other mortgage originators' practices and about the underlying mortgage borrowers, loans, and properties. GMAC also provided Plaintiffs with untrue information about their own due diligence of the mortgage originators and underlying loans.

41. According to Ben S. Bernanke, Chairman of the Federal Reserve Board, in a March 2008 speech, "[t]he deterioration in underwriting standards that appears to have begun in late 2005 is another important factor underlying the current crisis. A large share of subprime loans that were originated during this time feature high combined loan-to-value ratios and, in some cases, layers of additional risk factors, such as a lack of full documentation or the acceptance of very high debt-to-income ratios." The loan-to-value ("LTV") ratio is a significant measure of credit risk, because both the likelihood of default and the severity of loss are higher when borrowers have less equity to protect in the event of foreclosure. The debt-to-income ratio is also a significant measure of credit risk, because borrowers who incur debt that is relatively high compared to their income are more likely to default on their loans. In its March 2008 Policy Statement on Financial Market Developments, the President's Working Group on

Financial Markets concluded that "[t]he turmoil in financial markets clearly was triggered by a *dramatic weakening of underwriting standards for U.S. subprime mortgages, beginning* in late 2004 and extending into early 2007." (Emphasis in original.) As U.S. housing prices subsequently declined, the delinquency rates for such mortgages soared.

42. The FCIC, after "review[ing] millions of pages of documents, interview[ing] more than 700 witnesses, and [holding] 19 days of public hearings in New York, Washington, D.C., and communities across the country," concluded that investment banks "failed to perform adequate due diligence on the mortgages they purchased and at times knowingly waived compliance with underwriting standards" such that "[p]otential investors were not fully informed or were misled about the poor quality of the mortgages contained in some mortgage-related securities."

43. An important aspect of GMAC's violation of its stated underwriting standards was their reliance on faulty appraisals. According to the April 7, 2010 FCIC testimony of Richard Bitner, a former executive of a subprime mortgage originator for 15 years and the author of the book *Confessions of a Subprime Lender*, "the appraisal process [was] highly susceptible to manipulation, lenders had to conduct business as though the broker and appraiser couldn't be trusted, [and] either the majority of appraisers were incompetent or they were influenced by brokers to increase the value." He continued:

> To put things in perspective, during my company's history, half of all the loans we underwrote were overvalued by as much 10%. This meant one out of two appraisals were still within an acceptable tolerance for our end investors. Our experience showed that 10% was the most an appraisal could be overvalued and still be purchased by these investors. Another quarter that we reviewed were overvalued by 11-20%. These loans were either declined or we reduced the property value to an acceptable tolerance level. The remaining 25% of appraisals that we initially underwrote were

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

so overvalued they defied all logic. ***Throwing a dart at a board while blindfolded would've produced more accurate results.***[2]

44. Mr. Bitner testified about the implications of inflated appraisals:

> If multiple properties in an area are overvalued by 10%, they become comparable sales for future appraisals. The process then repeats itself. We saw it on several occasions. We'd close a loan in January and see the subject property show up as a comparable sale in the same neighborhood six months later. Except this time, the new subject property, which was nearly identical in size and style to the home we financed in January, was being appraised for 10% more. Of course, demand is a key component to driving value, but the defective nature of the appraisal process served as an accelerant. In the end, the subprime industry's willingness to consistently accept overvalued appraisals significantly contributed to the run-up in property values experienced throughout the country.
>
> * * *
>
> If the appraisal process had worked correctly, a significant percentage of subprime borrowers would've been denied due to a lack of funds. Inevitably, this would have forced sellers to drop their exorbitant asking prices to more reasonable levels. The rate of property appreciation experienced on a national basis from 1998 to 2006 was not only a function of market demand, but was due, in part, to the subprime industry's acceptance of overvalued appraisals, coupled with a high percentage of credit-challenged borrowers who financed with no money down.
>
> Mr. Bitner testified that the engine behind the increased malfeasance was the Wall Street Banks: "[T]he demand from Wall Street investment banks to feed the securitization machines coupled with an erosion in credit standards led the industry to drive itself off the proverbial cliff."

45. Alan Hummel, Chair of the Appraisal Institute, testified before the Senate Committee on Banking that the dynamic between mortgage originators and appraisers created a "terrible conflict of interest" where appraisers "experience[d] systemic problems of coercion"

---

[2] Throughout this Complaint, emphasis in quotations is added except where otherwise noted.

and were "ordered to doctor their reports" or they might be "placed on exclusionary or 'do-not-use' lists."

46. A 2007 survey of 1,200 appraisers conducted by October Research Corp., which publishes *Valuation Review*, found that 90% of appraisers reported that mortgage brokers and others pressured them to raise property valuations to enable deals to go through. This figure was nearly double the findings of a similar study conducted just three years earlier. The 2007 study also "found that 75% of appraisers reported 'negative ramifications' if they did not cooperate, alter their appraisal, and provide a higher valuation." Adding to these problems was the fact that lenders were generally unable to assess the accuracy of the appraisals for loans originated by mortgage brokers, since the lenders were typically located far from the properties and knew little about the properties' neighborhoods.

47. GMAC's abandonment of its stated underwriting and appraisal standards is confirmed by the statements of former GMAC employees interviewed in Plaintiffs' investigation.

48. CW1, who was a senior mortgage underwriter for GMAC Mortgage in Troy, Michigan from 2003 to 2005, stated that GMAC's underwriting procedures were "pretty loose" and said, "They called it 'creative underwriting.'" For example, if a loan required six months of income but the applicant lacked the necessary income history, GMAC mortgage underwriters would divide the applicant's bank balance by six and treat that amount as the required income. CW1 saw quite a few "risky" loans where he didn't like the parameters or "didn't agree with the way things were done," so he passed these loans to his supervisor, who was GMAC's head of underwriting for several states. The supervisor would approve the loans. People from "corporate" wanted loans approved, so it was a matter of "scratching people's backs," according to CW1.

49. CW2, who was a director for Residential Securities from April 2002 until May 2005, worked directly with the sale of non-agency MBS during his tenure with the underwriter. CW2 stated that regardless of whether business was up or down, GMAC "loosened the underwriting guidelines" in order to "always keep origination volume up." CW2 stated that the MBS issued by Defendant RAMP were "the kitchen sink," because "RAMP was a shelf developed for program exceptions," and that "as the housing bubble really got going, the amount of issuance on the RAMP shelf exploded." According to CW2, RAMP became "a very important shelf for [GMAC] because they could put anything in there. They could put things in there that didn't meet RFC guidelines."

50. CW3, who was a senior wholesale underwriter for GMAC from August 1997 to the spring of 2007, said that her supervisors frequently overrode her underwriting decisions and closed "bad loans." Her supervisors' bonuses were dependent on the volume of closed loans, so they were motivated to push loans through, even if they were questionable. "They were doing loans they knew were bad." CW3 added, "A lot of times the sales director would raise holy commotion with the supervisor and directors, and under pressure, they'd approve bad loans." CW3 also stated that she "didn't trust" the documentation, because she heard of underwriters falsifying information in loan files. Another underwriter told her that she heard her supervisor telling a manager who "couldn't get the figures correct" to close a loan to "Just make it up, put anything; no one will ever check." CW3 stated that GMAC did "a lot" of no-income/no-assets stated loans, which were "a big joke around there" and were called "liar loans, because we knew damn well they were lying. You can't tell me a manicurist in L.A. was making $12,000 a month." CW3 said that she did not challenge the stated incomes even if they were unreasonable because it was just not done at GMAC and "you would get overruled [by a manager]." If CW3 requested full documentation because a borrower's assets did not support his stated income, her

boss would overrule her. Managers also waived bad appraisals that "you knew damn well did not support the value," according to CW3.

51. CW3 specifically linked GMAC's poor underwriting to pressure to generate loans to be sold. The trading group approved exceptions to underwriting standards, and the underwriters "had a feeling they had to make exceptions to fill a pool." The underwriters "would get an email [from the trading department] saying, 'We need 10 more loans to put in the 5% pool.'" She recalled, "A lot of times I'd decline a loan, and if the sales director knew the supervisor wouldn't go for it, [the sales director] would call trading – they knew the weak links in that department – and they knew they'd approve it." There was even a person who worked as a liaison between trading and underwriting and was able to sign off on loans despite having no underwriting experience. CW3 worked on bulk loan files, sorting them into approved loans, "pended loans" which were missing documentation, and declined loans. Another employee who was responsible for funding bulk loans did not address them according to their approved, pended or declined status, but "funded the whole load." CW3 objected to this and raised it with her supervisor and her supervisor's supervisor, but "everyone knew [that GMAC employee] was funding declined, bad, or pended loans" and had no problem with it.

52. CW4, who was an underwriter at GMAC in Monterey, California from 1997 to 2008, stated that GMAC's Desktop Underwriter ("DU") program had "very loose guidelines." 90% of loans were sent through DU, which did not require documentation and "rarely turned down a loan." GMAC's underwriting guidelines got "looser and looser" until 2007. CW4 stated that challenging an applicant's statements "was just unheard of"; "We had a philosophy that whatever the borrower told you was the truth." For no-doc loans, GMAC verified credit scores and LTV ratios and nothing else, according to CW4.

53. CW5, who was a senior underwriter at GMAC Mortgage in Troy, Michigan from 1986 to 2008, also stated that most loans were processed through DU. Loan processors (who were not underwriters) were able to approve loans that went though DU; if DU could not approve a loan, then the loan was sent to an underwriter. CW5 stated that: "You could call [no-doc] loans 'liar loans,' because anyone could say they made $8,000 a month [when] they really didn't." Since GMAC relied on automated underwriting with DU, these stated income/stated asset loans were taken at face value. CW5 stated that: "If the application indicates it and the borrower says it, [DU treated it as] truth. And we as underwriters rarely saw them."

54. CW6, who worked as a securities trading analyst at GMAC in Minneapolis from April 2006 to May 2007, stated that there was concern at GMAC about the quality of loans in late 2006 and early 2007, as they started to see a lot of early payment defaults on "fraudulent subprime loans." CW6 said that GMAC could have detected the fraudulent loans if it had "dug deeper" but usually only looked at the basic information in the computer file like FICO scores and LTV ratios. Because the underwriting was automated, mortgage brokers submitted information based on what criteria were needed to close loans, and "a lot of them didn't have documentation." CW6 also stated that GMAC accepted inflated appraisals: "To make a loan work, an appraisal has to come in at a certain value. The problem is that appraisers would overinflate values. It's not right."

55. GMAC's abandonment of its stated underwriting standards and its fraudulent representations concealing that abandonment from investors have also been confirmed by the allegations that courts have sustained in other lawsuits against GMAC. In *MBIA Insurance Co. v. Residential Funding Co.*, the New York State Supreme Court denied Residential Funding's motion to dismiss MBIA's fraud claims based on Residential Funding's representations about the quality of the mortgages underlying five MBS offerings from July 2006 to 2007 that were

insured by MBIA. 906 N.Y.S.2d 781, 26 Misc.3d 1204(A) (N.Y. Sup. Dec. 22, 2009). When the mortgage pools began to perform badly soon after the securitizations closed, with substantial defaults and delinquencies, MBIA demanded access to the loan files and determined that 34% of the loans in the loan pools were already in default by December 2009, and that more than 88% of the loans in default were not originated or acquired by Residential Funding in material compliance with its representations and warranties that they were underwritten in compliance with Residential Funding's underwriting guidelines, that the loan files contained all necessary documents and complied with all applicable laws, and that the loan pools did not contain unlawful "high cost loans." In fact, significant numbers of the loans had DTI or CLTV ratios far in excess of Residential Funding's guidelines, were made on the basis of stated incomes that were unreasonable, or were originated in violation of federal and state predatory lending laws.

56. These violations of the underwriting guidelines resulted largely from Residential Funding's engaging in three improper underwriting practices: "negotiated commitment," in which Residential Funding prospectively agreed with a loan originator that Residential Funding would buy non-compliant loans to be originated by the originator; "bulk purchase programs," in which Residential Funding agreed to buy bulk amounts of loans from a loan seller that had already been originated without re-underwriting them to confirm that they complied with the underwriting guidelines; and the use of Residential Funding's proprietary automated electronic loan underwriting program, "Assetwise," which purportedly determined whether mortgages met underwriting criteria set up in the program but which did not actually apply Residential Funding's stated underwriting guidelines. After summarizing the allegations from MBIA's complaint that are summarized in this and the preceding paragraph, the court held that "the fraud cause of action survives here, because it is premised on allegations that [Residential Funding]

misrepresented various statistics and other existing facts about the underlying mortgage loans that [Residential Funding] contributed to the mortgage loans pools."

57. The representations that are alleged to be fraudulent in MBIA's action against Residential Funding were contained in the loan tapes, data schedules, and prospectus supplements for the offerings – the same types of documents prepared by the GMAC Defendants that were delivered to Thrivent in connection with the GMAC MBS at issue here – and covered compliance with underwriting guidelines, accuracy of the provided loan information, CLTV and DTI ratios and FICO scores, inclusion of proper documents in the loan files, compliance with applicable laws, absence of high cost loans, and absence of material breaches or defaults on the loans – the same types of representations that are at issue here. The systematic nature of the misrepresentations supports a strong inference that the same types of false statements were made by the GMAC Defendants in the loan tapes, data schedules, and prospectus supplements for the GMAC MBS purchased by Thrivent.

58. The MBIA complaint against Residential Funding includes numerous specific examples of improperly underwritten loans and violations of Residential Funding's underwriting guidelines. For example, one stated income loan was given to a borrower who said he earned $9,800 per month as a dispatcher at a freight company and who had a prior bankruptcy and automobile repossession; another was given to a borrower who said he earned $41,666 per month in 2006 as a liquor store owner but who filed for bankruptcy in 2007 claiming to have earned nothing in 2006. Loans were made with DTI and LTC ratios exceeding the maximums under Residential Funding's guidelines, including loans with LTV ratios over 100%. Many loan files were missing necessary documents, which MBIA alleged "may greatly impede the ability of the trustees for the respective [Residential Funding MBS] Transactions to enforce their rights and remedies with respect to delinquent mortgages."

59. MBIA made allegations substantially identical to its allegations against Residential Funding in another fraud complaint against GMAC Mortgage, which was also sustained by the New York State Supreme Court. *See MBIA Insurance Co. v. GMAC Mortgage LLC*, Index No. 600837/10 (N.Y. Sup. Dec. 14, 2010). The three fraudulent offerings which were the subject of the MBIA action against GMAC include GMAC Mortgage Corp. Home Equity Loan Trust 2006-HE4, which is one of the MBS offerings purchased by Thrivent. The *MBIA v. GMAC* complaint likewise alleges that MBIA reviewed thousands of loan files after the transactions performed badly – including loans that were securitized and sold to Plaintiffs – and determined that at least 89% of the delinquent or charged-off loans reviewed by MBIA were not originated in material compliance with GMAC Mortgage's stated underwriting guidelines and its representations and warranties regarding compliance with those guidelines. While MBIA, as an insurer of those MBS, could gain access to the underlying loan files, Plaintiffs have no such access absent the discovery process.

60. MBIA's analysis in both cases revealed that an overwhelming number of loans in the securitized loan pools had been made to borrowers who could not reasonably have expected to be able to repay the loans, and that the risk factors inherent in the borrowers' portfolios were significantly greater than as represented. MBIA's sustained complaints allege that GMAC and Residential Funding knew that the mortgage loans failed to comply with its own underwriting guidelines, finding that "there were fundamental, material, and consistent violations of [Residential Funding's] underwriting guidelines and policies in connection with the underwriting of the mortgage loans." Moreover, "[t]he undisclosed and misrepresented risks were pervasive throughout the mortgage loan portfolios for the securitization transactions." Similarly, with respect to GMAC Mortgage, MBIA's review of the mortgage loans "made clear that GMAC

Mortgage had wholly abandoned its own underwriting policies and instead routinely approved loans to borrowers who failed to meet basic risk criteria."

61. In both cases, MBIA provided examples of individual loans that diverged from the GMAC Defendants' stated underwriting guidelines, some of which came from the loan files of loans pooled into the GMACM 2006-HE4 Certificate. In fact, for the deals that MBIA analyzed, the characteristics of the deficient loan files significantly overlapped with – if were not identical to – those present here. For example, while MBIA analyzed loans underlying the GMACM 2006-HE4 Certificate, the loans underlying the GMACM 2006-HE2 and GMACM 2006-HE3 Certificates contained similar second lien loans securitized within a 3-month period (July through September 2006). The following specific deficiencies are a small sample of MBIA's specific findings:

- On March 8, 2006, a loan with a principal balance of $55,000 was made to a borrower in Perris, California on a property with an original appraisal value of $225,000 and a senior loan balance of $440,000. The borrower stated his income to be $9,800 per month ($117,800 per year) as a dispatcher at a freight company. Further, the borrower could only demonstrate $22,270.80 in liquid assets, the majority of which was in a 401K retirement account. The stated income was unreasonable based on the borrower's employment and not substantiated by the borrower's credit/asset profile. In that regard, the borrower's credit profile indicated a prior bankruptcy filing, an existing loan against the borrower's 401K retirement account and an automobile repossession.

- On November 30, 2006, a loan with a principal balance of $140,000 was made to a borrower in Newton, Massachusetts on a property with an original appraisal value of $740,000 and a senior loan balance of $513,567. The property subject to the loan was a non-owner occupied investment property. The borrower stated his income to be $41,666 per month ($500,000 per year) as the owner of a Wine/Spirits store. Further, the borrower did not demonstrate any liquid assets. The stated income was unreasonable based on the borrower's employment and not

substantiated by the borrower's credit/asset profile. Notably, the borrower filed for bankruptcy in 2007 in connection with which the borrower claimed to have earned $0.00 for 2006. Further, the appraisal indicated the property failed to conform to legal standards and the loan file lacked any letter from the local authority regarding rebuilding. RFC Underwriting Guidelines require verification of 6 months of reserves for the monthly Principle, Interest, Taxes and Insurance ("PITI") payments for stated income loans on non-owner occupied investment properties yet there is no indication in the loan files that these reserves were identified or verified. Finally, RFC guidelines limit loans under the non-owner occupied loan program to $100,000, $40,000 less than was loaned.

- On November 12, 2006, a loan with a principal balance of $135,000.00 was made to a borrower in Scottsdale, Arizona on a property with an original appraisal value of $540,000.00 and a senior loan balance of $405,000.00. The borrower stated income of $11,000 per month as a sales manager at a concrete company, however, the borrower could only demonstrate assets of $11,491. The stated income was unreasonable based on the borrower's employment and not substantiated by the borrower's credit/asset profile. Notably, the borrower filed for bankruptcy in 2008 in connection with which the borrower claimed to have actually earned $43,523 for 2006 and $20,401 for 2007. Additionally, the bank account used to verify the borrower's reserves is actually held in the name of the loan officer that issued the loan.

- On January 25, 2006, a loan in the amount of $210,000 was made to a borrower in Vacaville, California on a property with an original appraisal value of $460,000 and a senior loan balance of $368,150. The borrower was employed as a correctional officer by the State of California. The loan was approved based on a DTI that was calculated using the borrower's highest reported monthly income, rather than his average income over a 33-month period, as is required by the Underwriting Guidelines. As a result, the true DTI on the loan was 65.56%, which exceeded the maximum ration of 50% permitted under the applicable loan program. The CLTV ratio of 125.68% also exceeded the maximum CLTV ratio of 100% permitted under the Guidelines.

62. The falsity of the same types of prospectus representations that are at issue here has also been alleged by plaintiffs and sustained by a court in *New Jersey Carpenters Health Fund v. Residential Capital LLC*, 2010 WL 1257528 (S.D.N.Y. Mar. 31, 2010). Residential Funding sponsored and RALI served as a depositor for all of the MBS at issue in that action, and Homecomings served as the primary originator of the underlying loans, just as they are for the RALI loans purchased by Plaintiffs. Plaintiffs in that action alleged that Homecomings "systematic[ally] disregard[ed] . . . the underwriting guidelines set forth in the Offering Documents." The district court agreed, denying defendants' motion to dismiss investors' claims under the Securities Act of 1933 based on false statements in GMAC prospectuses and prospectus supplements for MBS offerings in 2006 and 2007, holding that "'Plaintiffs provide a credible inference that originators of these underlying loan pools systematically disregarded underwriting guidelines' because of 'widespread evidence' of this activity by the originator along with the fact that 'the loan pools provided by those same originators failed at considerable levels.'" *Id.* at *6. The court held that "these factual allegations about [Homecomings'] improper underwriting practices coupled with the loan pools' near-total credit rating collapse and default rate spike are sufficient to create a fair inference that [Homecomings] totally disregarded the underwriting guidelines, contrary to what was stated in the Offering Documents." *Id.*

63. GMAC's pervasive violations of its stated underwriting and appraisal guidelines led to immense losses and the near collapse of GMAC, which received enormous infusions of taxpayer money in a bailout in 2008. In September 2008, GMAC Mortgage closed all of its retail mortgage locations and Homecomings stopped originated loans.

C. The Credit Ratings Assigned To the GMAC Certificates Materially Misrepresented The Credit Risk Of The Certificates

64. The AAA investment grade credit ratings of the Certificates were a factor in Plaintiffs' purchase of the Certificates. Because Plaintiffs are conservative institutional investors, they purchased only investment-grade Certificates, all which were rated AAA. They therefore purchased purportedly low-risk securities that were high in the capital structure of the Certificate offerings. Thus, Plaintiffs relied to their detriment on the ratings and the GMAC Defendants' representations regarding the ratings in the Offering Documents.

65. "Investment grade" products are understood in the marketplace to be stable, secure and safe. Using S&P's scale, "investment grade" ratings are AAA, AA, A and BBB, and represent, high credit quality (AAA), upper-medium credit quality (AA and A) and medium credit quality (BBB). Any instrument rated below BBB is considered below investment grade or "junk bond."

66. The Defendants well understood (and banked on) the important role the credit ratings played in the MBS markets. They featured the ratings prominently in the Offering Documents and discussed at length the ratings received by the different tranches of the Certificates, and the bases for the ratings. Yet, the Defendants knew that the ratings were not reliable because those ratings were bought and paid for, and were supported by, flawed information provided by the Defendants to the credit rating agencies.

67. Each prospectus supplement states that the issuance of each tranche of the Certificates was conditioned on the assignment of particular, investment-grade ratings, and listed the ratings in a chart. All of the Certificates purchased by Plaintiffs were AAA-rated tranches. The AAA rating denotes "high credit-quality," and is the same rating as those typically assigned to bonds backed by the full faith and credit of the United States Government,

such as Treasury Bills. Historically, before 2007, investments with AAA ratings had an expected cumulative loss rate of less than 0.5 percent, with an annual loss rate of close to nil. According to Standard and Poors, the default rate on all investment grade corporate bonds (including AA, A and BBB) from 1981 to 2007, for example, averaged about .094% per year with no year higher than 0.41%. The Certificates did not deserve these investment grade ratings, as evidenced most clearly by the fact that all of the Certificates have now been downgraded to junk, a vast number of the underlying loans have been foreclosed upon, and the remaining underlying loans are suffering from crippling deficiencies and face serious risks of default.

68. The credit rating agencies received enormous revenue from the issuers who paid them for rating the products they sold. Because the desired rating of a securitized product was the starting point for any securities offering, the credit rating agencies were actively involved in helping GMAC structure the products to achieve the requested rating. As a result, the credit rating agencies essentially worked backwards, starting with GMAC's target rating and thereafter working toward a structure that could conceivably yield the desired rating. To estimate the expected losses or probability of default, the credit rating agencies used historical data to estimate the likely sensitivity of the expected loss or probability of default to underwriting characteristics of the loan, the experience of the originator and servicer, and the local and national economic conditions. Based on the expected losses or the probability of default, the cash flows available to each of the tranches were simulated. Once the cash flows were simulated, the rating agencies and GMAC then determined how much credit enhancement would be made available to each tranche of the Certificates, with an ultimate goal of maximizing GMAC's profit.

Hennepin County Civil, MN

69. A 2008 SEC Report entitled, "Summary Report of Issues Identified in the Commission Staff's Examinations of Select Credit Rating Agencies" ("Summary Report") revealed that the issuers and the credit rating agencies worked together so that securities would receive the highest ratings:

> [T]ypically, if the analyst concludes that the capital structure of the RMBS does not support the desired ratings, this preliminary conclusion would be conveyed to the arranger. The arranger could accept that determination and have the trust issue the securities with the proposed capital structure and the lower rating or adjust the structure to provide the requisite credit enhancement for the senior tranche to get the desired highest rating. Generally, arrangers aim for the largest possible senior tranche, i.e., to provide the least amount of credit enhancement possible, since the senior tranche -- as the highest rated tranche -- pays the lowest coupon rate of the RMBS' tranches and, therefore, costs the arranger the least to fund.

70. As a result of this collaboration with the credit rating agencies, GMAC was able to manipulate the system to achieve inflated ratings. For example, through repeated interactions with the credit rating agencies, GMAC could effectively reverse engineer aspects of the ratings models and then modify the structure of a financing to improve its ratings without actually improving its credit quality.

71. This rating process was further compromised by the practice of "rating shopping." GMAC did not pay for the credit rating agencies' services until after the agencies submitted a preliminary rating. This practice created, essentially, bidding wars where the issuers would hire the agency that provided the highest rating for the lowest price. The credit rating agencies were paid only if they provided the desired investment grade ratings, and only in the event that the transaction closed with those ratings. "Ratings shopping" jeopardized the integrity and independence of the rating process.

72. The credit ratings of the Certificates were further compromised by misinformation provided by GMAC regarding the abandonment of their underwriting standards, rampant use of aggressive exceptions, knowledge of pervasive fraud in the stated income loan programs, and the inflated appraisals assigned to the underlying collateral, as described above.

73. Subsequent downgrades confirm that the investment grade ratings reported in the Offering Documents were unjustifiably high and misstated the true credit risk of the Certificates purchased by Plaintiffs. Beginning in the spring of 2008, the Certificates purchased by Plaintiffs also became subject to these rating agency downgrades. Today, all of the GMAC Certificates – all of which were initially awarded AAA investment grade ratings – have been downgraded to junk. The *en masse* downgrade of AAA-rated Certificates indicates that the ratings set forth in the Offering Documents were false, unreliable and inflated.

74. The Defendants knew that the AAA investment grade ratings assigned to the Certificates were false because, unbeknownst to Plaintiffs, the Defendants' underwriting and appraisal standards had been abandoned and, as such, no reliable estimate could be made concerning the level of enhancement necessary to ensure that the top tranches purchased by Plaintiffs were of AAA quality. By including and endorsing these AAA ratings in the Prospectus Supplements, Defendants were making a false representation that they actually believed that the AAA ratings were an accurate reflection of the credit quality of the Certificates.

D. GMAC Failed To Ensure That Title To The Underlying Loans Was Effectively Transferred

75. An essential aspect of the mortgage securitization process is that the issuing trust for each MBS offering must obtain good title to the mortgage loans comprising the pool for that offering. This is necessary in order for the MBS holders to be legally entitled to enforce the

mortgage loans in case of default. Two documents relating to each mortgage loan must be validly transferred to the trust as part of the securitization process – a promissory note and a security instrument (either a mortgage or a deed of trust).

76. The rules for these transfers are governed by the law of the state where the property is located, by the terms of the pooling and servicing agreement ("PSA") for each securitization, and by the law governing the issuing trust (with respect to matters of trust law). Generally, state laws and the PSAs require the promissory note and security instrument to be transferred by indorsement, in the same way that a check can be transferred by indorsement, or by sale. In addition, state laws generally require that the trustee have physical possession of the original, manually signed note in order for the loan to be enforceable by the trustee against the borrower in case of default.

77. In order to preserve the bankruptcy-remote status of the issuing trusts in RMBS transactions, the notes and security instruments are generally not transferred directly from the mortgage loan originator to the trust. Rather, the notes and security instruments are generally initially transferred from the originator (*e.g.*, Ally Bank, Homecomings or GMAC Mortgage) to the depositor (*e.g.*, RALI or RAMP), either directly or via one or more special-purpose entities established by GMAC. After this initial transfer to the depositor, the depositor transfers the notes and security interests to the issuing trust for the particular securitization. Each of these transfers must be valid under applicable state law in order for the trust to have good title to the mortgage loans.

78. In addition, the PSA generally requires the transfers of the mortgage loans to the trust to be completed within a strict time limit after formation of the trust in order to ensure that the trust qualifies as a tax-free real estate mortgage investment conduit ("REMIC").

79. The applicable state trust law generally requires strict compliance with the trust documents, including the PSA, so that failure to comply strictly with the timeliness, indorsement, physical delivery, and other requirements of the PSA with respect to the transfers of the notes and security instruments means that the transfers would be void and the trust would not have good title to the mortgage loans.

80. The Offering Documents for each offering of the Certificates represented in substance that the issuing trust for that offering had obtained good title to the mortgage loans comprising the pool for the offering. In reality, however, GMAC routinely failed to comply with the requirements of applicable state laws and the PSAs for valid transfers of the notes and security instruments to the issuing trusts.

81. Evidence about failure to properly assign mortgage loan documents has become public in foreclosure litigation involving GMAC. For example, Margie Kwiatanowski, who was a "Limited Signing Officer" of GMAC Mortgage Corp., testified in a deposition in 2006 in a Florida foreclosure action that she signed affidavits for submission to courts in foreclosure actions, which represented the facts about the mortgages and stated that she had reviewed the relevant mortgage documents such as the note and mortgage, but that in fact she did not review the mortgage documents. Based on Kwiatanowski's testimony, the Florida Circuit Court sanctioned the plaintiff trust, finding that the trust "through its servicing entity, GMAC Mortgage Corp., submitted false testimony to the Court in the form of Affidavits of Indebtedness signed and subscribed by Margie Kwiatanowski . . . . The submission of the false Affidavits was pursuant to protocols and procedures wherein Ms. Kwiatanowski, as Limited Signing Officer, would attest to review of the relevant loan documents, the Complaint, and loan payment records, when in fact (as sworn to by Ms. Kwiatanowski in her deposition) she neither reviewed the

referenced records nor was familiar with the manner with which the records were created by GMAC . . . ."

82. Despite the Florida court's sanctions, GMAC continued to submit false affidavits in foreclosure actions around the country. In fact, GMAC promoted Kwiatanowski in 2008 to supervisor of its foreclosure document signing department. One of the GMAC signing officers reporting to Kwiatanowski is "team leader" Jeffrey Stephan, who testified in 2009 and 2010 about his own practice of signing purported assignments of mortgages and affidavits for submission to courts in foreclosure proceedings without reviewing the mortgage documents or verifying the information contained in the assignments and affidavits. Stephan testified that he signs approximately 10,000 assignments, affidavits, and similar documents per month; that the assignments are prepared by GMAC's outside foreclosure counsel *after* the mortgages are referred to counsel for foreclosure; that Stephan signs documents without verifying that the purported holder of the notes actually holds them; that Stephan signs affidavits stating that attached copies of notes are true and correct copies without reviewing the notes; and that these practices are in accordance with GMAC's policies.

83. Based on Stephan's 2010 testimony, a Maine state court vacated a partial summary judgment in favor of Fannie Mae, as purported owner of a GMAC-serviced mortgage, in a foreclosure action and sanctioned Fannie Mae for GMAC's misconduct. The court held that:

> Plaintiff [Fannie Mae] does not dispute that its affiant, Jeffrey Stephan, in his role as limited signing officer for GMAC, Plaintiff's servicing agent, signed the affidavit which Plaintiff submitted in support of its Motion for Summary Judgment without even reading it and without signing it in the presence of a notary. . . . The Court is particularly troubled by the fact that Stephan's deposition in this case is not the first time that GMAC's high-volume and careless approach to affidavit signing has been deposed. Stephan himself was deposed six months earlier, on December 10, 2009, in Florida. His Florida testimony is consistent with the testimony given in this case: except for some limited checking of figures, he signs summary judgment affidavits without first reading them and without appearing before a notary.

84. Summarizing the evidence from the GMAC "robo-signer" cases in which Kwiatanowski and Stephan testified, James A. Kowalski, Jr., the attorney who took the Kwiatanowski deposition, testified before the Committee on the Judiciary of the U.S. House of Representatives that "Assignments are . . . created after the fact in an attempt to demonstrate a chain of ownership, and that many critical facts in the Assignments, such as the date of the Assignment or the assertion of an equitable transfer are not based on any evidence at all. (For example, the date often used for the Assignment is the date the file is transferred to the [foreclosing] law firm, not the date the Trust purportedly took ownership of the loan.)"

85. GMAC temporarily suspended foreclosures in 23 states (primarily those states that require judicial foreclosure proceedings) in September 2010 while it attempted to address the problems created by its improper mortgage assignment and foreclosure documentation procedures. All 50 state attorneys general announced in October 2010 that they are investigating GMAC's foreclosure document practices, including the widespread use of improperly signed mortgage assignments and affidavits. The Ohio Attorney General filed suit against GMAC Mortgage LLC in October 2010, alleging that GMAC "sign[ed] and caus[ed] the filing in Ohio courts of hundreds of false affidavits and assignments of notes." The Ohio Attorney General called GMAC's conduct a "fraud on the court": "It's a basic subversion of our legal system, and it does not sufficiently respect people's private property rights." Analyst Jasraj Vaidya of Barclays, commenting on GMAC's suspension of foreclosures, wrote that "[a] clean record of note ownership is lost or hazy in many cases, due to multiple transfers of the notes." Old Republic National Title, one of the largest U.S. title insurance companies, announced in September 2010 that it would not write title policies for homes foreclosed by GMAC because of the improper documentation problem.

86. Thomas Marano, the chief executive officer of mortgage operations of Ally Financial, which is the present parent company of GMAC, testified before the U.S. House of Representatives Financial Services Subcommittee in November 2010 that "[o]ur company's process for preparing foreclosure affidavits was flawed. There were affidavits signed outside the immediate physical presence of a notary and without direct personal knowledge of the information in the affidavits."

E. The Defendants Controlled The Securitization Process

87. The GMAC Defendants controlled, and had actual knowledge of or were indifferent to the truth or falsity about, each aspect of the securitization process, from loan origination through the sale of the MBS to Plaintiffs.

88. Every Certificate was backed in part by loans from Homecomings, GMAC Mortgage, or Ally Bank (f/k/a GMAC Bank). All of the loans in the RAMP Certificates were backed by loans originated by GMAC Mortgage or Ally Bank, and Homecomings originated a significant percentage of the loans in the RALI Certificates: RALI 2004-QS16 (27.5%), RALI 2005-QA10 (24.6%), RALI 2005-QA7 (16.3%), RALI 2007-QS9 (50%).

89. Defendants acted as the sponsor and servicer for the loans underlying the Certificates. GMAC Mortgage was sponsor and servicer for the RAMP Certificates. Residential Funding was sponsor and servicer for the RALI Certificates. In the case of the RAMP Certificates, Defendants originated the mortgage loans, then pooled the mortgage loans in the securitizations and conveyed these loans to the Depositor Defendants. In the case of the RALI Certificates, Defendants originated a portion of the mortgage loans, acquired the remainder of the mortgage loans, then pooled the mortgage loans in the securitizations and conveyed these loans to the Depositor Defendants.

90. Depositor Defendants RAMP and RALI were the Depositors for the Offerings. In that role, they purchased the mortgage loans and then conveyed the loans to the issuing trusts through conveyance of the loans to the trustees. The Depositors then issued the Certificates to Plaintiffs and other investors.

91. Defendants were underwriters for most of the Certificates marketed and sold to Plaintiffs. Residential Securities was a seller for the RAMP Certificates and one of the RALI Securities. In that role, it shared responsibility for underwriting and managing the sale of the Certificates to Plaintiffs and other investors, including screening the mortgage loans for compliance with the Defendants' underwriting guidelines.

92. Defendants' involvement in and control over each aspect of the securitization process provided them with a unique knowledge and expertise regarding the appropriate standards and procedures for originating, acquiring, underwriting and servicing the mortgage loans underlying the Certificates, as well as of the loan characteristics of the loan pools underlying the Certificates.

V. PLAINTIFFS' INVESTMENT IN THE CERTIFICATES

93. The Certificates for all offerings were issued pursuant to the Offering Documents. These documents generally explained the structure and provided an overview of the Certificates. The Depositor Defendants and Residential Funding Securities prepared the Offering Documents.

94. The Prospectus Supplements filed with the SEC contained detailed descriptions of the mortgage pools underlying the Certificates. The respective Prospectus Supplements provided the specific terms of the particular Certificate offering. Each Prospectus Supplement included tabular data concerning the loans underlying the Certificates, including (but not limited to) the type of loans; the number of loans; the mortgage rate and net mortgage rate (the

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

mortgage rate net of the premium for any lender paid mortgage insurance less the sum of the master servicing fee and the trustee fee on the mortgage loan); the aggregate scheduled principal balance of the loans; the weighted average original combined LTV ratio; occupancy rates; credit enhancement; and the geographic concentration of the mortgaged properties. The Prospectus Supplements also contained a summary of GMAC's underwriting and appraisal standards, guidelines and practices. The Registration Statements incorporated by reference the subsequently filed Prospectuses and Prospectus Supplements.

95. The charts in Exhibit 1 identifies (i) each Certificate Offering and tranche in which Plaintiffs purchased; (ii) the full name of the Offering; (iii) the issuing entity; (iv) the corresponding Registration Statement file number; (v) the Depositor Defendant who issued each Certificate; (vi) the issue date of the Certificate; (vii) the purchasing Plaintiff; and (viii) the date of the purchase. Residential Funding or GMAC Mortgage was the Seller/Sponsor for each Offering; Residential Funding or GMAC Mortgage was the servicer of each Offering, and Residential Funding Securities was an underwriter of each Offering except RALI 2004-QS16, RALI 2005 QA10, and RALI 2005-QA7.

96. Thrivent made their investment decisions using internal investment personnel. In deciding to purchase the Certificates, Thrivent relied on the Defendants' false representations and omissions of material fact regarding the Defendants' underwriting standards and the characteristics of the mortgage loans underlying the Certificates. But for the Defendants' fraudulent representations and omissions, Thrivent would not have purchased the Certificates. The same Thrivent personnel made Thrivent's investment decisions with respect to each of the GMAC Certificates, using the same investment criteria, guidelines, processes, and models.

97. Thrivent reasonably relied upon the Defendants' representations in the Offering Documents. Thrivent did not know at the time they purchased the Certificates, and could not

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

have known, that GMAC had stopped following their underwriting guidelines to the point of abandoning those guidelines, leading to a drastic increase in the origination of risky loans, nor did they know that the property appraisals secured by GMAC resulted in false appraisal values. Thrivent also did not know that GMAC knowingly or recklessly accepted false information about material facts such as borrowers' stated income and intention to live in the mortgaged properties, which caused the Defendants' representations to Thrivent to be false. If Thrivent had known these and other material facts regarding the Defendants' fraudulent misrepresentations and omissions of material fact, Thrivent would not have purchased the Certificates.

98. The Defendants' misrepresentations and omissions of material facts caused Thrivent to suffer losses on the Certificates, because the Certificates were in fact far riskier—and their rate of default far higher—than the Defendants had described them to be. The mortgage loans underlying the Certificates experienced defaults and delinquencies at a much higher rate due to GMAC's abandonment of their loan-origination guidelines.

99. Thrivent decided to purchase each GMAC Certificate identified in Exhibit 1 on the basis of the information contained in the applicable Offering Documents filed with the SEC, and based on additional information provided to Thrivent by Residential Funding Securities or other brokers involved in the sale of the Certificates. Moreover, in connection with the offers and sales of the Certificates to Plaintiffs, Residential Funding Securities or other brokers provided directly or indirectly to Thrivent the Offering Documents and additional documents, such as statistical tables to be included in the Prospectus Supplements. These documents included term sheets, pooling and servicing agreements, computational material, data regarding the LTV and debt-to-income ratios of the pools, and computer models of the financial structures

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

of the securitizations. Similar information was sent to and analyzed by Thrivent investment personnel if the GMAC Certificate was sold to them in the secondary market.

100. Thrivent's investment personnel reviewed and analyzed the information provided directly or indirectly by Residential Funding Securities or other brokers with respect to each offering of the GMAC Certificates and performed various analyses of the Certificate-specific data for each offering before deciding to purchase Certificates in the offering. The analyses conducted by Thrivent before deciding to purchase a Certificate included various credit analyses based on the information provided by Residential Funding Securities or other underwriters with respect to both the credit characteristics of the mortgage loan pool (including, for example, geographic concentration; weighted average life; fixed- or floating-rate loans; full-, low-, or no-documentation "stated income" loans; and owner-occupied, second home, or investment properties), and the structure of the securitization with respect to the seniority and risk characteristics of the particular tranche of Certificates (including, for example, position in the payment "waterfall").

101. Thus, Thrivent relied on the information in the term sheets, computational material, and other data provided directly or indirectly by Residential Funding Securities or other brokers for each offering of the GMAC Certificates. Thrivent also relied on the GMAC Offering Documents' representations and the statements about the underwriting guidelines that were purportedly followed in originating the underlying mortgage loans.

102. These documents contained numerous statements of material facts about the Certificates, including statements concerning: (i) Homecomings', Ally Bank's GMAC Mortgage's, and any other applicable mortgage originators' underwriting guidelines that were purportedly applied to evaluate the ability of the borrowers to repay the loans underlying the Certificates; (ii) the appraisal guidelines that were purportedly applied to evaluate the value and

adequacy of the mortgaged properties as collateral; (iii) the LTV ratios, debt to income ratios, and purported occupancy status of the mortgaged properties, including whether the properties were "owner occupied," "second homes," or "investment properties"; (iv) GMAC's due diligence of the loans and the mortgage originators' underwriting practices; and (v) various forms of credit enhancement applicable to certain tranches of Certificates.

103. These statements of material facts were untrue because: (i) Homecomings, Ally Bank, GMAC Mortgage, and the other mortgage originators violated their stated underwriting guidelines and did not consistently evaluate the borrowers' ability to repay the loans; (ii) inflated appraisals caused the listed LTV ratios and levels of credit enhancement to be untrue; and (iii) the actual numbers of riskier "second home" and "investment property" mortgagees were higher than the stated numbers. In addition, metrics such as debt-to-income ratios were untrue as a result of Homecomings', Ally Bank's, GMAC Mortgage's, and the other mortgage originators' acceptance of untrue information from mortgage applicants. For example, Homecomings, Ally Bank and the other mortgage originators allowed applicants for "stated income" loans to provide untrue income information and did not verify the applicants' purported income. Stated income loans were therefore known among personnel of GMAC as "liar loans."

VI. DEFENDANTS' FALSE AND MISLEADING MATERIAL MISSTATEMENTS AND OMISSIONS IN THE OFFERING DOCUMENTS

104. The Offering Documents pursuant to which Thrivent purchased the Certificates contained untrue statements of material fact, or omitted to state material facts necessary to make the statements therein not misleading, regarding: (i) Homecomings', Ally Bank's, GMAC Mortgage's and other originators' underwriting processes and guidelines by which the loans were originated, including the prevalence and type of exceptions to those guidelines being

applied to the underlying loans, and the rampant fraud in stated income loans; (ii) the value of the underlying real estate securing the loans, in terms of LTV ratios and the appraisal standards by which such real estate values were measured; (iii) the credit ratings of the Securities; and (iv) the adequacy of GMAC's transfer of good title and legal ownership of the underlying loans to the issuing trusts.

A. The GMAC Defendants Made False And Misleading Statements Regarding Their Underwriting Guidelines

1. The RAMP Certificates

105. GMAC Mortgage (on its own and through Ally Bank) originated or packaged the mortgage loans that were included in the pools for the RAMP Certificates. The Prospectus Supplements for the Certificates all contained identical or materially similar statements of material fact regarding GMAC Mortgage's underwriting standards and practices.

106. The RAMP Certificates made the following misrepresentations regarding the GMAC Defendants' underwriting guidelines and practices:

> ***All of the mortgage loans were underwritten generally in accordance with GMAC Mortgage Corporation's underwriting standards.*** . . . GMAC Mortgage Corporation's underwriting standards with respect to the mortgage loans generally will conform to those published in the GMAC Mortgage Corporation underwriting guidelines, including the provisions of the GMAC Mortgage Corporation underwriting guidelines applicable to the GMAC Mortgage Home Equity Program. The underwriting standards as set forth in the GMAC Mortgage Corporation underwriting guidelines are continually revised based on prevailing conditions in the residential mortgage market and the market for mortgage securities.

107. All of the RAMP Certificates Prospectus Supplements made the following material misrepresentations:

> ***The mortgage loans included in the mortgage pool generally were originated subject to a maximum CLTV Ratio of 100.00%. Additionally, loans were generally originated with a maximum***

> ***total monthly debt to income ratio of 45%, although variances are permitted based on compensating factors.***

108. All of the RAMP Certificates' Prospectus Supplements represented that: "***a mortgage loan may be considered to comply with a set of underwriting standards, even if one or more specific criteria included in the underwriting standards were not satisfied, if other factors compensated for the criteria that were not satisfied or if the mortgage loan is considered to be in substantial compliance with the underwriting standards.***"

2. The RALI Certificates

109. Residential Funding subsidiary Homecomings Financial originated or packaged a significant percentage of the mortgage loans that were included in the pools for the RALI Certificates. The Prospectus Supplements for the Certificates all contained identical or materially similar statements of material fact regarding the underwriting standards and practices governing the RALI Certificates.

110. The RALI Certificates made the following misrepresentations regarding the GMAC Defendants' underwriting guidelines and practices applied to the Homecomings Financial and other underlying loans:

> ***All of the mortgage loans were underwritten generally in accordance with GMAC Mortgage Corporation's underwriting standards.*** . . . GMAC Mortgage Corporation's underwriting standards with respect to the mortgage loans generally will conform to those published in the GMAC Mortgage Corporation underwriting guidelines, including the provisions of the GMAC Mortgage Corporation underwriting guidelines applicable to the GMAC Mortgage Home Equity Program. The underwriting standards as set forth in the GMAC Mortgage Corporation underwriting guidelines are continually revised based on prevailing conditions in the residential mortgage market and the market for mortgage securities.

111. All of the RALI Certificates Prospectus Supplements made the following material misrepresentations:

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

> The adequacy of the mortgaged property as security for repayment of the related mortgage loan generally is determined by an appraisal in accordance with appraisal procedure guidelines described in the Seller Guide. Appraisers may be staff appraisers employed by the originator. The appraisal procedure guidelines generally require the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property is in good condition and that construction, if new, has been substantially completed. The appraiser is required to consider a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property, or replacement cost analysis based on the current cost of constructing or purchasing a similar property. In certain instances, the LTV ratio is based on the appraised value as indicated on a review appraisal conducted by the mortgage collateral seller or originator.
>
> *****
>
> Prior to assigning the mortgage loans to the depositor, Residential Funding will have reviewed the underwriting information provided by the mortgage collateral sellers for the mortgage loans and, in those cases, determined that the mortgage loans were generally originated in accordance with or in a manner generally consistent with the underwriting standards described in the Seller Guide. With regard to a material portion of these mortgage loans, this review of underwriting information by Residential Funding was performed using an automated underwriting system. Any determination described above using an automated underwriting system will only be based on the information entered into the system and the information the system is programmed to review.

112. All of the RALI Certificates' Prospectus Supplements represented that, in certain circumstances: "the system may make adjustments for some compensating factors, which could result in a mortgage loan being approved even if all of the specified underwriting criteria in the Seller Guide for that underwriting program are not satisfied."

113. The above statements of material facts in the RAMP and RALI Certificates were untrue when made because, as explained above in ¶¶ 36-63, they failed to disclose that the GMAC Defendants: (i) systematically failed to follow their stated underwriting standards; (ii) allowed pervasive exceptions to their stated underwriting standards in the absence of

compensating factors; (iii) disregarded credit quality in favor of generating increased loan volume for securitizations; (iv) routinely allowed fraudulent representations of an applicant's stated income and, in many cases, knowingly falsified the stated income; and (v) violated their stated appraisal standards and in many instances materially inflated the values of the underlying mortgaged properties in the loan origination and underwriting process.

114. The RAMP Certificates allowed for purchase of additional mortgage loans by the issuing trusts from GMAC after the initial closing of the offerings. The Offering Documents for these Certificates represented in substance that: "Any conveyance of subsequent mortgage loans on a subsequent transfer date is subject to certain conditions including, but not limited to: . . . GMAC Mortgage Corporation will select subsequent mortgage loans in a manner that it reasonably believes is not adverse to the interests of the holders of notes or the credit enhancer . . . ." On information and belief, these representations were false because GMAC knowingly or recklessly selected subsequent mortgage loans to convey to the issuing trusts for these Certificates that GMAC knew were underwritten in violation of GMAC's stated underwriting standards and were likely to default.

B. The GMAC Defendants Made Untrue Statements And Omissions Regarding Appraisals And LTV Ratios

1. The RAMP Certificates

115. The adequacy of the mortgaged properties as security for repayment of the loans was purportedly determined by appraisals. The Prospectus Supplements represented that "appraisals may be performed by appraisers independent from or affiliated with the GMAC Mortgage Corporation or their affiliates."

116. The Prospectus Supplements provided information regarding LTV ratios, in association with various loan groupings, including by loan type and documentation level, property type and geographical location. The RAMP Certificates Prospectus Supplements stated that:

> ***The mortgage loans included in the mortgage pool generally were originated subject to a maximum CLTV Ratio of 100.00%.*** Additionally, loans were generally originated with a maximum total monthly debt to income ratio of 45%, although variances are permitted based on compensating factors. There can be no assurance that the CLTV Ratio or the debt to income ratio for any mortgage loans will not increase from the levels established at origination.

2. The RALI Certificates

117. The adequacy of the mortgaged properties as security for repayment of the loans was purportedly determined by appraisals:

> The adequacy of the mortgaged property as security for repayment of the related mortgage loan generally is determined by an appraisal in accordance with appraisal procedure guidelines described in the Seller Guide. Appraisers may be staff appraisers employed by the originator. The appraisal procedure guidelines generally require the appraiser or an agent on its behalf to personally inspect the property and to verify whether the property is in good condition and that construction, if new, has been substantially completed. The appraiser is required to consider a market data analysis of recent sales of comparable properties and, when deemed applicable, an analysis based on income generated from the property, or replacement cost analysis based on the current cost of constructing or purchasing a similar property. In certain instances, the LTV ratio is based on the appraised value as indicated on a review appraisal conducted by the mortgage collateral seller or originator.

118. The representations regarding appraisals and LTV ratios were materially false and misleading in that they omitted to state that the appraisals were inaccurate because: (i) the appraisers were never independent from GMAC, which exerted pressure on appraisers to come back with pre-determined, preconceived, inflated and false appraisal values; (ii) the actual LTV ratios for numerous mortgage loans underlying the Certificates would have exceeded 100% if the underlying properties had been appraised by an independent appraiser as represented in the Offering Documents; and (iii) the forms of credit enhancement applicable to certain tranches of

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

the Certificates were affected by the total value of the underlying properties, and thus were inaccurate as stated.

C. The GMAC Defendants Materially Misrepresented The Accuracy Of The Credit Ratings Assigned To The Certificates

119. The GMAC Defendants represented in the Offering Documents that all of the RAMP and RALI Certificates purchased by Plaintiffs were worthy of being rated "AAA," signifying that the risk of loss was virtually non-existent.

120. By providing ratings, the GMAC Defendants represented that they believed that the information provided to the rating agencies to support these ratings accurately reflected GMAC's underwriting guidelines and practices, and the specific qualities of the underlying loans. As stated in detail above, ¶¶ 64-74, this representation was false.

121. The GMAC Defendants further represented in the Prospectus Supplements, in sum or substance, that it was "a condition to the issuance of the" certificates that they be awarded the highest credit rating by at least two of the three leading rating agencies: S&P, Moody's or Fitch. The RAMP Certificates stated that "A securities rating addresses the likelihood of the receipt by the holders of the notes of distributions on the mortgage loans." The RALI Certificates similarly stated that the (a) "ratings assigned by Moody's . . . address the likelihood of the receipt by the Senior Certificate holders of all distributions to which they are entitled . . . and reflect its analysis of the riskiness of the mortgage loans"; (b) "the ratings assigned by Fitch to mortgage pass-through certificates address the likelihood of the receipt by certificateholders of all distributions to which they are entitled under the transaction structure. . . . and reflect its analysis of the riskiness of the underlying mortgage loans and the structure of the transaction as described in the operative documents"; and (c) the S&P ratings

"address the likelihood of the receipt by certificateholders of payments required under the pooling and servicing agreement."

122. These statements regarding the ratings assigned to the Certificates were false because the GMAC Defendants stated the assigned ratings while knowing that misleading information was provided to the rating agencies by the GMAC Defendants to ensure AAA or otherwise investment grade ratings.

123. The falsity of these statements is further evidenced by the rapid downgrades of all of the GMAC Certificates within a few years of issuance, with all but one of the Certificates downgraded to junk. *See* Exhibit 2.

D. The GMAC Defendants Materially Misrepresented RAMP's and RALI's Transfer Of Good Title To The Mortgage Loans To The Issuing Trusts

124. The GMAC Defendants stated in each RAMP Certificate Prospectus Supplement that the Depositor RAMP, following the sale of the mortgage loans to it, "will then transfer the mortgage loans to the owner trustee, on behalf of the issuing entity. The issuing entity will then pledge all of its right, title and interest in the mortgage loans to the indenture trustee for the benefit of the noteholders and the credit enhancer."

125. Likewise, the GMAC Defendants stated in each RALI Certificate Prospectus Supplement that the Depositor RALI:

> *will transfer, convey and assign to the trustee or its nominee, which may be the custodian, all right, title and interest of the depositor in the mortgage securities and other property to be included in the trust for a series.* The assignment will include all principal and interest due on or with respect to the mortgage securities after the cut-off date specified in the accompanying prospectus supplement, except for any Spread. *The depositor will cause the mortgage securities to be registered in the name of the trustee or its nominee, and the trustee will concurrently authenticate and deliver the certificates.*

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

126. These representations were false because, as alleged in detail in ¶¶ 75-86, the GMAC Defendants routinely failed to physically deliver the original promissory notes and security instruments for the mortgage loans to the issuing trusts, as required by applicable state laws and the PSAs. These representations were also false because the GMAC Defendants routinely failed to execute valid indorsements of the documents at the time of the purported transfer, as also required by applicable state laws and the PSAs. The issuing trusts therefore did not possess good title to many of the mortgage loans and lacked legal authority to enforce many of the mortgage loans against the borrowers in case of default.

VII. BECAUSE OF DEFENDANTS' CONDUCT, PLAINTIFFS HAVE SUFFERED LOSSES ON THEIR PURCHASES OF CERTIFICATES

127. The ratings on virtually all of the Certificates have since been downgraded. Nor are they marketable at the prices paid for them by Plaintiffs. As reflected in the attached Exhibit 2, which reflects the Certificates in which the Plaintiffs purchased interests, all but one of the GMAC Certificates, which were originally rated "AAA," have been downgraded to junk.

128. Further, the delinquency, bank ownership and foreclosure rates on the underlying mortgages have soared since issuance. As reflected in the attached Exhibit 3, the average percentage of GMAC loans that are currently 30 days or more delinquent, in foreclosure, or bank-owned exceeds 23%. Moreover, these current performance numbers do not reflect the number of loans which have been foreclosed since issuance and which are no longer included within the loan pools. Exhibit 3 reflects the original number of loans in the loan pools and the total number of loans which have been removed from the pools. Indeed, as reflected in Exhibit 3, since issuance, on average, 53% of the underlying loans in each trust have been dropped from the loan pools. A significant portion of those loans has caused significant collateral loss to the Certificates. For example, for RALI 2007-QS9, 42% of the initial 2,605 underlying loans have

been either removed from the pool or modified at a loss, causing a net loss of over $95 million, or 13.5% net loss to the collateral supporting the Certificates.

129. Statistical studies by others have similarly revealed that the problems in mortgage loans were tied to the abandonment of underwriting standards. The F.B.I. Mortgage Fraud Reports of 2007 (published in April 2008) reported on the results of a study of three million residential mortgages that found that between 30% and 70% of early payment defaults were linked to significant misrepresentations in the original loan applications. Loans containing egregious misrepresentations like the misrepresentations documented in the GMAC loan pools were five times as likely to default in the first six months than loans that did not.

130. Other parties' reviews of GMAC's full loan files have revealed even greater deviations. Third parties with access to the complete loan files for certain GMAC securitizations have performed additional analysis of the mortgage loans underlying GMAC's offerings. Their analyses provide additional strong evidence that essential characteristics of the mortgage loans underlying GMAC's MBS were misrepresented and omitted material information, and that the problems in GMAC's underwriting practices were systemic.

131. MBIA is a New York-based monoline insurer that wrote insurance on certain GMAC mortgage-backed securities offerings. MBIA conducted an investigation into GMAC's loan files after it was asked to make payments to certain other investors.

132. MBIA's analysis included an analysis of over 12,000 loan files for Residential Funding and GMAC Mortgage MBS offerings, as discussed in ¶¶ 55-62, and found that between 88% and 89% of the delinquent or charged-off loans reviewed by MBIA for Residential Funding and GMAC Mortgage, respectively, were not originated in material compliance with their stated underwriting guidelines.

VIII. CAUSES OF ACTION

FIRST CAUSE OF ACTION

(Common Law Fraudulent Misrepresentation Against The GMAC Defendants)

133. Plaintiffs repeat and reallege the allegations set forth in the preceding paragraphs, as if fully set forth herein.

134. As alleged above, in the Offering Documents and in their public statements, Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants made fraudulent and false statements of material fact, and omitted material facts necessary in order to make their statements, in light of the circumstances under which the statements were made, not misleading.

135. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants knew at the time they sold and marketed each of the Certificates that the foregoing statements were false or, at the very least, made the statements without knowing whether the statements were true.

136. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants made these materially misleading statements and omissions for the purpose of inducing Plaintiffs to purchase the Certificates. Furthermore, these statements related to these Defendants' own acts and omissions.

137. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants knew that Plaintiffs were relying on their expertise, and they encouraged such reliance through the Offering Documents and their public representations, as described herein. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants knew that Plaintiffs would rely upon their representations in connection with Plaintiffs' decision to purchase the Certificates.

Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants were in a position of unique and superior knowledge regarding the true facts concerning the foregoing material misrepresentations and omissions.

138. It was only by making such representations that Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants were able to induce Plaintiffs to buy the Certificates. Plaintiffs would not have purchased or otherwise acquired the Certificates but for Residential Funding's, GMAC Mortgage's, Homecomings', Ally Bank's, Residential Securities', and the Depositor Defendants' fraudulent representations and omissions about the quality of the Certificates.

139. Plaintiffs justifiably, reasonably, and foreseeably relied on Residential Funding's, GMAC Mortgage's, Homecomings', Ally Bank's, Residential Securities', and the Depositor Defendants' representations and false statements regarding the quality of the Certificates.

140. As a result of the false and misleading statements and omissions, as alleged herein, Plaintiffs have suffered substantial damages.

141. Because Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants committed these acts and omissions maliciously, wantonly and oppressively, and because the consequences of these acts knowingly affected the general public, including but not limited to all persons with interests in the Certificates, Plaintiffs are entitled to recover punitive damages.

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

SECOND CAUSE OF ACTION

(Common Law Reckless Misrepresentation Against The GMAC Defendants)

142. Plaintiffs repeat and reallege the allegations set forth in the preceding paragraphs, as if fully set forth herein.

143. As alleged above, in the Offering Documents and in their public statements, Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants made fraudulent and false statements of material fact, and omitted material facts necessary in order to make their statements, in light of the circumstances under which the statements were made, not misleading.

144. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants made the materially misleading statements and omissions with conscious ignorance of the truth of the statements, or made the materially misleading statements with knowledge that the information relied on for the statements was not adequate or dependable enough to support the statements.

145. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants made these materially misleading statements and omissions for the purpose of inducing Plaintiffs to purchase the Certificates. Furthermore, these statements related to these Defendants' own acts and omissions.

146. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants knew that Plaintiffs were relying on their expertise, and they encouraged such reliance through the Offering Documents and their public representations, as described herein. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants knew that Plaintiffs would rely

upon their representations in connection with Plaintiffs' decision to purchase the Certificates. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants were in a position of unique and superior knowledge regarding the true facts concerning the foregoing material misrepresentations and omissions.

147. It was only by making such representations that Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants were able to induce Plaintiffs to buy the Certificates. Plaintiffs would not have purchased or otherwise acquired the Certificates but for Residential Funding's, GMAC Mortgage's, Homecomings', Ally Bank's, Residential Securities', and the Depositor Defendants' reckless representations and omissions about the quality of the Certificates.

148. Plaintiffs justifiably, reasonably, and foreseeably relied on Residential Funding's, GMAC Mortgage's, Homecomings', Ally Bank's, Residential Securities', and the Depositor Defendants' representations and false statements regarding the quality of the Certificates.

149. As a result of the false and misleading statements and omissions, as alleged herein, Plaintiffs have suffered substantial damages.

150. Because Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants committed these acts and omissions maliciously, wantonly and oppressively, and because the consequences of these acts knowingly affected the general public, including but not limited to all persons with interests in the Certificates, Plaintiffs are entitled to recover punitive damages

Filed in Fourth Judicial District Court

Hennepin County Civil, MN

THIRD CAUSE OF ACTION

(Fraudulent Inducement Against The GMAC Defendants)

151. Plaintiffs repeat and reallege the allegations set forth in the preceding paragraphs, as if fully set forth herein.

152. As alleged above, in the Offering Documents and in their public statements, Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants made fraudulent and reckless false statements of material fact, and omitted material facts necessary in order to make their statements, in light of the circumstances under which the statements were made, not misleading.

153. This is a claim for fraudulent inducement against Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants.

154. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants knew at the time they sold and marketed each of the Certificates that the foregoing statements were false or, at the very least, made the statements without knowing whether the statements were true.

155. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants made these materially misleading statements and omissions for the purpose of inducing Plaintiffs to purchase the Certificates. Furthermore, these statements related to these Defendants' own acts and omissions.

156. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants knew that Plaintiffs were relying on their expertise, and they encouraged such reliance through the Offering Documents and their public representations, as described herein. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants knew that Plaintiffs would rely

upon their representations in connection with Plaintiffs' decision to purchase the Certificates. Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants were in a position of unique and superior knowledge regarding the true facts concerning the foregoing material misrepresentations and omissions.

157. It was only by making such representations that Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants were able to induce Plaintiffs to buy the Certificates. Plaintiffs would not have purchased or otherwise acquired the Certificates but for Residential Funding's, GMAC Mortgage's, Homecomings', Ally Bank's, Residential Securities', and the Depositor Defendants' fraudulent representations and omissions about the quality of the Certificates.

158. Plaintiffs justifiably, reasonably, and foreseeably relied on Residential Funding's, GMAC Mortgage's, Homecomings', Ally Bank's, Residential Securities', and the Depositor Defendants' representations and false statements regarding the quality of the Certificates.

159. By virtue of Residential Funding's, GMAC Mortgage's, Homecomings', Ally Bank's, Residential Securities', and the Depositor Defendants' false and misleading statements and omissions, as alleged herein, Plaintiffs have suffered substantial damages and are also entitled to a rescission of the sale of the Certificates.

FOURTH CAUSE OF ACTION

(Aiding And Abetting Fraudulent and Reckless Misrepresentation Against The GMAC Defendants)

160. Plaintiffs repeat and reallege the allegations set forth in the preceding paragraphs, as if fully set forth herein.

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

161. This is a claim against the above-named aiding and abetting Defendants for aiding and abetting the fraudulent and reckless misrepresentations by Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants. Each of these GMAC Defendants aided and abetted the fraud committed by all of the others among these GMAC Defendants.

162. The above-named aiding and abetting GMAC Defendants knew of the fraudulent and reckless misrepresentations made by each of the other GMAC Defendants on Plaintiffs. As alleged in detail above, each of the above-named aiding and abetting GMAC Defendants knew that the GMAC Certificates were not backed by high quality loans and were not underwritten according to GMAC's underwriting standards, participated in those violations and had actual knowledge of their own acts, or participated in and had actual knowledge of the GMAC Defendants' failure to convey good title to the mortgage loans underlying the GMAC Certificates to the issuing trusts.

163. Furthermore, the above-named aiding and abetting GMAC Defendants provided the other GMAC Defendants with substantial assistance in advancing the commission of the fraud. As alleged in detail above, each of the above-named aiding and abetting GMAC Defendants participated in the violations of GMAC's mortgage loan underwriting and appraisal standards, made false public statements about GMAC's mortgage loan underwriting and appraisal standards, provided false information about the mortgage loans underlying the GMAC Certificates to the credit rating agencies, provided false information for use in the Offering Documents, or participated in the failure to properly endorse and deliver the mortgage notes and security documents to the issuing trusts.

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

164. It was foreseeable to the above-named aiding and abetting GMAC Defendants at the time they actively assisted in the commission of the fraudulent and reckless misrepresentations that Plaintiffs would be harmed as a result of their assistance.

165. As a direct and natural result of the fraudulent and reckless misrepresentations by Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants and the above-named aiding and abetting GMAC Defendants' knowing and active participation therein, Plaintiffs have suffered substantial damages.

FIFTH CAUSE OF ACTION

(Negligent Misrepresentation Against The GMAC Defendants)

166. Plaintiffs repeat and reallege each and every allegation set forth in the preceding paragraphs above as if fully set forth herein, except any allegations that the Defendants made any untrue statements and omissions intentionally or recklessly. For the purposes of this Count, Plaintiff expressly disclaims any claim of fraud or intentional misconduct.

167. This is a claim for negligent misrepresentation against Residential Funding, GMAC Mortgage, Homecomings, Ally Bank, Residential Securities, and the Depositor Defendants (the "Negligent Misrepresentation Defendants").

168. Plaintiffs made 22 separate investments in seven GMAC Certificates that the GMAC Defendants securitized and sold. The Negligent Misrepresentation Defendants also originated or acquired, underwrote, and serviced all the loans in the Offerings.

169. Because the Negligent Misrepresentation Defendants arranged the Securitizations, and originated or acquired, underwrote, and serviced all of the underlying mortgage loans, they had unique and special knowledge about the loans in the Offerings. In particular, the Negligent Misrepresentation Defendants had unique and special knowledge and

expertise regarding the quality of the underwriting of those loans as well as the servicing practices employed as to such loans.

170. Because Plaintiffs could not evaluate the loan files for the mortgage loans underlying their Certificates, and because Plaintiffs could not examine the underwriting quality or servicing practices for the Mortgage Loans in the Securitizations on a loan-by-loan basis, they were heavily reliant on the Negligent Misrepresentation Defendants' unique and special knowledge regarding the underlying mortgage loans when determining whether to make each investment of Certificates. Plaintiffs were entirely reliant on the Negligent Misrepresentation Defendants to provide accurate information regarding the loans in engaging in that analysis. Accordingly, the Negligent Misrepresentation Defendants were uniquely situated to evaluate the economics of each Certificate.

171. Over the course of more than three years, for 22 separate GMAC investments, Plaintiffs relied on the Negligent Misrepresentation Defendants' unique and special knowledge regarding the quality of the underlying mortgage loans and their underwriting when determining whether to invest in the Offerings. This longstanding relationship, coupled with the Negligent Misrepresentation Defendants' unique and special knowledge about the underlying loans, created a special relationship of trust, confidence, and dependence between the Negligent Misrepresentation Defendants and Plaintiffs.

172. The Negligent Misrepresentation Defendants were aware that Plaintiffs relied on their unique and special expertise and experience and depended upon them for accurate and truthful information. The Negligent Misrepresentation Defendants also knew that the facts regarding GMAC's compliance with their underwriting standards were exclusively within their knowledge.

173. Based on their expertise, superior knowledge, and relationship with Plaintiffs, the Negligent Misrepresentation Defendants owed a duty to Plaintiffs to use reasonable care in providing complete, accurate, and timely information regarding the mortgage loans and the Certificates. The Negligent Misrepresentation Defendants breached their duty to provide such reasonable care and competence to Plaintiffs.

174. The Negligent Misrepresentation Defendants likewise made misrepresentations which they knew, or were negligent in not knowing at the time to be false, in order to induce Plaintiffs' investment in the Certificates. The Negligent Misrepresentation Defendants provided the Offering Documents to Plaintiffs in connection with the Certificates, for the purpose of informing Plaintiffs of material facts necessary to make an informed judgment about whether to purchase the Certificates in the Offerings. In providing these documents, Defendants knew that the information contained and incorporated therein would be used for a serious purpose, and that Plaintiffs, like other reasonably prudent investors, intended to rely on the information.

175. As alleged above, the Offering Documents contained materially false and misleading information.

176. The Negligent Misrepresentation Defendants should have known that the information in the Offering Documents was materially false and misleading.

177. Unaware that the Offering Documents contained materially false and misleading statements, Plaintiffs reasonably relied on those false and misleading statements when deciding to purchase the Certificates in the Offerings.

178. Plaintiffs purchased Certificates identified in Exhibit 1 from the Depositor Defendants and are therefore in privity with the Depositor Defendants for those purchases.

179. Based on the Negligent Misrepresentation Defendants' expertise and specialized knowledge, and in light of the false and misleading representations in the Offering Documents,

Filed in Fourth Judicial District Court
10/24/2011 10:45:56 AM
Hennepin County Civil, MN

the Negligent Misrepresentation Defendants owed Plaintiffs a duty to provide them with reasonable, complete, accurate, and timely information regarding the quality of the Certificates, and breached their duty to provide such information to Plaintiffs.

180. Plaintiffs reasonably relied on the information provided by the Negligent Misrepresentation Defendants and have suffered substantial damages as a result of their misrepresentations.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray for relief and judgment, as follows:

(a) Awarding compensatory and/or rescissionary damages in favor of Plaintiffs against the GMAC Defendants, jointly and severally, for all damages sustained as a result of Defendants' wrongdoing, in an amount to be proven at trial, including interest thereon;

(b) Awarding punitive damages for Plaintiffs' common-law fraudulent and reckless misrepresentation claims;

(c) Awarding Plaintiffs their reasonable costs and expenses incurred in this action, including counsel fees and expert fees; and

(d) Such other relief as the Court may deem just and proper.

VI. DISCLOSURES EMERGE ABOUT THE PROBLEMS UNDERLYING THE LOANS....230

VII. UNION CENTRAL'S RELIANCE ON DEFENDANTS' FALSE AND MISLEADING STATEMENTS....233

I. NATURE OF THE ACTION

1. The Union Central Life Insurance Company, Ameritas Life Insurance Corp. and Acacia Life Insurance Company (collectively, "Plaintiffs" or "Union Central") bring this action to recover losses suffered as a result of Defendants' fraudulent misconduct whereby they sold to Plaintiffs asset-backed securities (the "Certificates") pursuant to materially false and misleading statements made in Registration Statements and Prospectus Supplements filed with the United States Securities and Exchange Commission ("SEC") (collectively, the "Registration Statements").

2. The Certificates were supported by pools of residential mortgage loans generally secured by first or second liens on residential properties. The Registration Statements and other statements disseminated to Union Central (the "Offering Materials") were false and misleading in that they included false statements and/or omissions about the processes and practices used to select the pools of mortgage loans and the quality of those loans.

3. During 2005 through 2007 the sponsoring Defendants (collectively, "Defendants") established the trusts identified and listed in Exhibit 1 attached hereto (the "Trusts") to issue billions of dollars worth of certificates that were backed by mortgage loans they deposited in the Trusts. In selling these residential mortgage-backed securities ("RMBS") to Plaintiffs, Defendants who are the sponsors, depositors and underwriters for these RMBS, affirmatively and materially misrepresented the quality of the loans backing the Trusts, the procedures that had been used to review and screen those loans, the adequacy of the collateral supporting the loans and financial capacity and willingness of borrowers to repay the loans. Because the relevant safeguards had not been utilized and were not present, the loans deposited in the Trusts were materially different from the type Defendants had represented were being securitized and sold to Plaintiffs as properly secured and highly rated investments.

4. Defendants also concealed important information, including that outside firms that Defendants had hired to evaluate the loans had found a large percentage of their mortgage loans included in RMBS offerings during this time period did not conform to standards which the Defendants represented to investors had been used to originate the loans. As a result, Defendants actually knew about these deficiencies prior to securitization, yet they failed to require replacement loans for large numbers of the bad loans. They concealed this adverse information from Union Central and other investors. Defendants intended for Union Central to believe that Defendants' underwriting and due diligence procedures were being used to identify and exclude problem loans, not to simply waive through problem loans even when identified.

5. Defendants engaged in this concerted course of conduct while promoting a "race to the bottom" in the quality of loan origination because they were competing with each other for this profitable business. The Senate Permanent Subcommittee on Investigations ("Senate PSI") has found that banks, such as Defendants, were "the driving force behind the structured finance products that provided a steady stream of funding for lenders originating high risk, poor quality loans and that magnified risk throughout the U.S. financial system. The investment banks that engineered, sold, traded, and profited from mortgage related structured finance products were a major cause of the financial crisis." *See U.S. Senate Permanent Subcommittee or Investigations, Wall Street & The Financial Crisis: Anatomy of a Financial Collapse* (April 13, 2011) (the "Senate PSI Report").

6. The Senate PSI case study of defendant Washington Mutual's practice of abandoning proper loan underwriting found it to be typical of other banks in the mortgage securitization industry:

> Washington Mutual was not the only mortgage lender to fail during the financial crisis. Nor was its high risk lending practices unusual. To the contrary, the Subcommittee investigation indicates that Washington Mutual was emblematic of practices at a number of financial institutions that originated, sold, and securitized high risk home loans from 2004 to 2008.

7. As alleged herein, Defendants willfully abandoned prudent loan underwriting standards, while representing to Plaintiffs that the loans backing the Trusts had been properly underwritten with standards and procedures to verify the quality of the loans. Unbeknownst to Plaintiffs, Defendants were actually fueling the erosion of proper underwriting standards with their insatiable appetite for more mortgages to securitize and sell to investors. In the pursuit of higher profits, Defendants employed, financed, facilitated and accepted improper lending practices while abandoning the very loan underwriting guidelines they falsely represented to Plaintiffs were being utilized for the loans they securitized and sold to them.

8. The *Final Report of the National Commission on the Causes of the Financial and Economic Crisis in the United States* prepared by the Financial Crisis Inquiry Commission ("FCIC Report") also concluded that financial institutions, such as Defendants here, were the driving force behind deteriorating loan underwriting standards when improperly securitizing bad loans and selling them to investors. As the FCIC Report put it: "We conclude collapsing mortgage-lending standards and the mortgage securitization pipeline lit and spread the flame of contagion and crisis." The FCIC Report's conclusion is consistent with the detailed factual allegations set forth herein that show Defendants knowingly promoted the abandonment of proper loan underwriting in connection with the securitizations sold to Plaintiffs.

9. There was essential agreement between members of the FCIC that financial institutions, such as Defendants, ignored credit quality standards for mortgages they securitized. Three dissenting commission members explained in their separate Dissenting Statement: "There was a steady deterioration in mortgage underwriting standards (enabled by securitizers that lowered the credit quality of the mortgages they would accept, and credit rating agencies that overrated the subsequent securities and derivatives)." The Dissenting Statement continued:

> Mortgage originators took advantage of these lower credit quality securitization standards and the easy flow of credit to relax the underwriting discipline in the loans they issued. As long as they could resell a mortgage to the secondary market, they didn't care about its quality.

As alleged herein, Defendants engaged in this very same misconduct in connection with the RMBS Certificates they sold to Plaintiffs, while also concealing and failing to disclose this misconduct.

10. As loan originators, financiers of loan originators, loan securitizers and sellers of securitized loans, Defendants had the ability and power to influence and control the underwriting standards they employed and accepted in connection with the loan securitizations they sold to Plaintiffs. Defendants were the only parties to these RMBS transactions who not only had access to the loan files and other inside information, but who, through their investigations and practices, actually knew about the poor quality of the underwriting that had been used to make the loans.

11. Instead of diligently executing and complying with their responsibility as gatekeepers at each stage of the securitization process so as to enforce proper underwriting and accurately evaluate prospective borrowers' willingness and ability to repay the mortgage loans, Defendants knowingly securitized bad loans in order to increase the supply of loans needed to continue their profitable securitization business.

12. Those Defendants who were direct loan originators received many reports and were well aware that their loan officers and employees were not complying with the stated underwriting standards, and they frequently received internal reports, which were ignored or brushed aside, that loan officers and underwriters were approving defective loans and waiving underwriting requirements without a valid basis for doing so.

13. Defendants' due diligence, monitoring and investigations performed on the loan pools that they were originating and/or acquiring for securitization also conclusively demonstrated to them that prudent underwriting standards had been widely abandoned with respect to the loans in the

Trusts. As alleged below, a substantial percentage of loans that Defendants sampled and reviewed in connection with securitizations revealed the loans had not been properly underwritten and had been made to borrowers who would be unable to repay them.

14. Defendants did not disclose this extremely adverse information, which was only recently published in connection with the FCIC Report. Thus, in 2010, the truth began to be revealed to the public regarding Defendants' actual knowledge at the time of the securitizations of defects in the mortgage pools that supported the Certificates. After spending more than a year examining the causes of the financial crisis, in late 2010 the FCIC began disclosing its findings.

15. Defendant did not use their inside information, special knowledge and ability to halt the making and securitizing of bad loans by enforcing proper underwriting standards. Nor did they discontinue funding originators who engaged in wrongful loan origination practices. Rather, Defendants utilized their inside knowledge of the true conditions to gain additional economic advantage at the expense of investors such as Plaintiffs. For example, Defendants presented information regarding poor quality loans to the originators of the defective loans they were purchasing – not to fix the problem – but in order to negotiate reduced prices for loans they were depositing in the RMBS Trusts, thereby increasing their profits while leaving loans that were internally known to be defective in the trust they were selling to investors.

16. In other instances, Defendants used their inside information regarding defective loans in RMBS Trusts to take short positions regarding the underlying mortgages, and thereby profiting when the loans went into default and generated losses for RMBS purchasers. These Defendants were betting the value of the trust certificates would decline due to the poor quality of the underlying loans at the same time they were selling similar RMBS to Plaintiffs without disclosing what they knew about abandonment of the underwriting standards.

17. Plaintiffs would not have purchased these RMBS Certificates if Defendants had revealed the true conditions. When purchasing the Certificates, Plaintiffs sought investments that were conservative but also generated a reasonable yield. In purchasing the subject RMBS Plaintiffs relied upon Defendants' representations regarding the loan underwriting standards that had purportedly been applied and utilized to ensure quality loans were in the Trusts. Plaintiffs and their advisors relied on information presented in term sheets, Registration Statements and other statements Defendants provided to Plaintiffs regarding the mortgages and the underwriting standards, appraisals, loan-to-value ratios ("LTV"), debt-to-income ("DTI") ratios, owner-occupancy rates and ratings. These representations were material to Plaintiffs' investment decisions.

18. Because Defendants concealed their widespread abandonment of prudent loan underwriting, Plaintiffs were unaware of the substantially increased likelihood the subject loans would soon become non-performing and generate substantial losses flowing through the RMBS Trusts to Plaintiffs. And this is precisely what happened. Plaintiffs have not been compensated for the high level of concealed risk, which has now been actualized, that the Certificates actually posed.

19. Union Central has suffered large losses on its investments in the Certificates as a very high percentage of the loans have defaulted. Due to the lack of proper loan underwriting many of the Certificates have defaulted and are now worthless. The remainder of the Certificates have dropped significantly in value since the time of Union Central's purchases due to defects in the underlying mortgage loans. The Certificates still held by Union Central are no longer marketable at prices anywhere near the prices paid, as it is now clear that the Certificates were exposed to much more risk with respect to both the timing and absolute cash flow to be received than the Defendants' statements represented.

20. As further alleged below, Defendants committed egregious fraud with their materially false and misleading representations, and when omitting key information that would have been highly material to Union Central's decision to invest. Defendants recklessly or knowingly made these false and misleading statements and omissions as described below.

II. JURISDICTION AND VENUE

21. This Court has jurisdiction over this action pursuant to 28 U.S.C. §1331. Certain claims asserted herein arise under §§10(b) and 20(a) of the Securities Exchange Act of 1934 ("1934 Act"), and Rule 10b-5 promulgated thereunder [17 C.F.R. §240.10b-5]. Jurisdiction is conferred by §27 of the 1934 Act and venue is proper pursuant to §27 of the 1934 Act.

22. This Court also has jurisdiction over the common law claims of fraud and aiding and abetting pursuant to this Court's supplemental jurisdiction under 28 U.S.C. §1367(a).

23. This Court has diversity jurisdiction pursuant to 28 U.S.C. §1332(a), as there is complete diversity of citizenship between the parties, and the amount in controversy exceeds $75,000, exclusive of interest and costs.

24. Venue is proper in this District because the violations of law complained of herein occurred in part in this District, including the dissemination of the materially false and misleading statements complained of herein, and Defendants conduct business in this District. The depositors of the mortgage loans for many of the Trusts had principal offices in New York, New York.

25. In connection with the acts alleged in this complaint, Defendants, directly or indirectly, used the means and instrumentalities of interstate commerce, including, but not limited to, the mails, interstate telephone communications and the facilities of the national securities markets.

III. PARTIES

A. Plaintiffs

26. Plaintiffs are The Union Central Life Insurance Company, Ameritas Life Insurance Corp. and Acacia Life Insurance Company. Plaintiffs are indirect, fully owned subsidiaries of UNIFI Mutual Holding Company, which offers its clients a wide array of financial and insurance services. The Union Central Life Insurance Company and Ameritas Life Insurance Corp. are both Nebraska companies, with home offices in Lincoln, Nebraska. Acacia Life Insurance Company is a District of Columbia company, with home offices in Bethesda, Maryland.

27. Plaintiffs acquired Certificates in reliance on Defendants' false statements, including those in the Registration Statements and Prospectus Supplements, and have been damaged thereby. Plaintiffs purchased Certificates as described in Exhibit 1 attached hereto.

B. Defendants

1. WaMu

28. All of the Washington Mutual-affiliated Defendants described in §III.B.1. are referred to collectively as "WaMu." WaMu pooled mortgage loans and sold Certificates for the following Trust:

Washington Mutual Mortgage Pass-Through Certificates, WMALT Series 2005-3 Trust ("WMALT 2005-3 Trust")

29. Defendant Washington Mutual Mortgage Securities Corp. ("WMMSC"), was incorporated in Delaware and headquartered in Illinois. WMMSC was a wholly owned subsidiary of

Washington Mutual, Inc. ("WMI"), which in 2007, the last year it filed a Form 10-K with the SEC, recorded a net loss of $67 million.[1] WMMSC acted as the depositor for the WMALT 2005-3 Trust.

30. Defendant WaMu Capital Corp. ("WCC") is incorporated and headquartered in Washington and is a subsidiary of J.P. Morgan Chase & Co. WCC was a subsidiary of WMI. It is a registered broker-dealer with the SEC. WCC acted as underwriter in the sale of the Certificates for the WMALT 2005-3 Trust and in doing so, drafted and disseminated certain of the Offering Materials, including, but not limited to, the Prospectus Supplement.

2. Citi

31. All of the Citigroup-affiliated Defendants described in §III.B.2. are referred to collectively as "Citi." Citi pooled mortgage loans and sold Certificates for the following Trusts (collectively, "Citi Trusts"):

Citicorp Mortgage Securities Trust, Series 2007-5 ("CMSI 2007-5 Trust")
Citicorp Mortgage Securities Trust, Series 2007-8 ("CMSI 2007-8 Trust")
Citigroup Mortgage Loan Trust 2007-10 ("CMLT 2007-10 Trust")

32. Defendant Citigroup Inc. ("Citigroup") is a global diversified financial services holding company, incorporated under the laws of Delaware, and headquartered in New York. Citigroup does business in more than 160 countries and manages approximately 200 million customer accounts. All of the Citigroup-related Defendants are direct or indirect subsidiaries of Citigroup.

---

[1] WMI's collapse in 2008 is considered the largest bank failure in U.S. history. (Source: *Wall Street Journal*, Sept. 26, 2008.) After the government seized WMI, J.P. Morgan Chase & Co. bought the crumbling bank for $1.9 billion.

33. Defendant Citigroup Global Markets Inc. ("CGMI") is a New York-incorporated and -headquartered company. As an SEC-registered broker-dealer, it is the brokerage and securities arm of defendant Citigroup. CGMI provides investment banking services to corporate, institutional, government, and retail clients. CGMI acted as underwriter in the sale of the Certificates for the Citi Trusts and in doing so drafted and disseminated certain of the Offering Materials, including but not limited to the Supplemental Prospectus.

34. As an active market-maker, CGMI's deals were not limited to Citi transactions. In addition, CGMI underwrote the RALI Series 2005-QS7 Trust and the RALI Series 2005-QS14 Trust, which are also at issue in this action. *See* §V.F.

35. Defendant CitiMortgage, Inc. ("CitiMortgage") is a New York corporation whose principal offices are in Connecticut and with major operations in Missouri. As the mortgage lending unit of Citigroup, it originated many of the mortgages in the CMSI 2007-5 and the CMSI 2007-8 Trusts. It also was the servicer for all three Citi Trusts and the sponsor for the CMSI 2007-5 and CMSI 2007-8 Trusts.

36. Defendant Citicorp Mortgage Securities, Inc. ("CMSI") is a Delaware corporation headquartered in Missouri. It is a wholly-owned subsidiary of CitiMortgage. CMSI acted as the depositor for the CMSI 2007-5 and CMSI 2007-8 Trusts.

37. Defendant Douglas R. Krueger ("Krueger") was President and a director of CMSI. Defendant Krueger signed the Form S-3 comprising part of the Registration Statements pursuant to the offerings of the CMSI 2007-5 and CMSI 2007-8 Trusts.

38. Defendant Citigroup Global Markets Realty Corp. ("CGMR") is a New York corporation headquartered in New York. It is an affiliate of defendant CGMI, the Citi Trusts' underwriter. CGMR acted as sponsor for the CMLT 2007-10 Trust.

39. Defendant Citigroup Mortgage Loan Trust Inc. ("CMLT") is a Delaware corporation headquartered in New York. It is an affiliate of defendant CGMR. CMLT engaged in the securitization of mortgage loans acquired by the Trust's sponsor, CGMR. CMLT acted as the depositor for the CMLT 2007-10 Trust.

40. Defendant Randall Costa ("Costa") was President and a director of CMLT during the relevant time period. Defendant Costa signed the Form S-3 comprising part of the Registration Statements pursuant to the offerings of the CMLT 2007-10 Trust.

3. Goldman

41. All of the Goldman-affiliated Defendants described in §III.B.3. are referred to collectively as "Goldman." Goldman pooled mortgage loans and sold Certificates for the following Trusts (collectively, "Goldman Trusts"):

GSR Mortgage Loan Trust 2006-7F ("GSR 2006-7F Trust")
GSR Mortgage Loan Trust 2006-9F ("GSR 2006-9F Trust")

42. Defendant Goldman, Sachs & Co. ("Goldman Sachs") is a full service investment banking and securities firm. Goldman Sachs is a New York partnership formed by Goldman Sachs Group, Inc., which is incorporated in Delaware and headquartered in New York, and Goldman Sachs & Co., LLC, whose sole member is Goldman Sachs Group, Inc. Goldman Sachs acted as underwriter in the sale of the Certificates for the Goldman Trusts and in doing so, drafted and disseminated certain of the Offering Materials, including, but not limited, to the Prospectus Supplement.

43. Defendant Goldman Sachs Mortgage Company ("GSMCo.") is a New York limited partnership. Its general partner is Goldman Sachs Real Estate Funding Corp., which is incorporated and headquartered in New York, and its limited partner is The Goldman Sachs Group, Inc., which is

incorporated in Delaware and headquartered in New York. GSMCo. was the sponsor for the Goldman Trusts.

44. Defendant GS Mortgage Securities Corp. ("GSMS") is a Delaware corporation headquartered in New York. It is a wholly-owned subsidiary of GSMCo. GSMS acquired mortgage loans and acted as the depositor for the Goldman Trusts.

45. Defendant Daniel L. Sparks ("Sparks") was Chief Executive Officer ("CEO") and a director of GSMS. during the relevant time period. Defendant Sparks signed the Form S-3 comprising part of the Registration Statements pursuant to the offerings of the Goldman Trusts.

4. IndyMac

46. Defendant IndyMac RMBS, Inc. ("IndyMac RMBS"), a Delaware corporation headquartered in California, was the wholly-owned subsidiary of IndyMac Bank, F.S.B. ("IndyMac Bank"), which was closed by the Federal Deposit Insurance Corporation ("FDIC") on July 11, 2008. IndyMac RMBS and its failed parent, IndyMac Bank, are referred to collectively as "IndyMac." IndyMac RMBS acquired mortgage loans and acted as the depositor for IndyMac IMJA Mortgage Loan Trust 2007-A1 ("IMJA 2007-A1 Trust").

5. Morgan Stanley

47. All of the Morgan Stanley-affiliated Defendants described in §III.B.3. are referred to collectively as "Morgan Stanley." Morgan Stanley pooled mortgage loans and sold Certificates for the Morgan Stanley Mortgage Loan Trust 2005-5AR ("MSM 2005-5AR Trust")

48. The Morgan Stanley parent, defendant Morgan Stanley ("MS") is incorporated in Delaware and headquartered in New York. MS is a global financial service firm that reported net revenues of $32.4 billion for 2011. All of the Morgan Stanley-related Defendants are direct or indirect subsidiaries of MS.

49. Defendant Morgan Stanley & Co. Incorporated ("MS&Co.") is an SEC-registered broker-dealer incorporated in Delaware and headquartered in New York. MS&Co. acted as underwriter in the sale of the Certificates for the MSM 2005-5AR Trust and in doing so, drafted and disseminated certain of the Offering Materials, including, but not limited to, the Prospectus Supplement.

50. Defendant Morgan Stanley Capital I Inc. ("MSCII"), a Delaware corporation headquartered in New York, is a wholly-owned subsidiary of defendant MS&Co. MSCII acted as the depositor for the MSM 2005-5AR Trust.

6. RALI

51. All of the RALI-affiliated Defendants described in §III.B.6. are referred to collectively as "RALI." RALI pooled mortgage loans and sold Certificates for the following Trusts (collectively, "RALI Trusts"):

RALI Series 2005-QA9 Trust
RALI Series 2005-QS7 Trust
RALI Series 2005-QS9 Trust
RALI Series 2005-QS14 Trust
RALI Series 2005-QA5 Trust
RALI Series 2006-QS2 Trust
RALI Series 2006-QS6 Trust
RALI Series 2006-QS18 Trust

52. Defendant Ally Financial, formerly known as GMAC, Inc. ("Ally") is a financial services company incorporated in Delaware and headquartered in Michigan. It maintains its longstanding relationship providing auto financing to automotive dealers and customers of General Motors Company, of which it had been a subsidiary. In its 2011 annual filing with the SEC, it reported that it was one of the largest residential mortgage companies in the United States. All of the RALI-related Defendants are direct or indirect subsidiaries of Ally.

53. Defendant Residential Capital LLC, formerly known as Residential Capital Corporation ("ResCap") is an indirect wholly owned subsidiary of Ally. ResCap is a Delaware limited liability company headquartered in Minnesota. As a real estate finance company, ResCap's business focused on the residential real estate market. From 2005 to 2006, according to *Inside Mortgage Finance*, it grew from being the fifth largest to the third largest issuer of non-conforming mortgage-backed securities in the United States, issuing more than $65 billion in securities. It was also ranked the sixth and seventh largest producer of residential mortgage loans in the United States in 2005 and 2006, respectively.

54. Defendant Residential Funding Securities, LLC ("RFS"), now known as Ally Securities LLC and also referred to in the Offering Materials as GMAC RFC Securities, is a Delaware limited liability company registered as a broker-dealer with the SEC. Its principal place of business is in New York. Prior to 2007, it was known as Residential Funding Securities Corporation. RFS acted as underwriter for all of the RALI Trusts, except for RALI Series 2005-QA9, and in doing so, drafted and disseminated certain of the Offering Materials, including, but not limited to, the Prospectus Supplement.

55. Defendant Residential Funding Company, LLC, formerly known as Residential Funding Corporation ("RFC") is a Delaware-organized limited liability company with its principal place of business in Minnesota. RFC was a subsidiary of ResCap, as well as the sole owner of HomeComings Financials, LLC ("HomeComings"), formerly known as HomeComings Financials Network, Inc., which originated many of the mortgages underlying the RALI Trusts. RFC acted as master servicer for the RALI Trusts.

56. Defendant Residential Accredit Loans, Inc. ("Residential Accredit") is a Delaware corporation with its principal place of business in Minnesota. It is also an indirect wholly-owned

subsidiary of ResCap and RFC. Residential Accredit acquired mortgage loans from RFC and acted as the depositor for the RALI Trusts.

57. Defendant Bruce J. Paradis ("Paradis") was President, CEO and a director of Residential Accredit during the relevant time period. Defendant Paradis signed the Forms S-3 comprising part of the Registration Statements pursuant to the offerings of the RALI Trusts.

7. UBS

58. All of the MASTR-affiliated Defendants described in §III.B.7. are referred to collectively as "UBS." UBS pooled mortgage loans and sold Certificates for the following Trusts (collectively, "MASTR Trusts"):

MASTR Asset Securitization Trust 2005-1 ("MASTR 2005-1")
MASTR Asset Securitization Trust 2005-2 ("MASTR 2005-2")
MASTR Asset Securitization Trust 2006-1 ("MASTR 2006-1")

59. Defendant UBS AG is a Swiss-organized bank with a global presence. UBS AG specializes in wealth management and investment banking. All of the MASTR-related Defendants are direct or indirect subsidiaries of UBS AG.

60. Defendant UBS Securities LLC ("UBS Securities") is a Delaware-registered limited liability company that engages in a nationwide securities business as a broker-deal registered with the SEC. UBS Securities' principal place of business is located in New York. Its members are UBS Americas Inc., which is incorporated in Delaware and headquartered in Connecticut, and UBS AG. UBS Securities acted as underwriter in the sale of the Certificates for the MASTR Trusts and in doing so, drafted and disseminated certain of the Offering Materials, including, but not limited to, the Prospectus Supplement.

61. As an active market-maker, UBS Securities' deals were not limited to MASTR transactions. In addition, UBS Securities underwrote the following Trusts:

CMSI 2007-5 Trust
IMJA 2007-A1 Trust
RALI 2005-QA9 Trust
RALI 2005-QS7 Trust
RALI 2005-QS9 Trust

62. Defendant Mortgage Asset Securitization Transactions, Inc. ("Mortgage Asset"), a Delaware corporation with its principal place of business in New York, is a wholly-owned limited purpose finance subsidiary of UBS Americas Inc. Mortgage Asset acted as the depositor for the MASTR Trusts.

8. HSBC

63. Defendant HSBC Securities (USA) Inc. ("HSBC Securities") is an investment banking firm that provides financial advisory services and is incorporated in Delaware and headquartered in New York. HSBC Securities and its parent, HSBC Holdings plc, are referred to collectively as "HSBC." HSBC Securities acted as underwriter in the sale of the Certificates for the IMJA 2007-A1 Trust and in doing so, drafted and disseminated certain of the Offering Materials, including, but not limited to, the Prospectus Supplement.

9. SunTrust

64. Defendant SunTrust Capital Markets, Inc. ("SCM"), now known as SunTrust Robinson Humphrey, Inc., is an SEC-registered broker-dealer that provides investment banking services. SCM is a Tennessee corporation whose headquarters are in Georgia. SCM is an affiliate of SunTrust Mortgages, Inc. ("SunTrust Mortgage"), an originator of mortgage loans. SCM, SunTrust Mortgage and their parent, SunTrust Banks, Inc., are referred to collectively as "SunTrust." SCM acted as underwriter in the sale of the Certificates for the MASTR 2006-1 Trust and in doing so,

drafted and disseminated certain of the Offering Materials, including, but not limited to, the Prospectus Supplement.

10. Deutsche Bank

65. Defendant Deutsche Bank Securities Inc. ("DB Securities") is a Delaware-incorporated investment bank that provides security brokerage services and is based in New York. It is a registered broker-dealer with the SEC. DB Securities and its parent, Deutsche Bank AG, are referred to collectively as "Deutsche Bank." DB Securities acted as underwriter in the sale of the Certificates for the RALI 2006-QS2 and RALI 2006-QSI8 Trusts and in doing so, drafted and disseminated certain of the Offering Materials, including, but not limited to, the Prospectus Supplement.

11. RBS

66. Defendant RBS Securities, Inc. ("RBS Securities"), a subsidiary of Greenwich Capital Holdings, Inc., was formerly known as Greenwich Capital Markets, Inc. and later changed its name to RBS Securities, Inc. in April 2009. It is incorporated in Delaware and headquartered in Connecticut. RBS Securities and its parent, The Royal Bank of Scotland Group plc, are referred to collectively as "RBS." RBS Securities acted as underwriter in the sale of the Certificates for the RALI 2005-QS14 and RALI 2006-QS6 Trusts and in doing so, drafted and disseminated certain of the Offering Materials, including, but not limited to, the Prospectus Supplement.

12. Defendant Groups

67. The Defendants identified in ¶¶35, 36, 38, 39, 43, 44, 46, 50, 56, 62 are referred to herein as the "Depositor Defendants" or "Sponsor Defendants."

68. The Defendants identified in ¶¶33, 42, 49, 54, 60 are referred to herein as the "Affiliated Underwriter Defendants."

69. The Defendants identified in ¶¶63-66 are referred to herein as the "Unaffiliated Underwriter Defendants."

70. The Defendants identified in ¶¶37, 40, 45, 57 are referred to herein as the "Individual Defendants." The Individual Defendants each held positions of responsibility with the respective Depositor Defendants and/or Underwriter Defendants. Each had control over other personnel employed within their organizations and affiliated organizations and involved in the issuance of their respective RMBS and each Individual Defendant had control over the contents of the respective Prospectus Supplements for those RMBS offerings.

71. The Affiliated Underwriter Defendants, Unaffiliated Underwriter Defendants and the Individual Defendants aided and abetted and/or participated with and/or conspired with the Depositor Defendants in connection with their respective RMBS underwriting and loan securitization activities at issue herein and in furtherance of the wrongful acts and course of conduct that caused the damages and injuries claimed herein and are responsible in some manner for the acts, occurrences and events alleged in this complaint.

IV. DEFENDANTS WERE CRITICAL PARTICIPANTS IN INDUSTRY-WIDE MISCONDUCT

A. Residential Mortgage Loan Borrowers

72. Borrowers who require funds to finance the purchase of a house or to refinance an existing mortgage apply for residential mortgage loans with a loan originator. These loan originators assess a borrower's ability to make payments on the mortgage loan based on, among other things, the borrower's Fair Isaac & Company ("FICO") credit score. Borrowers with higher FICO scores were able to receive loans with less documentation during the approval process, as well as higher LTV ratios. Based in part on a person's FICO score, a loan originator assesses a borrower's risk

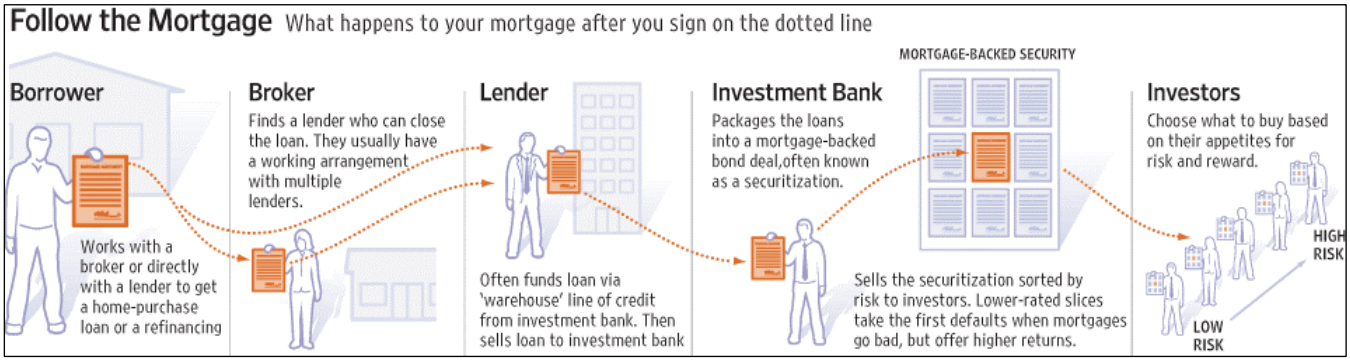
profile to determine the interest rate for the loan, the amount of the loan, and the general structure of the loan.

73. A loan originator will issue a "prime" mortgage loan to a borrower who has a high credit score and who can supply the required documentation evidencing their income, assets, employment background, and other documentation that supports their financial health. Borrowers who are issued "prime" mortgage loans are deemed to be the most creditworthy and receive the best rates and structure on mortgage loans.

74. If a borrower has the required credit score for a "prime" mortgage loan, but does not supply supporting documentation of his financial health, then a loan originator will issue the borrower a loan referred to as a "low-doc" or Alt-A loan, and the interest rate on that loan will be higher than that of a prime mortgage loan and the general structure of the loan will not be as favorable as it would be for a prime borrower. Low doc or Alt-A loans are appropriate for borrowers who are self-employed or have large income streams that are frequently uneven and not subject to regular documentation.

75. A borrower will be classified as "sub-prime" if the borrower has a lower credit score and higher debt-to-equity ratio. Borrowers that have low credit ratings are unable to obtain a conventional mortgage because they are considered to have a larger than average risk of defaulting on a loan. For this reason, lending institutions often charge interest on sub-prime mortgages at a rate that is higher than a conventional mortgage in order to compensate themselves for assuming more risk. None of the Trusts were represented to have included subprime loans, while in fact many of the loans in the Trusts were made to borrowers who would not have qualified for even subprime loans if proper, diligent and prudent underwriting had actually been in place and utilized.

B. The Secondary Market

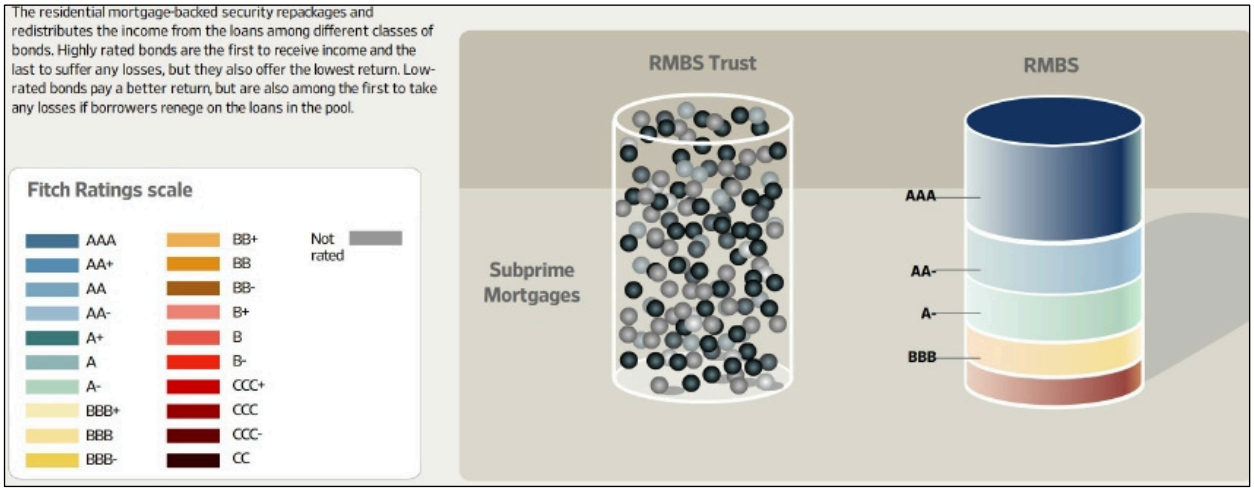


76. Traditionally, the model for a mortgage loan involved a lending institution (*i.e.*, the loan originator) extending a loan to a prospective home buyer in exchange for a promissory note from the home buyer to repay the principal and interest on the loan. The loan originator also held a lien against the home as collateral in the event the home buyer defaulted on the obligation. Under this simple model, the loan originator held the promissory note until it matured and was exposed to the concomitant risk that the borrower may fail to repay the loan. As such, under the traditional model, the loan originator had a financial incentive to ensure that (1) the borrower had the financial wherewithal and ability to repay the promissory note, and (2) the underlying property had sufficient value to enable the originator to recover its principal and interest in the event that the borrower defaulted on the promissory note.

77. Beginning in the 1990s, persistent low interest rates and low inflation led to a demand for mortgages. As a result, banks and other mortgage lending institutions took advantage of this opportunity, introducing financial innovations in the form of asset securitization to finance an expanding mortgage market. As discussed below, these innovations altered (1) the foregoing traditional lending model, severing the traditional direct link between borrower and lender, and (2) the risks normally associated with mortgage loans.

78. Unlike the traditional lending model, an asset securitization involves the sale and securitization of mortgages. Specifically, after a loan originator issues a mortgage to a borrower, the loan originator sells the mortgage in the financial markets to a third-party financial institution. By selling the mortgage, the loan originator obtains fees in connection with the issuance of the mortgage, receives upfront proceeds when it sells the mortgage into the financial markets, and thereby has new capital to issue more mortgages. The mortgages sold into the financial markets are

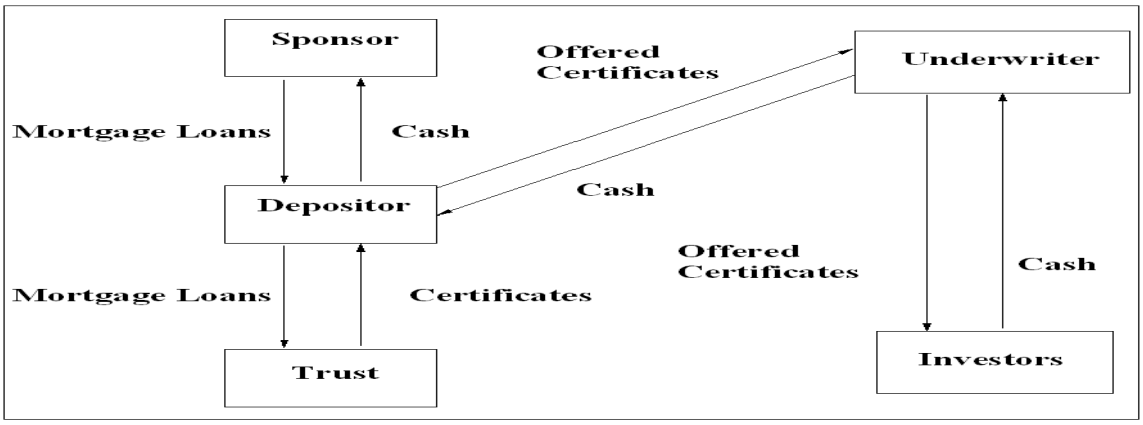
typically pooled together and securitized into what are commonly referred to as RMBS. In addition to receiving proceeds from the sale of the mortgage, the loan originator is no longer subject to the risk that the borrower may default – that risk is transferred with the mortgages to investors who purchase the RMBS.



79. As illustrated below, in a mortgage securitization, mortgage loans are acquired, pooled together or "securitized," and then sold to investors in the form of RMBS, whereby the investors acquire rights in the income flowing from the mortgage pools:

80. When mortgage borrowers make interest and principal payments as required by the underlying mortgages, the cash-flow is distributed to the holders of the RMBS certificates in order of priority based on the specific tranche held by the RMBS investors. The highest tranche (also referred to as the senior tranche) is first to receive its share of the mortgage proceeds and is also the last to absorb any losses should mortgage-borrowers become delinquent or default on their mortgage.

81. In this RMBS structure, the senior tranches receive the highest investment rating by the rating agencies, usually AAA. After the senior tranche, the middle tranches (referred to as mezzanine tranches) next receive their share of the proceeds. In accordance with their order of priority, the mezzanine tranches were generally rated from AA to BBB by the rating agencies.



82. The process of distributing the mortgage proceeds continues down the tranches through to the bottom tranches, referred to as equity tranches. This process is repeated each month and all investors receive the payments owed to them so long as the borrowers are current on their mortgages. The following diagram illustrates the concept of tranches within an RMBS comprised of residential mortgages (often referred to as a residential mortgage-backed securities or RMBS:

(Source: *The Wall Street Journal*)

83. As illustrated below, in the typical securitization transaction, participants in the transaction are (1) the servicer of the loans to be securitized, often called the "sponsor," (2) the depositor of the loans in a trust or entity for securitization, (3) the underwriter of the RMBS, (4) the entity or trust responsible for issuing the RMBS, often called the "trust," and (5) the investors in the RMBS.

84. The securitization process begins with the sale of mortgage loans by the sponsor – the owner of the mortgages that it either originated or acquired – to the depositor in return for cash. The depositor then sells those mortgage loans and related assets to the trust, and in exchange, the trust issues certificates to the depositor. The depositor then works with the underwriter of the trust to price and sell the certificates to investors:

85. Thereafter, the mortgage loans held by the trusts are serviced, *i.e.*, principal and interest are collected from mortgagors, by the servicer, which earns monthly servicing fees for collecting such principal and interest from mortgagors. After subtracting a servicing fee, the servicer sends the remainder of the mortgage payments to a trustee for administration and distribution to the trust, and ultimately, to the purchasers of the RMBS certificates.

C. Securitizations

86. The Depositor Defendants acquired mortgage loan pools either from affiliated originators or unrelated third parties and transferred the mortgage pools to the Trusts in exchange for the Certificates. Many of the Certificates purchased by Union Central were issued by New York trusts. Each of the Trusts issued hundreds of million of dollars worth of certificates pursuant to the Registration Statements.

87. The Underwriter Defendants acquired the certificates from the Depositor Defendants and sold them to the investing public pursuant to the Registration Statements.

88. The Certificates were sold pursuant to Prospectus Supplements that were issued pursuant to Form S-3 Registration Statements, which were created as "shelf" registrations under Rule 415 of the Securities Act of 1933 ("1933 Act"). These shelf registration statements allowed

Defendants to rapidly access the capital markets with offerings of RMBS to investors, including Plaintiffs. Plaintiffs purchased Certificates arranged by the following depositors pursuant to Registration Statements:

(a) Defendant CMLT was the depositor for the following Trust:

Trust	Prospectus Date	Registration Statement No.
Citicorp Mortgage Securities Trust Series 2007-5	June 25, 2007	333-130333
Citicorp Mortgage Securities Trust Series 2007-8	September 26, 2007	333-130333

(b) Defendant CMSI was the depositor for the following Trusts:

Trust	Prospectus Date	Registration Statement No.
Citigroup Mortgage Loan Trust 2007-10	October 31, 2007	333-138237

(c) Defendant GSMSC was the depositor for the following Trusts:

Trust	Prospectus Date	Registration Statement No.
GSR Mortgage Loan Trust 2006-7F	July 27, 2006	333-132809
GSR Mortgage Loan Trust 2006-9F	October 26, 2006	333-132809

(d) Defendant Mortgage Asset was the depositor for the following Trusts:

Trust	Prospectus Date	Registration Statement No.
MASTR Asset Securitization Trust 2005-1	May 25, 2005	333-106982
MASTR Asset Securitization Trust 2005-2	October 25, 2005	333-124678
MASTR Asset Securitization Trust 2006-1	March 28, 2006	333-124678

(e) Defendant MSCI was the depositor for the following Trust:

Trust	Prospectus Date	Registration Statement No.
Morgan Stanley Mortgage Loan Trust 2005-5AR	August 29, 2005	333-125593

(f) Defendant Residential Accredit was the depositor for the following Trusts:

Trust	Prospectus Date	Registration Statement No.
RALI Series 2005-QA5 Trust	May 3, 2005	333-107959
RALI Series 2005-QA9 Trust	August 26, 2005	333-126732
RALI Series 2005-QS7 Trust	June 27, 2005	333-107959
RALI Series 2005-QS9 Trust	June 27, 2005	333-107959
RALI Series 2005-QS14 Trust	September 28, 2005	333-126732
RALI Series 2006-QS2 Trust	February 27, 2006	333-126732
RALI Series 2006-QS6 Trust	June 27, 2006	333-131213
RALI Series 2006-QS18 Trust	December 27, 2006	333-131213

(g) Defendant WMMSC was the depositor for the following Trust:

Trust	Prospectus Date	Registration Statement No.
Washington Mutual Mortgage Pass-Through Certificates, WMALT Series 2005-3	April 21, 2005	333-103345

(h) Defendant IndyMac RMBS was the depositor for the following Trust:

Trust	Prospectus Date	Registration Statement No.
IndyMac IMJA Mortgage Loan Trust 2007-A1	June 28, 2007	333-132042

89. The Defendants also filed various documents with the SEC, including Form 8-K and Form 10-K reports subsequent to the issuances. Those documents were incorporated by reference into and along with the Prospectus Supplements which comprise certain of the Registration Statements.

90. The Registration Statements that were filed with the SEC purport to describe the assets supporting the Certificates. Accurate information about the composition of the asset pool – including, importantly, the manner in which it was created – is the cornerstone of the disclosure required under the securities laws to enable investors to make informed decisions about the Certificates. Complete and accurate information is even more important in the context of selling

"asset-backed securities" such as the Certificates, because the performance of the Certificates is based almost entirely upon the quality of the assets the Depositor Defendants sold to the Trusts.

D. Financial Crisis Inquiry Commission

91. The FCIC was created to examine the causes of the recent financial and economic crisis in the United States. The FCIC spent more than a year examining the causes, with 19 days of public hearings, interviews of more than 700 witnesses and the review of millions of pages of documents. The FCIC released some findings in mid-2010 and issued its final Report in January 2011. The FCIC's findings revealed much of the intentional conduct which caused the crisis.

E. Clayton Holdings

92. Clayton Holdings, Inc. ("Clayton"), a Connecticut-based firm that analyzes home mortgages for banks, hedge funds, monoline insurance companies and government agencies, played an important role in the securitization process in that investment banks hired Clayton to analyze a subsection of the home mortgage loans to be securitized. Clayton performed this role and did find defects. However, Clayton's findings were largely ignored.

93. In late September 2010, Clayton provided its data to the FCIC. The FCIC held its last public hearing in Sacramento, where top Clayton executives testified under oath about the firm's role in the mortgage securitization chain. Note the following chart prepared as part of the FCIC inquiry, mentioning Clayton's findings with regard to many of the Defendants named herein:

Rejected Loans Waived in by Selected Banks

From January 2006 through June 2007, Clayton rejected 28% of the mortgages it reviewed. Of these, 39% were waived in anyway.

Financial Institution	A ACCEPTED LOANS *(Event 1 & 2)/ Total pool of loans*	B REJECTED LOANS *(Event 3)/ Total pool of loans*	C REJECTED LOANS WAIVED IN BY FINANCIAL INSTITUTIONS	D REJECTED LOANS AFTER WAIVERS *(B–C)*	E FINANCIAL INSTITUTION WAIVER RATE *(C/B)*
Citigroup	58%	42%	13%	29%	31%
Credit Suisse	68	32	11	21	33
Deutsche	65	35	17	17	50
Goldman	77	23	7	16	29
JP Morgan	73	27	14	13	51
Lehman	74	26	10	16	37
Merrill	77	23	7	16	32
UBS	80	20	6	13	33
WaMu	73	27	8	19	29
Total Bank Sample	**72%**	**28%**	**11%**	**17%**	**39%**

NOTES: From Clayton Trending Reports. Numbers may not add due to rounding.
SOURCE: Clayton Holdings

94. As noted above, many of the banks employed Clayton to perform reviews which the banks then disregarded in large measure. For example, Clayton discovered that 42% of Citigroup's pool of loans did not meet standards and Citigroup disregarded those findings for nearly a third of those loans. Thus, even though these banks and their officers had actual knowledge that a large percentage of the RMBS portfolio reviewed by Clayton failed to conform, they included many of these same loans in securitizations. Moreover, Clayton reviewed only a sample of the loans, leading Defendants invariably to the conclusion that there were thousands of additional defective loans which Clayton had not reviewed. Defendants concealed the information provided by Clayton about non-compliance and sold the RMBS to investors, including Union Central, who were unaware of the failure of many of the loans to conform to standards. In fact, the only use Defendants appear to have

had for Clayton's findings was to use the results as a negotiating point to reduce Defendants' costs of acquiring the loans. Nothing was disclosed to the ultimate RMBS certificate investors about Clayton's findings.

95. Certain of the Prospectus Supplements identified Clayton as providing services to the Defendants but concealed the exceptions Clayton identified and the fact that the Defendants had largely disregarded Clayton's findings.

F. Appraisal Manipulation

96. The FCIC Report also included testimony showing intentional manipulation of appraisal results by lenders in order to get more loans closed:

> Some real estate appraisers had also been expressing concerns for years. From 2000 to 2007, a coalition of appraisal organizations circulated and ultimately delivered to Washington officials a public petition; signed by 11,000 appraisers and including the name and address of each, it charged that lenders were pressuring appraisers to place artificially high prices on properties. According to the petition, lenders were "blacklisting honest appraisers" and instead assigning business only to appraisers who would hit the desired price targets. "The powers that be cannot claim ignorance," the appraiser Dennis J. Black of Port Charlotte, Florida, testified to the Commission.
>
> The appraiser Karen Mann of Discovery Bay, California, another industry veteran, told the Commission that lenders had opened subsidiaries to perform appraisals, allowing them to extract extra fees from "unknowing" consumers and making it easier to inflate home values. The steep hike in home prices and the unmerited and inflated appraisals she was seeing in Northern California convinced her that the housing industry was headed for a cataclysmic downturn. In 2005, she laid off some of her staff in order to cut her overhead expenses, in anticipation of the coming storm; two years later, she shut down her office and began working out of her home.

97. In written testimony before the United States House of Representatives Committee on Financial Services, Alan Hummel, Senior Vice President and Chief Appraiser of Forsythe Appraisals, LLC, testified about an independent study conducted in December 2006 by the October Research Corporation:

> This study found that 90 percent of appraisers were pressured by mortgage brokers, lenders, realty agents, consumers and others to raise property valuations to enable deals to go through. This was nearly double the abuse findings of a similar study three years ago. Moreover, the survey found that 75 percent of appraisers reported "negative ramifications" if they did not cooperate, alter their appraisal, to provide an artificial valuation.
>
> * * *
>
> Unfortunately, these parties with a vested interest in the transaction are often the same people managing the appraisal process within many financial institutions, and therein is a terrible conflict of interest. In this situation our members experience systemic problems with coercion. Appraisers are ordered to doctor their reports or else never see work from those parties again.

98. Similarly, Richard Bitner, a former executive of a subprime lender for fifteen years, testified in April 2010 before the FCIC that "the appraisal process [was] highly susceptible to manipulation," and that the rise in property values was in part due to "the subprime industry's acceptance of overvalued appraisals." New Century's Patricia Lindsay, a former wholesale lender, stated in her testimony to the FCIC on April 7, 2010 that appraisers "fear[ed]" for their "livelihoods," and therefore cherry-picked data "that would help support the needed value rather than finding the best comparables to come up with the most accurate value." Likewise, Jim Amorin, President of the Appraisal Institute, confirmed in his testimony to the FCIC on April 23, 2009 that "[i]n many cases, appraisers are ordered or severely pressured to doctor their reports and to convey a particular, higher value for a property, or else never see work from those parties again. . . . [T]oo often state licensed and certified appraisers are forced into making a 'Hobson's Choice.'"

99. The FCIC's January 2011 Report recounts the similar testimony of Dennis J. Black, an appraiser with 24 years of experience who held continuing education services across the country. "He heard complaints from the appraisers that they had been pressured to ignore missing kitchens, damaged walls, and inoperable mechanical systems. Black told the FCIC, 'The story I have heard

most often is the client saying he could not use the appraisal because the value was [not] what they needed.' The client would hire somebody else."

G. Deteriorating Mortgage Lending Practices

100. The FCIC also noted the deteriorating mortgage practices of several originators, many of whom originated loans in the Trusts as alleged herein:

> In 2005, examiners from the Fed and other agencies conducted a confidential "peer group" study of mortgage practices at six companies that together had originated $1.3 trillion in mortgages in 2005, almost half the national total. In the group were five banks whose holding companies were under the Fed's supervisory purview – Bank of America, Citigroup, Countrywide, National City, and Wells Fargo – as well as the largest thrift, Washington Mutual. The study "showed a very rapid increase in the volume of these irresponsible loans, very risky loans," Sabeth Siddique, then head of credit risk at the Federal Reserve Board's Division of Banking Supervision and Regulation, told the FCIC. A large percentage of their loans issued were subprime and Alt-A mortgages, and the underwriting standards for these products had deteriorated.

101. The FCIC also obtained testimony of key players in the securitization process. One such witness was Richard M. Bowen, III ("Bowen"), who was Senior Vice President and Chief Underwriter for Correspondent and Acquisitions for Citifinancial Mortgage, an affiliate of Citi, and during 2006 and 2007 was Business Chief Underwriter for Correspondent Lending in the Consumer Lending Group and charged with the underwriting responsibility for over $90 billion annually of residential mortgage production. Bowen was responsible for over 220 professional underwriters. Bowen testified:

> My underwriting function was responsible to ensure that these mortgages met the credit standards required by Citi credit policy.
>
> * * *
>
> In mid-2006 I discovered that over 60% of these mortgages purchased and sold were defective. Because Citi had given reps and warrants to the investors that the mortgages were not defective, the investors could force Citi to repurchase many billions of dollars of these defective assets. This situation represented a large potential risk to the shareholders of Citigroup.

I started issuing warnings in June of 2006 and attempted to get management to address these critical risk issues. These warnings continued through 2007 and went to all levels of the Consumer Lending Group.

We continued to purchase and sell to investors even larger volumes of mortgages through 2007. And defective mortgages increased during 2007 to over 80% of production.

* * *

During 2006 and 2007 I witnessed many changes to the way the credit risk was being evaluated for these pools during the purchase processes. These changes included the Wall Street Chief Risk Officer's reversing of large numbers of underwriting decisions on mortgage loans from "turn down" to "approved." And variances from accepted Citi credit policy were made. Subprime mortgage pools, many over $300 million, were purchased even though the minimum credit-policy-required-criteria was not met.

Beginning in 2006 I issued many warnings to management concerning these practices, and specifically objected to the purchase of many identified pools. I believed that these practices exposed Citi to substantial risk of loss.

H. The Offering Materials Contained Detailed Information Regarding the Quality of the Loan Underlying the Certificates

102. The Offering Materials for each of the Trusts contained information and data regarding, for example, the particular features of the Certificates, the structure of the Trusts, the entities involved in the issuance, and the loans underlying the Certificates. The Offering Materials for the Certificates contained disclosures regarding, *inter alia*: (a) the underwriting standards pursuant to which the loans were originated; (b) the appraisal process for the underlying loans and LTV ratios based on such appraisals; (c) DTI ratios or standards acceptable for borrowers; (d) owner-occupancy rates for the subject collateral; and (e) credit ratings for the Certificates.

103. This data allowed investors, such as Union Central, to evaluate the quality of the Certificates. Investors, including Union Central, relied on the accuracy of this information in making their investment decisions to purchase the Certificates. Indeed, Union Central rejected over

90% of the Certificates that they reviewed and closely scrutinized these disclosures to ensure that the Certificates were of satisfactory quality.

104. So too, the credit rating agencies relied on the accuracy of this data in rating the Certificates. Even small changes to LTV ratios and owner-occupancy rates, for example, could materially alter the risk profile. Defendants were all well aware of how the rating agencies evaluated the Certificates and what kinds of loan pools would produce the desired ratings that were necessary to issue the Certificates.

105. The following paragraphs describe some of the essential metrics and standards that were included in all of the Offering Materials and were material to reasonable investors, including Union Central.

1. Underwriting Standards

106. The fundamental basis upon which RMBS are valued is the ability of the borrowers to repay the principal and interest on the underlying loans and the adequacy of the loans' collateral should the borrower default. If the borrowers cannot pay, and the collateral is insufficient, the investors incur losses. For this reason, the underwriting standards and practices of the mortgage originator that issued the loans backing the Certificates, and the representations in the Offering Materials regarding those standards, are critically important to the value of the securities, and to investors' decisions to purchase the securities.

107. The Offering Materials contained umbrella underwriting guidelines which would be applicable to all the loans underlying the Certificates, as well as more specific guidelines applicable to certain originators from whom the loans were purchased. These underwriting standards described the types of information collected from borrowers, the due diligence and verifications conducted on the borrower, as well as the acceptable credit standards for originating a loan. In the case of reduced

documentation or no documentation loans, the underwriting standards described compensating factors that were evaluated and/or restrictions on borrowers to whom such loans could be issued.

108. For each Certificate, the Offering Materials represented that underwriting standards were applied to ensure that a borrower had the capacity to repay the loan at issue.

2. Appraisals and Loan-to-Value Ratios

109. As represented in the Offering Materials, the underwriting and approval process for loans pooled in the Trusts required obtaining appraisals that generally complied with the Uniform Standards of Professional Appraisal Practices ("USPAP"). Accurate appraisal reports were one of the most important parts of a loan file because they supported the underwriter's determination of whether sufficient and appropriate collateral to back the mortgage transaction. If the appraiser overvalued the property, the loan amount would have been larger than it should be, and the investor's risk of loss in the event of foreclosure would be much greater.

110. An accurate appraisal is also critical to the determination of an LTV ratio. The LTV ratio affects the degree of risk involved in the loan – both the risk of default and the risk of loss in the event of a default. Borrowers are less likely to default on loans with low LTVs. A borrower who makes a large down-payment has a substantive investment in the property, and will therefore try harder to avoid foreclosure. When foreclosure is necessary, the investor is more likely to recover the entire debt if the LTV is lower. For these reasons, the Offering Materials described the LTV ratios of the loans underlying the Certificates, and generally described the LTV limits used in the underwriting of the loans.

111. The FCIC Report, as well as other recent reports, have revealed an industry-wide practice by which appraisals were manipulated in order to ensure that loans could be underwritten

regardless of the actual value of the property which was supposed to serve as collateral of the subject loan.

3. Debt-to-Income Ratios

112. DTI ratios are critical metrics in evaluating whether a borrower will be able to repay the contemplated loan. If a borrower has very high levels or debt, or low levels of income, or both, it is less likely that he or she will be able to repay the loan. This relationship is described best by the borrower's DTI ratio.

113. According to past industry norms, DTI ratios over 50% to 55% were considered excessive and high risk. Fannie Mae and Freddie Mac targeted DTI ratios at only 38%.

114. If a borrower misstates his or her income, or fails to disclose known debts, such misrepresentations will lead to understated DTI ratios, thus making a loan appear to be less risky than it really was.

4. Owner-Occupancy Rates

115. The Offering Materials contained aggregate information about the occupancy status of the loans underlying the Certificates. Occupancy status refers to whether the property securing the mortgage is the primary residence of the borrower, a second home, or an investment property.

116. The statements about occupancy status were material to investors' decisions to invest in the Certificates because occupancy status serves as an important indicator of the credit risk associated with a mortgage loan and the securities that the loan collateralizes. Borrowers who reside in mortgaged properties have more incentive to avoid default than borrowers who purchase homes as second homes or investment properties and live elsewhere. These borrowers are more likely to care for the primary residence to keep up the property's value by attending to maintenance and purchasing insurance. Thus, the percentage of loans in the collateral group of a securitization that

are not securitized by mortgage loans on owner-occupied residents is an important measure of the risk of the certificates sold in that securitization. Even small differences in the percentages of primary/owner-occupied, second home/secondary, and investment properties in the collateral group of a securitization can have a significant effect on the risk of each certificate sold in that securitization, and thus, are important to the decision of a reasonable investor whether to purchase any such certificate.

5. Ratings

117. Each of the tranches in the Certificates was assigned a rating from either Standard & Poor's Ratings Services ("S&P") or Fitch Ratings ("Fitch"). In determining how to rate each tranche, the rating agencies considered, *inter alia*: (i) the structure of the Certificate; (ii) the level of credit protection available to each tranche; and (iii) the quality of the loans underlying the Certificates.

118. The Defendants understood how the rating agencies assigned ratings, and specifically structured the Certificates so that each tranche would receive the desired ratings. Indeed, the Certificates' issuance was conditioned on obtaining the rating Defendants expected.

119. The rating agencies relied on the accuracy of the information Defendants provided in order to assign ratings to the Certificates. Since Defendants provided the rating agencies false and misleading information about the loans underlying the Certificates, the rating agencies would assign ratings that did not accurately reflect the risk of loss associated with such investments.

I. Loans Included in the Securitizations Were Generated Through Fraudulent and Reckless Origination Practices

120. Defendants and their originators engaged in fraudulent lending practices that were certain to lead to defaults by homeowners and losses for RMBS investors. In addition to the suspect origination practices used by subsidiaries or affiliates of the Depositor Defendants, the Defendants

also deposited into the Trust loans generated by some of the most aggressive loan originators in the business, including Bank of America ("BofA"), Countrywide Home Loans, Inc. ("Countrywide"), Greenpoint Mortgage Funding ("Greenpoint"), SunTrust Mortgage, Inc. ("SunTrust Mortgage"), CitiMortgage, IndyMac Bank, American Home Mortgage Corp. ("American Home"), PHH Mortgage Corporation ("PHH"), ABN AMRO Mortgage Group, Inc. ("ABN AMRO"), National City Mortgage Co. ("National City"), GMAC Mortgage Corporation ("GMAC Mortgage"), HomeComings Financial, LLC ("HomeComings") and Argent Mortgage Company, LLC ("Argent").

121. The practices employed by these originators and/or their brokers included encouraging borrowers to inflate their income levels in stated-income loans, concealing known situations where the home would not be owner occupied, and manipulating the appraisal process such that LTV ratios were false and misleading. These practices were so widespread that the Depositor Defendants were at a minimum reckless in continuing to include non-compliant loans in the portfolios. When Clayton provided information to the banks, many ***known*** problems were actually ignored. And some banks' internal procedures for avoiding problematic loans were ignored.

122. The improper practices of the originators are highlighted below:

1. BofA

123. BofA was an originator of mortgage loans in at least the following Trusts:

GSR Mortgage Loan Trust 2006-9F
MASTR Asset Securitization Trust 2005-1

124. Defendants' statements about BofA's underwriting standards and appraisal practices were false due to BofA's poor practices with respect to its mortgage lending. As the FCIC Report noted:

> Similarly, in examining Bank of America in 2007, its lead bank regulator, the Office of the Comptroller of the Currency (OCC), sampled 50 mortgages and found

16 with "quality assurance referrals" for suspicious activity for which no report had been filed with FinCEN. All 16 met the legal requirement for a filing.

125. While BofA's RMBS portfolio of Countrywide-originated loans is well known, loans originated by BofA prior to the acquisition of Countrywide were also problematic. When announcing settlement agreements between certain originators and mortgage giants Freddie Mac and Fannie Mae, Fannie Mae CEO Michael Williams said it continued to work to resolve other claims, including ones related to BofA-originated loans.

126. Documents produced in the FCIC investigation also showed that Bank of America waived in 60% of the loans Clayton had rejected in the seven 2006 and 2007 RMBS deals presented in the investigation.

2. Countrywide

127. Countrywide was an originator of mortgage loans in at least the following Trusts:

Citigroup Mortgage Loan Trust 2007-10
GSR Mortgage Loan Trust 2006-7F
GSR Mortgage Loan Trust 2006-9F
Morgan Stanley Mortgage Loan Trust 2005-5AR

128. Defendants' statements about Countrywide's underwriting standards and appraisal practices were false due to Countrywide's lending practices that abandoned all prudent loan underwriting practices. Countrywide was issuing or acquiring mortgages with limited documentation and/or excessive LTV ratios even where compensating factors were not demonstrated. Some borrowers with "No Doc" mortgage loans were wage earners who could have provided employment, income and asset verification, but were not required to do so because their actual income and assets would have been insufficient for the mortgage amounts.

129. Countrywide's appraisals were frequently inflated, reckless, contained predetermined values or were otherwise unreliable, which caused the LTV ratios to be misstated. This caused mortgages to be issued for borrowers with higher DTI ratios than was purportedly allowed.

130. Additionally, Countrywide and its brokers increasingly used non-traditional mortgage loans where the LTV ratios were over the stated limit due to "silent second" liens. In fact, for the mortgage loans generated under Countrywide's Streamlined Documentation Program, appraisals were not obtained at all, even though the mortgage loans obtained did, in fact, exceed 80% of the actual value of the subject property. The importance of legitimate appraisals was even more important under Countrywide's Expanded Underwriting Guidelines because these mortgage loans provided for loan amounts which reached 90%, 95% or even 100% in some cases. Given the inflated appraisals frequently provided, the undisclosed risk of mortgages exceeding home values was extreme. Countrywide's appraisal practices were intended to inflate the property value so that loans would close.

131. Numerous government reports and investigations have described rampant underwriting failures at Countrywide throughout the period of the Trusts at issue here. In addition, those reports and investigations have led to disclosures of admissions and acknowledgments made by top Countrywide executives of the abandonment of adherence to underwriting guidelines. In addition, the FCIC Report singled out Countrywide for its role in the financial crisis and specifically identified Countrywide in the Report's summary conclusions discussing the systemic breakdown in accountability and ethics:

> Lenders made loans that they knew borrowers could not afford and that could cause massive losses to investors in mortgage securities. As early as September 2004, Countrywide executives recognized that many of the loans they were originating could result in "catastrophic consequences." Less than a year later, they noted that certain high-risk loans they were making could result not only in

> foreclosures but also in "financial and reputational catastrophe" for the firm. But they did not stop.

132. Courts, including the federal court that presided over a civil action that the SEC brought against Countrywide's former leaders, have considered allegations that Countrywide failed to comply with underwriting guidelines and abandoned accurate representations in their registration statements offering RMBS. These courts have found that the claims against Countrywide are facially valid and raise genuine issues of material fact.

133. On June 4, 2009, the SEC filed a complaint in the U.S. District Court for the Central District of California against Mozilo, Sambol and Sieracki for their fraudulent disclosures relating to Countrywide's purported adherence to conservative loan origination and underwriting guidelines, as well as insider trading by Mozilo. *See* Complaint, *SEC v. Mozilo*, No. 09-03994 (C.D. Cal. June 4, 2009) (Dkt. No. 1). On September 16, 2010, the District Court rejected the Defendants' motion for summary judgment, finding that the SEC had raised genuine issues of fact as to, among other things, whether the Defendants had misrepresented the quality of Countrywide's underwriting processes. In its decision, the court stated:

> The SEC has presented evidence that these statements regarding the quality of Countrywide's underwriting guidelines and loan production were misleading in light of Defendants' failure to disclose, *inter alia*, that: (1) As a consequence of Countrywide's "matching strategy," Countrywide's underwriting "guidelines" would end up as a composite of the most aggressive guidelines in the market. . . . and (2) Countrywide routinely ignored its official underwriting guidelines, and in practice, Countrywide's only criterion for approving a loan was whether the loan could be sold into the secondary market.
>
> For example, Countrywide's Chief Risk Officer, John McMurray, explained in his deposition that Countrywide mixed and matched guidelines from various lenders in the industry, which resulted in Countrywide's guidelines being a composite of the most aggressive guidelines in the industry . . . .
>
> SEC has also presented evidence that Countrywide routinely ignored its official underwriting to such an extent that Countrywide would underwrite ***any*** loan it could sell into the secondary mortgage market. According to the evidence

> presented by the SEC, Countrywide typically made four attempts to approve a loan. . . . As a result of this process, a significant portion (typically in excess of 20%) of Countrywide's loans were issued as exceptions to its official underwriting guidelines. . . . In light of this evidence, a reasonable jury could conclude that Countrywide all but abandoned managing credit risk through its underwriting guidelines, that Countrywide would originate any loan it could sell, and therefore that the statements regarding the quality of Countrywide's underwriting and loan production were misleading.

SEC v. Mozilo, No. 09-03994-JFW MANx, 2010 WL 3656068, at *10, *12-*14 (C.D. Cal. Sept. 16, 2010) (emphasis in original). After this decision was rendered, Messrs. Mozilo, Sambol, and Sieracki settled with the SEC, agreeing to pay substantial fines. *See* Press Release, "SEC, Former Countrywide CEO Angelo Mozilo to Pay SEC's Largest Ever Financial Penalty Against a Public Company's Senior Executive" (Oct. 15, 2010).

134. The SEC action surfaced internal Countrywide reports and e-mails among Countrywide employees that provide contemporaneous documentation of Countrywide's routine failure to comply with its underwriting guidelines. Emails from CEO Mozilo himself admitted Countrywide's lack of compliance with its own underwriting guidelines. *See* Ex. 28 at 1 to Declaration of Lynn M. Dean in Support of Plaintiff Securities and Exchange Commission's Opposition to Defendants' Motion for Summary Judgment or Adjudication ("Dean Decl."): Part 4, *SEC v. Mozilo*, No. 09-03994 (C.D. Cal. Aug. 16, 2010) (Dkt. No. 230-2). In early 2006, HSBC had begun to contractually force Countrywide to buy back loans that did not comply with underwriting guidelines. In an April 13, 2006 e-mail, Mozilo wrote to Sieracki and others that he was concerned that his company had originated the HSBC loans "with serious disregard for process [and] compliance with guidelines," resulting in the delivery of loans "with deficient documentation." Ex. 16 at 2 to Dean Decl.: Part 3, *SEC v. Mozilo*, No. 09-03994 (C.D. Cal. Aug. 16, 2010) (Dkt. No. 227-5). Mozilo further stated, "I have personally observed a serious lack of compliance within our

origination system as it relates to documentation and generally a deteri[or]ation in the quality of loans originated versus the pricing of those loan[s]." *Id*.

135. In addition to the SEC action, Countrywide has been sued in numerous state enforcement actions for abandoning underwriting standards and engaging in unfair and deceptive practices in connection with loan origination.

136. In *People v. Countrywide Financial Corp.*, the Attorney General for the State of California filed a civil action on behalf of Countrywide borrowers in California against Countrywide and its senior executives. Countrywide faces statutory claims for false advertising and unfair competition based on a plan to increase the volume of mortgage loans for securitization without regard to borrower creditworthiness. Complaint, *People v. Countrywide Financial Corp.*, No. LC081846 (Cal. Super. Ct., L.A. County June 25, 2008) (Dkt. No. 3).

137. In *People v. Countrywide Financial Corp.*, the Attorney General for the State of Illinois filed a civil suit on behalf of Illinois borrowers against Countrywide and Mozilo. Asserting state consumer protection and unfair competition statutory claims, the Illinois Attorney General alleged that, beginning in or around 2004, Countrywide engaged in unfair and deceptive practices, including loosening underwriting standards, structuring unfair loan products with risky features and engaging in misleading marketing and sales practices. Complaint, *People v. Countrywide Financial Corp.*, No. 08CH22994 (Ill. Cir. Ct. Ch. Div., Cook County June 25, 2008).

138. In *Connecticut v. Countrywide Financial Corp.*, the Connecticut Insurance Commissioner commenced a civil action asserting that Countrywide violated state unfair and deceptive practices law by deceiving consumers into obtaining mortgage loans for which they were not suited and could not afford. Complaint, *Connecticut v. Countrywide Financial Corp.*, No. 1207 (Conn. Super. Ct., Hartford July 28, 2008).

139. In *Florida v. Countrywide Financial Corp.*, the Florida Attorney General commenced a civil action asserting unfair practices claims against Countrywide and Mozilo. The Florida Attorney General alleged that, since January 2004, Countrywide conducted a scheme to originate subprime mortgage loans to unqualified borrowers and relatedly engaged in securities law violations. The Attorney General further alleged that Countrywide violated state statutory lender laws by falsely representing that Countrywide had originated each mortgage loan in accordance with its underwriting guidelines and that each borrower had the ability to repay the mortgage loan. Complaint, *Florida v. Countrywide Financial Corp.*, No. 08-30105 (Fla. Cir. Ct. 17th Judicial Circuit June 30, 2008).

140. In *Indiana v. Countrywide Financial Corp.*, the State of Indiana filed a civil action asserting that Countrywide violated the state's unfair and deceptive practices law from 2005 through 2008 by deceiving consumers into obtaining mortgage loans for which they were not suited and could not afford. Complaint, *State of Indiana, County of Steuben v. Countrywide Financial Corp.*, No. 76C01-0808-PL-0952 (Ind. Cir. Ct. Aug. 22, 2008).

141. On October 6, 2008, these states, plus 23 others, all joined in a settlement with Bank of America, pursuant to which Bank of America (as the successor-in-interest to the Countrywide Defendants) agreed to pay $150 million for state foreclosure relief programs and loan modifications for borrowers totaling $8.4 billion. *See* Press Release, "Securities and Exchange Commission, Bank of America Agrees in Principle to ARS Settlement" (Oct. 8, 2008).

142. This is but a small subset of the many civil actions filed by investors, government entities, insurers, trustees and other parties that have sued Countrywide for similar conduct.

3. Greenpoint

143. Greenpoint was an originator of mortgage loans in at least the following Trust:

Citigroup Mortgage Loan Trust 2007-10

144. Defendants' statements about Greenpoint's underwriting standards and appraisal practices were false due to Greenpoint's lending practices that systematically ignored such underwriting standards.

145. Greenpoint was the nation's seventh largest originator of Alt-A mortgages. Greenpoint routinely granted guidelines exceptions – even where compensating factors did not exist and the borrower could not qualify. Many of the loans were granted by the over 18,000 brokers who were approved to transact with Greenpoint – a large enough number that Greenpoint could not exercise any realistic degree of control. Typically, new brokers were actively monitored for only the first five to seven loans submitted, usually during only the mortgage's first 90 days of being approved.

146. According to one Greenpoint sales manager, Greenpoint's philosophy was "if we can sell it, we will originate it." To that end, Greenpoint originated loans whose attributes diverged significantly from underwriting guidelines. Greenpoint had a practice of allowing its staff and outside brokers to inflate appraisal values, thereby distorting the LTV ratios referred to in the Prospectus Supplement. According to a former Greenpoint senior review appraiser, whose job was to evaluate the appraisers' appraisal reports, the appraiser received bonuses if they exceeded their quotas – resulting in "many crummy appraisals." The former senior review appraiser recalled being under continual pressure to approve appraisal reports because compensation increased for the mortgage brokers, account executives, branch sales representatives, and branch office managers for each loan that closed.

147. Further, Greenpoint did not verify the income of borrowers as represented in the Registration Statements but had a reputation in the industry for cutting corners on underwriting. In

fact, a former Greenpoint broker service representative supervisor recalled that ascertaining whether the borrower could repay the loan was unnecessary for Greenpoint's loan program, and that it was "fairly common" for mortgage loans to be approved where the borrower would not be able to repay. The supervisor recounted instances where if a loan failed to gain approval, an account executive would improperly re-open the application with a new loan number as stated income loan. On other occasions, according to the supervisor, to hide that fact that a borrower had previously submitted an application that failed, the account executive would alter the social security number by one digit or misspell the name by one letter, and then correct the errors after the loan was approved.

148. The Office of the Comptroller of the Currency ("OCC") later ranked Greenpoint as the thirteenth worst subprime originator in the country for mortgages originated from 2005 to 2007, according to its "Worst Ten in the Worst Ten" analysis.

4. SunTrust Mortgage

149. SunTrust Mortgage was an originator of mortgage loans in at least the following Trusts:

Citigroup Mortgage Loan Trust 2007-10
GSR Mortgage Loan Trust 2006-9F
MASTR Asset Securitization Trust 2006-1

150. Defendants' statements about SunTrust Mortgage's underwriting standards and appraisal practices were false due to SunTrust Mortgage's lending practices. Plaintiffs hereby incorporate by reference the allegations regarding SunTrust's abandonment of underwriting guidelines as set forth in §V.G.5.

5. CitiMortgage

151. CitiMortgage was an originator of mortgage loans in at least the following Trusts:

Citicorp Mortgage Securities Trust, Series 2007-5

Citicorp Mortgage Securities Trust, Series 2007-8
Citigroup Mortgage Loan Trust, Series 2007-10

152. Citi's statements about CitiMortgage's underwriting standards for its loans and the loans it acquired, as well as its appraisal practices were false due to CitiMortgage's systematic disregard of underwriting standards, corroborated by Clayton's findings of improper lending practices. Plaintiffs hereby incorporate by reference the allegations regarding Citi's abandonment of underwriting guidelines as set forth in §V.B.

6. IndyMac

153. IndyMac was the originator of mortgage loans in at least the following Trust:

IndyMac IMJA Mortgage Loan Trust 2007-A1

154. IndyMac RMBS's statements about IndyMac's underwriting standards and appraisal practices were false due to IndyMac's actual lending practices. Plaintiffs hereby incorporate by reference the allegations regarding IndyMac's abandonment of underwriting guidelines as set forth in §V.D.

7. American Home

155. American Home was an originator of mortgage loans in at least the following Trust:

Citigroup Mortgage Loan Trust 2007-10

156. Defendants' statements about American Home's underwriting standards and appraisal practices were false due to American Home's actual lending practices.

157. In order to post desired loan production, American Home was as a matter of course granting exceptions even where "compensating factors" did not exist. American Home's business was dependent on continually increasing volume. Thus, it became even more aggressive in early 2007 when American Home made $16.7 billion in mortgage loans. A third of its mortgages were

Payment Option ARMs which allowed borrowers to make payments that were less than the interest amount accruing on the loan, resulting in the difference being added to the principal balance each month. American Home granted exceptions as a matter of course because its business relied on volume as it was paid a fee for each loan and it was transferring securitization of these mortgages and not retaining the mortgage loans as assets on its own balance sheet.

158. A former American Home operations manager confirmed that American Home rarely if ever verified income before closing a loan and emphasized that the borrower's ability to repay the loan was not a consideration at American Home.

159. Moreover, granting loans under stated-income applications relied significantly on accurate appraisals, which American Home did not obtain. A former vice president at American Home, whose job was overseeing the mortgage loans' appraisals, said that appraisal fraud was a common problem at American Home and recalled that loan officers pressured appraisers to come up with the "right number."

160. American Home's loans were particularly popular with speculators who would not occupy the homes, which would decrease the borrowers' "willingness" to pay the debt if home prices did not appreciate to the borrowers' expectations. American Home subsequently suffered losses itself when borrowers whose incomes American Home had not verified began to default on little-money-down loans at an accelerated pace.

161. The OCC subsequently ranked American Home as the eleventh worst subprime originator for the years 2005 through 2007 according to its "Worst Ten in the Worst Ten" analysis.

8. PHH

162. PHH was an originator of mortgage loans in at least the following Trust:

GSR Mortgage Loan Trust 2006-9F

163. Defendants' statements about PHH's underwriting standards and appraisal practices were false due to PHH's lending practices.

164. PHH, which was spun-off from Cendant Corporation in 2005, was a private label mortgage provider which was the lender behind certain realtors that offered mortgage loans. PHH acquired loans from these realtors, but did not routinely perform the thorough review represented. The lack of a thorough review was critical since the structure of the arrangement was that the real estate agents were pushing both the home and the mortgage on the borrower. Real estate agents would always push valuations in order to get the deal done and have the deal look attractive to the actual lender. PHH looked the other way on inflated real estate values in order to keep its big corporate clients happy. PHH was extremely aggressive in making loans, promising same-day loan decisions and a best-price guarantee wherein it would beat any lender's price or pay the borrower $500. The mortgage loans PHH held on to had suffered declines in value by late 2007 with many of the declines related to loans with origination flaws.

9. ABN AMRO

165. ABN AMRO ("AAMG") was an originator of mortgage loans in at least the following Trust:

Citicorp Mortgage Securities Trust, Series 2007-5

166. Defendants' statements about ABN AMRO's underwriting standards and appraisal practices were false due to ABN AMRO's lending practices.

167. Citigroup acquired ABN AMRO in January 2007. ABN AMRO had a reputation as an extremely aggressive lender and had settled litigation regarding fraudulently inflated appraisals used to close residential mortgage loans. Before the collapse of the housing market and the risky lending practices came to light, ABN AMRO offered a "Fastest Loan Yet" program, which allowed

select brokers to approve loans on their own with much less documentation than more traditional loans.

10. National City

168. National City was an originator of mortgage loans in at least the following Trusts:

Citigroup Mortgage Loan Trust 2007-10
GSR Mortgage Loan Trust 2006-9F
RALI Series 2005-QS7 Trust
RALI Series 2005-QS9 Trust
RALI Series 2005-QS14 Trust
RALI Series 2006-QS6 Trust
RALI Series 2006-QS2 Trust
RALI Series 2006-QS6 Trust
RALI Series 2006-QS18 Trust

169. Defendants' statements about National City's underwriting standards and appraisal practices were false due to National City's actual lending practices that abandoned underwriting standards.

170. National City's strategy intended to take advantage of the interest rate spread on subprime mortgages which could be sold to third parties at a premium to their origination cost. Thus, National City sought to originate mortgages at an increasing rate, heedless of underwriting standards. As the *bnet.com* blog noted on October 27, 2008:

> The pattern is too familiar. Two profitable, respected banks with limited exposure to mortgages get greedy and try to cash in on the subprime craze. Both end up ready to go out of existence.
>
> That's the case with National City Bank of Cleveland and Wachovia of Charlotte, N.C.
>
> Not that long ago, National City was a pillar of the Cleveland business society. Founded in 1845, the bank reliably loaned money and took in deposits. Mortgages brought in a small 5 percent of total profit. Then in the latter boom years of the late 1990s, National City wanted to put its profits on afterburner. So in 1999, it bought California subprime lender First Franklin. Within a few years, mortgages

> were half of National City's profit and the bank was the country's sixth biggest housing lender.
>
> * * *
>
> By 2005, it was obvious the subprime initiative had become toxic. But the bank did nothing to correct what would prove a fatal mistake.

171. National City granted exceptions to guidelines in many circumstances – not just where compensating factors existed. The exceptions were granted so that the borrower could qualify even without compensating factors. National City acquired many loans from mortgage brokers but did little verification of information in applications, and brokers were able to get loans approved that were inconsistent with National City's underwriting guidelines. In January 2008, National City stopped purchasing loans from brokers. PNC Financial Services purchased the struggling company in October 2008 with TARP funds.

11. GMAC Mortgage

172. GMAC Mortgage was the originator of mortgage loans in at least the following Trusts:

RALI Series 2006-QS2 Trust
RALI Series 2006-QS6 Trust
RALI Series 2006-QS18 Trust

173. GMAC Mortgage is an affiliate of defendant RFC and an indirect, wholly owned subsidiary of defendant Ally. Defendants' statements about GMAC Mortgage's underwriting standards and appraisal practices were false due to the actual practices GMAC Mortgage used to generate mortgage loans.

174. Plaintiffs hereby incorporate by reference the allegations regarding RALI's abandonment of underwriting guidelines as set forth in §V.F.

12. HomeComings

175. HomeComings was the originator of mortgage loans in at least the following Trusts:

RALI Series 2005 QA5 Trust
RALI Series 2005 QA9 Trust
RALI Series 2005-QS7 Trust
RALI Series 2005-QS9 Trust
RALI Series 2005-QS14 Trust
RALI Series 2006-QS2 Trust
RALI Series 2006-QS6 Trust
RALI Series 2006-QS18 Trust

176. HomeComings is a subsidiary of defendant RFC and an indirect, wholly-owned subsidiary of defendant Ally. Defendants' statements about HomeComings' underwriting standards and appraisal practices were false due to the actual practices HomeComings used to generate mortgage loans. Plaintiffs hereby incorporate by reference the allegations regarding RALI abandonment of underwriting guidelines as set forth in §V.F.

13. Argent

177. Argent was the originator of mortgage loans in at least the following Trust:

Citigroup Mortgage Loan Trust 2007-10

178. Defendants' statements about Argent's underwriting standards and appraisal practices were false due to Argent's actual lending practices that systematically abandoned underwriting standards. The OCC named Argent as the third worst subprime originator for the years 2005 through 2007, according to its "Worst Ten in the Worst Ten" analysis. Once a unit of Ameriquest Mortgage Co, it was taken over by CitiMortgage in August 2007, and according to a much later *New York Times* article, the purchase was likened internally by Citi bankers to "catching a falling knife."

179. The FCIC Report related that an Argent Vice President Orson Benn ("Benn") was at the center of a "criminal ring scamming homeowners in the Tampa area." The scheme involved

trolling neighborhoods looking for elderly homeowners who they thought likely had substantial equity in their homes. After duping the homeowners into filling out forms, the perpetrators would use the information to take out false home equity loans in the homeowners' names.

180. The Miami Herald reported on December 7, 2008 that Benn also "tutor[ed] Florida mortgage brokers in the art of fraud," including teaching brokers "how to doctor credit reports, coach[ing] them to inflate income on loan applications, and help[ing] them invent phantom jobs for borrowers." In all, Benn's network approved more than $550 million in Florida home loans and helped Argent to become the nation's largest provider of mortgages for low-credit score borrowers. Benn went to prison for his role in the fraud. In his court testimony, he stated that at Argent, "[t]he accuracy of loan applications was not a priority" since "Argent made money bundling the mortgages and selling them to investors on Wall Street."

181. Mortgage fraud permeated Argent's underwriting practices. In 2011, Cuyahoga County Prosecutor in Ohio indicted former Argent managers, supervisors, and underwriters for falsifying nearly 13 million dollars worth of mortgage loans in the Cleveland area. On loans for 100 houses, Argent falsified the mortgage loan documents that had not met Argent's standards such that they could be approved.

182. During an interview for an article entitled "The Subprime House of Cards" now published on *Cleveland.com* on May 11, 2008, Jacqulyn Fishwick recalled that during her two years employed at an Argent loan processing center near Chicago, she "'saw some stuff I didn't agree with.'" She stated she witnessed "account managers remove documents from files and create documents by cutting and pasting them."

183. In an article entitled "Silencing the Whistle-blowers" for *The Investigative Fund* on May 10, 2010, Steve Jernigan told his experience working as a fraud investigator for Argent in its

California headquarters. He sent an appraiser to Indiana to check on a subdivision that Argent had made loans on. The appraiser reported back to Jernigan: '"I'm standing in the middle of a cornfield."' The loan applications, in other words, had been made up. When Jernigan pulled the loan files for the subdivision's properties, he found that each original appraisal report had attached a photo of the same house.

184. Jernigan continued to find problems within Argent. Ultimately, his investigation "led him higher up Argent's food chain, to a senior executive who had been 'pretty much turning a blind eye' to whether the loans were on the up-and-up." At that point, Jernigan said, upper management made it clear he had gone too far. He recalled that he '"was pulled into an office"' where a supervisor '"looked me straight in the eye and said: "You've got to stop."'"

V. DEFENDANTS KNOWINGLY MADE FALSE AND MISLEADING STATEMENTS REGARDING THE CERTIFICATES THEY WERE SELLING TO UNION CENTRAL

185. The Offering Materials pursuant to which each of the Certificates were sold contained knowingly false statements about the underlying mortgage loans, including the underwriting standards through which the loans were originated, the appraisals used, the owner-occupancy statistics, and the DTI ratios. The Offering Materials also included false statements about the credit ratings these Certificates merited. Union Central relied to its detriment on these representations.

A. Washington Mutual

1. WaMu's Securitizations

186. Union Central purchased a Certificate sponsored by WaMu on April 29, 2005, representing an investment of approximately $4.3 million:

CUSIP	Description	Issuing Entity	Issue Date	Purchase Date
9393365Q2	WMALT 2005-3 B3	Washington Mutual Mortgage Pass-Through Certificates, WMALT Series 2005-3	4/1/2005	4/29/2005

187. Washington Mutual Mortgage Pass-Through Certificates, WMALT 2005-3 was a $533 million deal comprising 2,448 fixed rate mortgages with mostly 30-year terms.

2. False and Misleading Statements in WaMu's Offering Materials

a. False and Misleading Statements About Compliance with Underwriting Standards

188. In addition to WaMu-originated loans, WMMSC deposited into the WMALT 2005-3 Trust loans that had been acquired from mortgage brokers and other originators. WaMu's Offering Materials represented that "each Lender must have experience in originating and servicing conventional residential mortgages and must have a net worth acceptable to the Company." In order to be approved as a seller, WaMu evaluated "certain criteria, including the Lender's depth of mortgage origination experience, servicing experience and financial stability."

189. Unbeknownst to Plaintiffs, WaMu deposited and securitized loans into the WMALT 2005-3 Trust even though the loans had been issued to borrowers regardless of their willingness and ability to repay them – loans that were often based on false verification of employment, overstated income, inflated appraisals, understated debt to loan ratios and/or exceptions to underwriting criteria that had no valid justification.

190. The Offering Materials represented that the mortgage loans owned by the Trust were originated in accordance with WaMu's underwriting standards:

> The Mortgage Loans to be included in each Mortgage Pool will be subject to the various credit, appraisal and underwriting standards described herein. The Company's credit, appraisal and underwriting standards with respect to certain

> Mortgage Loans will generally conform to those published in the Company's Selling Guide . . . .

191. The Offering Materials assured investors that underwriting standards were enacted to ensure that a borrower's ability to repay the debt could be meaningfully evaluated:

> All of the credit, appraisal and underwriting standards will provide an underwriter with sufficient information to evaluate the borrower's repayment ability and the adequacy of the Mortgaged Property as collateral. . . .
>
> The Company's underwriting standards are intended to evaluate the prospective Mortgagor's credit standing and repayment ability, and the value and adequacy of the proposed Mortgaged Property as collateral. . . .
>
> The Company's underwriting standards generally follow guidelines acceptable to Fannie Mae and Freddie Mac.

192. The Offering Materials made material misrepresentations regarding the purported processes used to screen loans in the Trust and directly relating to the purported quality of the loan in the Trust. For instance, WaMu represented:

> The Mortgage Loans to be purchased by Washington Mutual Mortgage Securities Corp. (the 'Company') for inclusion in a Mortgage Pool will be screened and underwritten in accordance with the standards set forth herein under 'The Company – Mortgage Purchase Program' and ' – Credit, Appraisal and Underwriting Standards.' The Mortgage Loans in each Mortgage Pool will be originated by or purchased from lending institutions which meet the requirements set forth under 'The Company – Mortgage Purchase Program' (such institutions, 'Sellers').

b. False and Misleading Statements About Appraisals and LTV Ratios

193. The Offering Materials represented that the underlying mortgaged properties would provide adequate security for the mortgage loans, based in part on the appraised value of the properties securing the mortgage loans underlying the Certificates.

194. The Offering Materials for the Certificates represented that WaMu required and relied upon independent appraisals to determine the adequacy of the underlying collateral. For example, the Offering Materials stated:

> In determining the adequacy of the property as collateral, an independent appraisal is made of each property considered for financing. The appraiser is required to inspect the property and verify that it is in good condition and that construction, if new, has been completed. The appraisal is based on the appraiser's judgment of values, giving appropriate weight to both the market value of comparable homes and the cost of replacing the property

195. The Prospectus also contains representations concerning the LTV ratios of the mortgage loans underlying each securitization. Specifically, the weighted average original LTV ratio was disclosed as being 71%.

c. False and Misleading Statements About Debt-to-Income Ratios

196. The Offering Materials stated that in the course of the loan application process, borrowers were generally required to provide information regarding their assets, liabilities and income in order to determine the borrowers' ability to repay the debt.

197. Where provided, such information was converted in DTI ratios, which were a material part of the underwriting process, and specific DTI ratios for the loans underlying the Certificates were utilized by the rating agencies to determine the ratings for the Certificates in the Trust.

d. False and Misleading Statements About Owner-Occupancy

198. The WaMu Defendants' Offering Materials contained specific disclosures about the occupancy status of the loans underlying the Certificates.

199. The Offering Materials stated that 1,954 out of the 2,448 loans were for owner-occupied primary properties. The remaining 494 loans were purportedly second homes or non-owner occupied properties.

e. False and Misleading Statements About Ratings

200. WaMu represented that the ratings of the Certificates as set forth in the Offering Materials was a condition to their issuance, and that the ratings reflected the likelihood that investors would receive the distributions to which they were entitled:

> The offered certificates are required to receive the ratings from Standard & Poor's Ratings Services, a division of The McGraw-Hill Companies, Inc. and Moody's Investors Service, Inc. indicated under 'Certificate Ratings' in this prospectus supplement. The ratings on the offered certificates address the likelihood of the receipt by holders of the offered certificates of all distributions on the underlying mortgage loans to which they are entitled.

201. The Offering Materials also set forth the specific ratings for the Certificate purchased by Union Central. The Certificate was rated BBB by S&P and Baa2 by Moody's Investors Service, Inc. ("Moody's").

3. WaMu's Statements Were Knowingly False and Misleading

202. WaMu knew, or was reckless in not knowing, that the statements identified above were materially false and misleading and/or omitted material facts necessary to make the statements made not misleading. As set forth herein, WaMu had actual knowledge that the stated underwriting guidelines were not being adhered to.

a. Underwriting Standards Had Been Abandoned

203. While the Offering Materials set forth detailed underwriting guidelines that were supposed to be applied in evaluating borrowers and loans, in fact the stated underwriting guidelines had been abandoned by the loan originators.

204. WaMu's statements about loan underwriting practices for the mortgage loans in the WMALT 2005-3 Trust were materially false and misleading because the relevant lending practices for those loans were designed to increase new loan volume with little or no consideration for whether the borrower could repay the loan. In addition, WaMu did not exert much control, if any,

over loan officers and others who did the loans included in the WMALT 2005-3 Trust. WaMu effectively waived through loans that were internally known to be fraudulent. A high percentage of the underlying mortgage loans never should have been made because borrowers lacked the willingness and ability to repay them.

205. Further, WaMu knew that the originators abandoned the fundamental principle that underwriting was supposed to meaningfully evaluate the borrowers' ability to repay the debt, and the lender and/or investors' ability to recover against the pledged collateral in the event of a default. Instead, the originators approved loans they knew were based on falsified information and that did not comply with any of the stated underwriting guidelines.

(1) Skyrocketing Default Rates Are Evidence of Abandoned Underwriting

206. The Certificates purchased by Union Central was supposed to be a stable, long-term investment backed by investment-grade credit ratings. However, the extraordinary default rates on the mortgage loans underlying Union Central's Certificate is prima facie evidence that the stated underwriting standards and loan characteristics represented in the Offering Materials were materially false and misleading.

207. The following chart sets forth the delinquency, bankruptcy or foreclosure amounts, as well as collateral cumulative losses, for the Certificates purchased by Union Central as of June 2009:

Certificate	Original Deal Size	Delinquent, Bankruptcy Foreclosure, REO Actual Bal.	Collateral Cumulative Losses
WMALT 2005-3	$533,527,878	$40,853,692	$3,444,628

208. Had the loans been issued in accordance with the stated underwriting guidelines, and had the loans in fact had the characteristics described in the Offering Materials, the rate of

delinquency, bankruptcy and foreclosure and cumulative losses would be far lower than the current rates. Indeed, Moody's highest expected collateral rate for the life of the Trust was $3.8 million.

209. The defaults and related drop in value of the Certificate are due to WaMu's wrongdoing, and not because of the general change in economic conditions. Economic studies confirm this common-sense conclusion. For instance, BasePoint Analytics LLC, a recognized fraud analytics and consulting firm, analyzed over three million loans originated between 1997 and 2006 (the majority being 2005-2006 vintage), including 16,000 examples of non-performing loans that had evidence of fraudulent misrepresentation in the original applications. Their research found that as much as 70% of early payment default loans contained fraud misrepresentations on the application.

(2) Appraisals and LTV Ratios Were Inflated

210. The descriptions of appraisal standards, as well as the LTV ratios derived from such appraisals, were materially false and misleading. Undisclosed in the Offering Materials, and in violation of any legitimate appraisal standards, many of the loans underlying the Certificates had been approved through the use of manipulated appraisals that guaranteed that the collateral property would be valued at a price sufficient to support the loan.

211. For instance, the plaintiffs in *FHFA v. JP Morgan Stanley, et al.*, No. 11-CV-06188-PKC (S.D.N.Y. Sept. 2, 2011), conducted an automated valuation model ("AVM") analysis of a sample of the property underlying the WaMu offerings at issue in that litigation. *FHFA v. JP Morgan* Complaint (Dkt. No. 1), ¶¶348-353. AVM's are routinely used in the industry as a way of valuing properties during prequalification, origination portfolio review and servicing.

212. The Federal Housing Finance Agency's ("FHFA") analysis demonstrates that the valuation of the loans underlying the Certificates were materially and consistently inflated, and

therefore that the stated LTV ratios were materially overstated, which in turn greatly increased the risk of default for the loans underlying the Certificates. The FHFA analyzed twenty-four WaMu securitizations issued between 2005 and 2007, including securitizations bearing substantially similar characteristics as the Certificate purchased by Plaintiffs. For example, two of the transactions analyzed by the FHFA which were similar to Plaintiffs' securitization, the WMALT 2005-9 and WMALT 2005-10 Trusts, represented that 89.08% and 94.88%, respectively, of the loans had LTV ratios of less than 80%. However, the FHFA's analysis showed the true percentage of loans having LTV ratios of 80% or less was a mere 77.70% and 72.62%. While none of the certificates were supposed to contain loans that had an LTV ratio over 100%, the FHFA's analysis found that a significant number of loans had LTV ratios of over 100% – in other words, the value of the loan was more than the value of the property. With respect to the WMALT 2005-9 and WMALT 2005-10 Trusts, the FHFA found LTV ratios greater than 100% in 3.72% and 6.39% of the loans, respectively.

213. The FHFA's analysis of similar WaMU Trusts issued in the same time period as WAMU 2005-3 reflect the WaMu Defendants' wrongful practice of accepting inflated appraisals in connection with their loan securitizations. As alleged below, Washington Mutual's internal documents confirm the WaMu Defendants abandoned prudent loan underwriting which would have halted such practices.

(3) Owner-Occupancy Rates Were Falsified

214. The FHFA loan-level analysis of thousands of loans securitized by WaMu at the same time as the Certificates at issue here, confirm that WaMu's RMBS Offering Materials routinely misstated the owner-occupancy rates of the loans underlying the Certificates. The *FHFA v. JP Morgan* plaintiffs undertook a sophisticated analysis to determine whether a given borrower actually

occupied the property as claimed. *FHFA v. JP Morgan* Complaint, ¶¶340-347. For each offering, the *FHFA v. JP Morgan* plaintiffs analyzed tax records, credit records, bills, property records and lien records, to determine whether a borrower was actually living in the property subject to the loan.

215. The results of the *FHFA v. JP Morgan* plaintiffs' analysis is further indication that the percentage of owner-occupied properties disclosed by WaMu in their Offering Materials was false and that the true rate was much lower. For each of the WaMu Trusts at issue in the *FHFA v. JP Morgan* action, the percentage of owner-occupied properties was overstated by between 6% and 14%.

(4) Ratings Were False

216. When assigning ratings to the securities the rating agencies relied on the accuracy of the information provided by WaMu, including the descriptions of the underwriting standards and the data concerning DTI ratios, LTV ratios and owner-occupancy statistics. However, because the information supplied by WaMu was materially false and misleading, the ratings assigned to the certificates did not provide an accurate evaluation of the risk of default.

217. In 2009, Moody's downgraded WMALT 2005-3 tranche B3 to junk status with a "C" rating, explaining the downgrade was "triggered by rapidly increasing delinquencies, higher severities, slower prepayments and mounting losses in the underlying collateral." Currently this B-3 tranche is not rated by Moody's because it has defaulted entirely.

b. WaMu Knew that Underwriting Standards Were Being Abandoned

218. WaMu had actual knowledge that the mortgage loans underlying the Certificates it sold to Union Central did not comply with the stated underwriting guidelines contained in the Offering Materials. Further, WaMu knew that the quantitative and qualitative data contained in the Offering Materials was materially false and misleading.

219. The Senate PSI issued a case study of the WaMu Defendants' misconduct, which it described as "how one bank's strategy for growth and profit led to the origination and securitization of hundreds of billions of dollars in poor quality mortgages that undermined the U.S. financial system." The Senate PSI Report noted that WaMu "engaged in a host of shoddy lending practices that contributed to a mortgage time bomb."

220. Washington Mutual Inc.'s Chief Credit Officer during 1999-2005, James G. Vanasek ("Vanasek"), testified before the Senate PSI, stating:

- Causes of the residential credit crisis included "self interest, failure to adhere to lending policies [and] untested product innovations."
- "[R]apidly increasing housing prices masked the risks of a changing product mix and deteriorating underwriting . . . until . . . 2007."
- In 2004, Washington Mutual's advertising tagline was '"The power of yes"' implying that Washington Mutual would "find some way to make a loan."
- A "continual problem" at Washington Mutual was that "line managers, particularly in the mortgage area, not only authorized but encouraged policy exceptions."

221. The Senate PSI case study concluded that these wrongful loan origination and mortgage securitization practices were caused in part by a compensation structure that rewarded employees for this conduct. This rewarding of employees for making bad loans extended to the top executives with WaMu. In this regard, the Senate PSI case study concluded that WaMu CEO Kerry K. Killinger ("Killinger") received $100 million in compensation during 2003-2008 as a result of overseeing practices that created a "Mortgage Time Bomb."

222. The Senate PSI made specific findings in its case study of "Washington Mutual Practices That Created a Mortgage Time Bomb," including the following findings of improper practices that are directly contrary to the representations made to Plaintiffs in connection with their purchase of the WMALT 2005-3 Trust Certificates:

- Targeting Higher Risk Borrowers
- Steering Borrowers to Higher Risk Home Loans
- Increasing Sales of High Risk Home Loans to Wall Street
- Qualifying Borrowers By Ability to Make Initial Low Payments
- Ignoring Signs of Fraudulent Borrower Information
- Presuming Rising Home Prices When Approving Loans
- Making Loans that Are Dependent on Refinancing to Work
- Using Lax Controls Over Loan Approvals
- Offering Higher Pay for Making Higher Risk Home Loans
- Rewarding Employees for Loan Volume over Loan Quality
- Securitizing Home Loans Identified as Likely to Fail
- Securitizing Home Loans Identified as Fraudulent

223. WaMu's December 21, 2004 Board of Directors Discussion materials entitled "Asset Allocation Initiative: Higher Risk Lending Strategy and Increased Credit Risk Management" explained that the business plan was to originate and acquire more loans made to higher risk borrowers. This high risk strategy was based on '"Expanded Criteria"' for loan approval, utilizing "higher loan to value ratios" and '"'"No Income" loan documentation type.'" The Board presentation recognized that such diminishing of loan underwriting standards would present '"Higher uncertainty about ability to pay or "stated income" documentation type"' and '"[H]igher uncertainty about willingness to pay or collateral value."' More than 75% of the loans that WMMSC deposited into the WMALT 2005-3 Trust were these reduced documentation or no documentation loans.

224. WaMu's January 2005 Board of Directors Finance Committee Discussion materials entitled "Higher Risk Lending Strategy – 'Asset Allocation Initiative'" similarly discussed the strategy of abandoning prudent underwriting standards: '"In order to generate more sustainable,

consistent, higher margins within Washington Mutual, the 2005 Strategic Plan calls for a shift in our mix of business, increasing our Credit Risk tolerance while continuing to mitigate our Market and Operational Risk positions."' Its substantial increase in "Credit Risk tolerance" allowed for WaMu's origination of higher risk loans as well as riskier loans "purchased through our Specialty Mortgage Finance [SMF] program."

225. WaMu understood the anticipated negative impact from effectively foregoing prudent loan underwriting standards, as noted in a January 2005 Washington Mutual Board of Directors Discussion presentation entitled "Higher Risk Lending Strategy and Increased Credit Risk Management:"

> Although we expect the Higher Risk Lending strategy to result in increased financial returns, owing to wider loan pricing spreads, actual performance is subject to notable credit risks:
>
> - The potential for unexpected high credit-related losses increases roughly in proportion to the increase in expected credit-related losses.
> - Additional capital will need to be set aside for the higher potential for unexpected losses. If actual performance is worse than expected, the measured potential for unexpectedly high losses would increase further, and additional capital would need to be held.

226. On March 10, 2005 WaMu's CEO, Killinger, sent an e-mail to Vanasek, highlighting the declining underwriting standards in the face of a housing bubble:

> I suspect the toughest thing for us will be to navigate through a period of high home prices, ***increased competitive conditions for reduced underwriting standards***, and our need to grow the balance sheet. I have never seen such a high risk housing market as market after market thinks they are unique and for whatever reason are not likely to experience price declines. This typically signifies a bubble.

227. Vanasek responded to Killinger's March 10 e-mail by acknowledging the seriousness of the bubble that was being fueled by reckless loan origination practices and the ongoing loan securitization process:

> I could not agree more. All the classic signs are there and the likely outcome is probably not great. We would all like to think the air can come out of the balloon slowly but history would not lean you in that direction.

228. Notwithstanding their awareness of the industry-wide race to the bottom with respect to the abandonment of prudent loan underwriting standards, WaMu continued to securitize and sell bad loans to the public, including the WMALT 2005-3 Trust sold to Union Central in April 2005.

229. An April 27, 2006 e-mail from Steve Rotella ("Rotella") (WaMu Bank COO) to Killinger admitted that "much of the paper [*i.e.*, loans] we originated in the 05 growth spurt was low quality." These are the same bad loans securitized in the WMALT 2005-3 Trust whose Certificates Plaintiffs purchased.

230. As Michael Liu, a Washington Mutual Portfolio Analyst/Trader reported in his February 14, 2007 e-mail analyzing Option ARM loan delinquencies, "Loans originated in 2004 and 2005 represent the highest amount of 3 PPD and nonaccrual."

231. In an effort to protect itself from the increased credit risk resulting from the abandonment of prudent loan underwriting standards, WaMu securitized and sold the bad high risk loans to the investing public, including Plaintiffs. WaMu's "Higher Risk Lending Strategy 'Asset Allocation Initiative"' directed the Credit Policy Committee to "[u]tilize approved credit risk management tactics when necessary, including NPL [non-performing loan] sales or other credit enhancements." The WaMu Defendants directly participated in these "credit risk management tactics" by securitizing bad loans in the WMALT 2005-3 Trust whose Certificates they then marketed and sold to Plaintiffs in April 2005.

232. WaMu securitized and sold improperly-underwritten loans to investors in order to get those problem loans off WaMu's balance sheet. As recounted in Bethany McLean & Joe Nocera, *All the Devils Are Here – The Hidden History of the Financial Crisis* 217 (2010): "In a 2005 memo

about Washington Mutual, the FDIC summed up the prevailing sentiment: 'Management believes, however, that the impact on WMB [of a housing downturn] would be manageable, since the riskiest segments of production are sold to investors, and that these investors will bear the brunt of a bursting housing bubble.'" By placing high risk, bad loans in the WMALT 2005-3 Trust, WaMu Defendants wrongfully saddled Plaintiffs with that burden.

233. The Senate PSI case study similarly concluded that WaMu knew of deficiencies in their loan origination and securitization practices, since those operations had been subject to repeated internal and governmental criticisms:

> Over the years, both Long Beach and Washington Mutual were repeatedly criticized by the bank's internal auditors and reviewers, as well as its regulators, OTS and the FDIC, for deficient lending and securitization practices.

234. The Senate PSI found that WaMu knowingly securitized delinquency-prone and fraudulent loans without disclosing this adverse information to investors:

> At times, WaMu selected and securitized loans that it had identified as likely to go delinquent, without disclosing its analysis to investors who bought the securities, and also securitized loans tainted by fraudulent information, without notifying purchasers of the fraud that was discovered.

235. This highly improper conduct was ongoing at the very time when WaMu securitized bad loans in the WMALT 2005-3 Trust and then sold Trust Certificates to Plaintiffs on April 29, 2005.

236. A November 17, 2005 WaMu internal memo from Nancy Gonseth to Vanasek, Cheryl Feltgen (Division Executive, Chief Risk Officer – Home Loans) and others recounts the "sustained history of confirmed fraud findings over the past three years:"

> Due to a ***sustained history of confirmed fraud findings over the past three years from the Emerging Markets and Retail Broker Program*** areas, the Home Loans Risk Mitigation Team recently conducted a targeted review of the loans originated in two Southern California Community Fulfillment Centers (CFCs). . . .

> The purpose of the review was to establish a factual basis for determination as to whether or not a broad, systemic pattern of mortgage fraud was present in the Emerging Markets and Retail Broker Loan programs . . . .
>
> Based on this targeted review program, an extensive level of loan fraud exists in the Emerging Markets CFCs, virtually all of it stemming from employees in these areas circumventing bank policy surrounding loan verification and review. Of the 129 detailed loan reviewed that have been conducted to date, ***42% of the loans reviewed contained suspected activity or fraud, virtually all of it attributable to some sort of employee malfeasance or failure to execute company policy. In terms of employee activity enabling this perpetration of fraud, the following categories of activity appeared most frequently: inconsistent application of credit policy, errors or negligence, process design flaws, intentional circumvention of established processes, and overriding automated decisioning recommendations***. (Emphasis in original.)

237. An earlier August 30, 2005 internal WaMu e-mail chain between Ann Tierney (Washington Mutual Credit Risk Management) and Vanasek and others recounted the improper loan underwriting practices used by those responsible for originating home loans within WaMu's operations. One sample of 83 loans showed that 58% of those loans "contained confirmed fraud findings." Forty percent of these loans "involve[d] employment and/or income misrepresentation." In a second sample of 48 loans "83% of total loans reviewed contained confirmed fraud findings." Thirty-five percent of these loans also contained "employment and/or income misrepresentation."

238. WaMu's awareness of the systematic abandonment of prudent loan underwriting practices is confirmed by their corporate documents. The January 2005 Washington Mutual Board of Director Discussion entitled "Higher Risk Lending Strategy and Increased Credit Risk Management" discussed problems in the Specialty Mortgage Finance unit that acquired loans from third party loan originators for securitization and sale to investors: "The SMF management team is small and hence lacks depth; analytical/portfolio credit functions also are understaffed." The presentation explained the Specialty Mortgage Finance unit needed better technology to ensure proper oversight of loan underwriting: "SMF could benefit from more advanced technology in the

areas of underwriting due diligence, servicing oversight, and portfolio financial and credit risk management."

239. As the Senate PSI case study found, WaMu securitized and sold bad loans acquired from third parties. WaMu likewise originated bad loans for securitization:

> In addition to problems with its subprime lending, Washington Mutual suffered from lending and securitization deficiencies related to its own mortgage activities. It received, for example, repeated criticisms for unsatisfactory underwriting procedures, loans that did not meet credit requirements, and loans subject to fraud, appraisal problems and errors. For example, a 2005 internal investigation found that loans originated from two top loan producing offices in southern California contained an extensive level of fraud caused primarily by employees circumventing bank policies. Despite fraud rates in excess of 58% and 83% at those two offices, no steps were taken to address the problems, and ***no investors who purchased loans originated by those offices were notified in 2005 of the fraud problem***.

240. More than 26% of the aggregate principle balance of the loans that WMMSC deposited in the WMALT 2005-3 Trust were from California. Rather than disclose its ongoing practice of having its California loan officers make fraud-tainted loans to securitize for sale to investors, WaMu sold the WMALT 2005-3 Trust Certificates to Plaintiffs in April 2005, while concealing this extremely adverse information. As alleged above, WaMu stated just the opposite when telling Plaintiffs the loans in the WMALT 2005-3 Trust had been properly screened and underwritten.

241. Instead of taking serious steps to correct these improper loan origination and securitization practices by employing proper loan underwriting practices to stamp out the internally known fraud-tainted loans, WaMu took steps to reduce and further abandon prudent underwriting standards to increase the production of high risk loans, as alleged above.

242. An internal WaMu power-point presentation entitled Retail Fraud Risk Overview dated November 16, 2005, identified numerous failures to adopt, follow and enforce proper loan

underwriting practices. This report noted: "Fraud findings do not differ between the retail broker and retail lending programs and principally relate to misrepresentation of loan qualifying data." The report stated that on average, "78% of the funded retail broker loans reviewed were found to contain fraud," while "[o]n average 67% of the retail funded loans reviewed contain fraud, however, YTD finding indicate a rising trend." Specific examples of bad loans were also discussed, including loans where "[t]he credit package was found to be completely fabricated. Throughout the process, red flags were over-looked, process requirements were waived, and exceptions to policy were granted." Another sampled loan file contained an appraisal report that "appears to contain false data regarding the subject property's site and building sizes. This information significantly influenced the final statement of appraised value, and the resulting maximum loan amount on this cash out refinance." Many of the sampled loan files contained misrepresentations of the borrower income, including a file where "Borrower's qualifying income was inflated $1200 per month, with notes that this decision is consistent with WaMu's credit policy." This report also identified numerous "Process and Control Weaknesses," including "Inconsistent application of credit policy," "Process design flaws," Intentional circumvention of established processes," "Overriding automated decisioning recommendations," and "Technology (Optis) limitations."

243. WaMu made no serious effort to correct the widespread practice of failing to properly screen loans before securitizing and selling them to investors. Rather, they lowered the underwriting standards, thereby institutionalizing a company-wide policy that essentially ignored and disregarded prudent loan underwriting standards and practices.

244. Even years later WaMu had still failed to correct these problems. An August 2007 WaMu internal memo entitled "Home Loans Wholesale Specialty Lending – FPD [First Payment Defaults] 2007 Targeted Review" that was distributed to Killinger (Chairman & CEO), Rotella

(President & COO), David Schneider (President Home Loans), and numerous other high-ranking Washington Mutual executives, noted that "[t]he overall system of credit risk management activities and process has major weaknesses resulting in unacceptable level of credit risk," and two "high" priority causes for this long-standing situation were noted:

- (High) Ineffectiveness of fraud detection tools – 132 of the 187 (71%) files were reviewed by Risk Mitigation for fraud. Risk Mitigation confirmed fraud on 115 files and could not confirm on 17 of the files, but listed them as "highly" suspect. This issue is a repeat finding with CCR [Corporate Credit Review]

- (High) Weak credit infrastructure impacting credit quality. Credit weakness and underwriting deficiencies is a repeat finding with CCR. . . . Findings from the CCR FPD review in relation to credit quality:

    - 132 of the 187 loans sampled were identified with red flags that were not addressed by the business unit

    - 80 of the 112 (71%) stated income loans were identified for lack of reasonableness of income

    - 87 files (47%) exceeded program parameters in place at the time of approval

    - 133 (71%) had credit evaluation or loan decision errors present

    - 25 (13%) had title report issues that were not addressed

    - 28 (14%) had income calculations errors and 35 (19%) had income documentation errors

    - 58 (31%) had appraisal discrepancies or issues that raised concerns that the value was not supported

245. WaMu knew they were securitizing and selling loans that had not passed minimal loan underwriting procedures to weed out borrowers who lacked the willingness and ability to pay back the loans. Years after WaMu had consciously abandoned prudent loan underwriting practices in order to take on additional credit risk, Rotella wrote to Killinger on August 23, 2007, acknowledging "we sure made some mistakes." Rotella's e-mail went on to explain:

> I said the other day that HLs [*i.e.*, Washington Mutual internal Home Loan unit] (the original prime only) was the worst managed business I had seen in my career.
>
> * * *
>
> I would also note that the credit staff and infrastructure of HL was poor and has had to be rebuilt almost from the ground up. EDE [*i.e.*, Enterprise Decision Engine which was to supposed to have standardized and centralized decision strategies and increased risk management control over strategy execution] was not working well. Mark Hillis was a part time and ineffective chief credit officer, and most credit authority was held at the center including underwriting and appraisal. Cheryl arrived on the scene around early 2006 and huge strides have been made. ***But we are still not close to where we need to be*** and accountability is not clear between center and line.
>
> * * *
>
> The lesson here, as above, is that the ***lack of strong credit staff and analytics contributed to spotty underwriting discipline*** and a lack of insights into possible policy changes as we moved into HL production. ***Without beating a dead horse, Tom and I worried about our stated desire to take on more credit risk and the weak staff and infrastructure in ERM*** [*i.e.*, Enterprise Risk Management which was supposed to have provided oversight to insure prudent lending] (center and business) if a credit downturn occurred.

246. Because WaMu had drastically lowered its own loan underwriting standards at the same time that its underwriting and monitoring of third-party loan underwriting was essentially non-existent, WaMu knew, or was grossly reckless in not knowing, that the loans securitized and sold to Plaintiffs in the WMALT 2005-3 Trust were – to a very high degree – destined to fail because they had not been properly screened or underwritten.

247. Similar loan underwriting deficiencies existed at WaMu's affiliate Long Beach Mortgage Company ("Long Beach Mortgage"), which during the relevant time period was a wholly-owned subsidiary of WaMu Bank. On January 14, 2004 the FDIC reported to WaMu on its visitation to Long Beach Mortgage and the "unsatisfactory underwriting practices" that existed there. The FDIC Report discussed a review of approximately 4,000 Long Beach Mortgage loans where it was found that more than 76% of them were deficient – 800 of the loans were found to be

"unsaleable" and 2250 of the sampled loans "contained deficiencies requiring remediation prior to sale." The president of Long Beach Mortgage explained to the FDIC investigators "that the problems were largely attributable to management's decision to integrate LBMC's sub prime loan origination and servicing operations into WMI's prime home lending program." Yet, the problems with Long Beach Mortgage's improper loan screening practices continued unabated until that business was essentially dead. In an August 21, 2007 e-mail COO Rotella responded to yet another internal analysis showing that "Long Beach Mortgage Loan Origination & Underwriting (REQUIRES IMPROVEMENT)" by saying: "This seems to me to be the ultimate in bayonetting the wounded, if not the dead. Not only do we already have a MRBA from the OTS on this, but the [Long Beach Mortgage] business is essentially gone."

248. WaMu's systemic failure to adopt, implement, or enforce proper loan underwriting practices constituted "business as usual" throughout the period 2004 to 2008. An April 4, 2008 Washington Mutual report to the OTC confirmed allegations by AIG/UG regarding fraudulent loan origination practices in connection with 25 loans made between 2004 and 2007, while specifically conceding: "CFI verified that the AIG reported elements of loan fraud did occur within [Washington Mutual's] Montebello CFC loan origination process."

249. A July 22, 2008 OTS Exam Summary for WaMu further confirmed the existence of these long-standing failures to implement proper loan underwriting procedures. The OTS found for WaMu's loan screening operations: "Lack of Income Reasonableness Guidance and Controls," "Lack of Income Analysis Procedures for Stated Income Loans," "Measures to address reasonableness of stated income were not implemented in home equity originations," and "WaMu (non appraisal) employees were able to inappropriately influence values of appraisals." As the above evidence reflects, these problems were known for years internally by WaMu, but no proper

steps were ever taken to address and change them. And proper corrective action would never occur, because two months later the FDIC took over WaMu Bank due to its ongoing loss of billions of dollars stemming from the conduct alleged herein. In September 2008, the FDIC sold WaMu Bank to JP Morgan Chase Bank, further evidencing the intractable loan underwriting and loan acquisition problems within WaMu's operations throughout this period.

250. The Senate PSI case study concluded that WaMu's improper loan origination, acquisition and securitization practices were typical of other financial institutions, such as the many Defendants in this case, who also engaged in these wrongful practices.

(1) WaMu Had Actual Knowledge of the Defective Loans They Were Securitizing

251. Documents recently released by Clayton confirm that there were rampant underwriting violations in the loan pools contained in the Certificates. As the FCIC described, in the internal Clayton "Trending Report" made public by the Government in conjunction with testimony given in September 2010, WaMu received regular reports regarding defective loans, and 19% of the loans Clayton reviewed for WaMu "failed to meet guidelines." These loans were not subject to any proper "exceptions," as they did not have any "compensating factors." Rather, these loans were plainly defective.

252. Despite such a high level of nonconforming loans, WaMu nevertheless continued utilizing, and indeed funding, the same originators who had placed the nonconforming loans in the pools and "waived in" to its pools 29% of those toxic loans that Clayton had identified as being outside the guidelines. Such waivers were never disclosed to Union Central or any of the investors who purchased WaMu certificates.

253. Clayton's data demonstrates that underwriting guidelines were being routinely violated, and that WaMu was informed of such violations. The hidden "waiver" of rejected loans

that were not subject to any compensating factors was an omission that rendered the WaMu Defendants' disclosures regarding their underwriting and due diligence processes materially misleading. As the FCIC Report concluded:

> [M]any prospectuses indicated that the loans in the pools either met guidelines outright or had compensating factors, even though Clayton's records show that only a portion of the loans were sampled, and that of those that were sampled, a substantial percentage of Grade 3 Event loans were waived in.
>
> * * *
>
> [O]ne could reasonably expect [the untested loans] to have many of the same deficiencies, and at the same rate, as the sampled loans. Prospectuses for the ultimate investors in the mortgage-backed securities did not contain this information, or information on how few of the loans were reviewed, raising the question of whether the disclosures were materially misleading, in violation of the securities laws.

(2) WaMu Knew that Ratings Were False

254. The Certificate purchased by Plaintiffs received a BBB credit rating from S&P and a Baa2 rating from Moody's, indicating the rating agencies' view of its risk profile. The ratings were material to reasonable investors, including Union Central, because the ratings provided additional assurances that investors would receive the expected interest and principal payments. The Certificates would have been unmarketable to investors like Union Central and would not have been issued but for the provision of these ratings. As the Offering Materials stated:

> It is a condition to the issuance of the offered certificates that they receive ratings from S&P and Moody's as indicated.

255. The Offering Materials represented that the rating agencies conducted an analysis designed to assess the likelihood of delinquencies and defaults in the underlying mortgage pools and issued ratings accordingly. The Offering Materials stated:

> The ratings assigned to this issue do not constitute a recommendation to purchase or sell these securities. Rather, they are an indication of the likelihood of the payment of principal and interest as set forth in the transaction documentation.

256. These representations were false. The ratings given to the Certificate by S&P and Moody's were based on the loan profiles supplied to the agencies by WaMu. But as discussed above, most (if not all) of the key components of that data were false because WaMu failed to enforce and adhere to the disclosed underwriting standards and permitted and accepted manipulated appraisals of the properties underlying the mortgage pools. As such, WaMu essentially pre-determined the ratings by feeding inaccurate information into the ratings system. WaMu failed to disclose that the ratings would be based entirely on unreliable information provided by WaMu itself.

4. WaMu Capital Corp.'s Liability as an Underwriter of the WaMu Certificate

257. WCC made the false and misleading statements alleged above, which were contained in the Prospectus Supplement endorsed and used by WCC in the sale of certificates to investors.

258. As underwriter, WCC edited, drafted and controlled the content of the WMALT 2005-3 Trust's Offering Materials, including with respect to the material misstatements and omissions alleged above. In connection with its due diligence conducted in connection with the offering of the Certificates to Plaintiffs, WCC received, considered and understood the adverse information alleged above regarding the lack of proper underwriting for the loans deposited in the subject Trusts. As underwriter, WCC then used and disseminated these false and misleading Offering Materials to Plaintiffs in connection with the sale of the Certificates and in order to profit at Plaintiffs' expense.

259. WCC, as a subsidiary within WaMu, had knowledge that WaMu, as alleged in §V.A, failed to adhere to underwriting standards when it pooled mortgage loans for its RMBS, including for the WMALT 2005-3 Trust, and provided distorted information to the rating agencies that was purposefully manipulated to meet the targeted rating. Further, WCC, knew or was reckless in not knowing, of the defective loans in the WMALT 2005-3 Trust as a result of its due diligence

performed as an underwriter for the WMALT 2005-3 Trust. WCC had access to the detailed loan tapes and actual loan files, and its review of these materials showed it (or it was reckless in not understanding) that originators of the loans WaMu deposited in the WMALT 2005-3 Trust had a practice of routinely and systematically disregarding the stated underwriting standards.

260. WCC also knew that mortgage loans deposited into the WMALT 2005-3 Trust were not properly underwritten because WCC was a knowledgeable insider in the mortgage securitization industry who, unlike Plaintiffs, was privy to the widespread abandonment of prudent loan underwriting practices in connection with the securitization of loans, as alleged herein. In addition to the WMALT 2005-3 Trust, WCC underwrote and sold many other such WaMu RMBS to investors and had in that context gained inside knowledge of the poor quality loan underwriting.

B. Citi

1. Citi's Securitizations

261. In 2007, Union Central purchased Certificates from the three Citi Trusts. For the CMSI 2007-5 and CMSI 2007-8 Trusts, Citi issued RMBS backed by fixed-rate, non-conforming, prime, residential first-mortgage loans that defendant CitiMortgage either both originated and purchased from others. For the CMLT 2007-10 Trust, Citi issued RMBS backed by fixed-rate and adjustable-rate mortgage residential first-mortgage loans, while the Group 1 loans, which supported the Certificates that Union Central bought, were fixed-rate mortgages.

262. The CMSI 2007-5 Trust was a $342.9 million deal; the CMSI 2007-8 Trust was a $296.1 deal; and the CMLT 2007-10 Trust was a $1.12 billion deal.

263. CGMI underwrote the Certificates from CMSI and CMLT and sold them to the Union Central pursuant to the Registration Statements.

Trust	Registration Statement No.	Registration Statement Date
CMSI 2007-5	333-130333	December 15, 2005

CMSI 2007-8	333-130333	December 15, 20015
CMLT 2007-10	333-138237	October 25, 2006

264. The following purchases made by Union Central represent a total investment of over $13.6 million:

CUSIP	Certificate	Issuing Entity	Depositor	Underwriter(s)	Issue Date	Purchase Date
17312KAT9	CMSI 2007-5 B1	Citicorp Mortgage Securities Trust, Series 2007-5	CMSI	CGMI and UBS Securities LLC	6/1/2007	12/19/2007
17312DAL2	CMSI 2007-8 B1	Citicorp Mortgage Securities Trust, Series 2007-8	CMSI	CGMI and Banc of America Securities LLC	9/1/2007	10/3/2007
17313QAC2	CMLT 2007-10 B1	Citigroup Mortgage Loan Trust 2007-10	CMLT	CGMI	10/1/2007	1/22/2008

2. False and Misleading Statements in Citi's Offering Materials

a. False and Misleading Statements About Compliance with Underwriting Standards

265. Citi originated and acquired from other originators the underlying mortgages for the Citi Trusts. The Offering Materials represented that each of the mortgage sellers and originators applied underwriting standards that were designed to ensure that the borrower could repay the loan, and thus an investor like Union Central would see a full return on its investment.

(1) CMSI 2007-5 Trust and CMSI 2007-8 Trust

266. The Prospectus Supplements for both CMSI Trusts represented that the subject "[m]ortgage loan underwriting assesses a prospective borrower's ability and willingness to repay, and the adequacy of the property as collateral for, a requested loan."

267. Defendant CitiMortgage originated approximately 48% of the CMSI 2007-5 Trust, AAMG originated approximately 39%.[2]

268. The CMSI 2007-5 Offering Materials represented: "These [third-party] organizations originated the mortgage loans under guidelines that are substantially in accordance with CitiMortgage's guidelines for its own originations." Further, "CitiMortgage believes that AAMG's, Provident Funding's and SIRVA Mortgage's underwriting procedures for the mortgage loans included in this series are not materially different from CitiMortgage's own underwriting procedures for similar loans."

269. For the CMSI 2007-8 Trust, CitiMortgage originated and sold to the Trust 70% of the underlying mortgages. Third-party organizations originated the remainder.

270. Citi represented in its CMSI 2007-8 Offering Materials that "[t]hese [third-party] organizations originated the mortgage loans under guidelines that are substantially in accordance with CitiMortgage's guidelines for its own originations." Further, "[s]ome mortgage loans acquired by CitiMortgage from other organizations and included in the pools may have been originated by these organizations, and some may have been purchased by these organizations from other persons. CitiMortgage believes that these organizations' underwriting procedures for the mortgage loans included in this series, whether originated or purchased by these organizations, are not materially different from CitiMortgage's own underwriting procedures for similar loans."

271. For both the CMSI 2007-5 and CMSI 2007-8 Trusts, the Offering Materials also represented: "Third-party originators must be experienced in originating mortgage loans of the types in the pool in accordance with accepted practices and prudent guidelines."

---

[2] As of March 1, 2007, AAMG became a wholly-owned subsidiary of CitiMortgage.

272. Citi also represented that its own review of the third-party originations would ensure the capacity of the borrower to repay the loan and the adequacy of the collateral:

> The underwriting policies and guidelines of third-party originators (which for purposes of this prospectus includes AAMG) may differ from those of the affiliated originators. In purchasing third-party loans, CitiMortgage will review a sample of the loans to determine whether they generally conform to CitiMortgage's underwriting standards. CitiMortgage will fully or partly credit score or re-underwrite the third-party loans to determine whether the original underwriting process adequately assessed the borrower's ability to repay and the adequacy of the property as collateral, based on CitiMortgage's underwriting standards.

273. With respect to the loans in the CMLT 2007-10 Trust, Citi represented that:

> All mortgage loans will have been subject to underwriting standards acceptable to the depositor and applied as described below. Each mortgage loan seller, or another party on its behalf, will represent and warrant that mortgage loans purchased by or on behalf of the depositor from it have been originated by the related originators in accordance with such underwriting standards.
>
> Unless otherwise specified in the related prospectus supplement, the underwriting standards are applied by the originators to evaluate the borrower's credit standing and repayment ability, and the value and adequacy of the mortgaged property as collateral.

274. Citi represented in its CMLT 2007-10 Trust's Offering Materials that American Home, Argent, Countrywide, and PennFed originated the majority of the underlying mortgages, while the other third-party originators listed sold them less than 20%. Citi represented in its Offering Materials that the third parties from whom it bought the mortgages each had applied underwriting standards designed to ensure that the borrower could repay the loan.

(i) American Home

275. The Offering Materials described the underwriting guidelines American Home used to originate the loans that it sold to the Trust. According to the Offering Materials, American Home's underwritings were designed to evaluate the capacity of the borrower to repay the loan and the adequacy of the collateral:

> American Home's underwriting philosophy is to weigh all risk factors inherent in the loan file, giving consideration to the individual transaction, borrower profile, the level of documentation provided and the property used to collateralize the debt. These standards are applied in accordance with applicable federal and state laws and regulations. Exceptions to the underwriting standards may be permitted where compensating factors are present.
>
> * * *
>
> American Home underwrites a borrower's creditworthiness based solely on information that American Home believes is indicative of the applicant's willingness and ability to pay the debt they would be incurring.

(ii) Argent

276. The Offering Materials described the underwriting guidelines Argent used to originate the loans that it sold to the Trust. According to the Offering Materials, Argent's underwritings were designed to evaluate the capacity of the borrower to repay the loan and the adequacy of the collateral:

> The mortgage loans originated by Argent Mortgage Company, LLC (the "Argent Mortgage Loans") were originated generally in accordance with the underwriting standards described below (the "Argent Underwriting Guidelines"). The Argent Underwriting Guidelines are primarily intended to evaluate: ***(1) the applicant's credit standing and repayment ability and (2) the value and adequacy of the mortgaged property as collateral***. On a case-by-case basis, Argent may determine that, based upon compensating factors, a loan applicant warrants an exception to the requirements set forth in the Argent Underwriting Guidelines. Compensating factors may include, but are not limited to, loan-to-value ratio, debt-to-income ratio, good credit history, stable employment history, length at current employment and time in residence at the applicant's current address. It is expected that a substantial number of the mortgage loans to be included in the mortgage pool will represent such underwriting exceptions.

(iii) Countrywide

277. The Offering Materials described the underwriting guidelines Countrywide used to originate the loans that it sold to the Trust. According to the Offering Materials, Countrywide's underwritings were designed to evaluate the capacity of the borrower to repay the loan and the adequacy of the collateral:

> Countrywide Home Loans' underwriting standards are applied in accordance with applicable federal and state laws and regulations.
>
> * * *
>
> Countrywide Home Loans' underwriting standards are applied by or on behalf of Countrywide Home Loans to evaluate the prospective borrower's credit standing and repayment ability and the value and adequacy of the mortgaged property as collateral.

(iv) PennFed

278. The Offering Materials described the underwriting guidelines PennFed used to originate the loans that it sold to the Trust. According to the Offering Materials, PennFed's underwritings were designed to evaluate the capacity of the borrower to repay the loan and the adequacy of the collateral:

> These mortgage loans were underwritten generally using Freddie Mac and Fannie Mae guidelines, although loan amounts might have exceeded agency limits. The Company's non-conforming underwriting guidelines were similar to those of Freddie Mac and Fannie Mae, but exceptions might have been permitted where compensating factors were present. . . . The Company evaluated the borrower's ability to make monthly payments, past credit history and the value of the property securing the loan.

b. False and Misleading Statements About Appraisals and LTV Ratios

279. The Offering Materials represented that the underlying mortgaged properties would provide adequate security for the mortgage loans, based in part on the appraised value of the properties securing the mortgage loans underlying the Certificates. The adequacy of the mortgaged properties as security for repayment of the loans will have generally been determined by appraisals, conducted in accordance with pre-established guidelines.

280. Each securing property was to be appraised by a qualified and diligent appraiser, and each appraisal was required to satisfy that the property value can support the principal balance of the

mortgage loan. In general, appraisals were to be in conformity with USPAP, as adopted by the Appraisal Standards Board of the Appraisal Foundation.

281. The CMSI 2007-5 and 2007-8 Trusts represented that the appraisals of the third-party originated loans had to be independent:

> Each appraisal is conducted by an independent fee appraiser. The appraiser personally visits the property and estimates its market value on the basis of comparable properties. . . . The independent appraisers do not receive any compensation dependent upon either the amount of the loan or its consummation.

282. The CMLT 2007-10 Trust Offering Materials stated: "In determining the adequacy of the property as collateral, an appraisal is made of each property considered for financing, except in the case of new manufactured homes, as described under 'The Trust Funds.'" Each appraiser is selected in accordance with predetermined guidelines established for appraisers. The appraiser is required to inspect the property and verify that it is in good condition and that construction, if new, has been completed."

283. The Offering Materials for the CMLT 2007-10 also contained representations pertaining to the primary originators' appraisals.

284. Regarding American Home, Citi's Offering Materials represented:

> Every mortgage loan is secured by a property that has been appraised by a licensed appraiser in accordance with the Uniform Standards of Professional Appraisal Practice of the Appraisal Foundation. The appraisers perform on-site inspections of the property and report on the neighborhood and property condition in factual and specific terms. Each appraisal contains an opinion of value that represents the appraiser's professional conclusion based on market data of sales of comparable properties and a logical analysis with adjustments for differences between the comparable sales and the subject property and the appraiser's judgment. In addition, each appraisal is reviewed for accuracy and consistency by American Home's vendor management company or an underwriter of American Home or a mortgage insurance company contract underwriter.

285. Regarding Argent, Citi's Offering Materials represented:

> The Argent Underwriting Guidelines are applied in accordance with a procedure which complies with applicable federal and state laws and regulations and requires (i) an appraisal of the mortgaged property which conforms to the Uniform Standards of Professional Appraisal Practice and are generally on forms similar to those acceptable to Fannie Mae and Freddie Mac and (ii) a review of such appraisal, which review may be conducted by a representative of Argent or a fee appraiser and may include a desk review of the original appraisal or a drive-by review appraisal of the mortgaged property.

286. Regarding Countrywide, Citi's Offering Materials represented:

> Except with respect to the mortgage loans originated pursuant to its Streamlined Documentation Program, whose values were confirmed with a Fannie Mae proprietary automated valuation model, Countrywide Home Loans obtains appraisals from independent appraisers or appraisal services for properties that are to secure mortgage loans. The appraisers inspect and appraise the proposed mortgaged property and verify that the property is in acceptable condition. Following each appraisal, the appraiser prepares a report which includes a market data analysis based on recent sales of comparable homes in the area and, when deemed appropriate, a replacement cost analysis based on the current cost of constructing a similar home. All appraisals are required to conform to Fannie Mae or Freddie Mac appraisal standards then in effect.

287. Regarding PennFed, Citi's Offering Materials represented: "Properties securing real estate loans were appraised by a licensed in-house appraiser or independent appraisers, all of whom were approved by the Company's Board of Directors."

288. Citi's Offering Materials also provided specific information regarding the weighted average LTV ratios of the loans underlying the Certificates:

Certificates	LTV Ratio
CMSI 2007-5	69.60%
CMSI 2007-8	70.48%
CMLT 2007-10	68.02%

c. False and Misleading Statements About Debt-to-Income Ratios

289. Citi's Offering Materials for the Citi Trusts contained numerous statements regarding the evaluation of DTI ratios for the borrowers whose loans comprised the Trusts. Absent

compensating factors, the Offering Materials described the manner in which the loan originators evaluated DTI ratios for borrowers.

290. Citi represented in the Offering Materials for the CMSI 2007-5 and 2007-8 Trusts that the originators for the underlying mortgages would decide as part of their lending guidelines "whether the prospective borrower has enough monthly income to meet monthly obligations on the proposed loan and related expenses as well as the prospective borrower's other financial obligations and monthly living expenses." The CMLT 2007-10 made substantially the same representation.

291. Additionally, the CMLT 2007-10 Trust provided additional details for some of the loan originators practices regarding DTI.

292. For example, Citi represented that loans originated by American Home, "the underwriter must evaluate the borrower's ability to manage all recurring payments on all debts, including the monthly housing expense." Similarly, Argent-originated loans required, according to the Citi Offering Materials, that "[d]uring the underwriting process, Argent review[] and verif[y] the loan applicant's sources of income (except under certain stated income documentation programs such information may not be independently verified), calculate[] the amount of income from all such sources indicated on the loan application, [and] calculate[] the debt-to-income ratio to determine the applicant's ability to repay the loan," among other procedures. PennFed purportedly "evaluated the borrower's ability to make monthly payments."

293. The CMLT 2007-10 Offering Materials provided even greater detail for loans originated by Countrywide:

> [A] prospective borrower must generally demonstrate that the ratio of the borrower's monthly housing expenses (including principal and interest on the proposed mortgage loan and, as applicable, the related monthly portion of property taxes, hazard insurance and mortgage insurance) to the borrower's monthly gross income and the ratio of total monthly debt to the monthly gross income (the "debt-to-income" ratios) are within acceptable limits. . . . The maximum acceptable debt-to-

income ratio, which is determined on a loan-by-loan basis varies depending on a number of underwriting criteria, including the Loan-to-Value Ratio, loan purpose, loan amount and credit history of the borrower.

* * *

Under its Standard Underwriting Guidelines, Countrywide Home Loans generally permits a debt-to-income ratio based on the borrower's monthly housing expenses of up to 33% and a debt-to-income ratio based on the borrower's total monthly debt of up to 38%.

* * *

Under its Expanded Underwriting Guidelines, Countrywide Home Loans generally permits a debt-to-income ratio based on the borrower's monthly housing expenses of up to 36% and a debt-to-income ratio based on the borrower's total monthly debt of up to 40%; provided, however, that if the Loan-to-Value Ratio exceeds 80%, the maximum permitted debt-to-income ratios are 33% and 38%, respectively.

d. False and Misleading Statements About Owner-Occupancy

294. Citi specifically disclosed owner-occupancy statuses for the underlying mortgages in the Offering Materials because it is an indicator of the borrowers' likelihood to stay current with their payments, passed through to investors.

295. The following chart provides the Trusts' disclosures:

Certificate	Owner-Occupied/Primary Residence	Secondary Residence/ Vacation Home	Investor
CMSI 2007-5	94.11%	5.89%	0%
CMSI 2007-8	94.21%	5.67%	0.12%
CMLT 2007-10	95.31%	4.67%	0.02%

e. False and Misleading Statements About Ratings

296. The Offering Materials for each Citi Trust stated that the ratings of the Certificates as set forth in the Prospectus was a condition to their issuance, and that the ratings reflected the likelihood that investors would receive the distributions to which they were entitled.

297. The CMSI 2007-5 and CMSI 2007-8 Trusts represented:

> The offered certificates will not be sold unless the rating agencies have rated the offered certificates as shown [in the Prospectus].
>
> * * *
>
> The ratings of Standard & Poor's Ratings Services (*S&P*) on mortgage pass-through certificates address the likelihood of the receipt by certificate holders of timely payments of interest and the ultimate return of principal. S&P's ratings take into consideration the credit quality of the mortgage pool, including any credit support providers, structural and legal aspects associated with the certificates, and the extent to which the payment stream on the mortgage pool is adequate to make payments required under the certificates. . . .
>
> The ratings of Moody's Investors Service, Inc. (*Moody's*) on mortgage pass-through certificates address (1) the likelihood of the receipt by certificate holders of all distributions to which they are entitled and (2) the structural, legal and issuer aspects associated with the certificates, including the nature of the underlying mortgage loans and the credit quality of any credit support provider. . . .
>
> The ratings assigned by Fitch Ratings (*Fitch*) to mortgage pass-through certificates address the likelihood of the receipt by certificate holders of timely payments of interest and the ultimate return of principal. Fitch's ratings reflect its analysis of the riskiness of the underlying mortgage loans and the structure of the transaction as described in the operative documents.

298. The information given to the rating agencies was critical in determining, among other items, the Trusts' rating. The Citi Offering Materials disclose: "Once CitiMortgage agrees to sell a mortgage loan pool to an underwriter for securitization, the underwriter, in conjunction with the rating agencies for the series, determines the size, interest rates, and payment order for the classes of certificates comprising the series."

299. Likewise, the CMLT 2007-10 Trust represented:

> It is a condition to the issuance of the Offered Certificates that the Offered Certificates receive not lower than the ratings [listed in the Prospectus] from Fitch Ratings, or Fitch and Standard & Poor's, a division of The McGraw-Hill Companies, Inc., or S&P.
>
> * * *
>
> The ratings assigned to mortgage pass-through certificates address the likelihood of the receipt by certificateholders of all distributions to which the certificateholders are entitled. The rating process addresses structural and legal

aspects associated with the certificates, including the nature of the underlying mortgage loans.

300. The Offering Materials also set forth the specific ratings for the Certificates that Union Central purchased:

Certificate	Rating
CMSI 2007-5 B1	AA
CMSI 2007-8 B1	AA
CMLT 2007-10 B1	AA

301. In obtaining these ratings for the subject Certificates, Citi concealed the adverse information alleged herein from the rating agencies. Had the rating agencies known the true value of the loans underlying the Certificates, the Certificates would have been rated significantly lower, or not at all.

3. Citi's Statements Were Knowingly False and Misleading

302. Citi knew, or was reckless in not knowing, that the statements identified above were materially false and misleading and/or omitted material facts necessary to make the statements made not misleading. As set forth herein, Citi had actual knowledge that the stated underwriting guidelines were not being adhered to and rather than provide truthful information and disclosures to Union Central and other investors, used such knowledge to reap massive profits for itself by betting against the very products they were selling investors.

a. Citi Knew that Underwriting Standards Had Been Abandoned

303. While the Offering Materials set forth detailed underwriting guidelines that were supposed to be applied in evaluating borrowers and loans, in fact as Citi was aware, the stated underwriting guidelines had been abandoned by the loan originators and by Citi when depositing the loans in the Trusts.

304. The originators abandoned the fundamental principle that underwriting was supposed to meaningfully evaluate the borrowers' ability to repay the debt, and the lender and/or investors' ability to recover against the pledged collateral in the event of a default. Instead, the originators, using Citi's own financing and encouraged by Citi and other investment banks' insatiable appetite for acquiring loans regardless of their quality, approved loans which they knew were based on falsified information and which did not comply with any of the stated underwriting guidelines.

305. CitiMortgage had abandoned all prudent underwriting practices with respect to the loans that it had originated and included in the subject Trusts, as alleged herein.

306. AAMG had abandoned all prudent underwriting practices with respect to the loans that it had originated and sold to Citi for inclusion in the subject Trusts, as alleged above at §IV.I.9.

307. American Home had abandoned all prudent underwriting practices with respect to the loans that it had originated and sold to Citi for inclusion in the subject Trusts, as alleged above at §IV.I.7.

308. Argent had abandoned all prudent underwriting practices with respect to the loans that it had originated and sold to Citi for inclusion in the subject Trusts, as alleged above at §IV.I.13,

309. Countrywide had abandoned all prudent underwriting practices with respect to the loans that it had originated and sold to Citi for inclusion in the subject Trusts, as alleged above at §IV.I.2.

310. Greenpoint had abandoned all prudent underwriting practices with respect to the loans that it had originated and sold to Citi for inclusion in the subject Trusts, as alleged above at §IV.I.3.

311. National City had abandoned all prudent underwriting practices with respect to the loans that it had originated and sold to Citi for inclusion in the subject Trusts, as alleged above at §IV.I.10.

312. SunTrust Mortgage had abandoned all prudent underwriting practices with respect to the loans that it had originated and sold to Citi for inclusion in the subject Trusts, as alleged above at §IV.I.4.

b. Citi's CEO Knew and Condoned Citi's Issuance of RMBS with Defective Loans

313. Charles Prince ("Prince") served as CEO of Citigroup from 2003 to 2007, and he admitted in his testimony before the FCIC, that Citi's "[s]ecuritization could be seen as a factory line." He conceded that mortgages of "lower and lower quality" went into the securitization process. The result he explained was that since "the raw material going into it was actually bad quality, it was toxic quality, and that is what ended up coming out the other end of the pipeline." Plaintiffs suffered substantial damages coming out of the other end of the pipeline as a result this factory line Citi used to securitize toxic loans sold to unknowing investors.

314. On March 7, 2008, Prince testified to Congress that "lending patterns began to deteriorate pretty significantly in 2006." By the spring of 2007, when reports reached the CEO that almost 20% of the borrowers in some of the securitized pools of mortgages had defaulted on their first payment, the CEO admitted that "most of the damage had already been done." Despite knowledge of the severely deteriorated loan standards, Citi continued to package loans for securitization to investors such as Union Central.

4. Citi Knew the Problems in the Mortgages Underlying the RMBS

315. In the fallout of the financial crisis, Prince was not the only Citi executive to admit to Citi's defective RMBS practices. Bowen was Citi's Senior Vice President and Chief Underwriter for Correspondent and Acquisitions for Citifinancial Mortgage from 2002 through 2005, and in 2006 was promoted to Business Chief Underwriter for Correspondent Lending in the Consumer Lending

Group. In his position he was charged with overseeing the underwriting of over $90 billion a year of residential mortgage production by over 220 professional underwriters, giving him first-hand knowledge of Citi's underwriting practices.

316. The mortgages Bowen's group underwrote originally came through correspondent channels. Thus, their underwriting responsibility was to ensure that the third-party originators' credit standards met Citi's requirements.[3] But as Bowen detailed in testimony to the FCIC on April 7, 2010, Citi increasingly approved mortgages that Citi's underwriting standards should have barred.

317. According to Bowen's FCIC testimony, in mid-2006 he discovered that over 60% of the mortgages purchased and sold to investors were defective. Beginning in June 2006, Bowen repeatedly informed Citi's management by "weekly reports, emails, and discussions," but his warnings went ignored. Bowen told the FCIC that by 2007 "defective mortgages increased . . . to over 80% of production." These were the toxic loans that Citi securitized and sold to Plaintiffs without properly disclosing Citi knew these loans had not been properly underwritten.

318. Notwithstanding Citi's awareness that as high as 80% of the 2007 production consisted of defective mortgages, Citi securitized these loans and sold them to investors, including Plaintiffs.

319. Susan Mills ("Mills"), the head of the Mortgage Finance group at CGMI, which was part of the team responsible for the securitization and underwriting of RMBS, told the FCIC in an interview that she had noticed increasing delinquencies in 2006. She therefore installed a

---

[3] Third-party originations made up 52% of the mortgages in the CMSI 2007-5 Trust, 30% of the CMSI 2007-8 Trust, and 100% of the CMLTI 2007-10 Trust.

surveillance group to track the loans that her team purchased. Nevertheless, from 2005 to 2007, Mills reported to the FCIC, early payment default rates nearly tripled from 2% to around 6%.

320. Citi waived through bad loans that did not meet prudent underwriting guidelines. For loans intended for Wall Street, Bowen testified that during 2006 and 2007 he "witnessed many changes to the way the credit risk was being evaluated for these pools during the purchase process." Notably, "[t]hese changes included the Wall Street Chief Risk Officer's reversing of large numbers of underwriting decisions on mortgage loans from 'turn down' to 'approved.'"

321. Bowen's testimony is consistent with an e-mail he sent to Citi's senior officers on November 3, 2007. He attached this e-mail to his written testimony. His e-mail warned that mortgage loans securitized and sold to investors often are "either outside of policy criteria or have documentation missing from the files," while explaining that during "2006-7 there were pools of mortgage loans aggregating $10 billion which were purchased from large mortgage companies with significant numbers of files identified as 'exceptions' (higher risk and substantially outside of our credit policy criteria)."

322. Bowen explained that for approximately $50 billion of mortgage loans originated through the correspondent channel by third parties, the underwriting was delegated to the third-party originator. Citi's Quality Assurance department, which reported to Bowen, was supposed to sample these loans to ascertain whether the third-party's underwriting "agreed" with what would have been the result had Citi underwrote the loan. But Bowen testified that "Citi policy require[d] that a minimum of 95% of the loans purchased" through this channel "must be assigned the 'agree' decision." In fact, over half of the files reported as "agree" were missing policy-required documents, such as proof of income documentation.

323. Bowen's testimony to the FCIC is confirmed by Sherry A. Hunt, a Citi whistleblower with first-hand knowledge of Citi's defective mortgage underwriting. In Hunt's whistleblower letter to the SEC dated May 24, 2011, which was attached to her *qui tam* complaint, she wrote:

> The position I accepted with CitMortgage [sic] in November 2004 was as Chief Underwriter and Vice President over the correspondent channel. The move proved to be disastrous to my career. . . .
>
> I will not go into all of the details here, but one would just need to watch the testimony of Richard Bowen III to the Financial Crisis Inquiry Commission in April 2010 and know that what he is stating is the truth, and that truth came from me alerting him to the issues. He was my manager.

See United States of America, ex rel, Sherry A. Hunt, v. Citigroup, Inc., et al., No. 1:11-cv-05473 (S.D.N.Y.) (Dkt. No. 19).

324. Citi systematically securitized loans originated by third parties that did not meet prudent underwriting standards and had been initially declined for this reason – before these toxic loans were waived through the factory line system. As Bowen explained in his November 3, 2007 e-mail, "[t]hese exceptions were approved by the Wall Street Channel Chief Risk Officer, many times over underwriting objections and with the files having been turned down by underwriting." Citi waived through these defective loans, allowing them to continue on Citi's securitization factory line.

a. Citi Securitized Imprudent Loans to Get Them Off Its Books and to Avoid the Risk of Default

325. In August 2005, according to Bill Beckmann ("Beckmann"), president and COO of CitiMortgage Inc., there was a Citi initiative to transition the company to a broader origination strategy. Citi brought under one "silo" its three mortgage businesses, which represented prime, subprime and home equity. Carl Levinson, who was appointed president and CEO of the Consumer Finance Group, was placed at the head of the merged mortgage companies. The upshot of the merger, explained Beckmann, was that Citi dispensed with the distinctions it had made among the

processing of its various types of mortgages. "Especially as the traditional prime market gets smaller," Beckmann said "we're beginning to see those lines blur."

326. As another managing director at CitiMortgage, Bradley J. Brunts, explained, Citi shifted its strategy toward making and acquiring more high risk loans by no longer viewing the nonprime business as a "niche business" but rather as one that was increasingly a "volume business." With the integration of these businesses, higher risk loans such as Alt-A mortgages grew from nil to 25% of CitiMortgage's overall business. As Beckmann put it, "our absolute focus for growth is alt-A" in 2006.

327. Citi was able to reduce the credit risk it faced from this shift in strategy by securitizing and selling these higher risk loans that it did not want to hold on its books. Thus, CitiMortgage's Alt-A loans would "go to market" through defendant CGMI, who would pool loans rejected by CitiMortgage into RMBS to be sold to investors. As Beckmann admitted, "[t]here are loans that maybe we wouldn't feel comfortable with [putting] in our portfolio, but the Street is happy with."

328. Beckmann further elaborated that defendant CitiMortgage's alliance with defendant CGMI was especially useful when making bulk purchases from a correspondent. In the past, he explained, if Citi only offered to purchase $70 million of a pool of $100 million from a correspondent, the correspondent would take its business to another customer who had offered to purchase $90 million of the pool. Because CGMI pushed the loans off on investors of RMBS trusts, "Citi can bid more robustly and not get stuck with the kicks – the loans we didn't want to take."

b. Other Employees Confirm Citi's Lack of Adequate Due Diligence

329. Citi knew the goal was to approve as many mortgages as possible for the mortgage pools, to the detriment of credit quality. To that end, witnesses such as a former senior underwriter

for CitiMortgage said "conventional lending ideas went out the window." Former Citi employees described Citi's underwriting standards as "too loose" and "too easy-going," allowing for "very aggressive" lending practices.

330. For example, a former regional sales manager for Citigroup's wholesale mortgage loan division described the steady deterioration in credit quality that started around 2005. He said he witnessed the increasing prevalence of interest-only, stated income, and 100% LTV mortgages. A former senior underwriter also remembered maximum LTV ratios at 100%. Another former senior underwriter, noted that in the spring of 2007, Citi even permitted mortgages for borrowers with FICO scores as low as 500, confirmed by a different senior underwriter who recalled that even in late 2007, minimum FICO scores were still around 580. The result, according to a former senior underwriter was that "almost anything would pass."

331. If the loose underwriting standards did not let the mortgages waive through, Citi's policy was to lean on its underwriters. Underwriters described the pressure they were under to approve mortgages. One former senior underwriter explained that if she found a loan to be problematic, the response from her "team lead" was to tell her to "look at it again." Underwriters understood, she said, that we should "find a way to accept it."

c. Skyrocketing Default Rates Are Further Evidence of Abandoned Underwriting

332. The Certificates sold to Union Central were supposed to be stable, long-term investments backed by investment-grade credit ratings. However, the extraordinary defaults on the mortgage loans underlying Union Central's Certificates is prima facie evidence that the stated underwriting standards and loan characteristics represented in the Offering Materials were materially false and misleading.

333. The following chart sets forth the delinquency, bankruptcy or foreclosure amounts, as well as collateral cumulative losses, for each of the Certificates purchases by Union Central as of June 2010:

Certificate	Original Deal Size	Delinquent, Bankruptcy, Foreclosure, REO Actual Balance	Collateral Cumulative Loss
CMSI 2007-5	$342,935,690	$16,139,620	$997,385
CMSI 2007-8	$296,050,563	$13,326,153	$1,877,023
CMLT 2007-10	$206, 824,470	$7,308,254	$657,223

334. Had the loans been issued in accordance with the stated underwriting guidelines, and had the loans in fact had the characteristics described in the Offering Materials, the rate of delinquency, bankruptcy and foreclosure would be far lower than the current rates. Indeed, Moody's maximum expected collateral losses for the life of the CMSI 2007-5 Certificate was only $1.55 million. Moody's maximum expected collateral losses for the life of the CMSI 2007-8 Certificate was $1.49 million.

d. Appraisals and LTV Ratios Were Inflated

335. The descriptions of appraisal standards, as well as the LTV ratios derived from such appraisals, were materially false and misleading. Undisclosed in the Offering Materials, and in violation of any legitimate appraisal standards, many of the loans underlying the Certificates had been approved through the use of manipulated appraisals that guaranteed that the collateral property would be valued at a price sufficient to support the loan. Citi's practices have been confirmed through modeling by other parties whose data demonstrates that appraisals used in connection with Citi securitizations in 2006 were routinely inflated.

336. For instance, the plaintiffs in *Allstate Ins. Co., et al. v. CitiMortgage, Inc., et al.*, Index No. 650432/2011 (Sup. Ct. N.Y. Feb. 17, 2011), conducted a sophisticated loan-level analysis

using AVM technology to parse over 9,000 mortgages underlying trusts that were substantially similar to the Citi offerings at issue in that litigation. *Allstate v. CitiMortgage* Complaint (Dkt. No. 2), ¶¶121, 130-137. AVM's are routinely used in the industry as a way of valuing properties during pre-qualification, origination portfolio review and servicing.

337. The *Allstate v. CitiMortgage* plaintiffs' analysis demonstrates that the valuation of the loans underlying their certificates were materially and consistently inflated, and therefore that the stated LTV ratios were materially overstated, which in turn greatly increased the risk of default for the loans underlying those certificates. The chart below summarizes their findings:

Trust	Represented Weighted Average LTV	Actual Weighted Average LTV	Prospectus Understatement
CMLTI 2006-4	70.30%	73.91%	3.61%
CMALT 2006-A7	70.65%	82.03%	11.38%
CRMSI 2007-02	79.04%	93.30%	14.26%
CRMSI 2006-03	78.08%	90.53%	12.45%
CRMSI 2007-01	79.39%	87.61%	8.22%

338. Even worse, while none of the certificates were supposed to contain loans that carried an LTV ratio over 100%, Allstate's analysis found that a significant number of loans indeed had LTV ratios of over 100% - in other words, the value of loan was more than the value of the property.

Trust	Percentage of Loans Represented to Have LTVs greater than 100%	Actual Percentage of Loans with LTVs Greater than 100%
CMLTI 2006-4	0.00%	9.25%
CMALT 2006-A7	0.00%	12.36%
CRMSI 2007-02	0.00%	36.61%
CRMSI 2006-03	0.00%	32.28%
CRMSI 2007-01	0.00%	31.36%

339. The FHFA also performed a similar AVM review to determine the accuracy of the reported LTV ratios in the Citi securitizations at issue in its case. The FHFA's review confirms that for every Citi securitization analyzed, the percentage of loans with LTV ratios of 80% or less was overstated. Further, the percentage of loans with LTVs of over 100% ranged from 5.61% to as high as 16.71%. *FHFA* Complaint, ¶¶113-118

e. Citi Knew that Appraisals Purposefully Overstated Home Values to Hit Sponsors' Targets

340. Citi knew that appraisers overstated property valuations, thereby decreasing stated LTV ratios, through the manipulation of the appraisals conducted on the underlying properties. Instead of conducting appraisals designed to accurately value the subject property in compliance with the USPAP or the practices set forth herein, many of the appraisals conducted on the underlying properties, if they were conducted at all, were designed to hit valuation targets that would allow loans to be funded and sold in RMBS.

341. As set forth in §§IV.F. and IV.H.2., Citi was a participant in the defendant-wide practice of pressuring appraisers to misstate appraisals in order to ensure that loans were funded regardless of the quality of the underlying collateral.

f. Citi Falsified Debt-to-Income Ratios

342. The statements contained in the Offering Materials regarding the acceptability and evaluation of DTI ratios, as well as many of the specific DTI ratios disclosed, were materially false and misleading. In fact, Citi and its originators knew that borrowers routinely falsified their stated incomes in order to have loans approved.

343. In the case of stated income loans, for example, Citi and its originators knew that many borrowers claimed incomes that did not come anywhere near a reasonable level for their stated occupations.

344. Plaintiffs have examined certain of the loans contained in the CMSI 2007-8 and the CMLT 2007-10 Trusts and found numerous examples of loans where Citi accepted falsified DTI ratios and where obvious signs of fraud or misrepresentations were ignored.

(1) CMSI 2007-8

345. The CMSI 2007-8 Trust included a $480,000 loan to purchase a primary residence in Casa Grande, Arizona in June 2007. Public records indicate that the borrower's DTI ratio was over 160%, rather than the 47.52% listed in the loan schedule. According to public records, the borrower did not occupy the property, contrary to what was listed in the loan schedule. Furthermore, the borrower failed to disclose another property purchase in the month preceding the note's completion for the mortgage in the CMSI 2007-8 Trust.

346. Another mortgagor in this Trust refinanced for $100,000 a primary residence in Temple City, CA. The loan schedule listed the borrower's DTI as 33.75%, but in fact, it was 73%. Within just five months of completing the refinancing, the borrowers entered into a third lien loan, and then shortly thereafter filed for bankruptcy.

347. The CMSI 2007-8 Trust also contained a cash-out refinance loan dated August 2007 on a $568,000 first mortgage of a primary residence in Poulsbo, Washington. This borrower's stated DTI was 65.21%, which is extremely high where the industry norm considers 50%-55% to be excessive. But even this was an understatement, because public records reveal that the borrower's DTI should have been listed as over 100%.

348. In another example, the CMSI 2007-8 Trust included a mortgage for the purchase in September 2007 of a $545,000 home in Houston, Texas. The borrower was a driver for a satellite parking company at an airport. Before the mortgage was in the Trust, the borrower had purchased three other homes. Though his DTI should have been in excess of 600%, the loan schedule

accompanying the Trust listed this borrower's DTI as 38.95%. Also diverging from the representation in the loan schedule was the fact that the property was not owner-occupied.

(2) CMLT 2007-10

349. The CMLT 2007-10 Trust contained a cash-out refinance mortgage for $600,000 originated by National City Mortgage in February 2007 in Dallas, Texas. Incredibly, the borrowers had completed other cash-out/refinance transactions during the years of 2001, 2002, 2003, 2004, and 2005. Within four months of completing this loan, the borrowers filed for bankruptcy, which filing revealed that the borrowers were involved in litigation concerning outstanding debts for the borrowers' businesses. Nevertheless, Citi allowed this mortgage to pass its underwriting review. The listed DTI on the loan schedule was 45.23%; in fact, the borrowers' DTI should have been listed between 68%-89%.

350. Another loan originated by National City Mortgage in the CMLT 2007-10 Trust was for a cash-out/refinance of a property in Lake Almanor, California in February 2007. The property had undergone a series of refinancings in the previous years to the subject loan. The borrower was elderly and subsisted on social security. The listed DTI was overstated by almost 100% – what should have been at least 84% was listed as 42.32% in the loan schedule.

g. Owner-Occupancy Rates Were Falsified

351. In addition to the examples above demonstrating that the Offering Materials misrepresented the owner-occupancy rates of subject properties underlying Citi Trusts, other parties' loan-level analysis of thousands of loans Citi securitized at the same time as the Certificates at issue here, further confirm Citi's practice of routinely permitting and using misstated owner-occupancy rates for loans underlying its RMBS Certificates.
