Request for extension of time to file Objection.

I am writing to request an extension of time to file my objection which was due on April 3rd 2026 I apologize for the delay in filing the objection and any inconvenience it may cause to the court and the opposing party the reason for the delay is due to medical issues that have prevented me from completing the necessary tasks within the prescribed timeline I have attached relevant medical documentation such as doctors note and disability statement supporting my claim of being unable to meet the deadline due to medical reasons these documents provide a detailed explanation of my medical condition and the period during which I was unable to fulfill my obligations.

The severity of knee and ankle pain, asthma and anxiety insomnia impaired my cognitive and physical functioning, preventing me from managing daily responsibilities and processing complex information or completing this filing within the prescribed deadline.

Now that my condition has stabilized sufficiently to allow me to function normally I am submitting this objection immediately. I kindly request that you grant a retroactive extension based on these unavoidable medical grounds so that my objection may be considered on its merits.

Thank you for your time, understanding, and consideration of this request

Sincerely,

Koshi Padnani.

Case 25-26635-A-9

Padnani, Koshi

MRN: E4715941

Office Visit 7/20/2026
Family Medicine, Long Beach

Provider: Leiser, Temima Leah, NP (Nurse Practitioner)
Primary diagnosis: Ankle pain, unspecified chronicity, unspecified laterality
Reason for Visit: Fatigue • Sleeping Problem • Ankle Pain

Progress Notes

Leiser, Temima Leah, NP (Nurse Practitioner) • Nurse Practitioner

Patient ID: Koshi Padnani is a 70 y.o. female
Chief Complaint: Fatigue, Sleeping Problem (Pt reports she has not able to sleep well), and Ankle Pain

Subjective:
70-year-old female with a past medical history significant for anxiety, insomnia, and hypertension presents today with complaints of persistent insomnia and chronic left ankle pain.

The patient reports ongoing difficulty sleeping, describing both difficulty falling asleep and maintaining sleep throughout the night. She states that her insomnia has progressively worsened and is affecting her daytime functioning, energy level, and overall quality of life. She denies any recent acute stressors or changes in her daily routine that would explain the worsening of her symptoms. A thorough medication reconciliation was performed during today's visit. Review of her medical record revealed that the last prescription for Ambien issued by this office was on 02/26/2025. The New York State I-STOP Prescription Monitoring Program was reviewed prior to prescribing, with no unexpected controlled substance prescriptions identified. Given her previous response to therapy and the absence of concerning findings on review of the prescription monitoring program, a refill of Ambien was prescribed.

A comprehensive discussion was held regarding insomnia and its potential contributing factors. Sleep hygiene measures were reviewed in detail, including maintaining a consistent sleep schedule, limiting caffeine and alcohol intake, reducing screen time before bedtime, avoiding daytime naps, and creating an optimal sleep environment. Additional medical causes of insomnia, including thyroid dysfunction, metabolic abnormalities, anemia, and vitamin deficiencies, were discussed. Routine laboratory studies were obtained today to evaluate for potential underlying causes contributing to her sleep disturbances. The patient verbalized understanding of the plan.

The patient also reports left ankle pain that has been present for approximately four months. She denies any known trauma or specific injury preceding the onset of pain. She has attempted conservative treatment at home, including the use of an ACE bandage for compression and topical Voltaren gel, without significant improvement in her symptoms. She continues to experience persistent discomfort despite these measures. She denies numbness, tingling, open wounds, redness, drainage, fever, or other systemic symptoms. Given the chronicity of her symptoms and failure of conservative treatment, an X-ray of the left ankle was ordered for further evaluation to assess for underlying degenerative changes, occult injury, or other bony abnormalities.

The patient was advised that she is also due for her annual physical exam and routine preventive health maintenance. She was encouraged to schedule this appointment at her earliest convenience so that age-appropriate screenings, preventive care, and chronic disease management can be comprehensively reviewed.

All questions and concerns were addressed during today's visit. The patient verbalized understanding of the treatment plan and agrees with the recommendations. She was instructed to follow up after imaging and laboratory results are available or sooner if her symptoms worsen or new concerns arise.

Ankle Pain
Pertinent negatives include no numbness.

Case 25-26635-A-9

History reviewed. No pertinent past medical history.
